Connie Mack

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. PHILBIN. Mr. Speaker, the entire Nation was bowed in mourning by the news of the passing on February 8 of the great Connie Mack, who, for several generations, was an outstanding figure in the baseball world.

Connie Mack was born in East Brookfield, Mass., in my district, in the year 1862. Of humble Irish origin, he was raised in an atmosphere where the great national game was greatly encouraged, and early in life he became a capable, skillful player. So renowned became his reputation that he was recruited as a very young man into the big leagues. His career as a player was notable, and he became known in baseball circles as one of the most solid, dependable men in organized baseball.

When his playing days were over he became manager of the Philadelphia Athletics. It was in this capacity that he achieved greatest success. Under his brilliant leadership the Athletics won 9 American League pennants and 5 world championships.

Great as his reputation in baseball was and outstanding his record, Connie Mack brought something more than playing ability and managerial skill into the national pastime. Connie Mack was a man of rugged character and fundamental virtues. He never forgot the precepts of his early religious, family, and school training. He was noted for his honesty, sincerity, sense of honor, and fairness, as well as for his kind nature and charitable instincts. He befriended a great many people during his life and always answered the call to help another human being. Many baseball men who played under him, as well as those who played with other teams, turned to him for help and he had the reputation of never turning away an appeal for assistance from old friends and colleagues.

Connie Mack was a very shrewd trader and during his career built up several champion teams. He had an unusual ability for handling players and making stars out of men no one else had been able to manage. Possessed of an innate and deep understanding of human nature, Connie was able to get at the problems of individual players and bring them into a state of mind where they were willing to cooperate with him.

Many funny stories are told about his experience in this respect with recalcitrant players. On one occasion an eccentric star pitcher whom he was relying upon to win important games disappeared and could not be found, although he was scheduled to take his place on the mound and was urgently needed if the Athletics were to win. Knowing of this man's bibulous leanings, Connie Mack dispatched some of his agents to various drinking emporiums in a frantic search for the valuable pitcher who was finally found several days later driving a coal wagon on the streets of Philadelphia. He was brought to the field and in three successive games, beginning that very afternoon, he won resounding victories that spelled another championship for the Atheltics. This particular man, who shall remain unnamed here, was so unpredictable that several other leading managers had given him up and it was only Connie who could get him to pitch at all. Yet, as a result of Connie's skillful handling, his record was a most impressive one.

You could multiply experiences like this in the career of Connie Mack and they all add up to one thing—his essential knowledge of people and his ability to get along with them, however weird their personal quirks.

The contributions which Connie Mack made to baseball are so great that they could never be fully evaluated. His character, his ability, his courage, and great sporting heart, his kind and humble spirit, his patriotism—all stamp him as a man of honor, achievement, and high stature.

As a Representative of the district where Connie Mack was born and raised, I am proud to express my appreciation for the great contribution which he has made throughout his lifetime to the national game and to American life. The people of my district join with me, I know, in these expressions of esteem, pride, and gratitude as well as in extending to his bereaved family our profound regret for the sorrowful bereavement and irreparable loss which they have suffered. His passing leaves a great void in baseball and in American life.

The memory of Connie Mack will long continue to be an inspiration to all young men who participate in competitive sport. If they follow his example, whether they win or lose, they will find satisfaction in defeat as well as in victory, because they shall have played the game with fairness and with honor and that is the way any game should be played in America, and that is the way true Americans will always demean themselves in every activity.

I sincerely believe that the life and contributions of such a great man as Connie Mack should be memorialized in some way by the Federal Government. For that reason I requested the Post Office Department to strike off a special stamp to honor Connie Mack and the American sport of baseball.

In his eternal reward may Connie Mack find peace and rest with his Maker. In the elysian fields may the great game of baseball which he honored and loved so much go on forever.

I asked my good friend, John T. Morgan, of Wheelwright, Mass., noted sports authority and friend of Connie Mack, to furnish me with a short biographical sketch of the great Connie. Under unanimous consent, I include as part of my remarks the able statement of Mr. Morgan, and newspaper articles about Connie Mack.

The material follows:

BIOGRAPHICAL SKETCH OF CONNIE MACK
(By John T. Morgan)

Cornelius McGillicuddy was born in East Brookfield, Mass., on December 22, 1862, when his father, Michael McGillicuddy, was in President Lincoln's army. At the end of the war his father came home and returned to his job in the mill. The first personal sorrow he ever knew was when a contagious disease struck our community. Our home became isolated, no neighbor dared enter. What the name of the disease was, I do not know. But this memory can never be erased from my mind. My little sister Mary Augusta, only a year old, died in my arms.

When Connie was 9 years old he worked summers in the cotton mill where he received 33 cents a day for running errands, carrying stock, and operating an elevator. The help were given an hour for lunch and Connie split this valuable time into 2 parts, 10 minutes for lunch and 50 minutes for 4 o'cat (a game of baseball played with 4 players). Even when taking time off for fishing or swimming in Lake Lashaway Connie was playing pitch and catch on the bank with his playmates. Connie was the catcher for the east Brookfield town team. In his last year with them they played the north Brookfields for the silver bat and championship of central Massachusetts before a record crowd at the Oakland Gardens in Brookfield on September 19, 1883. East Brookfield won by a score of 2–1.

"My father died when I was in my teens," said Connie, "and I consoled my mother with the fact that I would support the family. My first man's job at 16 years of age was to cut sole leather in a shoe shop. When I was 21, I went into a conference with my mother and told her I could be of greater help to the family if I went somewhere else where I could make more money. I argued that the other boys were now getting big enough to help her at home. When I told her I wanted to become a big-league baseball player she was shocked."

"I've got a chance to sign up with a professional team," I explained. "I don't want to spend my life in a shoe factory. She finally consented. 'Promise me one thing,' she begged. 'Promise me that you won't let them get you into bad habits. Promise me you won't drink.' "

"That promise," writes Connie, "I shall keep to the end of my life.

"I jumped into the professionals as a member of the Meridan team of Connecticut. A year later I was signed up by Hartford. From Hartford I went to the New York Metropolitan in the old American Baseball Association.

"In 1886 I was sold to the Washington Senators in the National League. I was one of the first players to go south on a spring training trip in 1888. It took us 3 nights and 2 days to make the trip. While I was in Washington I was feted by the fans and presented wtih a silver service at the end of 1887.

"Things were going so well with me at that time that I decided I should embark on another career. I was then 26 years of age and my mind kept going back to a certain girl I had left behind in New England in 1884. I fell in love with Margaret Hogan, of East Brookfield, but it wasn't until November 2, 1887, that I married her."

Connie jumped to Buffalo in the Players League in 1890. This league lasted only 1 year and Connie was back in the National League with Pittsburgh from 1891 through 1896. Connie managed the Pittsburgh Club from 1893 to 1906, then he went to Milwaukee Club and was manager of the Philadelphia Athletics in the newly born American League in 1900.

When the American League was organized Connie Mack was awarded the Philadelphia franchise. He hurried to that city to dig up local capital. Ban Johnson, organizer of the league, told him to see Ben F. Shibe, which Connie did. They organized a corporation and Shibe was made president. They had a franchise but no team or park, but they got things straightened out before the season opened.

Connie won the pennant in 1902, 1905, 1910, 1911, 1913, 1914, 1929, 1930, 1931, and World Series in 1910, 1911, 1913, 1929, 1930.

The World Series of 1929 between the Athletics and the Chicago Cubs gave Connie his greatest thrill in baseball. Instead of using Grove or Earnshaw or Walburg, his big three in the first game, he assigned a second stringer, Howard Ehmke, for mound duty. Ehmke beat the Cubs and smashed the record that big Ed Walsh, White Sox, had held for 23 years when Ed struck out 12 men in a world series. Ehmke struck out 13. In another game the Cubs were leading, 8–0, but the Athletics came up with 10 runs in 1 inning to win 10–8.

CONNIE MACK DIES AT 93—BASEBALL'S GRAND OLD MAN

PHILADELPHIA.—Connie Mack, who helped pioneer baseball from the sandlots to the No. 1 sport in the Nation, died Wednesday at the age of 93.

Known around the world as the Grand Old Man of Baseball and one of the most beloved men in the history of the game, Mack—born in East Brookfield, Mass., December 23, 1862—died quietly with his wife, 4 daughters, and 1 of 3 sons at his bedside.

ILL SINCE OCTOBER

He had been failing steadily since falling out of bed and breaking his hip October 1.

Mack was in baseball 62 years, 50 of them as manager of the Philadelphia Athletics of the American league, a term unequalled in the history of the game. He led the Athletics to 9 league titles and 5 world championships before retiring in 1950.

CORNELIUS M'GILLICUDDY

The end for the man who changed his name from Cornelius McGillicuddy to Connie Mack to fit a baseball box score, came at 3:20 p. m. at the home of one of his daughters, Mrs. Frank Cunningham, in the Germantown section of Philadephia.

Mack had been unable to walk since his accident and only last week son, Roy, announced that for the first time since 1888 his father would not make his annual winter pilgrimage to the South.

"Dad is unable to walk," said Roy. "We carry him to and from the car every day for a short drive. We don't think he's up to making the trip South." Roy said he knew then that his father did not have long to go.

As soon as word of Mack's death became known, baseball figures from Commissioner Ford Frick on down hastened to eulogize the man who lived for baseball.

Said Frick: "This is a great loss to the game. Mr. Mack was practically Mr. Baseball himself. He always will be remembered for the gentleness, kindliness, leadership and continuity he gave our great national game."

In Chicago, Will Harridge, president of the American League, said: "To me, the name of Connie Mack always has been synonymous with baseball, standing for everything that was best for the game he loved. One of the founders of the American League, he held an unmatched record of service to the league and all baseball, as player, manager, and outstanding executive."

HAD GREAT STARS

Mack developed some of the greatest stars, men like Albert (Chief) Bender, Eddie Collins, Frank (Home Run) Baker, Jack Barry (Holy Cross baseball coach), Jimmy Foxx, Al Simmons, Bob (Lefty) Grove, Mickey Cochrane, Eddie Plank, and Jack Coombs. Seven members of his last championship team now are in baseball's Hall of Fame.

Connie himself entered the hall before any of his stars. He was among seven pioneers of the game elected as the nucleus when baseball's historic center at Cooperstown, N. Y., was founded in 1937.

After he retired as manager of the Athletics, Mack continued as the team's goodwill ambassador and chief rooter until it was sold in 1954 by his sons, Earle and Roy, to a syndicate headed by Arnold Johnson of Chicago.

HAD SEVEN CHILDREN

Mack was married twice and was the father of seven children. His first wife died in 1898.

His financial interest in the Athletics in 1952 was estimated to be 300 of the team's 1,500 shares.

Mack recognized as a builder of champions, also earned a reputation as wrecker of champions. Twice he sold and traded championship teams, starting all over again from scratch. He broke up his 1910, 1911, 1913, 1914 champions after they blew the world series in four games to the Boston Braves in 1914. For the next decade his teams wallowed in the second division, landing in last place seven times.

It wasn't until 1929 that the Athletics ascended the heights again under the leadership of the tall tactician. Then with such baseball heroes as Foxx, Simmons, Cochrane, Jimmy Dykes and Bing Miller, Grove, Earnshaw, Rube Walberg and others, the A's won three straight American League pennants and two world titles.

After losing to the St. Louis Cardinals four games to three in the 1931 series, Mack once again broke up his team. Despite his championships, the club was in debt. They so outclassed the opposition that fans wouldn't pay to see them play. So, all the stars went for some $500,000. The Athletics fell upon evil days and haven't won a pennant since, finishing in the first division only four times since 1931.

TO THE FINAL DAY

After the 1950 season, Mack turned the reins over to Jimmy Dykes who had returned to the club as a coach and later as assistant manager. Mack said he was stepping down because he was getting old and that 50 years was a long time to hold one job. Even after resigning as manager, Mack followed the ball club for a season, going to spring training and making all the regular road trips.

Baseball was his life to the final day.

Mack began his baseball career in East Brookfield where as a boy he worked in a cotton mill to help support his sisters and his widowed mother. He developed into an able catcher, played with professional teams in Meriden, Conn., and then with the Hartford, Conn., team of the Southern New England League.

The Washington National League club purchased him in 1886. After a little more than 3 years with Washington and a time with the Buffalo club of the Brotherhood League, he went to Pittsburgh where he became manager in 1894. Three years later he became player-manager of Milwaukee in the Western League. Milwaukee became a member of the American Association in 1900 and Mack's team finished second.

In 1901, when the American League was expanded under the leadership of Ban Johnson, Mack went to Philadelphia as manager, the beginning of the longest tenure of any major league manager. In his second year the A's won the American League pennant—the first of nine for Connie.

Mack was famous for directing his players from the dugout with the movement of a scorecard. He regarded himself as a developer of players and not a buyer.

LITTLE KNOWN QUALITY

Mack was a mild-mannered, but firm man. He rarely, if ever, cursed, and almost never scolded a player severely in the presence of others.

He said that managing a ball club, whether on the sandlots or in the major leagues, required tact, diplomacy, plain horse sense and above all, a great deal of patience.

A little known quality of Macks was his charity, particularly to old, down-and-out ball players. He was a target for many requests and how much he gave away was his secret. Those who knew him intimately said his donations were in the thousands of dollars.

Mack not only won honors on the diamond, but high civic honor was bestowed upon him in many sections of his land. After the 1929 World Series, the citizens of his adopted home, Philadelphia, awarded him the Edward W. Bok prize for distinguished service to the city, an award of $10,000 which previously had gone only to artists, scientists, educators and philanthropists.

[From the West Brookfield (Mass.) Country Courier of February 9, 1956]

FAMED BASEBALL MANAGER DIED IN PHILADELPHIA YESTERDAY—HE WAS IN HIS 94TH YEAR

Connie Mack, Mr. Baseball himself, East Brookfield's most illustrious son, died yesterday at the Philadelphia home of his daughter in his 94th year. Born Cornelius McGillicuddy in the ell of the house that stands on the corner of Maple and Main Streets now occupied by the William Giguères, he left his native town more than 70 years ago for Meriden, Conn., where he started the professional baseball career which became so famous.

He grew up with baseball in this country, starting to play in East Brookfield when no more than a schoolboy. He and his family moved during his childhood to a home which stood on North Brookfield Road until it was destroyed by fire many years ago. The second house from the railroad tracks stands on the site of the McGillicuddy homestead.

Francis Drake, of the North Brookfield Road, East Brookfield, 12 years younger than Connie Mack, recalls him well. "We lived on the same street," he told the Courier last night, "and I went to school with his younger brothers. He was always good to us. In fact he started his younger brother Tom out in hotel business in Worcester later on."

The village school attended by Connie Mack is still standing. Years ago it became St. John's Church.

From the turn of the century to November 1954, Connie Mack managed the Philadelphia Athletics, leading them to their first American League pennant in 1902. Later he won 8 other pennants and 5 world series. His last pennant was in 1931.

In addition to managing the Athletics, for many years he was part owner of the club and at the time of its sale in November 1954 to a Kansas City outfit, he and his sons Roy and Earle were principal owners of the club.

Twice in the 1930's he was honored in communities in our area. Nineteen thirty-one found him at a testimonial banquet in his honor at the Hotel Massasoit in Spencer. On the occasion of that visit he spoke to Spencer schoolchildren in Memorial Town Hall. In 1935 he was an honored guest at North Brookfield's Old Home Week celebration.

Mr. Mack was elected to Baseball's Hall of Fame in Cooperstown, N. Y., in 1937. Later the American League baseball park in Philadelphia was named Connie Mack Stadium.

Although in most recent years his team wasn't at the top, nevertheless to the very end he upheld the spirit of the sport of baseball. He, more than anyone else, pointed it up as being a national institution, a sport everyone can enjoy. Win or lose, Connie Mack always was a good sport, firmly believing that baseball is good for the American soul.

And so Connie Mack has passed from the stands. People in our area can be proud that a native of East Brookfield reached the greatest heights in the world of sports. Not only was he baseball's most respected figure, but one of our country's greatest citizens.

[From the Worcester (Mass.) Telegram of February 9, 1956]

MACK LAST HERE IN 1951—VISITED BARRY, BURKETT

Connie Mack, the East Brookfield native who became the Grand Old Man of Baseball, made his last visit to Worcester in 1951.

In the 4 days he spent in Worcester County, Mack, who was then 88, climbed three flights of stairs to a third-floor apartment at 189 Grove Street to pay a call on another baseball great—the late Jesse Burkett, one of the three men in the history of baseball to hit .400 in three different seasons.

The next day, after a 43-year absence, he visited with the man who played shortstop on his vaunted $100,000 infield—Jack Barry, baseball coach at Holy Cross College.

WORKED FOR SCRIP

Barry played in the infield made up of Jack McInnis, Eddie Collins, Barry, and Frank (Home Run) Baker. For an hour at the then Hotel Sheraton, Barry and Mack reminisced on how that infield sparked the Athletics to three straight world championships and then disintegrated after being beat in four straight games by the Boston Braves in the 1914 World Series.

It was in his visit to Burkett that Mack dispelled the common assumption that he had started in a shoe factory. It was a cotton mill, and he received a 10-cent scrip, not cash, redeemable in merchandise.

It was about the time of that visit also that Mack received the gift that pleased not only the baseball patriach but his sons, Roy and Earle. He was presented an oil painting of his old home on the North Brookfield Road, East Brookfield. The house had been destroyed by fire in 1916.

It was a gift from Mrs. Katherine Cosgrove, wife of Mark F. Cosgrove, at her home, 5 Crystal Street, Worcester. She was a friend of the Mack family.

The former Katherine O'Day, of West Brookfield, then an art instructor at Spencer and the Brookfields, Mrs. Cosgrove had painted the picture after considerable research.

The original home in which Mack was born Cornelius McGillicuddy stands on Main Street, East Brookfield—the second house west of the Baptist Church on the north side of Route 9.

In 1934 Connie Mack last brought his Athletics home to Brookfield. The late George M. Cohan was master of ceremonies that day.

The Mack family moved to Philadelphia in 1904.

[From the Worcester (Mass.) Gazette of February 10, 1956]

CONNIE MACK WAS AN ALLTIME GREAT

East Brookfield has lost one of its outstanding sons. Cornelius McGillicuddy—as Connie Mack was christened—had not made his residence in East Brookfield for many years. But he was born there in the modest house on Main Street during the Civil War, and he retained an interest in his hometown throughout a long and active life. Until a few years ago, he was an occasional visitor to these parts.

Perhaps no man living has made such an impact upon organized baseball. From the time he started his career in East Brookfield, a skinny youngster who caught barehanded, until his death in Philadelphia Wednesday, Connie Mack's interest in the sport never flagged. He piloted his beloved Athletics to 9 league titles and 5 world championships during his half century as manager. Throughout, he was a force for clean baseball. Many of the greatest stars of the diamond got their tutelage under his fatherly direction.

On hearing of his death, Ford Frick said that Connie Mack was "Mr. Baseball." That he was, and those who knew him only by reputation, as well as those who were his personal friends, will note his passing with regret.

The American Council on Education Endorses Plan for a New Joint Congressional Committee Which Has Bipartisan Support

---

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 10, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, the educational exchange program is of deep interest to the American Council on Education and of special concern to the council's commission on education and international affairs which is responsible for coordinating all council activities in the international area.

At its last meeting on March 1–2, 1956, the commission again gave careful consideration to various measures before the 84th Congress which propose the establishment of a joint committee to be known as the Joint Committee on United States International Exchange of Persons Programs. These measures include House Joint Resolution 474, and Senate Joint Resolution 120 introduced by the Honorable J. W. FULBRIGHT for himself and Senator HUBERT H. HUMPHREY.

House Members who have joined with me in sponsoring this legislation include Representatives HUGH J. ADDONIZIO, VICTOR L. ANFUSO, THOMAS L. ASHLEY, CLEVELAND M. BAILEY, ROBERT C. BYRD, IRWIN D. DAVIDSON, THOMAS J. DODD, EDITH GREEN, DON HAYWORTH, HARRIS B. MCDOWELL, JR., THADDEUS MACHROWICZ, HENRY S. REUSS, GEORGE M. RHODES, PETER W. RODINO, JR., HUGH SCOTT, B. F. SISK, STEWART L. UDALL, HARRISON A. WILLIAMS, JR., and HERBERT ZELENKO.

As a result of its study of these measures, the commission on education and international affairs of the American Council on Education took certain actions which are reflected in the following excerpt from the minutes of the meeting held at the beginning of March:

The Commission on Education and International Affairs believes that a well-planned program for the international exchange of persons has and can contribute significantly to international understanding, freedom, and world peace. Major weaknesses of the Government's program have been their intermittent character and the absence of a broad, inclusive, long-range plan. We resolve therefore:

1. That the Commission on Education and International Affairs supports the proposal to establish a special joint committee of the Congress for purposes of making a study of present and proposed exchange programs and of formulating proposals for a comprehensive and continuing program.

2. That the Commission on Educational and International Affairs recommends to the Secretary of State that he take all appropriate measures to achieve the effective coordination of such exchange programs as are authorized by the Congress and to bring them into proper relationship with exchange programs of intergovernmental and private agencies.

3. That the officers of the American Council on Education be asked to arrange for the presentation of these views at the time of public hearings on the proposed legislation.

I include as part of my remarks the text of a letter which I sent to my colleagues in the House of Representatives explaining the purposes of House Joint Resolution 474. Also included here is a short article by Senator H. ALEXANDER SMITH which appeared in the October 1955 News Bulletin of the Institute of International Education; as well as a brief statement of the history and activities of the American Council on Education.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., April 10, 1956.

MY DEAR COLLEAGUE: I have introduced a joint resolution, House Joint Resolution 474, to establish a joint congressional committee to be known as the Joint Committee on United States International Exchange of Persons Programs. Such a joint committee will be able to make an important contribution to these international exchange programs.

It gives me great pleasure to be able to say that Senator J. W. FULBRIGHT has introduced a companion measure in the Senate as Senate Joint Resolution 120, and Senator HUBERT H. HUMPHREY has joined Senator FULBRIGHT as cosponsor of the measure.

I am hopeful that you and many other colleagues of mine from both parties will join with us in introducing this measure in the House. The text of our joint resolution is enclosed herewith for your study.

We believe that international exchange of persons has proved to be a valuable means of developing closer cooperation among the nations of the free world. The need for such cooperation is everyday more apparent. The

United States Government is using this technique both for building better understanding of our country abroad and for technical cooperation and economic development. Large exchange programs are now operated by the Department of State. Students, teachers, prominent specialists, and leaders in many fields are exchanged and outstanding cultural performers are sent abroad under these programs. The Congress authorized these programs through the Smith-Mundt Act (P. L. 402, 80th Cong.), the Fulbright Act (P. L. 584, 79th Cong.), and several other acts. American technical experts are sent abroad and foreign nationals are brought to the United States for training under the International Cooperation Administration (formerly FOA and point 4).

The Congress receives reports from the Secretary of State on these programs and reviews their operation annually in connection with appropriations. The Smith-Mundt Act also provides for a United States Advisory Commission on Educational Exchange which reports directly to the Congress on a semiannual basis.

All of these programs are reviewed separately, and by different congressional committees. They are extremely complex both from the point of view of administration and source of funds, and all use dollars and foreign currencies and rely to a large extent on the efficient use of private resources here and abroad.

It is, therefore, not surprising that some confusion has persisted in the Congress as well as in the public mind as to the relationships that exist between these programs. Yet broad public understanding and public acceptance of these exchange programs are essential if Congress is to support them. It is, we believe, imperative that this understanding be achieved and the confusion ended in order that these important activities can achieve the most useful results.

No concerted or continuing review of these programs and their relationships to each other has ever been undertaken by the Congress. Such a review is of the utmost importance and would be of inestimable benefit to the Congress and to the public. It would help all of us to make a more realistic appraisal of these programs.

The Joint Committee on United States International Exchange of Persons Programs which our joint resolution would establish will provide the necessary review to insure the most effective planning, operation, and administration of these important facets of our international relations.

Discussing the perennial crisis of exchange appropriations in Congress, Senator H. ALEXANDER SMITH, writing in the October 1955 issue of the news bulletin of the Institute of International Education, points out that although private exchange programs long antedate Government activity in this field, the role of the Federal Government is most significant and in recent years has become nearly indispensable.

Over the past few years, as he makes clear, a definite pattern has emerged in the process of getting appropriations for the Government's participation in international educational exchange programs, for instance, the President requests funds for an adequate program; the House of Representatives slashes this figure nearly in half. The Senate restores the full amount; and the final figure is a compromise between the two. The result, the Senator observes, is clearly insufficient appropriations, and he calls for grassroots understanding.

May I hear from you as to your interest in this legislation at your earliest convenience?

With kindest regards.

Sincerely yours,

FRANK THOMPSON, Jr.,
Member of Congress.

[From the News Bulletin of the Institute of International Education for October 1955]

PERENNIAL CRISIS

(By H. ALEXANDER SMITH)

Senator H. ALEXANDER SMITH, Republican, of New Jersey, was cosponsor of the Smith-Mundt Act and sponsor of the act, passed in 1949, authorizing the use of payments on World War I debts by Finland for educational activities, including exchange of students between the two countries.

THE CHALLENGE

"As long as we believe that knowledge is better than ignorance, that the truth makes men free, exchange of persons programs should survive and grow." That sentence, taken from the report of the Committee on Educational Interchange Policy on the Goals of Student Exchange, eloquently presents the challenge to those of us who do believe that knowledge and truth are the sound foundations on which to build enduring peace and a free and prosperous world.

Educational exchange plays an important, but by no means exclusive, role in the spreading of knowledge and truth. However, the almost ideal partnership through which we in the United States have combined private and public contributions to international educational exchange is a guiding example to be followed in attacking all aspects of international ignorance, prejudice, and misunderstanding.

THE SMITH-MUNDT ACT

There is no justification for complacency or inattention merely because a program has reached a high level of success. We must constantly review our goals, as did the Committee on Educational Interchange Policy, and, of equal importance, continuously inspect the foundation and framework on which we have built.

As readers of this bulletin are well aware, private exchange programs long antedate the Government's activity in this field, and still bear the major share of the burden. However, the governmental role is a significant one, and in recent years has become nearly indispensable. The legislative foundation on which the Government's participation is built consists essentially of two laws: Public Law 584 of the 79th Congress and Public Law 402 of the 80th Congress. The former is popularly known as the Fulbright Act and the latter as the Smith-Mundt Act.

As a cosponsor of the Smith-Mundt Act, I am particularly gratified with the outstanding success of the exchange program. My participation was inspired by the experience that I had personally with the activities of the Belgium American Educational Foundation, established by former President Hoover after World War I. This was an outgrowth of the old CRB—Commission for the Relief of Belgium—which saved Belgium during the First World War. The Belgian American Exchange program has been in continuous operation for a period of over 35 years. It counts among its alumni the leading Belgians in public life today. To it can be attributed directly the abiding friendship today between Belgium and the United States. It has been a model operation for many other private exchange programs.

THE FULBRIGHT ACT

The Fulbright Act inspired by my colleague, Senator WILLIAM FULBRIGHT, of Arkansas, originally enabled the use, for educational exchange purposes, of some of the foreign currencies available to the United States as a result of the disposal abroad of surplus property. As such it was a temporary program, but free from the necessity of annual appropriations. The Smith-Mundt Act provided a framework for a permanent program of much broader scope (in addition to the educational exchange features, this act is also the basis for the activities of the United States Information Agency), but required appropriated funds. Happily the Fulbright program now has available foreign currencies acquired by the United States through other means, and presumably will carry on indefinitely. Less happily, the program must now purchase these funds from the United States Treasury, thus becoming dependent upon appropriated funds.

It is in this context that we legislators who annually find ourselves on the firing line in the battle for appropriations, are forced to examine the foundation and framework on which we have built the Government's participation in educational exchange. For some years now I have had the growing feeling that, while the framework of the administration and programing can always be improved, the immediate problem is a crack in the foundation itself.

APPROPRIATION PATTERN IN THE CONGRESS

Over the past few years a definite pattern has emerged in the process of getting appropriations for the Government's participation in international educational exchange; the President requests funds for a minimal, but adequate, program; the House of Representatives slashes this figure nearly in half; the Senate restores the full amount, and the final figure is a compromise between the two. The result is, of course, a clearly insufficient appropriation.

In passing it should be mentioned that our successes in securing Senate approval of the full budget request have not been easy. The votes, when pressed in committee and on the floor, have been close. Unfortunately, in the House they have gone the other way, and deep cuts have been sustained.

Why? The program is an inspiring one, quick to catch the imagination of intelligent men, and never more important than today. The Congress is a responsible institution of Government, and responsive to the desires of the articulate voter—traditionally the House even more so than the Senate.

SUPPORT AT THE GRASSROOTS

The answer would seem obvious. Public understanding and public acceptance are the sine qua non for any long-range governmental program requiring annual appropriations. In the case of the exchange program we would seem to rely too heavily on an annual flood of testimonials at appropriations time, instead of building up a genuine and thorough year-round understanding of the program.

We have become too parochial, too ingrown. Happily we have had great success in securing wholehearted acceptance at the local level for the exchangees themselves. We must translate this acceptance—which has widely become enthusiasm—into a grassroots understanding of the program itself, and the role of the Government in it. When that has been accomplished, the appropriations should readily be forthcoming.

It is particularly appropriate that we renew our private efforts at this time, for the Geneva Conference, on the initiative of President Eisenhower, directed the Foreign Ministers to study measures to bring about freer contacts and exchanges to the mutual advantage of the countries and peoples concerned. This is one item on the agenda of the October meeting of the Foreign Ministers. We can do no less than give overwhelming support at home to this international interest at the highest levels of Government in promoting that which we believe in so deeply.

A BRIEF STATEMENT OF THE HISTORY AND ACTIVITIES OF THE AMERICAN COUNCIL ON EDUCATION

WHAT THE COUNCIL IS AND DOES

The American Council on Education is a council of national educational associations;

organizations having related interests; approved universities, colleges, teachers colleges, junior colleges, technological schools, and selected private secondary schools; State departments of education; city school systems and private school systems; selected educational departments of business and industrial companies; voluntary associations of higher education in the States; and large public libraries.

The membership as of July 1, 1953, was 1,097, consisting of 143 national and regional associations, and 954 educational institutions. Today, as in the beginning, membership in the council is by organization or institution, not by individual.

The council operates through its staff and the commissions and committees set up to perform specific services. Outstanding leaders in education, in related fields, and in public life serve on council committees and take an active part in educational conferences and studies.

Through the 35 years since its founding in 1918, the council has been a center of cooperation and coordination for the improvement of education at all levels, with particular emphasis on higher education. Its very existence, its functions as set forth in its constitution, its membership, and its activities reflect the peculiar genius of the American educational system—a system without national control, compromising a large number of autonomous units working together for the establishment and improvement of educational standards, policies, and procedures.

More specifically, the council has been a clearinghouse for the exchange of information and opinion; it has conducted many scientific inquiries and investigations into specific educational problems and has sought to enlist appropriate agencies for the solution of such problems; it has stimulated experimental activities by institutions and groups of institutions; it has kept in constant touch with pending legislation affecting educational matters; it has pioneered in methodology that has become standard practice on a national basis—its extensive series of tests, examinations, and cumulative records are representative achievements; it has acted as liaison agency between the educational institutions of the country and the Federal Government and has undertaken many significant projects at the request of the Army, Navy, and State Departments and other government agencies; and through its publications, now so extensive as to rank well with those of other educational presses of the United States, it has made available to educators and the general public widely used handbooks, informational reports, and many volumes of critical analysis of social and educational problems.

ORIGIN OF THE COUNCIL

The council came into being in 1918 as a direct result of the obvious need to coordinate the services which educational institutions and organizations could contribute to the Government in the national crisis brought on by World War I. The first meeting of educators looking toward that end was held in Chicago January 12 and 13, 1918, attended by members of the executive committees of the Association of American Colleges, Association of American Universities, Catholic Educational Association, and the National Association of State Universities. A larger conference was held in Washington on January 30, when an organization was formed and named the "Emergency Council on Education."

Eleven national educational associations were represented at this meeting and comprised the membership of the Emergency Council. They were: American Association of University Professors, Association of American Agricultural Colleges and Experiment Stations, Association of American Colleges, Association of American Universities, Association of State Universities, Association of Urban Universities, Catholic Educational Association, National Education Association, National Council of Education (NEA), Department of Superintendence (NEA), and Society for the Promotion of Engineering Education.

By the time of its next meeting, March 26–27, 1918, three additional associations had joined the Emergency Council: Association of American Medical Colleges, American Association for the Advancement of Science, and the National Council of Normal School Presidents and Principals.

The members of the Emergency Council on Education had not proceeded far with their work before they realized that there would be as much need for cooperative educational endeavor in time of peace as in time of war. Consequently, early in July 1918 the name of the organization was changed to American Council on Education, thus eliminating its original transient and emergency character, and visualizing its broadened scope in developing better relations with educational institutions abroad. The 14 founding organizations became constituent members of the permanent council.

ACTIVITIES OF THE COUNCIL

From its inception in January 1918 to the termination of hostilities in November of that year, the activities of the council were centered on the war effort. It performed many special services at the request of the President and various Government agencies, as it did again in World War II.

In peacetime it has broadened and intensified its study of American education, expanded its services to its member institutions and to educational institutions in general, and initiated and supported projects designed to promote better international understanding and relations.

In addition to its numerous services to the Federal Government, the council has made a number of State surveys of education at the request of State officers or legislatures. Among the surveys in recent years are those of Maryland, Illinois, Utah, Delaware, Alabama, Louisiana, and Hawaii.

Some highlights of educational achievement

Some of the council's activities of lasting value to American education are: the psychological examinations for high-school students and college freshmen, issued annually by the council from 1924 through 1947, and the Cooperative Test Service which functioned under the council's sole sponsorship from 1930 to January 1, 1948, when both of these projects were merged into the newly created Educational Testing Service; the National Teacher Examinations, established in 1939—a testing program administered on a nationwide scale; the American Youth Commission, composed of a group of leaders in civic and educational affairs who studied youth problems through a period of years and produced more than 30 volumes of enduring value; the Commission on Teacher Education, a cooperative Nation-wide project in which more than 50 colleges, universities, and public-school systems participated, resulting in a series of 20 published reports on a variety of problems; the Financial Advisory Service, which operated actively for the 5 years between 1935 and 1940, and produced 21 pamphlets on specific financial and business problems of institutions of higher education. The council was also exceedingly active in working for better and more uniform accreditation standards through a long period of years.

Ongoing council projects and committees include the Commission on Accreditation of Service Experiences established in 1945; the Inter-American Schools Service, established in 1943, and the Committee on Measurement and Evaluation, established in 1949 and continuing in a field in which the council has long been active. Other areas in which council committees have been influential in establishing policy in recent years include educational television, the education of women, intercollegiate athletics, college teaching, international cultural relations, institutional research policy, and religion in education. These activities are briefly described in connection with the responsible committees on pages 11–22.

EXPANSION OF MEMBERSHIP

Although the council originated as an association of national educational organizations, it soon became evident that both the organizations and the institutions of higher education would benefit by working together, and the constitution was therefore amended as early as December 1918 to provide for the inclusion of institutional members, that is, accredited colleges, universities, and technological schools, and for the inclusion of associate members—organizations with interests related to the work of the Council.

In June 1935 membership privileges were further extended to accredited teachers colleges, and later to State departments of education, public and private school systems, private secondary schools, junior colleges, the educational departments of business and industrial concerns, large public libraries, selected institutions of a specialized nature, voluntary associations of colleges within the United States, and selected universities outside the United States of America. The membership of 1,097 on July 1, 1953, comprised the following:

Seventy-nine constituent members (national and regional educational associations).

Sixty-four associate members (national organizations in fields related to education).

Nine hundred and fifty-four institutional members (universities, colleges, selected private secondary schools, public and private school systems, educational departments of industrial concerns, voluntary associations of colleges and universities within the States, large public libraries, etc.).

Almost all of the major educational associations are actively affiliated with the American Council on Education, which also includes institutional members from 47 States, the District of Columbia, Hawaii, and Puerto Rico.

THE MEN WHO HAVE DIRECTED THE COUNCIL

The development of the council naturally has revolved around the men who have served as its chief executive officer. Dr. Samuel P. Capen was its first full-time director, serving from 1919 to 1922, when he accepted the chancellorship of the University of Buffalo. He was succeeded by Dr. Charles R. Mann, who was director until 1934 when he retired. Dr. George F. Zook came to the presidency of the council in 1934 from the position of United States Commissioner of Education, having previously been president of the University of Akron. Dr. Zook served from July 1, 1934, through December 31, 1950. Dr. Arthur S. Adams became president January 1, 1951. Dr. Adams came to the council from the presidency of the University of New Hampshire. He was formerly provost of Cornell University.

Associate directors of the council have been David A. Robertson, who served from 1923 to 1930, John H. MacCracken from 1930 to 1934, C. S. Marsh from 1935 to 1944, and A. J. Brumbaugh, vice president from 1944 to 1950. The titles of director and associate director were changed to president and vice president in 1935. The office of vice president was discontinued in 1951.

The chairmen of the council have always played a most important part in its achievements, and the list of chairmen is a notable rollcall of some of America's greatest leaders

in education. The last several chairmen were:

1942–43: Edmund E. Day, president, Cornell University.

1943–44: O. C. Carmichael, chancellor, Vanderbilt University.

1944–45: Herman B. Wells, president, Indiana University.

1945–46: Alexander J. Stoddard, superintendent of schools, Philadelphia.

1946–47: George D. Stoddard, president, University of Illinois.

1947–48: Leonard Carmichael, president, Tufts College.

1948–49: Herold C. Hunt, superintendent of schools, Chicago.

1949–50: James B. Conant, president, Harvard University.

1950–51: J. L. Morrill, president, University of Minnesota.

1951–52: Everett N. Case, president, Colgate University.

1952–53: Robert L. Stearns, president, University of Colorado.

Midwest International Trade Development Center, Inc.

EXTENSION OF REMARKS

OF

HON. WILLIAM E. HESS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 10, 1956

Mr. HESS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report:

MIDWEST INTERNATIONAL TRADE DEVELOPMENT CENTER, INC., CINCINNATI, OHIO., ACTIVITIES REPORT, MARCH 31, 1956

On April 22, 1956, MITDC will complete 1 year of operation. In that time, we feel much has been accomplished toward our goals of developing more trade, understanding, and peace between this Midwest area and the free world.

We have had inquiries from abroad requesting names of firms in this area, and we have established these contacts. We have found export managers for Midwest Radio & Television Corp., Central Tool Co., and Senco Products of Cincinnati, Ohio, and Record Files of Wooster, Ohio. We have had one trade luncheon here, and others are in the planning stage for other towns in the MITDC area. A trade mission to Latin America is planned for the fall of 1956.

We have endeavored, through questionnaires sent to almost 400 firms in this immediate area to find those desiring foreign markets and sources of supply. We have begun making market surveys for these firms in cooperation with Xavier University.

We have established contacts with the United States Export-Import Bank, the United States Department of Commerce, both locally and in Washington, with all the ambassadors and consuls in Washington, with all the American consuls abroad, and the consuls of other countries residing in the MITDC trading area. We have their complete cooperation, as stated in letters to our office, in passing along information concerning this center and its activities to businessmen in other localities to stimulate more trade.

We have secured a consul for Mexico for Cincinnati, Miss Aria Parke Schawe, who has had broad experience in Mexico and other Latin American countries, and the matter is now in the hands of the Mexican Government for approval. We have every reason to believe this appointment will be approved, and continuing efforts are being made by this office to secure consuls for other countries in Cincinnati.

We have provided translation services when necessary for firms or individuals and speakers for various organizations. We completed all research to provide names of all the leading manufacturers and industrialists in this midwest area. We are now mailing our house organ, the Trade Mart, to approximately 1,000 businessmen and other interested organizations in the MITDC trading area each month as well as to American consuls abroad who keep it on display for business opportunities in their localities.

We are affiliated with International House of New Orleans, receiving all of their experience and services. We have a competent corps of representatives in Latin America, in three European countries, one Asiatic country. We shall continue to secure representatives in other sections of the world.

Through efforts of MITDC, Xavier University is now offering a course in international trade. The University of Indiana is now exploring the possibility of offering more scholarships to Latin American students at American universities and obtaining scholarships at Latin American universities for American students. We have arranged for one exchange doctor in the department of radiology at General Hospital.

United States Congressmen GORDON SCHERER and WILLIAM HESS have been contacted, and they are arranging for a meeting in Washington of the various representatives in Washington from the Midwest area so that a statement can be issued jointly in favor of MITDC and arrangements can be made for more support of this project in Washington.

The State of Ohio, in cooperation with MITDC, is preparing a new booklet on Ohio in color. Farson, Huff & Northlich, of Cincinnati, Ohio, are now preparing the dummy for this booklet which will be published in various languages, seeking to draw tourists to Ohio. Mr. E. E. Schnellbacher, Director of the Office of Intelligence and Services, Bureau of Foreign Commerce, Washington, D. C., said in his talk before the American Association of University Women in Cincinnati, March 15, 1956:

"If instead of shipping goods to foreign countries, we sent ourselves and brought them back, or if we brought enough customers here to equal production, we would have a balance of trade. * * * Tourism is very sound business because you provide the service industries with dollars which they in turn spend. There is no estimate of how American tourist dollars spent abroad return to this country in purchase of materials from American industry. * * * France, for example, made more money from the United States through tourism than from all the things she exported to the United States in goods."

Mr. C. A. Harrell, city manager of Cincinnati, has been contacted regarding the city of Cincinnati assuming some of the expense of publishing this book concerning Cincinnati and Ohio. While the city probably will not be able to aid in financing, Mr. Harrell stated in a letter to this office:

"I will be glad to discuss this matter further with you, if you feel the city can be helpful, for I am very much interested in the type of thing you are doing."

Negotiations were made with WRUL, World Wide Broadcasting of New York City to transcribe their recording of the MITDC banquet speeches in October of 1955, and news of this banquet has gone all around the world together with the news of the establishment of this trade center. NBC-TV has also been in consultation with us, and MITDC is to be included in their special telecast from Cincinnati on April 17 for Dave Garroway's Today.

On the civic service side, MITDC has cooperated with the Children's International Summer Village to provide a luncheon for the delegates to the village. We have provided contacts, home entertainment including dinners, and industrial tours for the following visitors to Cincinnati:

Latin American businessmen brought by Amertool Services.

Japanese businessmen brought by Amertool Service.

Latin American agricultural team brought by United Stats Department of Agriculture.

Mexican group of teachers, secretaries, accountants etc., brought by Experiment in International Living.

Teachers from India, Japan, and Argentina brought by Cincinnati Board of Education.

Doctors from Latin America brought by Wm. S. Merrell Co.

We are now preparing, in cooperation with the Wm. S. Merrell Co. a dinner and reception for the 122 resident international doctors, interns, and nurses at the Greater Cincinnati hospitals.

We have cooperated with the Cincinnati Council on World Affairs for their Latin American Institute in January, and we have provided letters of introduction to various Cincinnati area people who were leaving for foreign travel. We have helped Ohio State University publicize its April 7, 1956, Regional Foreign Trade Conference covering a 5-State area.

The past several weeks we have been exploring the possibility of JayCee support of MITDC, having had a conference with Mr. George Kral, president, and Mr. Lawrence W. Bratburd, international relations chairman for the local group. We have also had correspondence with Mr. William Hellerman of Columbus, Ohio, Ohio JayCee director of international relations who is very much interested in MITDC and is urging support of it by the local group.

We have also had contact with Mr. Roth of the Retail Merchants Association, and they feel they will be interested in participating as Founder Members of MITDC. In fact, a membership campaign is now in the planning stage, and will be presented for Board approval within the next 2 weeks.

We have been exploring the possibility of publishing for distribution abroad, an industrial directory of the Midwest area in four languages, and we have discussed this matter with Diamond Directory and Conover-Mast Co. It is now under consideration by these two firms.

All of these efforts were made while we were also soliciting and obtaining memberships with a staff of never more than 4, most of the time with only 2, with a total budget for equipment, office expenses, salaries, etc., of only $21,799.94 with pledges and income of $21,850, leaving a bank balance at this time of $50.06. Naturally, as with all new enterprises, mistakes were made during the first year of operation. However, we feel these have been corrected, and we are now in a much stronger position to obtain more memberships and provide more services to our members and to the community because the necessary groundwork has just now been laid.

Many other cities are now considering establishment of just such a center as ours, and we have been getting many inquiries as to how to start a center. If we do not go full-steam ahead, these other cities will overcome our headstart and much of the export and import business which could come to this area through MITDC will be diverted elsewhere.

MEMBERSHIPS IN MITDC AS OF MARCH 31, 1956

Founder memberships: Aluminum Industries, Inc.; American Tool Works Co.; Armco International Corp.; Baldwin Piano Co.; Bishopric Products Co.; Cincinnati Enquirer; Cincinnati Milling Machine Co.; Thomas Emery's Sons Co.; Farson, Huff, & Northlich; Formica Co.; Gruen Watch Co.; Industry Export Service; Pan-American Airlines; Proc-

tor & Gamble Co.; Reardon Industries, Inc.; Sheraton-Gibson Hotel; Strachan Shipping Co.; United States Playing Card Co.

Sustaining memberships: Alms Hotel; Brighton Corp.; E. W. Buschman Co., Inc.; Central Trust Co.; Cincinnati Butchers Supply Co.; Cincinnati Tool Co.; Crosley-Bendix Home Appliances Division; Fifth-Third Union Trust Co.; First National Bank; Provident Savings Bank & Trust Co.; Staples Tool Co.

Out-of-territory membership: Cia. Transmares of New Orleans.

Active memberships: American Laundry Machinery Co.; Atco Tool Corp.; H. Blacker Printing Inks, Inc.; Campbell-Hausfeld Co.; Century Machine Co.; Dayton Rubber Co.; Fries & Fries, Inc.; George P. Gundlach & Co.; Huenefeld Co.; E. Kahn's Sons Co.; Keco Industries, Inc.; Karl Kiefer Machine Co.; Midwest Radio & Television Corp.; Price Y Cia., Inc.; Railway Supply & Manufacturing Co.; Shepard-Warner Elevator Co.; Dr. Frank C. Sutton, M. D.; Weber Engineered Products Co.; Wolf Machine Co.

The Farm Situation

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 10, 1956

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter to a constituent:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., April 10, 1956.

DEAR MR. ———: Your letter in regard to the farm situation, of course, gives me no cause to cheer for I know you have reason to feel as you do at the present time. Many farmers and others, including your humble servant, BEN JENSEN, are now, and have been for the past several years, greatly concerned and worried about the welfare of the farmers.

In justice to the Republican Party we must not lose sight of the fact that the Democratic Party was in full power in the White House and in Congress when Mr. Mike DiSalle, the Director of the Office of Price Stabilization, rolled back the price of cattle 10 percent on July 1, 1951, with President Truman's complete approval, and he said I will again roll back cattle prices another 4½ percent on August 1, 1951, and another 4½ percent on October 1, 1951. Why? Because they were very anxious to give the packinghouse workers the 9 percent wage raise which they demanded, and by so doing the price of steaks would not be increased. Immediately after the rollback went into effect the packinghouse workers were granted the wage increase they demanded.

Congressmen from the cattle-producing States took up the fight and we were able to stop all except the 10-percent rollback—but the damage had been done. Even before July 1, 1951 arrived, cattle prices went on the toboggan and took other farm commodities down the grade with cattle prices, and farm commodities kept tumbling down in price until the early spring of 1953 after the Republicans took over the White House and Congress, and abolished the Office of Price Stabilization. Then for several months the price of farm commodities leveled off and stabilized, until Benson and the Farm Bureau heads announced the flexible-support proposal of 75 percent to 90 percent, and again the price of farm commodities began to weaken and slide downward. Please read my speech of May 12, 1954, and my letter to Mr. Benson of September 30, 1955, copies enclosed. In 1954 the Republican Congress passed a farm bill providing, as you know, 82½ percent to 90 percent support prices for our six basic storable farm crops, corn, wheat, cotton, rice, tobacco, and peanuts.

We must also be mindful of the fact that the Democrats are right now in full control of both Houses of Congress, just as they were during the last session, which adjourned last August when the House of Representatives passed H. R. 12, amending the Agriculture Act of 1949, as amended, with respect to price supports for basic commodities; that bill passed the House, May 5, 1955, by a vote of 206 yeas to 201 nays, and that bill reinstated the full 90-percent supports for the 6 basic storable farm crops and which I supported, but the Democrat-controlled Senate pigeonholed the bill for purely political reasons and nothing else. But ever since that time they have been very busily engaged in trying to put all the blame on the Republican Party for the decline in farm prices. While all this is water over the dam, it does point up where, and who, is responsible for the farm problem as it exists today. The thing we are interested in today is finding the right solution to the condition in which the farmer finds himself now—not only for the farmers' welfare, but for every American who over the long pull will sooner or later all be in the same boat.

Let us who are directly interested in the welfare of the farmer speak up, and make no bones about it. Let us say to Congress and to everyone who has a responsibility in the matter, that so long as everything the farmer buys at the counter is made or processed under a system of high supported and protected wage costs from the minute the raw product leaves the farm, the mine, or the water, just so long will it be a nation must to give the farmer like protection on the products he markets, for unless the farmers' dollar buys 100 cents worth of manufactured goods at the counter, and soon, I shudder to think of the consequences to our entire Nation.

According to a recent newspaper article, Henry Wallace, now of New York, said he favors flexible parity. Mr. Wallace was Secretary of Agriculture from 1933 to 1940, inclusive. Records show that our total farm income was less during that 8-year period than it was during the 8-year period previous to 1933. And, long after Mr. Wallace plowed under crops and caused little pigs to be destroyed, and after the New Dealers had spent over $19 billion tax dollars trying to prime the pump, top hogs sold on the Chicago market in 1940 for $5.70, and over 10 million Americans were out of work; but all those problems were solved quickly by World War II. All farm prices went up and up, and 14 million Americans were employed, in uniform. Oh, how soon we forget.

Now, I don't want any more of that kind of business. So, I'll continue to cast my lot with the Republicans, and I hope you will do likewise.

Sincerely yours,

BEN F. JENSEN,
Member of Congress.

American Youth, a Most Vital Asset

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 10, 1956

Mr. VAN ZANDT. Mr. Speaker, on April 6, 1956, Adm. Arthur Radford, Chairman of the Joint Chiefs of Staff, addressed the biennial convention of the National Jewish Welfare Board, New York City, on the subject American Youth, a Most Vital Asset.

Admiral Radford's address follows:

We are met here this afternoon as privileged members of free society. Indeed, we are proud of this fact, proud of our beliefs in the right to live in freedom and liberty.

Of late, however, I have been disturbed by voices here and abroad who cry out that our beliefs are weakened and enfeebled. These voices claim that the United States is not equal to its tasks, and that world trends inevitably favor communism. They subscribe to a fashion of being cynical and even malicious about that for which the United States stands.

Now some of these voices may reflect wholesome criticism. Some may even reflect intelligent reaction against an easy-going optimism and a tendency toward self-complacency. Of this I cannot be sure.

But I am sure that if we forget our basic fundamentals and ideals, and if we do nothing to advance them, we will increase the dangers for the generations to follow.

You may remember playing baseball and how at certain times you had to come back to base and tag up before advancing without penalty.

So it is with us today. Reaffirming our age-old principles is like returning to touch base again. We reestablish contact with proven fundamentals. We make ourselves better able to live our lives, educate our young, and pray our prayers, all in freedom and self-respect.

This then becomes our American legacy to all people of all times.

Our legacy is threatened, however, by a formidable adversary—a group of men who know what they want with perilous clarity, and are determined to achieve it with violent persistency. For the Communists the present world situation is a continuation of unrest and disorders growing out of the explosive forces of modern society. Their weapons include intimidation, propaganda, and attack upon the human mind.

Indeed the subjugation of the mind and the corruption of the spirit are essential conditions to their success. As a result, one's mind and spirit constitute prime objectives of Communist activities.

Here then is the core of our struggle with Communist tyranny. Here must be raised our bastion of defense, a bastion to be defended with vigor and determination. More that that, it should be a bastion from which strong ideals can spread to drive back the forces of darkness.

For all intents and purposes, we are participants in a battle between good and evil—a struggle between light and darkness. The struggle is deadly, and it is serious. All that is necessary for evil to triumph is for good American citizens to sit back and do nothing.

MILITARY SERVICE

Now, because of the magnitude of the Communist military threat, our Nation maintains strong Armed Forces. We do this in order to help prevent war if possible, and to be ready to win it if it occurs.

Quite naturally, this affects the lives of our young people. A great many of them must devote some part of their lives to military service. In this way we help insure our survival as a nation.

This year, as last year, more men and women will be graduated from the Armed Forces and returned to civil life than will be graduated from all the colleges and universities in the country put together.

Yet, many young people have not recognized and accepted these facts. Some have heard rumors that because our draft calls currently are small, their chances of being called into military service run about 1 in 10.

This is an erroneous impression. Our experience indicates that about 4 out of 5 of our young men, who are not fathers, and who are otherwise physically and mentally qualified and available, can expect to enter military service before they reach age 26.

Today there are nearly 3 million men and women in the Armed Forces, and most of them are young. Nearly 70 percent of them are less than 26 years old. In fact, the overall average age of the American Armed Forces is slightly under 23.

I think it is unfortunate when, for the lack of a positive attitude toward military service, a young man today reaches his late teens or early twenties in an uncertain state. Such an individual then faces the draft, and sometimes has inconvenient and costly changes to make in the life pattern he has started.

Actually, military service need never be regarded as an onerous obligation, one from which the individual derives no advantages. There are some 30 or more choices to fit a young man's plan of enlisted or officer service. But none of them best fit the individual who has no plan, or who lacks the patriotic zeal to do his part for America's readiness.

It would seem wise for a young man, and his parents, to give serious thought to the time and manner in which he discharges his obligations. Selection of a specific alternative can be made in relation to a logical, progressive career plan. In many cases military service can represent a definite, constructive upward step toward one's ultimate goal.

In this regard, the Joint Chiefs of Staff are as much interested in the kind of citizen the serviceman is when he leaves the Armed Forces as we are with his training while in uniform.

You probably already know that the Military Establishment performs prodigious feats in feeding, clothing, equipping, transporting and training our Armed Forces. It spends billions on the newest weapons and on the most modern ships, planes, tanks, and missiles. It spares no effort to provide the ablest leadership in order to achieve a high degree of military readiness. These are matters you hear about almost daily.

But we are also deeply concerned with doing everything possible to see that our young citizens come out of military service strengthened in faith, morale, and dedication to our American way of life. Their dedication is of the highest consequence.

The reason is simple and clear. For all practical purposes, the best defense of our liberty is the acceptance of responsibility. Acceptance of responsibility is dependent upon citizenship training of all Americans.

Liberty is like a medallion. One side offers rights and privileges. The other side depends upon acceptance of corresponding responsibilities. For every single freedom, there is a kindred responsibility.

These may sound like truisms or ideals, and they are. But we have a way of forgetting them. A nation has need for truisms. American youth has need for ideals, and always shall. Ideals are like stars. To benefit by them, we do not need to reach them and hold them in our hands. We need them for navigation purposes. Like the seafaring man on an ocean, we need them to guide us on the right course.

THE TASK AHEAD

In our young people, we see the hope for tomorrow. They have the enthusiasm, energy, and daring so essential to the perpetuation of life. They also have the greatest stake in the spiritual, moral, and physical security of these United States. For their future is the Nation's future.

Accordingly it seems to me that it is our great American task, yours and mine, to demonstrate to our youth by our example, the basic fundamentals of freedom. The problem is not one of originating anything new. The problem is to strengthen our convictions, and thus become better equipped and more fit. We must demonstrate and teach, in the home, the church, the school, and in the Armed Forces, a growing regard for the rights—and the duties—of freedom.

Now while in the service, our young people need spiritual and moral resources to sustain them, a sense of mission to inspire them, and an abiding confidence that the people at home are with them. These compelling needs are needs which the military cannot provide alone.

For this reason, the Department of Defense relies on the resourcefulness and competence of voluntary citizens' organizations such as the National Jewish Welfare Board. I realize that for you it has been a 40-year job in which you have been seeking ways to help our young become mentally and morally stronger. I think you should press ahead with that work because it is now more important than ever.

The American youth is a vital national asset. We in the military hope our youth will always have the strength of character, the dynamic purpose, and the simple courage to hold fast to the right course in dangerous times. The security of our American way of life is dependent upon the courageous hard work of all citizens—not upon food, nor money, nor comfort—but upon plain old-fashioned fortitude of mind, body, and soul. For the more our Nation sweats in peace, the less it may have to bleed in war.

Mr. Walter A. Stewart and Flood Control

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks, I include therein an outstanding statement of Mr. Walter A. Stewart recently made before the House and Senate Appropriations Public Works Subcommittee urging accelerated flood relief and protection for the stricken areas of Massachusetts and New England.

Mr. Stewart, former able and distinguished president of the American Optical Co., is the head of the Quinebaug and French Rivers Manufacturers Association and has contributed greatly in connection with efforts to rehabilitate flood stricken area and secure adequate flood protection and disaster insurance for them. I desire heartilly to commend and thank him and his associatees for their vigorous, constructive work in relation to vital flood control problems of my district, State, and region:

My name is Walter A. Stewart. My address is Southbridge, Mass. I am a trustee of the American Optical Co. and chairman of the executive committee of the Quinebaug-French River Manufacturers Association, representing industry and the citizenry in the valleys of those 2 rivers in southern Massachusetts and eastern Connecticut. Southbridge and Webster, Mass., and Putnam, Conn., are 3 of the principal towns in the area. We were damaged to the extent of some $35 million by the floods which followed Diane last August and are here to ask you to speed up the construction of already-authorized dams in that area. Had these dams been in existence last August, the Army engineers tell us that 60 percent of the damage we suffered would have been averted. The project has been mapped and proposed by the Army engineers since 1941 and is known as the Thames River Basin project.

At this point I would like to insert in the RECORD a simple table showing past and presently contemplated expenditures for the four projects in which we are interested. Also for your information, I have here a map showing the general location of these projects, and a few pictures of last August's floods.

Quinebaug-French River Manufacturers Association

[In dollars]

	Previously appropriated	1956 (supplemental)	1957 (budget)	Estimated total cost[1]
East Brimfield	70,000	140,000	340,000	5,700,000
Westville	79,000	----------	----------	[2] 5,890,000
Buffumville	195,000	100,000	1,200,000	2,820,000
Hodges Village	----------	140,000	360,000	4,350,000
Total	344,000	380,000	1,900,000	18,760,000

[1] 1955.
[2] 1954.

At the presently planned rate of expenditure, these dams will not be completed for 9 years. With weather experts predicting that New England is in for a long cycle of hurricanes, we just can't wait that long for relief. My own company has already announced that it is going to build a new frame plant in Frederick, Md.; that one of the purposes is to spread weather risk. But most of the companies our association represents are small, one-mill operations which are dependent upon the water of our rivers and which cannot spread out into other areas. Another blow like Diane's could just put some of them out of business—a fate which neither they individually or New England as a whole can afford.

In this connection, I would like to point out that New England has received less than one-third of 1 percent of the $1.8 billion appropriated for flood control during the last 5 years, although we pay 7.5 percent of all Federal taxes. Those figures are Senator KENNEDY'S.

In general we ask, gentlemen, that the appropriations for all our projects be stepped up, in whatever amount is necessary to see their completion within 3 years. Specifically we urge you to recommend at least $100,000 for advance planning and engineering for Westville—to give us assurance that the entire system is underway.

Thank you very much.

Foreign Minister Artajo, of Spain, in Washington

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. MACHROWICZ. Mr. Speaker, the Nation's Capitol is graced today and during this week by the presence of the Honorable A. M. Artajo, Minister of Foreign Affairs of the Republic of Spain, who is being officially received and will hold conversations with the Secretary of State on important problems affecting the two nations and the free world.

I take this occasion to call to the attention of my colleagues the intelligent

and far-sighted attitude of our distinguished guest and the Spanish Government toward the menace of communism to the free world today.

The Spanish people have experienced, during their civil war, a long and bitter struggle with the forces of communism. As a result, they are well aware of the Soviet methods of penetration and terror.

The fate of the captive nations has always been met in Spain with deep and sympathetic understanding on behalf of both the people and the Government. It might be interesting to call to your attention that the Spanish Government has never recognized the Communist-sponsored regime in Poland, and still gives full accreditation to a Polish Ambassador representing the free prewar government of Poland, now in exile. On many occasions since 1945 official Spanish pronouncements were published to the effect that no lasting peace can be achieved as long as Poland, and the other subjugated nations of Europe, are not free.

Recent declarations by Generalissimo Franco and Foreign Minister Artajo confirm that this attitude in respect to the problems of captive nations is a fundamental principle of Spanish foreign policy.

On June 4, 1955, at the closing session of the International Congress in Escorila, organized by the Centre Européen de Documentation et d'Information, Mr. Artajo, who presided at this meeting, confirmed emphatically that "the liberation of the European countries occupied by communism is—from the point of view of justice—a historical necessity as well as a political one."

In an interview in January, 1956, with the representative of the Spanish paper YA, Mr. Artajo, when asked about the policy of coexistence with the Soviets, answered: "When Russia will liberate the subjugated countries, we will begin to believe in her good will of coexistence." Similar declarations were made by the head of the Spanish Government, Generalissimo Franco.

We will hail the presence of this far-sighted statesman in our presence and hope that his conversations with our Secretary of State will lead to a better understanding of the Communist menace and a more solid basis for a firm and lasting era of peace based on justice.

The Wait-for-a-Crisis Leadership of the Administration

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. UDALL. Mr. Speaker, it seems beyond argument that our foreign relations have taken a bad turn in the past year. Recent news from Iceland, Ceylon, and the Middle East has been disquieting.

Yet, surprisingly, in the face of these developments and the obvious success of the new Russian tactics, the President and Mr. Dulles seem undisturbed. They have not brought forth new policies and seem bent on exercising a type of leadership which waits for crises to develop before plans of action are formulated.

With the campaign season approaching, there is always a suspicion that judgments by Members of Congress are tinged with political considerations. Consequently, to support my statement, I present today two articles and an editorial which appeared last week, written by Walter Lippmann, Joseph C. Harsch, and the editorial from the Washington Post and Times Herald. An article of similar tenor by James Reston, of the New York Times, was placed in the Appendix yesterday by the majority leader, Mr. McCORMACK, and appears at page A2832 of the RECORD. These gentlemen and the Post and Times Herald are not habitually critical of the administration and its policies, and their observations should have particular force at this time.

The articles and editorial follow:

LEADERSHIP AND STRADDLE

(By Walter Lippmann)

A great deal is being said abroad and here at home about how necessary and urgent it is that this country give firm and clear leadership to the non-Communist world. It is easier to say that than to do it. But I wonder whether the President and Secretary Dulles have not in fact come to think of the world situation in terms other than that of leadership, whether, indeed, they are trying to lead.

In the past few months Mr. Dulles has found himself entangled in an extraordinary series of dilemmas—in issues in which he is damned if he does and damned if he doesn't. He has been caught in the Goa dilemma between Portgual and India. In the Jakarta dilemma between the Netherlands and Indonesia, in the north African dilemma between France and the Algerian Arabs, in the Palestine dilemma between Israel and the Arabs, and in the Baghdad dilemma between Iraq and Egypt, in the Cyprus dilemma between Britain and Greece, in the Persion Gulf dilemma between Saudi Arabia and Great Britain, and so on and on.

This is all rather different from what it used to be in the pre-Geneva phase of the cold war. Then the issues were between Communists and anti-Communists. The line of leadership was self-evident. But now the issues which plague Mr. Dulles are very often primarily among our allies and the peoples that we are courting.

Mr. Dulles is in theory a believer, as he said in his famous Life magazine interview, in taking a clear position so that foreign governments will not miscalculate. In actual practice, beginning with Quemoy and Matsu and going on to Palestine, he has devoted an immense amount of his energy trying not to make clear choices in the dilemmas which confront him. I am not attempting here to criticize or to judge but only to describe when I say that a large part of our current policy is to work out ways of straddling the many horrid choices with which we are confronted.

The old much simpler days are passed when there was one great adversary and leadership consisted in opposing him. The great adversary is still there, to be sure, but he is playing a secondary part in the troubles of France in north Africa and of Great Britain in the Middle East.

The President and Mr. Dulles give the impression of being men who are not so much trying to lead a grand alliance as they are to disentangle themselves from its quarrels and to become if possible mediators. This is their line in Cyprus, in Palestine, and in effect in north Africa. They are trying not to become involved and committed and not to offend either side too much. Naturally enough, no one is very much pleased.

One wonders where the policy of straddle is heading, and what conception of America's role in the world is implied by it. Are they trying to accommodate themselves to the idea that there is an irresistible revolutionary tide of anti-Western passion rising in Africa and Asia, that they cannot hope to resist it, that they might in some places manage to appease it? It sometimes looks that way.

WARNING FROM ICELAND

On March 28 Members of Iceland's Althing passed a resolution calling for the withdrawal of all NATO armed forces from their country.

This action of the Althing was merely an expression of opinion as of the moment. It did not call for implementation by the Government. It was done shortly before an adjournment in the context of an election approaching on June 24. It may or may not lead to a formal withdrawal by Iceland from the NATO alliance.

The resolution was not, in other words, an act of Government, but only an expression of opinion by a Legislature which may well change when that Legislature reconvenes and also when the economic consequences of a withdrawal of the 7,000 United States troops in Iceland are more fully considered.

But when the Members of the Althing passed the resolution they gave the most specific expression to date of a point of view which has been stated with increasing frequency in countries which participate in the North Atlantic alliance.

The Foreign Minister of France and the President of Italy are two other recent sources of the opinion that the NATO alliance as it stands today is becoming obsolete and that the first need of the West in the post-Geneva world is not for a military alliance but for a much-improved economic and political association of the western nations.

There is no longer any doubt that a revolt against NATO is building up and that Iceland is merely the first country in which a legislature has gone one step beyond philosophic expression of the revolt.

One specific and immediate condition which lies behind the Iceland resolution is worthy of note.

In 1952, the first full year after the United States negotiated the arrangement under which United States radar stations and troops operate in Iceland, the United States purchased 25 percent of the total exports of Iceland. These consist mostly of fish in various forms—fresh, dried, tinned, and frozen. Iceland, incidentally, pioneered frozen fish sticks.

But in 1955 sales of Iceland's fish in the United States had declined to 13 percent of Iceland's exports.

In 1952, the Soviet-bloc countries took 7 percent of Iceland's fish exports. By 1955, Soviet-bloc purchases had gone up to 28 percent, or more than double United States purchases.

This change in the direction of Icelandic trade is not entirely the fault of the United States or its citizens. Wages have gone up sharply in Iceland, largely due to strike action by unions dominated by Communists. The price of Iceland's fish has gone up with wages and the fish has lost its competitive advantage of 1952 in United States markets.

But the cause of the decline in Icelandic sales in the United States is irrelevant to the result. The fact is that the Soviet bloc has become a more important customer of Iceland than the United States.

This provides an easy excuse or rationalization for a people long disturbed over what they regard as a threat to their ancient culture from the intrusion of an alien culture. The shift in trade has acted as a precipitant of older grievances. Iceland is questioning an alliance which cuts across the pattern of its trade in addition to the presumed pattern of its culture.

This is an inevitable process. Alliances which long survive are military expressions of cultural, political, and economic patterns. The incipient revolt against NATO springs, wherever it is found, from dissatisfaction with the cultural, political, and economic underpinnings of NATO.

In late February, President Gronchi, of Italy, came to Washington preaching a shift in emphasis in the NATO community from militray to economic collaboration. Behind it lies a leftward political inclination in Italy and economic needs which are not being satisfied by the United States.

On March 2, Foreign Minister Pineau, of France, let go a verbal blast against United States foreign policy. Behind it lay the fact that at that time the Franco-United States alliance was not of any visible help to France in its effort to save its great economic and political stake in Algeria.

The incipient French revolt has been stemmed momentarily by a strong endorsement of the French Government's new policies for Algeria. The Italian protest was not lodged in an acute form. It may well be that Iceland's tentative move will be reversed by new arrangements—perhaps by finding a way to revive the United States market for Iceland's fish.

The fact remains that the allies of the United States are decreasingly interested in the military alliance and increasingly interested in improving their economic and political relations, obtaining more support for their political purposes, and regaining more cultural independence. What the Althing did in Iceland is a warning that verbal protests had best be taken more seriously; a warning that unless Washington can put the western community on a broader basis it may some day find its community of military interests disappear without a successor.

THE CRISIS IN NATO

The crisis which has been confronting NATO for many months past is now plain for all to see. Iceland's action in calling for the withdrawal of all NATO forces is merely the latest, though the most spectacular, sign. The force in Iceland is American. It is there in virtue of a treaty concluded directly between the United States and Iceland at Iceland's request—a force which is mainly concerned with manning an airbase. It operates as the anchor of the northern flank of NATO for instant activation when NATO Europe is attacked. How Iceland could pull any weight as a member of NATO without permitting use of the base, as she proposes, is a mystery.

Iceland's request will not go into effect immediately. NATO must have 6 months' notice, and another 12 months is the due of the American Government as the initial contracting party. Furthermore, if the moderate views of the Independence Party should prevail at the polls in June, a reversal of policy is still poosible. What has prompted the Icelanders to demand withdrawal? Undoubtedly in a country with a population of only 155,000, the economic impact of a contingent of foreign troops is a constant irritant. It said from Reykjavik, however, that the easing of international tension is responsible. In other words, the seeming defection is the direct result of the summit conference at Geneva. In Iceland, where there is no military establishment, the view quickly gained favor that the parley at the top had come to what was tantamount to a nonaggression pact. That this was a mistaken view was argued in vain by this newspaper among others after Geneva.

However, more than the Geneva spirit is to blame for Iceland's default. What is equally at fault is the slackness and lack of coordination on the political level at NATO. Iceland, along with Greece, actually voted against a fellow NATO member, France, in the last U. N. Assembly. What an indictment of the lack of even diplomatic concert in NATO. Moreover, Iceland has been having trouble with another fellow NATO member, Britain, on fisheries. These divisive tendencies in NATO have been developing progressively.

When he was Supreme Commander at SHAPE, Dwight D. Eisenhower declared "Unity of NATO must rest ultimately on one thing—the enlightened self-interest of each participating nation." What have the great powers done to develop that self-interest? Nothing. Iceland is unable—and for that matter so are the other small powers in the Atlantic coalition—to detect any self-interest attaching to NATO membership. This is a challenge to the NATO Council when it meets in May. A political body corresponding to the military and economic groups must be created as a condition of NATO's very survival. Otherwise Soviet Russia, which, incidentally, is reported recently to have made an advantageous trade deal with Iceland, will simply divide and conquer what we are pleased to call the Atlantic Community.

Memorandum to Congress on H. R. 9065 Providing 15-Percent Increase in Benefits Under the Railroad Retirement Act

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. VAN ZANDT. Mr. Speaker, thousands of active and retired railroad employees and their families are concerned over the future of H. R. 9065 which is now pending before the House Interstate and Foreign Commerce Committee.

The following editorial which appeared in the March 31, 1956, issue of Labor explains in detail why early congressional action is warranted on this important legislation:

MEMO TO CONGRESS ON RAIL PENSION BILL

Members of the House Interstate Commerce Committee have had full opportunity to get the facts about the proposed amendments to the Railroad Retirement Act, as brought out at the committee's recent hearings. Other Members of the House and Senate have been presented with a one-sided picture, painted in daily newspaper editorials stirred up by some high officials of the Treasury Department and Budget Bureau.

Labor believes all Members of Congress, and the public, are entitled to hear both sides. The side not presented in the hostile editorials follows:

First, there is no question that retired railroad workers, their wives, widows, and other dependents, need increases in their pensions and benefits. Members of Congress know that from letters they receive from their constituents. The rail union chiefs are doing their duty in trying to get the needed increases.

Second, now as always, both Congress and the union representatives are trying to keep the railroad retirement fund financially sound, so its income will equal its outgo in the long run. So the needed pension and benefit increases will be matched by an income increase.

That's what the rail unions propose—a 1-percent raise in the retirement tax on the employees and likewise on the employers, lifting the tax on each from 6¼ to 7¼ percent.

Now let's lay the rest of the cards on the table, face up for everyone to see. The amendment bill proposes that railroad retirement taxes shall not be counted as earned wages in computing the Federal income tax. The effect would be to save most of the employes about as much money as they would pay in increased pension tax. The hostile editorials say there's something wrong about that. Well, let's ponder it:

In the first place, a rail worker never sees the money deducted from his pay for retirement taxes. The latter are an unavoidable expense, which he must pay to hold his job and earn a living on the railroads. In that respect, the pension tax is just like other "occupational expenses" and "business expenses" which are deductible on income tax returns.

They are too numerous to list here, except for a couple of examples. Professional men can and do deduct their bar association and medical association dues, thus reducing income taxes paid by lawyers and doctors. Union dues likewise are deductible. That's because such dues are working expenses, just as rail retirement taxes are.

Railroads are allowed to deduct their retirement taxes as a business expense. Why shouldn't the roads' employees be allowed to do the same sort of thing? Here's how it works out now:

Theoretically, the carriers and their employees are supposed to contribute "50–50" to the retirement fund. Actually, every $1 the employees contribute costs them 100 cents. But each $1 from the railroads costs them only 48 cents. They get back the other 52 cents by deducting the dollar from the profits on which they pay the 52 percent corporation income tax.

As a result, the 7¼ percent retirement tax proposed in the amendment bill would cost the carriers only 3.48 percent. The employees would pay their full 7¼ percent, unless they are allowed to offset the tax as proposed in the bill.

Even after such offset, most employees would pay at least 5.8 percent of their 7¼ percent pension tax, or nearly twice the 3.48 percent retirement tax actually paid by the carriers. That's because the offset would save the employees at the most only the 20 percent personal income tax on their contributions, while the carriers save 52 percent corporation income tax.

Also consider this: Railroads and other corporations are allowed to greatly reduce their income taxes by "charging off" in 5 years the cost of plants and equipment which won't actually wear out for as long as 40 years. A railroad worker "wears out" on the job in 40 years or less, but he gets no "charge offs" to reduce his income taxes while he's still able to work.

Both England and Canada allow workers to deduct their retirement system contributions from the wages and salaries on which they pay income taxes. The Treasury, Budget Bureau, and the hostile editorials say it would cost too much to do that here, and they present greatly exaggerated cost figures in an attempt to scare Congress and the public.

Congress should not allow this cost talk to divert its attention from the purpose of the bill—to give retired railroaders and their families badly-needed aid and the kind of

tax treatment they should have had long ago. If a proposal is right and fair, it should be approved, even if it means some loss of revenue. Congress and the Treasury could more than make up the loss by plugging 1 or 2 of the many tax-law loopholes which allow rich men to dodge their share of the burden.

Congressional Investigations

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Tablet, of Brooklyn, N. Y., dated March 24, 1956:

CONGRESSIONAL INVESTIGATIONS

The Tablet believes congressional committees investigating infiltration and subversion have performed a tremendous task for our country. Were it not for the House Committee on Un-American Activities, the Subcommittee on Internal Security, and the Senate Permanent Investigations Subcommittee the Communists would not have been unmasked, nor would their plots have been revealed, but these insidious conspirators would now have it their own way.

That the committees have been effective—even though they have at times only scratched the surface—is clearly proven by recent activities to destroy them, so as to make it possible for security risks, if not traitors, to hold Government posts and to make it easier for subversive propaganda to be carried on. As a matter of fact, as the Tablet pointed out following the organized campaign to destroy Senator JOSEPH R. MCCARTHY, there has been a seemingly systematic attempt to make the anti-Communist appear to be the Nation's peril and the Communist or Communist suspect or fellow traveler the champion of liberty. The unfortunate part is that Government officials and agencies—some of them put into office to clean out traitors, borers from within, and poor security risks—have actually been engaged in covering up a bad situation or declaring war on those who seek to safeguard the Nation. We offer the following recent examples of what has been going on:

1. Secretary of Commerce Sinclair Weeks and former Foreign Aid Chief Harold E. Stassen last Friday admitted that the United States had softened East-West trade barriers permitting—and unknown to the Nation—war material to go to Soviet Russia. And this to the detriment of our country. When Mr. Stassen denied war items were being shipped to the Soviet, members of the committee, both Republicans and Democrats, demanded a list of the items sent to the Soviet. The Senators were denied the list; the Government was protecting someone. Secretary Weeks, however, did assert the strategic items sent to the Soviet war machine in a decontrol bill represented a loss rather than a victory for our Nation.

2. Chairman FRANCIS E. WALTER, of Pennsylvania, of the House Committee on Un-American Activities, asserted that the National Labor Relations Board, once charged with being honeycombed with Communists, is still threaded by the same anti-American forces. Representative WALTER's investigators subpenaed about 20 NLRB workers to ask them about Red activities in the Government agency. When they appeared they brought from NLRB Chairman Boyd Leedom a letter ordering them not to tell anything to the Members of Congress. The stand, it appeared, was based on an Executive order written by Harry Truman in 1948 and it has still been continued by the administration which was elected to house clean and get rid of the Red and pro-Red saboteurs. Representative WALTER asserted the "most appalling" thing to emerge from the sessions was "the shocking indifference which enabled these people to pursue their objectives within the very Government of the United States."

3. The Senate Internal Security Subcommittee, under its very competent counsel Robert Morris, is continuing to bring up some startling information.

For instance, one of Mr. Morris' first tasks was to have a look at the Tass News Agency, which operates in this country as freely as any other news agency. Harry Freeman, of the Tass News Agency, said of himself:

"As a correspondent, I have had the opportunity to cover many of the important events of the past quarter of a century, including the San Francisco Conference of 1945, which founded the United Nations, most of the national conventions of the Republican and Democratic Parties, etc. Twice in the past I have been elected to the vice presidency of the Foreign Press Association, and I served for 2 years as a member of the standing committee of United Nations correspondents."

On the subject of his relationship to the Communist Party, Freeman testified: "To simplify the procedure, your honor, on these questions about Communist Party membership, and so on, the answer to Communist Party membership is 'No,' going back to August 1941. My answer to any question prior to that period is to invoke my privileges under the fifth amendment and to decline to answer."

This is only one example of the type of testimony that this committee has been putting into the record.

While these congressional committees have been courageously fighting a battle as important as if they were on the battlefield defending our Nation's cause, the enemy has taken great confidence by the activities of subcommittees, under Senator HUBERT H. HUMPHREY, of Minnesota, and Senator THOMAS C. HENNINGS, Jr., of Missouri, who have given the impression that the enemy of our country is not the Communist but the anti-Communist and that everything possible should be done to protect persons charged with belonging to the Red conspiracy from being exposed. These two subcommittees receive powerful backing from the Americans for Democratic Action, the Fund for the Republic and the press and radio liberals and pinks whose great apprehension seems to be that the Communists will be unmasked.

We believe the time is opportune for the Government to declare itself. If it is considered un-American to investigate or expose subversives or security risks, let the officials say so and Congress can act. On the other hand, if it is American and patriotic and aids national defense to investigate, inquire into and unmask those who would destroy our country from within, the Government should cooperate with and support congressional committees. It should, moreover, support honest employees like Donald Dozer, Bryton Barron, John Shaughnessy, and many others, including a whole contingent of men who told Senator MCCLELLAN and his committee that they protested against the sending of copper and other war items to the Soviet, as well as NLRB employees who opposed being gagged when they appeared before Congressman WALTER.

A national political campaign will soon commence. The majority of the people are looking with anxious eyes on Government officials, and those endeavoring to unseat them, to see who will best cooperate with, endorse and fight alongside of the congressional committees in exposing the enemy from within that works for the enemy from without.

The Paper Curtain Around the South

EXTENSION OF REMARKS
OF
HON. E. L. FORRESTER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. FORRESTER. Mr. Speaker, on Monday, April 2, 1956, the Macon News, a daily newspaper published at Macon, Ga., carried an editorial entitled "The Paper Curtain Around the South." That editorial is so completely true that I wish that everyone could have the opportunity of reading it. The editorial is as follows:

Grover Hall, Jr., of the Montgomery Advertiser, is doing for the Deep South what Jack Kilpatrick, of the Richmond News-Leader did for Virginia. Both, solely through the power and fire and brilliance of their editorial pages, are leaders in the fight to show that the South has a case, and a good one, for desiring to maintain segregation.

Southern newspapers edited for southern people by southern editors ought to be inspired and enrolled in this fight against the hypocrisy of the northern press. Unfortunately, however, there are some southern papers which, through absentee ownership, lack of courage, or lack of conviction, act as if the furor over desegregation is beneath comment.

The Montgomery Advertiser has vigorously attacked an old target of ours: the paper curtain through which northern newspapers and magazine editors clearly see the faults of the South, but which prevents them from seeing their own situations. In many instances where both races exist in large numbers, this results in as strict a segregation policy as can be found in Dixie.

"Do as I say, not as I do," these Yankeeland journalists seem to be telling us.

Editor Hall put a staff writer to checking the society editors of a number of non-southern big-city dailies by phone. "Do you publish Negro bridal photos in your society section?" they were asked.

The New York Times ("all the news that's fit to print") had published one in its entire history. The New York Herald Tribune had printed "four or five" in its lifetime. The New York Journal-American, none. These three newspapers are published in an area including more than 1 million Negroes in its population.

Chicago has nearly 700,000 Negroes, but the Chicago Daily Tribune ("world's greatest newspaper") has never used a picture of a Negro bride in its society section. Neither has the Los Angeles Times.

The Washington Post printed a Negro bridal photo once and received so many protests from white readers that no pictures of any brides are used. The society editor of the Detroit Free Press reacted nervously to the Advertiser's inquiry, admitted none had been published recently, asked time to think it over and submit an answer by mail, and then apparently forgot about it.

The St. Louis Post-Dispatch society department doesn't use photos of colored brides and always delicately suggests that there are Negro publications in the city which will print them.

There is a large Negro population in each of these cities. Presumably there is Negro

society in each of these communities, and naturally there are brides from among influential and respected Negro families. Yet these papers want to mix the races in the schools and segregate on the society pages where their white readers might object. Most southern papers, on the other hand, make no bones about wanting to keep the races segregated and segregate within their pages by running some Negro bridal pictures in their special colored sections.

Having by enterprise found all this out, Hall, editor of the Advertiser, offered the story to the Associated Press. The Montgomery AP bureau chief questioned the wisdom of filing the story. The Atlanta bureau took a quick look and decided it was not of interest to the public, so the story of northern racial discrimination was not relayed to other papers for publication.

The Associated Press is a cooperative newsgathering venture, jointly owned by all member newspapers. But it is controlled by a board of directors dominated by the big northern papers.

The other big wire service, the United Press, is a private corporation controlled by the Scripps-Howard newspaper chain interests. We have ourselves seen instructions from New York to United Press in Atlanta concerning the handling or substitution of words in racial stories.

This instance of how northern papers give intensive coverage to southern segregation while following a policy of segregation on their own society pages is only one of numerous other similar hypocrisies.

The only way the South can break through the paper curtain which nonsouthern publications have erected around us is to tell the story and to keep telling and keep telling it.

The South is not alone in this fight. There are millions of people in the North and the West who support the South's position, but the paper curtain prevents us from ever hearing much about it.

Mr. Speaker, I do not believe there is anyone in public life that is not familiar with this paper curtain referred to in the above quoted article. The newspapers have a great responsibility and privilege. I commend the Macon News for this splendid article and I hope that all newspapers in our country will follow its example.

Aspects of the Farm Problem

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. PHILBIN. Mr. Speaker, in connection with various farm measures under consideration of the House, it is pertinent to note at this time that the idea of taking cropland out of production in order to limit general agricultural output is not new. It was carried on very extensively in the early days of the New Deal by Secretary Wallace.

In fact, the original AAA program very closely resembled present proposals. It will be recalled that the original program was predicated on the allotment or quota system with limits fixed for the output of each farm to be administered by an Agricultural Adjustment Administration proposing to pay farmers for taking their land out of crop production.

As the law first operated in 1933, the individual wheat grower signed a contract with AAA to decrease his wheat acreage by 15 percent in the first contract and then he received a bounty of 30 cents a bushel on a percentage of his crops. Almost at the same time cotton and tobacco were covered and the rental of the land taken out of production was fixed according to the valuation of the land. Cotton growers, for example, were paid from $7 to $20 an acre depending upon the previous average yield of the land.

The Government hoped to take 10 million acres out of cotton then in the ground and actually that quantity of cotton was plowed under and the potential cotton crop for the year thus reduced by 4 million bales. In 1934 a similar program was inaugurated for corn, tying in a hog-reduction program. The objective was to reduce corn output by 20 to 30 percent and hog output by 25 percent. Corngrowers would receive 30 cents a bushel based on the appraised yield of the corn acreage rented. In that 1934 campaign about 1,150,000 signed by producers taking about 13 million acres of corn out of production and reducing hogs by about 13 million.

When these programs were underway, then came one of the worst droughts in a generation. In addition to the production cuts made by the Government, Mother Nature in her own caprice cut the corn crop until the original reduction program of AAA was actually doubled. The result was the smallest crop in 40 years. Because of the relationship between the corn supply and hog production, the raisers of hogs likewise reduced far beyond the intended figures and cut the number of hogs about 28 million head to about 35 percent of the base for 1932–33 production.

The 1934 curtailment operations in corn and hogs cost the Government over $350 million, the bulk of which went into the Corn Belt States, as presumably the bulk of payments under the proposed 1956 soil-bank measure would go. In those 2 years certain growers were paid $200 million for taking acreage out of production. The second cotton curtailment program started in the beginning of 1934 when 2-year contracts were offered to the farmers. Over a million individual contracts were signed under this program in which the Secretary of Agriculture rented and took out of production some 15 million acres and paid the growers about $115 million for cutting down the cotton acreage. The tobacco crop in 1934 at about the same time was reduced about one-third below production in the base years. Rice followed suit.

In the light of the drought of 1934, however, the following year what acreage not only did not shrink any further, but certain growers increased their sowing in 1935 by 6 million acres. You will recall that the Supreme Court decision in January 1936 declared the AAA program unconstitutional and the Department of Agriculture thereupon revamped its program building it around the voluntary system of conservation of land by which farmers were given direct payments for certain soil-conservation practices. The above figures were taken in the main from an article in Hoard's Dairyman magazine by Mr. A. B. Genung, of the New England Farm Foundation, and I believe that the statements presented are correct in every respect.

I desire to illustrate by presenting this statement that, insofar as Congress is concerned regarding the agricultural program, in one part of it at least, we are right back where we started from in 1933 when cotton was plowed under, little pigs were wastefully slaughtered, and the principle of scarcity was pursued as a national agricultural policy.

I think that all Members of this body are exceedingly anxious to help the farmers of the Nation. I would like to state that I, for one, do not believe that this Nation can long remain prosperous if over one-third of its population on the farms and in related activities are suffering from declining income.

It is certainly unsound and unjust to make the farmer buy in a protected market and sell in an unprotected one. It is unfair to apply price fixing to farm products in an otherwise free economy.

But it is also very unsound to tax the American people billions of dollars to support farm prices at a high parity level and as a result roll up in the warehouses of the Nation unprecedented, huge, and growing surpluses that hang like a black cloud over domestic and foreign markets and thereby serve to defer indefinitely the sound, permanent solution of farm problems that must be found some day, if we are to keep the American economy sound, healthy, and free.

On the other hand, I believe that any program we adopt should follow a line of sanity, soundness, and prudence and should be tied to our American enterprise system of which the American farm is probably about the best example. Let us seek solutions, not be along the lines of mass regimentation and price controls because those are the discredited methods of collectivism rather than the successful practices of free enterprise.

I hope that the Congress will work out a satisfactory program to solve the farm problem in the national interest as well as in the interest of the farmers.

Menominee Indians of Wisconsin Thank Indian Affairs Subcommittee for Considerate Treatment

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. REUSS. Mr. Speaker, a delegation of Menominee Indians from Wisconsin recently visited Washington to testify before the Indian Affairs Subcommittee of the House Committee on Interior and Insular Affairs in support of H. R. 9280, a bill to provide that the ter-

mination of Federal supervision over the Menominees must be accompanied by the consent of the tribe and by protection for their forest. The following tribute to the Indian Affairs Subcommittee and to its able chairman, the Honorable JAMES A. HALEY, paid by James G. Frechette, of the Menominee Indian Advisory Council, of Keshena, Wis., who was chairman of the delegation to Washington, was published in the Shawano (Wis.) Evening Leader of Saturday, March 31, 1956:

FAITH RESTORED IN UNITED STATES, SAYS FRECHETTE ON DELEGATES RETURN

The following report on the Menominee Indian delegation's trip to Washington is by James G. Frechette, advisory council chairman.

The Menominee tribal delegation is very grateful that the House Indian Affairs subcommittee has favorably reported out H. R. 9280 (Congressman REUSS' bill), the bill to provide for the consent of the tribe and protection for our forests in connection with the termination of Federal supervision.

During our stay in Washington we testified before the committee that the Menominee Indian people had unanimously voted for this bill. The important accomplishment of this action is not realized by many people; hence, so much opposition and criticism had to be overcome by our delegation. There is only one place where the Menominee Indian Tribe will have an opportunity to be heard on the dangers that we now see as a result of Public Law 399, the Federal termination bill, and that is to get the attention of the committees of Congress that have to deal with Indian affairs. The only way you can get this attention is by the introduction of a bill. It was surprising to the delegation to find so many good friends of the Indian people anxious to see that this tribe is fully protected in the future. Not only have we met new friends but the many leaders and telegrams that were sent to Washington supporting our cause was very gratifying. We also had the support of some very fine American organizations; we wish to have them know how grateful we are for their interest in our affairs.

Even though Congressman MELVIN R. LAIRD, of the Seventh Congressional District, did not support the Reuss bill, we are sincerely grateful to him that he supported the cause of the tribe that the Federal Government should pay for the cost of the studies and planning that is necessary under the termination bill. It was through the work of all of us that the Laird bill, H. R. 6218, was allowed to remain as a separate bill. Congressman REUSS, at our suggestion, graciously had the funds part of his bill removed so that Congressman LAIRD's bill would not in any way be affected by the amendments in H. R. 9280.

We still feel there is a great deal of misunderstanding between all the parties involved in this termination move. We are at a loss to know why so much emphasis was placed on the Wisconsin Legislative Study Committee. Although we appreciate their help very much and we wish to continue the good work that has been done to date, the law still reads that the Menominee Indian Tribe must, by December 31, 1957, present a plan or plans to the Secretary of the Interior which has the effect of relieving the Federal Government of all future responsibility to the Menominee Indian Tribe as a tribe of Indians. We still feel that this responsibility must rest with the tribe and the future recommendations must come from the tribe; after all, what is the motivating plan behind the termination bill—isn't Congress trying to prove that the Menominee Tribe of Indians are fully capable of handling their own affairs? Our interpretation of this capability includes the hiring of experts and the seeking of good counsel and advice by people who we believe are in a position to give us such aid. Naturally we place the Wisconsin Legislative Study Committee in this position and above all, we wish to continue the good relationship we established with the University of Wisconsin. These people have been concerned in the light of expert advice and in our estimation this was the outstanding move the tribe made in trying to meet the mandates of Public Law 399.

If Congress will now follow the subcommittee's action the tribe will be in a better position to do the planning necessary to insure the tribe adequate protection for its future economy. We are more confident that we can produce such a plan by December 31, 1957, the date which the committee wrote into the bill as the target date. This would, in turn, give the tribe and the Secretary of the Interior a full year's time to December 31, 1958 to determine whether the plan was feasible or not.

The reception we have received in Washington restores our faith that the United States Government intends to respect our treaty rights and deal fairly with its Indian citizens.

Mr. Speaker, the Shawano Evening Leader is a lively and well-edited daily newspaper serving Shawano County, in which most of the Menominee Reservation is situated. For many years the Evening Leader has given wholehearted support to the Menominee Tribe in its struggle to protect the forest and to safeguard the tribe's future. An editorial comment on the report of the Menominee delegation, published on Tuesday, April 3, 1956, follows:

THE REUSS AMENDMENT

The Menominee Indian delegation has returned from a trip to Washington, D. C., and the Menominee leaders have expressed themselves as pleased with the House subcommittee's report of the Reuss bill.

The Reuss bill provides for the consent of the Menominee Tribe before Federal termination is effected and further provides for the protection of the Indian forests.

This measure must still be approved by the full committee of the House and must pass the House and Senate before it becomes law. Thus the proposal which the Menominee officials are happy with is still not yet a reality.

As Mr. James Frechette, the chairman of the Menominee Advisory Council, has pointed out the law as of now reads that the Menominee Indians must by December 31, 1957, present a plan to the Secretary of the Interior—which has the effect of relieving the United States Government of all responsibility to the Indians.

It is right and proper that responsibility should be placed upon the Menominees to work out a plan by which their assets would be protected. It is, and should be, their job to work out their own future destiny in cooperation with the University of Wisconsin specialists and the members of the State Indian committee.

At the same time, they are entitled to assurance that there will be adequate protection of their property during the process of termination. The recommendations of the Indian subcommittee best assures the tribe of the protection it is entitled to have.

What happens to the Menominee assets ultimately will be the responsibility of the Menominees themselves. But in connection with termination they are entitled to congressional assurance that their property will be protected. Therefore the Congress should not hesitate in enacting the Reuss amendment.

Camp Drum

EXTENSION OF REMARKS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 10, 1956

Mr. KILBURN. Mr. Speaker, I include herewith an editorial from the Watertown Daily Times, the largest newspaper in my district, having to do with the important question of a permanent status for Camp Drum.

Here is one of the few camps that can train a division, give them winter training, and so far the Army has refused to put it on a permanent status although they have put several down south on that same status. This camp is near the big centers of population in the northeastern part of the United States and a logical place for permanent training.

When I tried to get the Air Force to use Camp Drum in place of spending millions and millions of dollars on a new installation at Plattsburg the Army refused to give up Camp Drum for that purpose and still they only use it for summer training.

If a big corporation ran their investments in big installations the way the Army and Air Force do they would soon go bankrupt. This big expensive installation should be used, and I hope the Members of the House will read this editorial and use their influence toward that end:

CAMP DRUM

Once again the Department of the Army has turned down Camp Drum as a permanent installation. Congressman CLARENCE E. KILBURN was so informed yesterday through a communication from Secretary of the Army Wilber M. Brucker. Congressman KILBURN proposes to continue his efforts to put the camp on a full-time year-round basis. He is justified in continuing this effort because certainly the answer that the Army gave yesterday was inadequate.

The Army talks about reviewing its requirements for permanent installations so as to determine the most efficient and economical utilization of facilities, based upon military requirements and long-range estimates pertaining to the troop strength of the Army. There is an explanation that is an explanation.

It is odd indeed that the generals who have had anything to do with this Camp Drum always emphasize its value as a year-round installation but nevertheless find few who will listen to them in the highest reaches of the Army. Recall the remarks of all the generals who come up to the camp from time to time to inspect it and to plan its future. They all comment the same way, that the camp is important not only in times of peace, but in times of war, that it should be a year-round operation. General Crittenberger, former First Army commander, now retired, said so on several occasions; General Dahlquist, the former commandant of the Army field forces, and his predecessor, Gen. Mark Clark. They, of course, are out of the Army now, having earned, because of their judgment and able service to the country, an honorable retirement. On the other hand, up-and-coming generals like Lt. Gen. Bruce Clarke have counseled often and loudly in behalf of greater Camp Drum utilization. The counsel seems always to fall on deaf ears.

Congressman KILBURN is on strong ground when he continues to present the cause for keeping the camp open. The Department of the Army says no, and it appears that the Congressman has another big assignment ahead of him. That assignment is changing the negative approach of the Army to a positive approach. This whole area stands ready to back the Congressman in any way that it can when he makes his new effort.

Correcting an Injustice

EXTENSION OF REMARKS
OF
HON. WILLIAM K. VAN PELT
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. VAN PELT. Mr. Speaker, in the pioneer days of aviation, a courageous Wisconsin man demonstrated that the airplane could be used as an effective weapon in naval warfare. That man was the late Gen. Billy Mitchell. His contribution to the defense of our country has never been officially recognized. The honor is long overdue. The justice of such action is ably expressed in an editorial which appeared recently in the Sheboygan, (Wis.) Press, which I request permission to include in the CONGRESSIONAL RECORD. The editorial follows:

CORRECTING AN INJUSTICE

Representative CARL VINSON, of Georgia, chairman of the House Armed Services Committee, is opposing a resolution to posthumously commission Billy Mitchell as a major general.

His contention is that the resolution would have the general effect of eliminating from the record the verdict of the Army court martial that tried and convicted Mitchell. Vinson believes that it is for history to decide whether Mitchell was right or wrong.

William Mitchell, who died February 19, 1936, was a controversial figure for most of his 56 years. He served in France during World War I as commander of the American Army Air Service and continued to hold that position after the war. He held the rank of brigadier general.

Mitchell became an international figure in 1921, when he demonstrated to the world that planes could sink a battleship. The German battleship *Ostfriesland*, a war prize, was selected as the target of bombs released from planes. As distinguished guests aboard the transport *Henderson* watched in awe, the fledgling American Air Force, led by Mitchell himself, blew the battleship to the bottom of the sea. Mitchell and his supporters said the demonstration proved the battleship was obsolete as then designed. It proved that airplanes were supreme over all ships at sea unless ample air protection was available.

Later the same year Mitchell's planes were permitted to conduct a new demonstration against the battleship *Alabama*, obsolete and retired. The first bomb released by the squadron sank the ship almost immediately.

However, the Navy refused to accept the evidence. There were also differences of opinion in the Army. As a result of his strong advocacy of air over naval power, Mitchell was reduced to the rank of colonel in April 1925 and shunted off to Texas. When the Navy's dirigible, *Shenandoah*, was wrecked that year during a storm over Ohio with the loss of 14 men, Mitchell charged that the high command of both the Army and the Navy were "guilty of incompetency, criminal negligence, and almost treasonable administration of the national defense." The charges led to a court-martial in which Mitchell was found guilty of insubordination. He was sentenced "to be suspended from rank, command, and duty with forfeiture of all pay and allowance for 5 years."

President Coolidge confirmed the verdict and sentence on January 26, 1926. The same day Mitchell resigned from the Army.

There have been repeated efforts since then to correct as far as possible the injustice that was done to Mitchell. The posthumous award of the Congressional Medal of Honor was voted in 1946. The effort now is to restore the rank to which he was entitled as the result of his services to the country by amending the records of the Department of the Army "so as to carry Colonel Mitchell as a major general at the time of his death." The Army has interposed no objections to the resolution.

Our opinion is that history has passed judgment on Billy Mitchell and that this judgment is entirely in his favor. He pointed the way. Had his ideas won prompt acceptance, a great many of the sea losses in the early days of World War II might have been averted. Adoption of the resolution by Congress, we are sure, would reflect the desires of the American people.

Worse Than No Bill

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MILLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. MILLER of New York. Mr. Speaker, under leave to revise and extend my remarks, I am inserting in the RECORD for the consideration of every Member who is really interested in solving the farm problem the following editorial which appeared in the Cleveland Plain Dealer of April 7:

WORSE THAN NO BILL

Practically everyone admits that the makeshift farm bill which has been hammered together by the Senate-House conferees, isn't much of a bill, and it was no surprise when Charles B. Shuman, president of the American Farm Bureau Federation said: "It is too late for a soil-bank plan to be of any benefit to farmers this year."

Speaking before the Bankers Club of Chicago, Shuman said:

"Even if legislation were adopted within the next week, it still would require at least 60 days to work out the administration details, inform farmers and put the program into operation. This would mean that farmers would have to plow up crops if they wished to participate in the soil bank, and I don't think such a wasteful and destructive plan would set well with the American people."

We don't think so either, Mr. Shuman, and we agree with you when you say: "Farmers will have every justification for holding Congress accountable for any bad farm legislation they might pass now under the guise of the urgency of the situation. * * * The only way Congress can make up for the political juggling that has been carried on at the expense of the farmer and the general public is to stay on the job until it develops a sound farm bill in the long-time interest of agriculture."

What's wrong with the makeshift bill? Here are five cardinal faults, as explained by Secretary Benson:

1. Mandatory 90 percent of parity supports for 6 basic commodities—a program for 6 commodities isn't a program for agriculture.

2. Dual parity for wheat, corn, cotton, and peanuts—a double standard which would make a joke of parity, and which would make parity a statistical stairway to the Promised Land.

3. Multiple price plan for wheat—it would hurt the small farmer by cutting his income and would increased the redtape which he abhors.

4. Mandatory price supports for feed grain.

5. A boost in price supports for dairy products.

"Together," said Benson, "these proposals add up to a hodgepodge which would increase surpluses as fast as the soil bank would reduce them. I see no logic in spending a billion dollars to pull down surpluses and spending another billion to pile them higher."

The President is expected to veto the emasculated farm bill, and if he does it may not prove to be the political hazard many experts fear. For there are many farmers like Shuman, who would prefer no farm bill at all to a bad bill—and who would prefer to wait for one that makes sense. This could be possible after the election heat has cooled down.

To Seek a Permanent Cure

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Muncie (Ind.) Star of March 27, 1956:

TO SEEK A PERMANENT CURE

Hoosier Senator HOMER CAPEHART has offered to the Senate a farm proposal which may justifiably be called exciting. It is a proposal that Government research in the industrial uses of farm products, long carried out on a limited scale by the Department of Agriculture, be elevated to the status of the major phase of the farm program.

All of American industrial experience suggests that Senator CAPEHART is merely stating a simple truth in saying that the possibilities of expanding the market for farm goods by this means are limitless.

Expansion of the farm market is the only kind of measure which can possibly bring permanent solution of the farm problem. The opposite measure—reduction of supply—has been the objective of the present Federal program since its inception during the New Deal. To date all the effort directed at this objective over more than 20 years has not been able to bring even a single season's respite from the problem. If the program ever were successful in shrinking production to the size of the market, there could be no sense of assurance that the market would not then contract further and bring the problem back.

If on the other hand relief from the problem can be obtained by expanding the market to absorb the existing production, even if production then expanded further, as it undoubtedly would, still there would be every possibility that a continued balance could be maintained by perpetuating the ex-

pansive trend of the market, once established.

We hope Congress will be quick to grasp the potentialities of this proposal.

We question the proposition that the idea should be implemented by creating a new administrative agency and a new section in the Department of Agriculture. To be sure this has been the standard method of launching a project in Washington over the past 25 years or so. But it is not necessarily the best method.

The establishment of new agencies would be dramatic. But it also would be time consuming. Funds and energies for a considerable period at the start of the program would be dissipated in the building of a new segment of bureaucracy. Only when it has firmly laid the groundwork for its own perpetuation and expansion is a new Federal bureau ready to go to work at the task assigned to it.

It might be more effective to put the funds and energy into direct expansion of the existing research program of the Department of Agriculture. Surely sufficient emphasis could be achieved in the passage of the act to give the program initial impetus equivalent to that achieved by the psychology of establishing a new agency.

The basic proposal is a good one. The mechanics are important to the end that energy be applied as soon and as directly as possible to the achievement of the mission, with a minimum of diversion into the fields of new buildings, new plants, and new staffs.

Senator CAPEHART has hold of something.

Do Nothing for Whom?

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. McCORMACK. Mr. Speaker, I include in my remarks the following interesting and sound editorial entitled, "Do Nothing for Whom?" appearing in the Boston Post of April 3, 1956:

DO NOTHING FOR WHOM?

Republican strategists are toying with the idea of labeling the 2d session of the 84th Congress a "do-nothing" Congress because the Congress, according to the spokesman, has not enacted legislation requested by President Eisenhower.

GOP planners may have the good sense to think it over before they let themselves in for a severe boxing around from organized groups apart from the Democratic Party who may very well inquire, "Do nothing—for whom?"

President Eisenhower submitted 201 requests to Congress in his several addresses between January 5 and March 19. These include the state of the Union, farm program, school budget, economic report, health, national parks, immigration, and foreign-aid messages.

The Congress is at the moment weighing 25 of this number in the farm bill which is in a conference committee. The President may not like what Congressmen are doing with his requests for farm legislation, but it cannot be claimed they are doing nothing.

The 201 requests submitted, however, include 62 requests submitted to previous sessions of Congress which were turned down and which have now been resubmitted. It is reasonable to say that Congress has acted once on 62 of the requests in previous sessions. There are 56 requests having to do with foreign policy, but the major bill is the one seeking $4,900,000,000 for foreign aid for fiscal 1957, and the requests, 7 in number, surrounding that bill.

There is always the danger of calling attention to the fact that important groups have been slighted in the President's requests for legislation, and that the farmers, who seek immediate relief, would get little of immediate assistance from the President's proposals.

In 1948, when former President Truman assailed the 80th Congress with such success, it was an alliance of labor and farm voters who accounted for the astounding success of Truman's campaign.

The President has only eight requests for labor legislation, one for equal pay for equal work, and the other for Federal regulation of private health and welfare funds, and renews six old requests. Similarly he has only 6 requests for military and veterans' legislation; all but 2 of these renewed requests were turned down previously by Congress.

Only two tax proposals came from the President; 1 to continue existing corporation taxes for a year, and the other to continue existing excise tax rates for a year. The rest of six tax requests are renewals of previously rejected requests, none of which would give the broad base of the taxpayers any tax relief.

In 1948 the Truman do-nothing charges against the 80th Congress specified that nothing had been done for the majority of taxpayers, which is a very different kind of appeal from charging a Congress with doing nothing because it finds nothing politically appealing in a President's program.

Tribute to "Lightning Joe" Collins, Noted Louisiana-Born Soldier

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. HÉBERT. Mr. Speaker, a great soldier has just retired from the United States Army.

I would have liked to have written something about the retirement of Joseph Lawton Collins who was appointed to the United States Military Academy from my congressional district, but my old colleague, Charles L. Dufour, of the New Orleans States, has written a better piece and expressed much more eloquently what I would have liked to have done.

Instead of an attempt to gild the lily I prefer to submit for the perpetual record the column which Mr. Dufour wrote upon the occasion of General Collins' retirement and to take this opportunity of concurring in Mr. Dufour's observations.

It was my privilege to return to New Orleans with General Collins when he was given a hero's welcome following the end of the World War. At the city-wide banquet which was given in his honor it was also my privilege to present him to his friends and neighbors from the city which sent him to West Point.

Mr. Dufour expresses the sentiments of all Louisianians in this piece on General Collins.

Here it is:

TRIBUTE TO "LIGHTNING JOE" COLLINS, NOTED LOUISIANA-BORN SOLDIER

(By Charles L. Dufour)

After 45 years in the United States Army, Louisiana's most noted soldier since P. G. T. Beauregard has retired.

I speak of Gen. J. Lawton "Lightning Joe" Collins, VII Corps commander in Europe in World War II and later Chief of Staff in Washington.

"Lightning Joe" called on President Eisenhower at the White House yesterday as part of his mustering out and he got from his old chief a warm "good luck to you, boy."

General Collins was one of the great American soldiers of World War II. His first mission after landing at Utah beach was to move across the Cotetin Peninsula and cut it in two to isolate and capture Cherbourg.

On June 26, 20 days after the invasion of France, Cherbourg fell to Joe Collins' troops.

"General Collins had conducted against it a relentless offensive," wrote General Eisenhower in Crusade in Europe, his war memoirs, "and as a result of the operation justified his nickname, 'Lightning Joe.'"

Joe Collins' next contribution came in a holding operation at Mortain, where the Germans poured in heavy tanks and powerful infantry elements to prevent an American breakout from the peninsula.

Several years ago, when Gen. Collins was at Tulane to receive an honorary degree, he spoke briefly at the T-Club breakfast on the similarity of modern war to football.

"In both," he said, "the strategy is to hit the enemy where he does not expect us to strike. And the tactics are similar. The line buck or quick opener in football has its equivalent in battle in the penetration. The envelopment is equivalent to the end run."

And then General Collins cited as an example of blocking in war, the great defensive battle at Mortain in August 1944.

"The Germans, pouring in everything they could to contain us in the Cherbourg Peninsula, counterattacked powerfully at Mortain," said General Collins. "It was the privilege of my corps to be in that great defensive battle and while we blocked, Georgie Patton and his Third Army made an end run into the open for the breakout."

What Ike thought of "Lightning Joe's" blocking, he puts into his book: "Had the German tanks and infantry succeeded in breaking through at Mortain, the predicament of all troops beyond that point would have been serious."

As the Allies swept across France to the German frontier "Lightning Joe's" divisions found themselves before Aachen, one of the gateways into Germany. "The city was stubbornly and fiercely defended," wrote Eisenhower, "but Collins, with his VII Corps, carried out the attack so skillfully that by October 13 he had surrounded the garrison and entered the city."

In the famous Battle of the Bulge, General Collins' men fought with distinction. When the Rhine was reached it was Collins' job to capture Cologne. "The VII Corps," wrote Eisenhower, "was quickly able to begin its southward attack, and from that moment on success attended us everywhere along the front." The VII Corps met heavy resistance at first, but overcame it.

Continued Eisenhower. "It continued a spectacular advance and on March 5 was on the outskirts of Cologne. We had calculated that this city would be stubbornly defended, as Aachen had been. * * * By the afternoon of March 7, Collins had taken over the whole city. Since we had estimated that his corps would be engaged there for a period of days in a heavy seige, the quick capture had the effect of providing us with additional divisions to exploit other victories to the south."

In every operation, General Collins justified the "Lightning Joe" label he had re-

ceived early in the invasion. His VII Corps, as Eisenhower summed it up "had been in the original assault against the Normandy beaches and soon thereafter had captured Cherbourg, had fought all the way across northwest Europe from the coast of France to the river Elbe."

Speed was the hallmark of "Lightning Joe" Collins and he knew how to inspire it in his men. General Eisenhower tells the story of how he got action in bridging the Rhine.

He summoned the corps engineer Col. Mason J. Young, and said: "Young, I believe you can put a bridge across the river in 12 hours. What kind of a prize do you want me to give you for doing it in less time than that?"

"I don't want anything," replied Young, "but if you can promise a couple of cases of champagne to my men we shall certainly try to win them."

"All right," said Collins, "I'll get the champagne if you get me a bridge in less than 12 hours."

In 10 hours and 11 minutes, the 330-yard bridge was completed.

At the start, I said that Joe Collins was Louisiana's greatest soldier since Beauregard. I would like to amend that, I think "Lightning Joe" is Louisiana's greatest soldier.

The ILO

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. KELLEY of Pennsylvania. Mr. Speaker, over a period of some months now the question has been raging as to the advisability of continuing the participation of the United States in the International Labor Organization. This has been spearheaded by Mr. William L. McGrath, an employer representative.

I, having participated in this conference on four different occasions, am very much opposed to such a notion. The International Labor Organization has been a valuable instrument among the nations to raise the standard of employees. A thought often overlooked is that raising the standard of living in underprivileged nations opens up markets for United States goods. Therefore, it is good business.

With your permission, I am including the following editorial from the New York Times of Saturday, April 7, which is an extremely good review dealing with this subject:

IN DEFENSE OF THE ILO

Attacks on the International Labor Organization, spearheaded by the United States Chamber of Commerce, urgently call for a rally in its defense. "One of the oldest and most useful international instruments for the development of a better way of life for all people," President Eisenhower has called it.

The drive to discredit the organization has grown out of the complaints of William L. McGrath, the most recent United States employer delegate. He has charged that the participation of Communist states in the ILO has made a mockery of its tripartite, employer-labor-government character, and has recommended that the United States pull out, or at least refuse to name another employer delegate. However, the chamber and the National Association of Manufacturers have recently nominated Charles H. Smith, Jr., for appointment by the President—but only for 1 year. In the meantime both organizations have called for Executive and congressional investigations of the ILO to find out whether this country should continue as a member.

We see no need for any such inquiry. The ILO's record, open to anyone who takes the time to scan it, supports the President's appraisal and documents the conclusion that the United States should not only continue its membership, but also increase its financial support. To do otherwise would merely strengthen the Communist influence, which is surely just what the chamber is seeking to avoid.

The recent acceptance of the U. S. S. R. as a member of the ILO did, of course, accentuate a weakness in its present structure—a structure designed to give employers and labor together an equal representation with governments in its councils. This aim is deflected when a government is the employer and workers are state employees, as in the U. S. S. R. and other Communist countries today—and that goes also for most Fascist-type dictatorships. In these cases governments get more influence than was originally intended. On the other hand, this situation is not nearly as serious as it may seem to the uninformed.

In the first place, the ILO itself is getting set to deal with this very problem. A special committee has recently made a thorough study of the degree of independence of employers and labor in every member country, to be used in deciding whether representation changes should be made. Also, the Communists have very little influence in the ILO, even as things stand today. The voting strength of the 8 Communist countries on the governing body is only 1 to 39, while in the organization as a whole they have but 32 out of the 284 total votes. The U. S. S. R. has so far failed completely to retard ILO activities directed against Communist practices. What influence it has will obviously be less if the United States continues as a member than if we should withdraw. (Those who want an excellent digest of the facts should write to the United States Department of Labor for its memorandum of February 1, 1956, on United States Participation in the ILO).

Furthermore, we do not share the doubts of the chamber of commerce about the value of the ILO in general. We agree with J. D. Zellerbach, United States employer delegate to the ILO from 1945 to 1948, who recently testified before the House Foreign Affairs Committee, that the ILO "has helped promote our national interests in many useful ways." Among others, he said, "it has encouraged positive programs for alleviating poverty, insecurity, and human exploitation, which are among the principal causes of social upheaval, revolution, and war." As he said, abandonment of our ILO membership would be morally and politicall indefensible.

Ray Willis—A Lovable Man

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Liberty (Ind.) Herald of March 29, 1956:

RAY WILLIS—A LOVABLE MAN

Raymond Eugene Willis was a lovable man. He was a type seldom seen in American politics. It is doubtful if any man in the State had more friends than Willis.

When he died last week, at the age of 80, his passing left sadness in many hearts, and by no means all of them Republican hearts.

Willis was primarily a newspaperman, even though he left it for the United States Senate in 1941 after his second campaign. He was the Republican nominee in 1938 and was defeated.

But he came back 2 years later to win by the largest majority ever rolled up by a senatorial candidate in the State's history. It was a memory that gave him satisfaction in later life after his own party denied him the nomination for reelection in 1946.

But this treatment never embittered Willis. It must have hurt him, but he never complained. He accepted the verdict and he worked loyally for those who had opposed him.

Willis enjoyed the friendship and confidence of many national figures, including the late Senator Taft and former Speaker of the House JOSEPH W. MARTIN.

He was the kind of a man who inspired confidence, and he always proved himself worthy of it.

For most of his married life his wife was an invalid in a wheelchair. That was something else of which he never complained. He lavished him love and loyalty upon her for more than half a century.

It was typical of his character.

Indiana has had many more colorful figures in politics.

But it never had one more steadfast than Ray Willis.

The Black Market Nickel Situation

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. McCORMACK. Mr. Speaker, under leave to revise and extend my remarks in the Appendix, I include three letters which I have received from Col. Willard F. Rockwell, chairman of the board of the Rockwell Spring & Axle Co., on the black market nickel situation.

On March 15, 1956, and March 20, 1956, I placed information in the CONGRESSIONAL RECORD concerning the black market situation in the use of nickel by American manufacturers. I indicated the hardships that are being caused to many small businessmen particularly in the plating industry when they are forced to buy 64½-cent nickel at prices ranging from $2.50 to $3 per pound.

I am enclosing with my remarks the three letters received from Col. Willard F. Rockwell, chairman of the board of Rockwell Spring & Axle Co. Colonel Rockwell states that:

Inasmuch as our company paid over $750,000 in 1955 directly for the purchase of black market nickel, and we do not furnish more than 7 percent of all the nickel plating required on the 1955 output of 8 million passenger cars, I estimate that over $10 million was spent by the entire automotive industry. It is probable that much more was spent, because one of the "Big Three" bought all

the available Chinese coins in Asia which had a nickel content, and recovered the nickel—which is a very expensive process.

He states further that:

Since the first of the year, the Defense Department has announced that it will attempt to find out how much nickel allocated to military contractors was actually used, which may disclose how much found its way into the black market. We have absolute proof that some steel companies have sold nickel which they received in excess of their requirements for military orders.

More significant is the statement of Colonel Rockwell that:

It is obvious that when big users are allocated only 25 percent of their requirements at the quoted price, but can buy the balance of 75 percent by paying a 300 percent premium, there is no real shortage which could not be alleviated by sufficient release from the Government's stockpile to break the black market.

I agree with this statement that there must be sufficient nickel available if any amount can be obtained on the black market at several times its regular market price. It also becomes more apparent every day that Dr. Flemming, as Director of the Office of Defense Mobilization, is the key person to bring relief to the nickel users of this country. He is in the position to determine the adequacy of the stockpile. He also is in the position to see that parties who illegally sell defense-rated nickel, and there have been a number of these, should be properly dealt with. He also has the primary responsibility to see that businesses are kept in good condition and not forced to the wall since they are necessary for mobilization purposes. The Secretary of Commerce shares responsibility in this program since he has a duty to protect business and also to determine that the allocations of nickel are equitably made. The correspondence which I am including in the RECORD indicates that no one is doing a good job in determining the adequacy of allocations nor the uses to which allocated nickel are made. Copies of this correspondence are being referred to both Dr. Flemming and Secretary Weeks for comment.

Mr. Speaker, these matters are of great concern to me. It appears that the situation is merely drifting with responsible agencies sticking their heads in the sand.. Of most concern to me is the statement or inference by responsible businessmen that, "there may not be a defense need for the stockpile program for nickel with most of the world's supply in friendly hands in the Western Hemisphere; that there would be a surplus of nickel if the stockpile program were discontinued and that there must be some reason for the stockpile other than the defense need. Such inferences when analyzed lead to these queries: (a) Who is hurt and who profits by the stockpiling of nickel and an artificial shortage created thereby, and (b) who would profit and who would be hurt if the policy were changed?

The letters follow:

ROCKWELL SPRING & AXLE CO.,
Coraopolis, Pa., March 23, 1956.

Hon. JOHN W. MCCORMACK,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN MCCORMACK: As a native of Boston and an alumnus of Mechanic Arts and Massachusetts Institute of Technology, I was very much pleased to have your letter of March 21 and to know that you are ready to take vigorous action on the nickel situation.

If you will obtain the United States Department of Commerce report: "A Review of Nickel in the United States, 1946–56," dated December 1955, you will find that most of my statistics are confirmed in that official report. On page 3, it states that 235 million pounds of nickel are assured to industry for 1956, including defense requirements of 65 million pounds. On page 5, you find this paragraph:

"The industry also points to the importance of developing markets in the face of a surplus of nickel which will occur when the stockpile is completed. It is necessary to begin now to build markets toward an increased consumption goal. Achievement of this goal is deemed to be in the best interests of both industry and the Government."

I enclose photostat of page 38, which shows the damage being done to the plating industry, its expansion, and its future, by the shortages.

It is obvious that when big users are allocated only 25 percent of their requirements at the quoted price, but can buy the balance of 75 percent by paying a 300-percent premium, there is no real shortage which could not be alleviated by sufficient release from the Government's stockpile to break the black market. The Office of Defense Mobilization announced yesterday that there would be a 300-percent increase in the amount allocated to industry for the second quarter of 1956, compared to the first quarter of 1956.

The enclosed memorandum on the Idaho Maryland Mines Corporation versus the United States may be of interest to you because the Court of Claims has decided that the gold mine owners are entitled to damages as a result of the action of the War Production Board in closing the mines in 1942. The court found that there was no necessity for doing it, and there were no benefits to the war effort. As a result of this decision, it is quite possible that the Government and its overburdened taxpayers will have to pay for the mistake of the War Production Board, and the precedent may encourage other victims of Government edicts to file suits when they can show damages.

I expect to be in Washington on Wednesday and Thursday of the coming week, and shall try to see you at your convenience to express my appreciation of your interest.

Respectfully yours,

WILLARD F. ROCKWELL,
Chairman of the Board.

ROCKWELL SPRING & AXLE CO.,
Coraopolis, Pa., March 23, 1956.

Hon. JOHN W. MCCORMACK,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN MCCORMACK: Replying to your letter of March 21, enclosed please find copy of speech which you requested. On page 27, you will find the correct quotation: "Foreign military experts ridicule this 5-year stockpile, because they say the next all-out war will involve the use of atomic weapons, and if it lasts 30 days there will be no human beings left to carry on."

When I was Assistant to the Secretary of Defense in 1953, I was sent to Europe to attend the NATO conference in Paris on the allocation of munitions orders which were being paid for by the United States Government, and I also inspected munitions plants in Greece, Italy, France, Holland, Norway, and England for the purpose of determining whether they were operated on an economical basis. I visited many defense plants in these countries, accompanied by officers from the Army, Air Force, and Navy.

During my 1953 visit to the Defense Ministry in England, I was asked why our country was attempting to establish 3- to 5-year stockpiles of conventional munitions, military machines, and goods in NATO countries, and accumulating a 5-year stockpile of strategic materials in the United States. I replied that if I knew the official answer, I had not been authorized to give it, and, because of my official standing, it was improper for me to express my private opinion, but I would be pleased to report their opinions of our policies when I returned. The spokesman for the British Defense Ministry then told me that it was their opinion, concurred in by the other NATO nations, that the next war would not last more than 30 to 90 days, because the use of atomic weapons would devastate the earth if continued over a longer period. I have heard our atomic scientists express the same opinion, and I am sure that you have heard similar reports.

Inasmuch as our company paid over $750,000 in 1955 directly for the purchase of black market nickel, and we do not furnish more than 7 percent of all the nickel plating required on the 1955 output of 8 million passenger cars, I estimate that over $10 million was spent by the entire automotive industry. It is probable that much more was spent, because one of the big three bought all the available Chinese coins in Asia which had a nickel content, and recovered the nickel, which is a very expensive process. The alloy steel mill which furnishes our requirements is the fourth largest in the country, and their management tells me that they are buying 75 percent of their requirements in the black market at $2.80 per pound, and the balance at the market price of about 70 cents per pound for nickel alloy material. Our company has spent $70,000 in this first quarter of 1956, over and above the quoted market price of under 90 cents per pound for nickel anodes in carload lots, so the situation is far worse now.

The Big Three are our principal customers, so we had expanding business in 1955, while some nickel-plating competitors who supply bumpers to the small independents had a very great decline in their business, but they received the same amount of nickel anodes in 1955 which they received in 1954. Their supplies were never audited by anyone in either the nickel industry or the Federal Government. Allocations are based now on actual use in the first 6 months of the year 1950.

Since the first of the year, the Defense Department has announced that it will attempt to find out how much nickel allocated to military contractors was actually used, which may disclose how much found its way into the black market. We have absolute proof that some steel companies have sold nickel which they received in excess of their requirements for military orders.

The Secretary of Commerce informed me indirectly that: "When nickel was decontrolled in November 1953 the Director of the Office of Defense Mobilization received assurance from industry that an equitable distribution of the nondefense nickel remaining after all defense rated orders were filled would be maintained. To the best of our knowledge and belief this undertaking has been faithfully carried out." We know that the promise to Dr. Flemming was not kept, because no one checked us or our competitors, and if anyone had checked the steel companies, they might have found how many sold excess supplies.

Just this morning, we were offered 100,000 pounds of nickel by a New York house, which refuses to name a price, but asks us what we are willing to pay. There are dozens of black market operators, but, as Dr. Flemming told you, there is no penalty on their operations. Sooner or later, a Government investigation will be started, but for many of the small users, the only result will be a post morten verdict.

As I was a member of the executive committee of the Army and Navy Munitions

Board during World War II, and was Acting Chairman of the Munitions Board in 1953, I know that all military requirement estimates contain at least 100 percent padding as a factor of safety. I know you have received information to this effect through your own strenuous efforts to introduce economy in military operations. There seems to be no doubt that the large supply of nickel in the black market is derived chiefly from excessive amounts allocated to military contractors and subcontractors, which are never audited by anyone.

A letter will follow answering some of your other questions which require more time. I am sure all industry, large and small, will appreciate your efforts to penetrate the mystery of the black market in nickel. I assume that the motorcar companies are not complaining because they have been under Government fire for many months, as you know, for their credit and dealer policies.

Thanking you for your interest, I am,

Respectfully yours,

WILLARD F. ROCKWELL,
Chairman of the Board.

ROCKWELL SPRING & AXLE CO.,
Coraopolis, Pa., April 2, 1956.

Hon. JOHN W. MCCORMACK,
Congressman From Massachusetts,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: With your letter of March 21, you included a copy of your letter to Dr. Flemming on January 11, 1956. (Printed in the CONGRESSIONAL RECORD March 15, 1956.)

Assuming that the questions asked in the Flemming letter are based on testimony given to your committee by Dr. Flemming, it appears that your committee has not received current information which is common in the nickel-plating trade.

If Dr. Flemming believes that "probably 96 percent of the nickel consumed in 1955 came from market-price sources," he is very badly mistaken. Our company spent $700,000 above the market price last year, and over $780,000 in the first quarter of this year. We were notified that ODM had arranged to increase the release for civilian use by 50 percent for the second quarter of 1956, compared to the first quarter. We have just been advised that we shall receive 15 percent less nickel in April than in the first quarter, although the Government records indicate that the nickel-plating industry is suffering most from the shortage.

Allocations to industry are based on any 6 months' period from January 1, 1949, to June 30, 1950, and we know that some companies are doing less business now, while some are doing more than they were 6 years ago. We believe gray market nickel comes from the excessive amounts given to companies which are doing less business. We know that much of the black market nickel comes from Government contractors who sell their extra military or AEC allotments in the black market, which is illegal. There is no law against the gray market, but ODM received a promise from the nickel industry in November 1953 (date of United States decontrol) that nickel would be distributed equitably. Dr. Flemming's report that an audit had been made in September 1955 indicates that he talked to producers, and not to consumers. It is strange that anyone making an audit would not ask the biggest consumers in the industry, and it certainly shows a disregard of small business not to find out how the small plating companies have existed. With the present price of $3 per pound in the gray market, it is possible that some consumers make more profit by selling nickel anodes than they could make by normal plating operations.

Our company has been forced by Government edict to give up some of its 90-cent nickel anodes to be replaced by nickel at $1.36 per pound, which represents higher cost Government purchased nickel from mines with poor grade ore. It certainly does not seem fair to ask the nickel-plating industry to carry the entire extra cost of this defense item, and then share all the other extra defense costs through their tax payments.

If the ODM has made a survey report, as they told you, prior to January 11, I cannot understand why they have not asked our company and the big three of the automobile companies where they are getting their nickel, which information would quickly disclose the extent of the gray and black markets.

You asked Dr. Flemming, "What right of appeal is afforded businessmen who feel that the present allocation system is not fair and equitable?" I have appealed to the Department of Commerce, to Senators and Congressmen, and to the nickel producers almost daily for 2 months, and have aroused very little interest in some quarters. The action of your committee resulted in the increased allotment for civilian use, but the International Nickel Co., through its agent, the McGean Chemical Co., immediately notified us of a 15-percent cut in our April quota. I am convinced that our purchasing agents are right when they tell me that every increased Government release has placed more nickel under the control of the gray market profiteers.

Senator CAPEHART told me that your joint committee intended to cross-examine some of the Government officials last Friday, but the adjournment of Congress on Thursday for the Easter vacation made it impossible, and most Government officials were out of reach or out of Washington.

In view of the fact that the gold-mine owners have won a decision in the Court of Claims that they are entitled to damages because their operations were closed down by WPB edict in 1942, we are asking our attorneys to investigate the possibility of a similar suit against Government officials.

We talked to your assistant, Mr. Ward, last Wednesday. He was not only very helpful, but his military experience has made him familiar with the military padded requirements which are probably the principal source of black market nickel.

Thanking you again for your interest, I am,

Respectfully yours,

WILLARD F. ROCKWELL,
Chairman of the Board.

Thoughtless Criticism

EXTENSION OF REMARKS
OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 10, 1956

Mr. DEROUNIAN. Mr. Speaker, what critics of the Secretary of State fail to comprehend—perhaps because they have not given it sufficient thought—is that the Secretary thinks first and then talks, as is obvious in his recent message to the country, here repeated by columnist David Lawrence in his article appearing in the Washington Evening Star of March 28, 1956. This is a tremendously important statement which should be thoughtfully read by everyone:

CRITICISM OF DULLES APPRAISED—SOME WOULD OVERLOOK THE VALUE OF PERSONAL VISITS TO OTHER NATIONS

(By David Lawrence)

Some Americans occasionally become so provincial that they don't see the forest of world affairs for the trees of political partisanship and pettiness.

At a time when bold, imaginative policies are needed "to win the minds of men"—as the call for international understanding is so often phrased—the criticism now is being advanced by partisans here that Secretary of State Dulles does too much traveling.

Democratic Senators, possibly for lack of any other issue, are foisting on their constituents this kind of criticism. The other day, for example, one Democratic Senator said of Secretary Dulles: "He has spent weeks of precious time doing what others could do just as well on his behalf—indeed, I think better. * * * He belongs at home. He should stop talking and, if it is not out of order, start thinking. Mr. Dulles should cease being a salesman and start being a statesman."

Such talk might be understandable if it came from a Republican isolationist, but when it comes from an internationalist Senator on the Democratic side in a public speech, it causes wonderment, though in a political year anything of a critical nature that belittles the Secretary of State is considered by some politicians to be permissible even it it does tend to weaken and discredit America in the eyes of people abroad.

Mr. Dulles, in his speech last Friday night, gave his answer over the radio to criticisms of this sort, but the Democratic Senator in question made the above-quoted speech the next evening just the same. Mr. Dulles had said:

"I have just returned from a 19-day trip which took me to 10 countries of Asia. It gave me the chance to talk intimately with the leaders of each of these countries. That is a great aid to good international relations. We can, of course, write each other notes. But talking face to face is the best way yet invented for enabling men to understand each other.

"I also took part in the annual meeting, held this year at Tokyo, of the heads of our 14 United States missions in the Far East area. I discussed our policies with them and answered their questions and received their suggestions."

What many Americans do not realize yet is that the airplane has made it possible for a United States Secretray of State to make a trip to 10 countries in Asia and be away from his desk only 19 days. European foreign ministers have always preferred personal contact to note writing, especially since the distances between their capitals are short. But an American Secretary of State traveling around the globe is something new. It pays dividends over and over again in moral values.

For every time a Secretary of State visits another country, the newspapers there give big space to his friendly utterances. It is publicity not usually obtainable for the American viewpoint and reaches millions of people whose friendship is important to the United States in the battle against Communist imperialism. Likewise, when a Secretary of State visits a small nation, it is considered a compliment by the people who are visited.

Why, for instance, did President Eisenhower go to Geneva except to show by his personal attitude that the American people wanted to be known as friendly to the people of Soviet Russia? Why did Bulganin and Khrushchev go to Yugoslavia and India, and now plan to go to Britain? Why is Nehru planning to come to Washington? Why is Mr. Eisenhower thinking about returning the visit of Nehru by going to India?

The answer is that all these missions serve a tactical purpose in the new battle of ideas.

Couldn't ambassadors do the same thing? Hardly—because the prestige of a top man representing his government and his people means more than 100 notes of old-fashioned diplomacy. The ambassadors themselves clamor for such visits and do much to pave the way for the success of these missions.

But what about the Department of State while the Secretary is absent? On important matters he can always be reached by radio telephone, or by cable. On the usual questions of administration, the Department of State has a large staff of executives with specific responsibilities for decisions relating to different areas of the world. This goes on even when the Secretary is at his desk.

The average voter isn't interested in making Mr. Dulles punch a time clock in his office but is anxious for the Secretary of State to do what he can to advance the cause of world peace even if, as President Eisenhower has so often said, it means traveling to the ends of the earth.

AVC Asks Arms for Israel To Meet Communist Bloc

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 10, 1956

Mr. MULTER. Mr. Speaker, I wish to direct to the attention of our colleagues the following statement issued in February 1956 by the American Veterans Committee, concerning the Egyptian-Czech trade agreement. The statement is prefaced by a resolution which the committee adopted in November 1955 in urging that the United States provide Israel with ample arms and military equipment for defense.

WHEN IS AN ARAB STATE A SOVIET SATELLITE?

"The unchanging goals of the United States are world peace and the defense of the free world. In its partnership with non-Communist nations the United States should help strengthen all forces devoted to peace and democratic institutions.

"THE MIDDLE EAST

"The Middle East situation has become explosive again—tensions between Israel and the Arab nations are aggravated by the Communist decision to supply arms to Egypt and other Arab states. Russia's entrance into this area introduces the serious threat that hostile, warring Arab nations will soon have not only arms superiority but external support for aggressive actions. We support the United States desire to effect a security guaranty to both Israel and the Arab States through the United Nations, but until such guaranty is effectuated we urge that the United States provide Israel with ample arms and military equipment for defense." (From the International Affairs Platform. Adopted by the American Veterans Committee, November 1955.)

Over 6 months ago Egypt entered into an arms deal with Red Czechoslovakia. Friendly warnings from the United States and other western nations that Communist arms and trade might lead to Arab political dependence on the Reds, have been characterized by Egyptian spokesmen as "meddling" and "interference." There is, nevertheless, growing evidence that Egypt has moved far down the road that leads to the status of a Soviet satellite. Egypt provides a case history of what can happen when a nation, for whatever motives, seeks Communist aid for the solution of its problems.

Evidence of Cairo's shift in the Kremlin's direction has appeared almost daily in reports published in the government-controlled Egyptian press—most influential in the Arab world—and in radio broadcasts emanating from Cairo. If corroborating evidence is needed, it can be found in responsible American newspapers and magazines such as the New York Times, Time magazine, Newsweek and U. S. News & World Report.

ANTIWESTERN PROPAGANDA

The 6 months since Nasser announced the Czech arms deal have witnessed a rising crescendo of antiwestern propaganda both in Cairo press and radio. In this campaign against the free world, the United States is target No. 1, closely followed by Britain and France, and daily the Arab masses are subjected to heavy doses of antifree world hatred. Conversely, nothing unfriendly is said about the Soviet European bloc and Red China, and the net effect has been to pave the way for deeper Communist ideological penetration. Here is the documented record:

"The United States suddenly is the butt of attacks more vitriolic than at any other time in Egyptian-American relations. Russia, on the other hand, is receiving unprecedented bouquets. The voice-of-the-Arabs radio broadcasts originating in Cairo speak of the Soviet Union as being sincere, honest, and impartial in its attitude during the present arms dispute. Some Arab leaders are drawing contrasts between what they term an understanding Russia and the imperialistic United States." Cairo dispatch, U. S. News & World Report, October 14, 1955.

"CAIRO, December 1.—The United States today is Egypt's official whipping boy. Every day the state-controlled press and radio are lashing out at Uncle Sam. An Egyptian propagandist told me frankly that the people are being conditioned to an anti-American feeling 'in case we decide to turn it on full force.' * * * We are accused of trying to destroy Arab unity, we are subtly ridiculed and our motives are suspect. In news stories and feature articles are planted the seeds of suspicion and hate." (Dispatch by Staff Writer William Longgood to New York World-Telegram and Sun, December 1, 1955.)

"CAIRO, January 14.—A new voice is reaching out to the people of the Middle East and Africa with growing strength and influence. * * * The 'Voice of the Arabs' is rapidly becoming the most influential propaganda medium in this vast area that has so lately sprung into the limelight as a new arena of the struggle between the great powers of the East and West * * *. Its news and political commentary never varies from the policies of the Governments of the sister Arab States of Nasser * * *. But the voice's broadcasts have brought official protests to the Egyptian Government from the State Department in Washington, from the British and French Foreign Offices and more recently even from the Governments of the sister Arab States of Iraq and Jordan. The latest protest came from the newly named Jordanian Government of Premier Samir el-Rifai who complained * * * that the 'Voice of the Arabs' had a strong influence in stirring up the violent anti-West riots that ended only after a military state of emergency had been clamped on the entire country." (Osgood Caruthers, New York Times Cairo correspondent in the New York Times, January 15, 1956.)

CAIRO RADIO SPEAKS

"Justice and logic require that we now defend and not attack Russia, and that we now attack and not defend Britain and America which have shown falsehood, deceit, fallacy, and ill will." (Al Akhbar, daily, quoted by Cairo Radio, October 14, 1955.)

"The United States, O Arabs, does not want to offer aid which is not backed by influence. She does not want to loan funds without interests in some form of colonization. * * * Russia, on her part, seizes the golden opportunity and begins to express support and get closer, and indeed to offer economic aid, financial or technical, without America's excessive demands. * * * Russia is fully ready to offer aid without desiring to buy consciences, freedoms or even homelands. * * * Russia is courteous, helpful and cooperative toward us, while * * * the United States shuns us, lets us down and prevents aid from reaching us." (Cairo, Voice of the Arabs, October 11, 1955.)

[What is democracy?] "There is, for instance, the United States, the stronghold of democracy. It is the capitalists who rule the country while the masses are busy chasing dollars and watching baseball games. Everyone knows the Soviet Union is a democratic state and that its rulers come from the masses. They rule through the Community Party." (Cairo Radio, October 11, 1955.)

PRO-SOVIET SLANT

"It was Khrushchev who announced that the Soviet Union sympathizes with the Arabs. It was Bulganin who attacked the Baghdad Pact and all military alliances, describing them as imperialistic acts in new forms with only aggressive aims. It was the voices of the two leaders which together maintained that this persistent foolish policy of the West constitutes a breach of the Geneva spirit which gave rise to world-wide optimism. It is no wonder therefore that this dual voice finds an appreciative reaction in the hearts of the Arabs and is worthy of being greeted with thanks." (Cairo Radio, December 31, 1955.)

"Communist Chinese Premier Chou En Lai has received a mission of Egyptian newspapermen who are now visiting China. Chou En Lai told the Al Akhbar reporter that he hoped the next Afro-Asian conference would be held in Cairo. The Communist Chinese Premier said he would take that opportunity to visit Egypt. He went on to assure the Egyptian journalist that China supports the Arab states in their efforts to win their independence and integrity." (Cairo radio, December 29, 1955.)

"The United States will continue to aid countries fighting Communist infiltration. It will also endeavor to find a solution to the tragic dispute between the Arab states and Israel, for it is anxious to retain the friendship of both parties—so said President Eisenhower in his state of the Union message. * * * Eisenhower's words sound so hollow now that the Soviet Union has embarked on its 'courageous peace campaign.'" (Lebanese newspaper Al Jaridah, quoted by Cairo radio, January 8, 1956.)

"If Bulganin and Khrushchev were to plan from the Kremlin a policy they would like Britain and America to follow in order to arouse Arab public opinion against them, and make way for Russia alone to win the sympathies of the Arab states * * * could they find a better policy than the current one pursued by the London and Washington Governments? * * * Can the Arabs contemplate this attitude without growing indignant and shunning any scheme designed to humiliate and subject them to the dictates of wanton Zionism in America and Britain? And can the Arabs view with satisfaction, thankfulness, and appreciation the clear and strong declarations of Comrade Khrushchev? * * * Could any man with a particle of dignity or sense of fairness in Egypt and the Arab states as a whole, fail to welcome these statements and thank the person who made them? * * * O statesmen of the Western World, awake from your stupor.

Know that we are neither your slaves nor anyone else's * * * and that we do not consent to kiss the hand which slaps us in the face, tramples our rights and prescribes our blood for our enemies. We give praise to any Eastern or Western statesman who sides with our rights, and condemns aggression against us, whatever the regime and doctrines prevailing in his country may be." (Col. Anwar al-Sadat, Egyptian Minister of State, in an editorial in Al Tahrir magazine, quoted by Cairo radio, January 3, 1956.)

SOVIET ECONOMIC INROADS

While this antifree world, pro-Soviet propaganda barrage conditions the minds of the Arab world, Egypt and her Arab neighbors are being manipulated economically into the Communist bloc.

Between August 1955 and January 1956, hardly a day passed when Cairo radio or Damascus radio did not carry at least one report of trade negotiations between an Arab state and a member of the Soviet bloc.

The fruits of these almost constant discussions were summed up on December 6, 1955, when the New York Herald Tribune reported from Cairo:

"Egyptian trade agreements have been negotiated with all Iron Curtain countries except Bulgaria and Albania."

The pattern of increased Arab trade with the Communist states was clear as far back as October 1955. In its issue of October 14, 1955, U. S. News & World Report reported from Cairo:

"Egypt has been tying up with the Soviet economy at an increasing rate in recent months. Sales of Egyptian cotton to the Soviet bloc have gone up fast, and cotton is just about Egypt's only export. During the last year the Soviet world bought more than twice as much cotton as ever before. Shipments have gone to Russia and Red China, as well as Czechoslovakia. Payment on the China deal was arranged in such a way that Egypt will have to buy products in other Communist countries in order to get full compensation. The same trend shows up in imports. Egypt now buys more than half her oil from Russia and Rumania. She used to get it all outside the Iron Curtain. The Egyptians are relying more and more on Eastern Europe for heavy manufactured goods and machine tools—such things as locomotives from Hungary and steel from Czechoslovakia. Even the wheat that has traditionally been imported from the United States and other Western countries is beginning to come from the Soviet bloc instead. As a result, Cairo is swarming with Communist trade delegations representing countries all the way from China to Poland. Their very presence has served to increase Communist prestige in Egypt over the last several months. The arms deal sent it higher than ever."

Details of successful Arab-Communist trade talks followed hard and fast. In its issue of November 28, 1955, Newsweek reported:

"Following the publicized announcement of Communist arms sales to Egypt (more than 200 MIG jet fighters, 150 heavy tanks, 6 submarines, and 500 artillery pieces). Egypt's Communications Minister Fathy Radwan and Gamala El Din Badewi, managing director of the Egyptian State Railways, returned from a visit to Prague with a Red bid to build a great new railroad network in Egypt. If approved, it would bring hundreds of Communist technicians into the area and make Egypt a communications gateway to Africa."

Cairo radio reported on November 30, 1955, that the Egyptian Permanent Under Secretary for Finance and Economy conferred with a delegation on means to facilitate the importation of iron from Communist China. Two weeks later, on December 14, 1955, Cairo radio reported:

"The agreement to import approximately 60,000 tons of iron from the Chinese Republic, which the Public Services Council had approved, has now been concluded and the iron actually shipped. It is now on its way to Egypt."

The East German Red regime was on the scene, too. On November 10, 1955, Cairo radio reported a 3-year pact:

"Minister of Trade and Industry Dr. Muhammad Abu Nusayr held a press conference November 10 at which he spoke about the trade agreement concluded November 10 between the German Democratic Republic and Egypt. The short-term agreement, he said, was concluded on March 7, 1953. The latest negotiations have resulted in the amending of certain of its articles in Egypt's favor. It has also been decided to raise the credit limit of the government of the German Democratic Republic from 500,000 to 700,000 pounds in order to enable it to increase its purchases from Egypt. The Minister then said that the long-term agreement stipulates that the German Democratic Republic pledges to purchase a minimum of 3 million pounds' worth of Egyptian products with a possible increase to 6 million pounds. The East German Government has promised to do its utmost to achieve the maximum limit. Abu Nusayr added that Egypt is importing complete factories and shipyards from the German Democratic Republic. The Minister concluded by saying that the German Democratic Republic is expected to send some technical experts to offer all kinds of assistance and impart experience to public and private organizations with regard to Egypt's requirements for its industrial and productive projects."

Hungary, meanwhile, has joined with Czechoslovakia in building bridges to span the Nile. The Beirut radio, on October 10, 1955, reported:

"According to a report from Budapest, Hungarian plants are now constructing seven highway bridges for the Nile Delta in Egypt. Each bridge will be 200 meters long and 12 meters wide. The bridges will be delivered late in 1957."

The Hungarians had other things to sell Egypt as part of the overall Red plan for economic penetration of the Arab world. On January 4, 1956, in a survey of Egyptian trade agreements with the Soviet bloc, correspondent Osgood Caruthers reported to the New York Times from Cairo:

"Hungary will send 93 Diesel switch engines to Egypt in return for E£2 million worth of cotton."

AN OVERALL SURVEY

The Caruthers survey also said this:

"The most important development in Egypt's economy in 1955 was the expansion of Egyptian trade commitments with the Soviet bloc.

"This expansion, accompanied by a marked increase in foreign Communist efforts to spread Soviet influence throughout the Middle East, caused deep concern among the western nations that were seeking to seal off the awakening and troubled Arab world from the menace of Red infiltration."

The free western nations had good cause for concern, too. As Issa Korachi reported to the New York Daily News from Egypt on November 1, 1955, Communist competition was pushing out western trade:

"France recently offered the lowest bid for a contract to provide Diesel hydraulic engines, but the sale went to Hungary. * * * An English company got beaten out of a big railway freight car contract when Poland offered to provide them for 27 percent less. * * * The Egyptian Health Ministry recently bought DDT from East Germany, as against an American bid."

A Christian Science Monitor correspondent in Cairo added a footnote to these developments in a dispatch published November 22, 1955:

"Early this year * * * the government saw fit to end the austerity regime and lift travel and import restrictions. * * * A few weeks ago, however, importers from the western countries were warned they could no longer have the foreign currency to buy from the West. If they wanted to do business abroad, they had to do it with Soviet and satellite countries. * * * One reason for this is Egypt's increasing difficulty in selling its cotton to western countries. Another reason is the huge amount of foreign currency being spent abroad, especially in Eastern European countries, for the purchase of heavy arms."

NASSER'S IDEA

Shortly after Premier Nasser announced the arms deal with Czechoslovakia he granted an interview to Time magazine correspondent Keith Wheeler. "It was my own idea," he said of the arms deal. "I had hesitated for 2 months, but at last in June I called for Soloc (Soviet ambassador to Egypt, now Chief of Middle Eastern Affairs in the Soviet Foreign Ministry) and I said, 'Sell us arms.' Really I was surprised when he accepted."

When Time man Wheeler asked Nasser whether he wasn't opening the way to the Russians with his arms purchases the Egyptian Premier replied, "There are not now any Russian or Czech technicians in Egypt." Technically, on this technical problem of technicians Nasser may have been right at the time he spoke.

The Nasser interview with Time was published on November 14, 1955. He may have been technically right about the technicians but one high-ranking United States official didn't think so. Appearing on a television program—College Press Conference, ABC-TV November 6, 1955—United States Assistant Secretary of State George V. Allen said: "There probably will be, and there probably are in Egypt right now, Soviet technicians, or at least, Communist technicians from Czechoslovakia."

RED TECHNICIANS

There was, of course, concrete evidence that some Red technicians were to be admitted to Egypt. In announcing the 3-year pact signed with East Germany November 10, the Egyptian Minister of Trade and Industry had said: "The German Democratic Government is expected to send some technical experts to offer all kinds of assistance and impart experience to public and private organizations."

And of course the Egyptian-Czech trade agreement, concluded several months before the arms deal, carried with it a provision that "The Egyptian Government is ready to facilitate the work of the Czech technical staff in Egypt."

Evidence mounted as time went on, however, that a considerable number of Red bloc technicians were, in fact, on the scene in Egypt. On January 20, 1956, the Associated Press reported from Washington:

"Premier Nasser is said to have admitted into Egypt possibly 150 Soviet bloc technicians to help assemble arms from Czechslovakia.

"Diplomatic sources who reported this today said the number is 5 times the 30 experts Nasser originally estimated would be necessary to help get into operating condition the guns, tanks, jet planes, and other arms.

"The increase is a source of concern to United States officials anxious to hold the growth of Soviet influence in the Middle East to a minimum.

"Egypt made a deal with Red Cezchoslovakia last fall for $80 million worth of military equipment, much of it now delivered."

Regardless of the number of Communist technicians actually in Egypt, it appeared quite early that other things were taking place that made the actual number of technicians on the scene relatively unimportant

RED PROPAGANDA

The U. S. News & World Report dispatch from Cairo, published October 14, also covered those angles. It said:

"The Communist influence isn't noticeable only in trade. Diplomatic missions of Russia and the satellites have all been getting bigger and more active. The Russian Ambassador is in frequent conference with Egyptian leaders. Russia has been given permission to expand its propaganda activities and has just recently taken over a building in downtown Cairo where it displays books and photographs and holds showings of Russian movies."

U. S. News & World Report noted some other developments as well:

"Russia began putting out a daily propaganda bulletin last month. Communist countries have been splurging with elaborate displays and other promotion stunts. East Germany, for example, staged a big fair in Cairo last spring, and spent more on fireworks for the affair than the United States Information Agency spent throughout Egypt in all of last year."

Finally, there was this significant angle:

"There is an increased tendency in Egypt's newspapers to go along with the Soviet line on international policies. Sometimes the papers print propaganda releases from Communist embassies without changing a word. For example, not long ago a Cairo newspaper carried a story extolling Czechoslovakia's 'ever-increasing living standard' and the high quality of its goods. The article bore the headline 'Czechoslovakia Makes the Stuff That Dreams Are Made of.' The whole thing came straight from a press release issued by the Czech Legation."

CONCLUSION

The disturbing evidence presented here clearly indicates that Egypt's kind of military and economic involvement with communism leads down the road to the fateful status of a Soviet satellite. Whatever Egypt's historic quarrel with Great Britain and the West, Egypt's freedom and destiny as well as the freedom and peace of the world can only suffer by cynical deals with Russia.

The United States as a partner in the free world alliance must make it clear to Egypt and the Middle East that we will respect and aid legitimate democratic aspiration of Egypt and the countries of the Middle East. We cannot, however, be blackmailed by dangerous games with Russia. We need to supply dynamic leadership which can help toward an equitable solution to the Israeli-Arab tensions.

The free world should offer positive and constructive action and should not under the guise of realism substitute debilitating appeasement.

United States Dollars Back UNESCO Currency

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 10, 1956

Mr. GROSS. Mr. Speaker, I suspect few Americans are aware that the United Nations Educational, Scientific, and Cultural Organization has its own international currency, apparently backed largely by United States dollars. An informative article on this subject appeared in the February 24, 1956, issue of "U. S. A., An American Bulletin of Fact and Opinion." The article, by Alice Widener, is as follows:

Few bankers, international financiers or Members of Congress ever heard of UNESCO Coupons. Yet the coupons are largely backed by United States dollars and the New York Times has described UNESCO Coupons as "a new medium of exchange." The Times also has described the coupons as "international money which is proving its versatility around the world."

For people who have never seen this new and versatile UNESCO money, the Times furnished the description: [1]

"The coupons actually look like and are the size of old United States bills. They are printed in French and English, and come in demoninations of 25 cents, $1, $3, $10, $30, and $100. But instead of some Government redeeming the bill, 'UNESCO promises to pay an authorized supplier, subject to agreed rules and conditions, the equivalent in the currency of his country ——— dollars of the United States of America, at the official rate of exchange.' "

THE FIRST DEAL

Historicaly, the first transaction in UNESCO's dollar-backed money involved a Scotsman's purchase via UNESCO's London branch of a $2.50 book published in the United States. The New York Times reported that the deal went like this:

"The Scotsman who carefully wrote a check received from UNESCO's London branch a coupon covering the cost of the book plus postage. He mailed this coupon to the American Booksellers Association which handles the book-coupon program for UNESCO in this country. The A. B. A. passed the order on to the publisher who promptly mailed on the book—and the transaction as far as the buyer was concerned was closed. No currency had to be converted and no money was mailed riskily. Behind the scenes UNESCO redeemed the coupons with hard, green dollars."

FOUND IN THE MORGUE

Careful study of the foregoing prompts any reader to ask: Why behind the scenes? A well-informed reader, who is an outstanding business economist formerly with the United States Treasury, asked: "What does a coupon do that an ordinary check on UNESCO wouldn't do?"

To try to answer these and other pertinent questions, this writer took a look at the UNESCO Coupon record after having noticed in a Socialist magazine, December 1955, that "UNESCO Coupons are available for the purchase of machinery and chemicals."

The affair started, it seems, in 1948 with a "book coupon plan" devised by the United Nations Educational, Scientific and Cultural Organization (UNESCO) as a means of providing scholars and libraries with books from foreign lands. News about the plan was carried under "Education" in the press. And though the book plan was quickly expanded to take in films, international travel and 12 categories of scientific material (possibly including data, instruments and materials relating to atomic energy), a close study of 10 years' press clippings on UNESCO in the morgue of a great New York City newspaper shows that news about the coupons is still carried under "Education."

Perhaps that is why extremely few clippings even mention the scientific materials. For example, the Times Magazine article of January 7, 1951, states: "UNESCO currently takes the form of coupons for book or film purchases, though now they are being used for other goods."

They certainly are.

According to Mrs. Elizabeth Meechan of the UNESCO office at U. N. headquarters in New York City, "more than two-thirds of all coupons issued have been used for the purchase of scientific materials."

RAPID RATE OF GROWTH

As has already been stated, the coupon plan was initiated in 1948 with a $2.50 book transaction. On January 28, 1951, the New York Herald Tribune reported that the UNESCO coupon scheme "has caught fire" and continued: "The book coupon scheme of UNESCO, designed to overcome foreign exchange controls, has become a $1 million business in 2 years."

By January 1, 1955, the coupon plan had become a $6,500,000 affair. Of course, in our times this is generally regarded as a piddling sum. But the rapid growth in UNESCO coupon use is not piddling. If it should continue at the same rate, or at an increased rate, UNESCO coupons—limited only by the number of dollars which can be acquired by UNESCO—could become an important and possibly disturbing factor in international exchange. The coupons are not handled by banks.

THE INVENTOR

The author of the UNESCO coupon scheme is Dr. Jacob Zuckerman, an Israeli citizen who was born in Germany in 1908. After Hitler took over in Germany, Dr. Zuckerman went to Belgium and worked as branch manager in a bank until the invasion of Belgium by the Germans in 1940. In December of that year, Dr. Zuckerman became Chief of Foreign Press Section at the British Embassy in Lisbon, Portugal.

In 1945, Dr. Zuckerman worked for the United States Embassy in Lisbon with the International Control Committee as documents analyst. In December 1945, he went to work for the Library of Congress in Germany where, according to Dr. Luther Evans (then Librarian of Congress, now Director General of UNESCO in Paris), Dr. Zuckerman did an excellent job.

Late in 1946, Dr. Zuckerman joined UNESCO in the Division of Libraries. There he created the book-coupon plan, then a gift-coupon plan (now operating mainly through American schools, church, and labor organizations) and a travel-coupon plan.

At present, Dr. Zuckerman heads the Division of Voluntary International Assistance at UNESCO House in Paris and he has a permanent contract with UNESCO at $9,800 yearly. But, according to Dr. Evans, Dr. Zuckerman has recently applied for a finance job with the U. N. headquarters in New York City. While UNESCO has approved Dr. Zuckerman's change of job, the organization will be very sorry to see Dr. Zuckerman go for he has always been in good standing and was one of UNESCO's best executives.

Apparently, Dr. Zuckerman is as versatile as his internationally versatile new currency.

FINANCIAL INTRICACIES

It would seem that a finance job at U. N. headquarters is a most logical position for Dr. Zuckerman to fill. In the future there are bound to be extremely intricate international financial problems involved in the UNESCO coupon scheme.

For example, the Soviet Union is now a member of UNESCO, and though the Soviets are not yet a part of the UNESCO coupon group, according to the UNESCO office at U. N. headquarters "we hope they will come in shortly."

If the Soviets do take part in the UNESCO coupon plan, will they put up 4 rubles to the dollar for book, film, and travel coupons and for coupon purchase of scientific machinery, instruments, and chemicals in the United States?

As a matter of fact, 90 percent of the coupons purchased are to buy American goods.

---

[1] Learning's Currency by Herbert Mitgang, New York Times Magazine, January 7, 1951.

In reply to an inquiry by this writer, Mrs. Meechan said: "America is benefiting by this extra source of purchasing power made possible because soft currency countries are able to purchase coupons."

But how are American taxpayers benefiting from subsidy of soft currencies at an artificial rate of official exchange with United States dollars?

SECRET U. N. MEMORANDUM

Perhaps Dr. Zuckerman will be able to answer this question and other inquiries in his new finance job at the U. N. headquarters. There the Department of Economic Affairs has long been intensely interested in international currency or scrip schemes such as Dr. Zuckerman has devised.

For example, on August 11, 1951, memorandum 2 marked "For internal circulation only" was distributed to insiders working in the International Financial and Commercial Relations Section. This restricted memorandum "was prepared to serve as background material for the work of experts nominated under ECOSOC [U. N. Economic and Social Council] resolution 290 (XI), paragraph 19." This dealt with commodity controls and trade.

Memorandum 2 begins with explanation that it "is concerned with a number of suggestions aiming at regulating economic conditions by sweeping schemes involving either the stabilization of prices of primary products or the introduction of a new kind of currency for use in transactions between countries."

Of "special consideration" in the memorandum are two international currency schemes conceived in the early forties: that proposed by Lord Keynes of the United Kingdom; and that proposed under the title "International Stabilization Fund" by the United States. The restricted memorandum 2 tactfully refrains from mentioning the fact that this United States plan was drawn by Harry Dexter White.

The authors of Memorandum 2–F. Hilgerdt and C. M. Wright—state that the application of international currency schemes "would depend on a 'new deal' in all matters relating to commercial and exchange policy." They declare that the introduction of a new currency unit or a special type of script to serve as a buffer between national currencies is a technicality which in itself would not bring about a change in the factors which stand in the way of multilateral settlement.

NO UNESCO LOYALTY TO UNITED STATES

Whether or not UNESCO coupons are used merely as a technicality in bringing about a U. N. "new deal" in all matters relating to commercial and exchange policy, it seems clear that there are many technicalities in ordinary commercial transactions that can be avoided by coupon deals, especially the travel and scientific materials deals.

When the existence of these UNESCO deals was brought to the attention of an official in the United States Immigration Bureau, he said:

"This brings up very serious problems. It enables nationals to evade their own laws concerning currency. It enables travelers to evade many phases of scrutiny.

"UNESCO's attitude toward loyalty to the United States is well known. This presents a very complicated problem, especially with government representatives from countries which might not otherwise be able to get dollars."

Yes, indeed. UNESCO's attitude toward loyalty to our sovereign government is well known. On October 17, 1954, the American press carried the front page U. N. news that Ambassador Henry Cabot Lodge had publicly criticized Dr. Luther Evans, American Director of UNESCO, for his attitude on loyalty cases involving United States nationals, and for his refusal to dismiss from the UNESCO Secretariat in Paris "United States nationals about whom there is reasonable doubt as to their loyalty to the United States." Later, UNESCO officially decided that an American citizen's possible disloyalty to the United States does not affect that citizen's integrity as a UNESCO employee.

UNESCO's basic attitude toward Americans' loyalty to the United States and toward the cold war in general is intimately concerned with the UNESCO coupon plan, for it is entirely under the control of UNESCO in Paris.

Because more than two-thirds of these coupons are for scientific materials, and because UNESCO has since its inception shown keenest interest in the development of atomic energy. Americans believing that loyalty to their country is, indeed, a part of their personal integrity should read an article which appeared in the New York Herald Tribune, March 31, 1946, by John J. O'Neill, science editor and Pulitzer prize winner. Mr. O'Neill wrote:

"The U. N. Educational, Scientific, and Cultural Organization is about as vicious a piece of legislation as could be conceived. * * * Professing to support democratic principles the proposal is instead entirely dictatorial. * * *

"The United States representatives at the London conference comprised 7 official delegates and 23 others. Here the constitution of the UNESCO was framed. Among our official delegates * * * was just one scientist, Harlow Shapley. * * * Harlow Shapley did not represent science. He represented just Harlow Shapley and nobody and nothing else in the field of science. No scientific organization chose him as representative. The choosing was done entirely from the political field."

It would be interesting to know who did this political choosing. For in the handbook, The Communist Party of the United States of America, issued by the Senate Internal Security Subcommittee, December 1955, Harlow Shapley is listed on page 94 as one "of the most active and typical sponsors" of Communist fronts.

In 1946, John J. O'Neill, science editor of the Herald Tribune, reached the conclusion that UNESCO is in its entirety a political organization.

UNESCO'S PARISIAN DICTATORSHIP

Today, this political UNESCO entity exerts dictatorial control over a new medium of exchange or an international currency—UNESCO coupons.

On January 10, 1956, this writer telephoned to Mrs. Elizabeth Meechan at the UNESCO office, U. N. Headquarters, and asked how the coupon system is supervised and controlled.

Very courteously, Mrs. Meechan said: "The distribution of coupons is supervised by the UNESCO Executive Board and by UNESCO Council."

In rely to a question about what amount of coupons can be used to buy a single article, Mrs. Meechan answered: "$2,000—except in some cases—then exceptions are made up to $25,000."

This writer asked: "Who determines the exceptions?"

Mrs. Meechan replied: "It is solely determined by UNESCO's Executive Board in Paris."

"Who determines the priority of one country's bid for a certain piece of machinery over another's—say, for instance, Russia versus Italy?"

"UNESCO, Paris," said Mrs. Meechan, "is the sole judge of whom to give priority."

"This has great potentialities, hasn't it?"

"Yes," Mrs. Meechan said. "Great potentialities."

Though potentialities for dictatorial distribution and control of UNESCO coupons are indeed almost limitless (depending mostly on the number of hard, green United States dollars available) the official booklet UNESCO Coupons for Scientific Material discreetly states in a final sentence on the last page:

"N. B.—The price limit set for each article obtainable with UNESCO coupons is $1,500. Provision has, however, been made for UNESCO to waive this rule in certain cases."

The official booklet lists 3 American export firms that deal in all 12 categories of scientific materials. One of these firms issued an advertising pamphlet which states that the company "provides a single, convenient source of new and improved laboratory instruments and apparatus which have been recently designed to keep pace with the latest advancements in science."

NEEDED: AN INQUIRY

It seems that the dictatorial control of UNESCO over the printing, issuance, and value of the coupons, and also UNESCO's discretionary power to waive rules in various transactions, suggests need for a public and also a congressional inquiry into the matter. In making such an inquiry, persons seeking the facts might bear in mind that in the introduction to Export Controls Regulations of the Bureau of Foreign Commerce in the Department of Commerce there are listed seven exceptions governing the granting of export licenses, exceptions No. 3 and No. 5 relegate control over export of atomic-energy materials and technical data relating thereto to the Department of State and to the Atomic Energy Commission.

Moreover, in any investigation of UNESCO coupon transactions it might be well to bear in mind that in the Soviet Union and its satellites—including Yugoslavia, which is a member of the UNESCO coupon group—both education and industry are entirely controlled by the state.

The director of international sales in a great American corporation studied the UNESCO coupon literature and said: "It would seem that the flexible limits of the amounts of the coupons are governed by the directors of UNESCO on the basis of the merits of each case, rather than on the basis of published information for which anyone may qualify simply by following instructions. Making UNESCO's policies and all its transactions a matter of public information would go a long way in answering the many questions which are raised in the matter."

A former economist for the American Bankers Association asked: "Why the coupon? What does the coupon accomplish that a direct financial transaction with a check on UNESCO could not? Why have UNESCO coupons circulating throughout the money channels of the world?"

A professor of economics said: "The UNESCO coupon scheme enables foreign countries to get in international trade the same value on their soft money which they arbitrarily and artificially set as its value for internal use."

The basic questions asked by all experts whom this writer consulted are:

What are the controls over UNESCO printing, issuance, and value of the coupons?

Who are the controllers?

Is the purchaser identified?

Does the UNESCO coupon scheme enable purchasers to avoid the normal checks on ordinary commercial transactions?

Since UNESCO coupons are redeemable in hard, green United States dollars behind the scenes at U. N. headquarters, and since the United States is a supporter of UNESCO, it would seem that American taxpayers and Congress should know all there is to know about UNESCO's new international currency.

Address by the Honorable Robert Murphy, Deputy Under Secretary of State, Convention Breakfast of the New York Province of the Newman Clubs, Waldorf-Astoria Hotel, New York, February 12, 1956

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I am pleased to include an interesting address delivered on February 12, 1956, at the convention breakfast of the New York Province of the Newman Clubs held at the Waldorf-Astoria Hotel in New York City by the Honorable Robert Murphy, Deputy Under Secretary of State:

Mr. Chairman, the New York Province of the Newman Clubs has greatly honored me by inviting me to take part in your convention dedicated to the theme "For a Better World."

This is a goal to which we all aspire. We can find guidance in our search for a better world in the life of Cardinal Newman himself and from the principles to which your clubs are devoted. Newman's Apologia and The Idea of a University remain classics today and were fitting inspiration for Timothy Harrington when he called his fellow students together to found a Newman club at the University of Pennsylvania.

John Henry Newman is a symbol of those who struggled for and attained happiness based on faith and spiritual understanding. His life was devoted to service of our faith and to increasing human understanding. We of the 20th century would do well to approach the difficult problems of our world in the spirit of calm and detached contemplation Cardinal Newman achieved.

Although he lived in what now seems a simple age, Newman's life span covered a period of great ferment and change. In the 19th century, industrialization was gathering momentum in Western Europe and the United States. New economic and social theories were challenging and testing the existing order. The concerns of the times were concerns about material things. It was said that men should have more goods; that goods should be more equitably distributed; that society should be reorganized to provide the maximum material benefits, to provide the greatest good for the greatest number.

Most of the economic and social ideas of the 19th century were idealistically conceived. They were intended to solve the problems created by new political institutions, by growing populations, and by the industrial revolution. The 20th century, however, has seen some of these schemes and theories used in practical life, and used in such a way as to destroy whatever may have been good, and to bring to dominance the error and evil they contain.

The materialist creed of Karl Marx, with its negation of faith and spirituality, its worship of the state alone, has become the enforced gospel of nearly a billion people, almost half the population of the world. Its economic dogmas have been adapted by Lenin, Stalin, and their successors to political and imperialist programs designed to promote Soviet communism into every part of the world. While this is an ideological purpose of vast significance it serves handily as a cover, and an effective cover, for good old-fashioned Russian expansionism.

These doctrines have strong appeal for many peoples, who are striving to improve their conditions and their standards of living. These peoples are often reluctant to believe that Communist intentions are predatory, that economic gain under the Marxist system will inevitably be at the expense of political liberty and spiritual freedom.

International communism is well armed for the struggle to which it is so fully committed. Its military forces include the two largest land armies in the world. It possesses substantial air power, and a growing stock of nuclear weapons. A huge percentage of the budgets and the resources of the U. S. S. R., of Red China, and of course the eastern European satellites are devoted to "national defense, armament, and internal security." Vast quantities of manpower are allocated to these purposes. As you know these millions of men and women have little or no choice when it comes to military service or in fact any labor for the State. Political and economic control is maintained by power in the hands of a few at the top and by tight organization in the ranks. By denying the needs of its own and subject peoples, the Soviet Union can set aside goods and equipment for export where it foresees political gain. Thus it can focus its resources on a given world area if it sees in that region a possibility of political gain. In the same way it can export technical assistance. And to the war of ideas it devotes vast resources which it can mobilize without much regard for public opinion. It has mastered the art of making the worse appear the better cause, of making the undemocratic sound democratic, of cloaking aggressive aims with peaceful words.

To meet this threat, a threat to the security of nations in addition to our own, the United States cooperates in an immense effort by the free nations to build their common strength. As a great power we have special responsibilities whether we welcome them or not. We have formed a system of alliances not only for mutual defense but for economic and social cooperation. We are doing much to drive home the story of what the free nations stand for and what international communism means.

Our strength is great, and we intend to remain strong. We intend to remain economically strong, militarily strong, and in particular morally strong. We must maintain faith and confidence in the values for which the United States stands. As Secretary Dulles has said: "The Government of the United States has, I like to believe, a rather unique tradition in this respect. Our Nation was founded on an experiment in human liberty. Our institutions reflect the belief of our founders that all men were endowed by their creator with inalienable rights and had duties prescribed by moral law. They believed that human institutions ought primarily to help men develop their God-given possibilities, and that our Nation, by its conduct and example, could help men everywhere to find the way to a better and more abundant life."

We share the tradition of a respect for human liberty and moral law with a number of the Nations with which we are now in close alliance. We must build upon these traditions and concepts if we are to build a better world. We must teach the new nations emerging in Asia and Africa the importance of these ideals. We must show them they can and must be adapted to their own conditions. We must teach by example that a society without moral value and without principles is doomed to fail, no matter how hard it struggles to build up economic and military power.

Not long ago Archbishop O'Boyle of Washington delivered a thoughtful and stimulating sermon on the conflict we face. "When mercy is considered treason," he said, "when truth is classed as a lie, and good is called evil, we are indeed faced with a monstrous perversion of human nature, a denial of every ideal that civilized man has cherished."

The archbishop accurately noted that communism appeals not only to the disgruntled, the bitter, and the neurotic members of a community, but also to men of sensitive nature and high ideals. He declared that there is danger we may look at the world struggle too narrowly, that we may concentrate too much on the economic, military and political menace of communism, and so neglect the battle for men's minds. "The American people should speak out," he concluded, "through their proper organizations and representatives, on the real nature of communism. We should realize that the struggle is total, and not merely a matter for Government action only." This is where I think you members of the national newman clubs have a major role to play. Why not mobilize your talents and your great abilities to spread an affirmative doctrine of the things for which your Government stands.

The United States is today making a tremendous effort to win the battle for men's minds. Our Government has a worldwide information program which is doing an effective job in many areas. Many nongovernmental groups are also doing excellent work in meeting foreign peoples and explaining our way of life. Missionaries, labor leaders, businessmen and thousands of other Americans are a vital part of our effort here and abroad to increase international understanding.

In the battle for men's minds, we (and I believe this applies especially to you club members) should make a particular effort to reach those men whose thoughts and ideas will be decisive in guiding the policies of the new nations in Asia and Africa. As Archbishop O'Boyle said: "In wide areas of the world, men of learning are the real leaders of their nations. This is particularly true in the nations newly freed from colonial status. It is in these very areas that the power of communism is growing with sobering speed."

Sometimes Americans have trouble understanding the attitude of the people of new nations. Usually these young nations want to solve their own problems their own way. They distrust foreign help and advice. They have an intense desire for rapid economic development. They know little about the Soviet Union but they are told its achievements are vast. Efforts are being made to persuade them that the pattern of Soviet industrial development has more meaning for them than the freer, more humane process by which the institutions of the United States and Western Europe were developed.

The tours of Bulganin and Khrushchev to India, Burma, and Afghanistan are efforts by the Soviet Union in the new direction. We would be foolish to deny that the new Soviet policy presents us with dangers and a challenge. Where formerly the Iron Curtain implacably shut off the Soviet Union and its satellites from the rest of the world, we now see "traveling salesmen," with broad smiles and back slapping, offering tempting bargains to the uncommitted nations. There are offers of economic and military aid, proposals for treaties of friendship, requests to set up diplomatic posts, and plans for interchange of experts in many fields.

It is ironic and typical, however, that at the same moment they speak of peace and friendship in India, Burma, and Afghanistan, the Soviets and their Communist allies continue their nuclear tests, their threats of war to take Taiwan, and their warnings of reprisal upon Iran and Pakistan for participation in the Western defense system.

In a sense the Soviets have put a new wrinkle in their traditional policy of zigzag. They have found it possible to zig and

zag at the same time. They continue to show plainly, for anyone who cares to look, that aggression is still their end, to be pursued by peaceful talk or warlike threats, or both—whatever suits the need of the moment.

By their own deeds they warn us again that we cannot delay our vigilance, we cannot lower our guard.

I have spoken to you already of the means, military, political, and economic, by which we must keep ourselves and our allies prepared to defend themselves. But the willingness and the ability to undertake our defense, while essential for avoiding war, is neither the only means nor the best means, in the long run, for preserving peace. We believe in a forward strategy not only in the military sense but in the political and social sense. As President Eisenhower put it earlier this year, "The sum of our international effort should be this: the waging of peace, with as much resourcefulness, with as great a sense of dedication and urgency a we have ever mustered in defense of our country in time of war."

One of the highest tests, I think, of the greatness of a nation is the test in times like these whether we can be strong enough to win a war, yet gentle enough to help the weak; resourceful enough to gain great wealth, but wise enough to use it well.

Moral leadership is a great asset in any struggle. It is especially important in the present world battle for the minds of men and women everywhere. The responsibility for moral leadership in our country certainly rests upon our Government, but not upon Government alone. It is also the direct responsibility of our churches and schools, of youth organizations such as the Boy Scouts, the 4-H Clubs, and especially of all these Newman Clubs of which we are justly proud. These agencies, civic and religious, must maintain the spiritual vigor and moral strength of the people who run our Government, who man our fighting forces, who carry on our dealings with other lands, who cast the votes that decide the course our Nation follows.

I am certain that your organization is doing a great deal, but you can do more. I have had close contact over the years with many young men and women who have been trained by our Catholic colleges and universities, and shaped under the guidance of the Newman Clubs and other groups. Most of them measure up admirably to the challenges they face.

But none of us must forget that the evil forces that oppose are tireless in their self-criticism, in their manipulation of Government programs, educational institutions and youth programs. Their brutal efficiency is high, and in all realism, we can expect it to go higher.

The moral superiority that our values, our system, have over those of the Soviets can and should be decisive in this contest between us. But it is not inevitable. Our values must be applied. Our system must be made to work. We must match their tirelessness with our own, their efficiency with ours, if our moral superiority is to be decisive.

In my lifetime I have seen a number of people become converts to our church. I am convinced that in most of the cases the conversion came not so much from words, however eloquent, but from deeds—from an example someone set in living a good life—from a creed that was lived. In the same way, as we seek to win the allegiance of the uncommitted nations to our standards and our values, we must do it by our deeds as much as by our words.

These nations will watch us, first, to seek how we apply our values among our own people. Our record in this respect is good, though certainly not perfect. The opening of the channels of opportunity, the emphasis on free choice and private initiative in the past few years has brought prosperity for nearly all Americans. In addition, progress has been made through legislative and judicial efforts to bring about greater social justice among our people.

Not only are we being watched in applying our values to our own people; we are being watched in applying them to other peoples. Here, again, we do not need to apologize for our efforts. In the past 10 years a number of nations have won their freedom from colonial control. It has been our policy to respect this new freedom. By our economic strength and in many ways we have helped it to survive and to grow.

It has also been our policy to support the further attainment of freedom by subject peoples who desire it. In particular we support the liberation by peaceful means of the peoples of Eastern Europe, who have been unwillingly made subjects of the new colonialism of the Communists.

Another means by which we have given moral leadership is through our efforts to bring about disarmament. The whole world was thrilled by President Eisenhower's proposal of Atoms for Peace in 1954, and again by his proposal for aerial inspection to insure disarmament in 1955.

The final means by which the United States has rendered moral leadership in the world is the courage, the determination, the high principle, the good faith with which President Eisenhower, Secretary Dulles, and the leaders of our Government, with the full backing and support of the American people, have faced the perils and the opportunities of this age in which we live.

Your convention is dedicated to the theme "for a better world." In these remarks I have tried to outline for you, perhaps inadequately, some of the obstacles that lie in the road to a better world, and more important some of the means by which we will surmount these obstacles. You who are on the threshold of your careers will play, I know, a major role in achieving our national objectives.

To all of you I wish godspeed and good luck as you go forward with your own efforts to bring this better world into being.

To Socialism by Way of Tax-Exempt Foundations

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. REECE of Tennessee. Mr. Speaker, thinking that a speech which I made before the Association of American Physicians and Surgeons, at Columbus, Ohio, might be of interest to the Members, I am inserting it in the RECORD:

TO SOCIALISM BY WAY OF TAX-EXEMPT FOUNDATIONS

(By Hon. CARROLL REECE, of Tennessee)

I

In this era in which we live, the old-fashioned virtues grow increasingly unpopular.

Liberal economists tell us that our Government (instead of cutting our suits to fit our cloth) should tax us to the limit of toleranoe and then borrow more from us in order to shower us with paternal blessings.

Instead of being taught independence, energy, and enterprise, our youth today is taught to look for security.

The man who believes in individualism, freedom, and self-reliance is ridiculed as antediluvian.

We approach closer and closer to socialism.

Most of those who urge us in this direction suffer the illusion that we can stop at a sort of extended New Deal.

But their British counterparts know better.

They see, and rely upon, the paternal state as a necessary transition—a stage between free enterprise and socialism.

Being evolutionary Socialists, they wish to reach their goal through the democratic process, and this requires the paternal state as a preparation for that goal.

They are confident, once this intermediate stage has been reached, that full socialism will follow inevitably.

But these British collectivists suffer under their own illusion, in turn. They refer to their ideal society as one based on production for use and not for profit. This slogan, also dear to the hearts of so many of our own radical educators, is pure nonsense.

One who works for his own profit is likely to work hard. One who works for the use of others, without profit to himself, is likely not to work any harder than he must.

And so this state which the British Socialists and our liberals envision, in which production will be higher and cheaper, can come into being only under the compulsion of communism or some other form of Socialist dictatorship—if it can come, at all, under any Socialist state.

II

This, then, is the illusion of British socialism, so much respected and aped by our own radicals, that they can stop at the point of democratic socialism.

Communists smile at this, knowing full well that the road to socialism is the road to collectivist dictatorship.

In this process they have materially weakened our people's patriotism. Flag waving is still with us, but patriotism in its deeper significance is fading—sadly fading.

An article in the United States News recently disclosed that fully one-third of the American prisoners of war succumbed to brainwashing without torture.

They were so weak in their patriotism, our schools had given them so little understanding of American principles, that they offered little or no resistance to the blandishments and seduction of Chinese Communist interrogators and propagandists.

Maj. Wm. E. Mayer, an Army psychiatrist, who made the study of brainwashing among 1,000 of our soldiers captured in Korea said he found even many soldiers had lost respect for patriotism. He said:

"I think a great many people feel that references to patriotism and love of country are somewhat embarrassing, unsophisticated, or foolish flag waving. I think this is to a very considerable degree the result both of well-meaning liberals, so-called, as well as others whose intentions are clearly destructive, to create the attitude that we should abandon love of country and patriotic ideals, as being identical with this evil thing called nationalism."

Where is the ruggedness which used to be so characteristic of Americans?

I attach rather clear meaning to terms such as "Americanism" and "the American way."

But to use terms such as these is to bring down a torrent of ridicule from the liberal press, writers, and commentators who dominate communications in the United States. These expressions are "corny" and "horse and buggy."

Behind this is a definite disparagement of patriotism.

Patriotism springs from nationalism, and nationalism has become a vice, not a virtue.

As the National Education Association has so often told our teachers and students, na-

tionalism is an obstacle in the way of achievement of the one world state without which, they say, we cannot have peace.

We are eventually to be merged into an international society—distinctly socialistic in its nature—an international Eden. And nationalism, they say, stands in the way of bringing us to it.

III

The president of the Fund for the Republic, Dr. Robert M. Hutchins, eloquently says:

"The Fund for the Republic is a sort of fund for the American dream. I do not think the fund can make the American dream came true, but perhaps it can help keep it alive and clear."

The American dream that is now occupying the attention of the foundation-financed intellectual cartel promotes the idea of government by an elite.

Robert Hutchins and the other members of this self-appointed professional intellectual aristocracy dream of an America governed by social scientists, guided by their benign infallibility under a system which frees the people from the responsibilities of freedom.

This is again illustrated by Mr. Pendleton Herring, of the Social Science Research Council, who wrote in 1947 concerning this matter:

"One of the greatest needs in the social sciences is for the development of skilled practitioners who can use social data for the cure of social ills as doctors use scientific data to cure bodily ills."

The degree to which this elite even penetrated the Federal Government is indicated by the 1947 report of the President's Commission on Higher Education.

I would like to give you a few significant extracts from that report:

"It will take social science and social engineering to solve the problems of human relations."

"Our people must learn to respect the need for special knowledge and technical training in this field (of social science) as they have come to defer to the expert in physics, chemistry, medicine and the other sciences."

I would like to say that by no valid definition can sociology and economics identify themselves as true science.

Seven years before this report was issued, one of the members of the President's Commission on Higher Education, Horace M. Kallen, wrote a magazine article entitled "Can We Be Saved by Indoctrination?"

I would like to quote two short paragraphs from that article:

"I find within the babble of plans and plots against the evils of our time one only which does not merely repeat the past; this is the proposal that the country's pedagogues shall undertake to establish themselves as the country's savoirs."

After some elaboration, Dr. Kallen concludes, "Having taken power, the teachers must use it to attain the 'central purpose' of realizing the American dream. They must operate education as the instrument of social regeneration. This consists of inculcating right doctrine."

Change the word "American" to "Fabian" and you are pretty close to the truth.

Another phase of this American dream might be found in another document for professional pedagogues entitled, "Molders of the American Mind," by Professor Norman Woelfel.

Here is one of his admonitions: "The younger generation is on its own, and the last thing that would interest modern youth is the salvaging of the Christian tradition. The environmental controls which technologists have achieved and the operations by means of which workers earn their livelihood need no aid or sanction from God nor any blessing from the church."

And he adds this final touch: "In the minds of the men who think experimentally, America is conceived as having a destiny which bursts the all too obvious limitations of Christian religious sanctions and of capitalistic profit economy."

All this has behind it the figure of Karl Marx, in one way or another. And this is just the kind of a thing being emphasized by the foundation in the field of social sciences.

There is a theory that the growth of Socialist influence in this country was accelerated by numbers of American professors who studied abroad at the end of the last century and came back to us full of new theories—intriguing, materialistic and social welfare philosophies, rooted in variations of Marxism, and depending upon a strong centralized government.

Whether this be the answer or no, there is no doubt that academicians had much to do with the suborning of public opinion through Marxism. In the long run, much public opinion is made in the universities; ideas generated there filter down through the teaching profession and the students into the general public.

As the egalitarianism of Marxism is attractive to many, socialism could have attracted many followers in America, anyway.

But there is no doubt that it could not possibly have affected us so widely and so deeply as it has, had it not been heavily financed.

This financing was supplied by several of the great fortunes built up by American industrialists under our capitalistic system.

This most certainly was not intended by such men as Andrew Carnegie and John D. Rockefeller, nor more recently by Henry Ford.

They would truly writhe in their graves if they could know that the foundations which they created have become the principal treasury of the radical movement in their country.

IV

It is difficult for the public to comprehend that this could be possible. The boards of these foundations have always contained many men who could not possibly have lent themselves consciously to an undermining of the free enterprise system. Indeed they did not. They just knew not what they did.

It happened, it began to happen, when these trustees, against sage advice, no longer confined themselves to the direct support of educational institutions, or religion, medicine, public health and science. It is difficult to put to propaganda or political use a grant to a college endowment or for medical research.

But when these foundations launched themselves into what are called the social sciences they made themselves vulnerable to a form of seduction and subversion against which they could not defend themselves.

When they entered the areas of man's relation to man—as the social sciences are so attractively described, they opened the door to political propaganda.

It is not hard to understand why these trustees went along usually without protest.

A great captain of industry is very likely to have just as high an IQ as a professor.

But when the industrialist sits on the board of a foundation which deals with areas which are both highly technical and extremely vague, he is not equipped to make informed decisions.

It is almost inevitable that he bow to the superior understanding of the academic adviser, just as he would to his doctor or lawyer.

Insofar as projects in the politically sensitive social sciences area are concerned, therefore, the decisions of the great foundations have been chiefly the decisions of academic advisers.

And the sad fact is that these advisers have come overwhelmingly from those who have been politically slanted to the left—and many of them far to the left.

One reason for this has been small grants are naturally unattractive to large foundations with large sums of money to dispense. A mass research project is something substantial—something to use up the money.

Yet mass research is rarely attractive to the conservative professor who needs support for individual research but does not want to run a large staff of computing machine operators and poll takers.

V

The liberal leftist educators, however, have become increasingly interested in the purely, or almost purely, empirical methods of research.

They have thought that they could translate some of the research methods of pure science into use in the social sciences.

It has been one of the outstanding fallacies of this large and terrifically influential group that human relationship problems could be solved mechanically and mathematically by what they call fact finding.

They have so often ignored or failed to take into account important and highly mutable factors such as love, patriotism, loyalties, motivations, and individual characteristics which are utterly incapable of measurement and quite beyond the application of a scientific approach.

Jealous, perhaps, of the true scientist in medicine, physics, etc., these men who have pompously and arbitrarily called themselves scientists, have concluded, and pronounced, that they are the only sound technicians. They have made themselves into a self-appointed elite. They call themselves social engineers.

Operating on a grand scale, they ponder mass symptoms and ignore individual diagnosis.

Armed with their punch cards and electronic brains they consider themselves far more competent to lead us into better pastures than the old-fashioned practitioners who permit themselves to be circumscribed by the known limitations of social science.

"This country was not built by an elite and it is inconceivable that it should ever be run by one," as President Jones, of Rutgers, says.

They have become messianic. And they have succeeded materially in their efforts, over the years, to influence our people.

Their approach has been what Professor Colegrove has called pathological.

They are always looking at what may be wrong with us, not for the purpose of improving what we have that is good and making it better, but for the purpose of supplanting it with something else.

These are the extreme followers of the cultural lag theory which assumes that our technological progress requires a new set of ethical values governing man's relation to man, and they are the advisers best equipped to furnish them.

So, in a period when informed men deplore our tragic lack of engineers and technicians, and the extent to which we are falling behind Russia in technological development, they have persuaded the great foundations to spend more on mass research in the social sciences.

The present shortage of engineers, physicists, and chemists is largely attributable to inadequate teaching of mathematics and the physical sciences in the secondary schools.

Young children have been encouraged to take social study courses rather than to accept the discipline of an exact physical science based on rigorous mathematical principles.

Teachers, too, have been encouraged to escape these disciplines, as they can readily major in a so-called social science, supported by a foundation grant, while they are preparing themselves to teach.

It is no wonder that it is becoming more and more difficult for industry or for Government to recruit from our schools the kind of people who can maintain our position in this age of science and technology.

The biggest foundation of all, the Ford Foundation, excluded itself wholly from such areas as science and medical research. The Rockefeller Foundation, last year, gave hundreds of thousands of dollars to a program of empirical research training in the social sciences. And so it goes.

VI

The same academicians to whom I refer, those who now so deeply influence the great foundations, have little respect for tradition and principle.

They are, almost all of them, followers of the theory of moral relativity, that there are no absolutes, whether religious, moral or civil.

What the facts disclose, is right.

They say: If the Rockefeller-financed Kinsey studies disclose that a large percentage of young girls have active sex-experience before marriage, we should change our laws and morals to permit this; if so many people have a touch of sex abnormality in their souls as indicated by Dr. Kinsey, laws against sex deviation should no longer be tolerated; in the economic field, if research indicates, that the Federal Government can do something more efficiently than can the States, the Federal Government should take it over, regardless of what our Constitution may say about the separation of legislative powers.

This discussion, this description, may give you the beginning of an idea of the type of mind of the intellectual whose opinions have directed the great foundations in the social sciences.

But they have not worked alone. There has come into being a new class of men, almost a guild—the professional administrators of foundations.

Selected largely under the advice of "liberal" intellectuals, they have come into practical operating control of these foundations.

These men, in turn, are overwhelmingly of a leftist political position. You would have to look hard to find a conservative among them.

All of them whom I have met, are pleasant, personable and attractive men who give the impression of complete sincerity (which is usually correct) and of complete objectivity (which is not).

There has been a further aid to the process by which socialism has been fed by the foundations. Just as these administrators have helped the leftwing intellectuals, intermediary organizations have been created to help the administrators—to serve as their advisers and retail distributors of their social science funds.

Typical of these organizations are the Social Research Council and the American Council of Education.

Nor must we forget the nefarious Institute of Pacific Relations, which the Carnegie Corp., the Carnegie Endowment for International Peace and the Rockefeller Foundation used to retail their funds to an aggregate of millions of dollars.

The IPR was Communist dominated and was more responsible than any other factor for the debacle which turned China over to the Communists.

The damage done by the foundations through the IPR cannot be estimated. It may have changed the whole course of history.

Intermediary organizations such as these have also come into the control of those consciously and actively to the left politically.

VII

And although the trustees of the great foundations think they run their foundations, except in the broadest sense, they do not.

Operating in areas substantially beyond their understanding (except in the most peripheral way) they rely on their leftist academic advisers, their leftlist professional employees and their leftist-controlled intermediary organizations, to make the decisions which are the most vital part of their trust function.

There is an occasional revolt such as that which, I suppose, occurred when the Ford Foundation made its magnificent grants last year to operating institutions, for which the people should be deeply grateful.

But even the Ford Foundation has not given up its major interest in leftist research in the social sciences nor its basic operating principle of permitting its experts, rather than its trustees, to determine the methods of operation.

I believe it might be safe to say that, in fields such as economics, sociology, and other social-science areas in which political slant can have a deep effect, the major foundations, both directly and through the use of intermediary organizations, have supported leftist thinking and leftist-slanted research and publication in the United States in the proportion of 10 to 1, compared with the support of the conservative or traditional. The proportion may even be very substantially greater.

Occasionable mistakes would be forgivable. But it is difficult to forgive mistakes in such volume. Moreover, mistakes can often be corrected.

And it is one of the most striking features of major foundation history in the United States that no substantial effort has ever been made to correct mistakes.

Let me give a few illustrations of what I mean, out of so many which could be recited.

VIII

There are some foundations which, like the League for Industrial Democracy, have been frank in their advocacy of socialism.

That foundation, originally the Intercollegiate Socialist Society, did not abandon its ardent propaganda for socialism after it changed its name.

This organization is avowedly socialistic and has openly operated as an educational arm of the Socialist Party.

Before the rapprochement between Hitler and Stalin in 1939, when the Socialist and Communist Parties in the United States worked to establish a popular front, many known Communists were assisted in placing their messages before the American people through the tax exemptions granted to the League for Industrial Democracy.

The League for Industrial Democracy is only one of many of the smaller tax-exempt foundations which have come into the control of those cautiously and actively engaged in subversion.

Although we think of foundations in terms of the great foundations such as Ford, Carnegie, and Rockefeller foundations, there are literally hundreds of smaller tax-exempt organizations which devote almost their entire income to the political area, like the League for Industrial Democracy.

IX

But some of the major foundations have been more subtle than LID and the IPR in their support of leftism.

Perhaps the most vicious and fateful product of foundation financing in our history was the Conclusions of the Commission on the Social Studies of the American Historical Association, published in 1934.

It became a bible of radical educators in our country, and its effects have been cumulatively with us. It has done us inestimable damage. It was financed to the tune of $340,000 by the Carnegie Corp.

Prof. Harold J. Laski, the philosopher of British socialism, said of this report:

"At bottom, and stripped of its carefully neutral phrases, the report is an educational program for a Socialist America."

And Harold Laski knew socialism when he saw it.

The report was, in fact, an utterly frank call to the teachers of America to use the schools for the purpose of indoctrinating our youth into an acceptance of socialism, which it called by the equivalent but softer name of "collectivism."

This monumental report was produced, not by a cross section of American academic opinion, but by a group overwhelmingly radical in its views, a group itself devoted to socialization. Read it, some day, and you will be shocked.

It should shock you more to understand that, after publication of this report, the president of the Carnegie Foundation, which had financed it, made a public statement in which he said that, although he, personally, did not agree with all of the report, he felt the American people should give a vote of thanks to its authors.

You might have thought that, having spent $340,000 to finance an advocacy of socialism in the schools, this great foundation might have supported a counterbalancing project—a study on the defense of capitalism by professors of contrary opinion so that the American people and the American educators could have the benefit of both sides of the argument, at least. Nothing like this was done.

The report was published and widely disseminated and today it stands as an educational charter in the United States.

Almost equally shocking and dangerous is the Encyclopedia of the Social Sciences which is regarded as the "bible" or the social sciences. It was sponsored with foundation money.

It is not only heavily slanted to the left but it slanders the free-enterprise system.

It would appear to be clearly designed to promote socialism among teachers and students.

The keyman in its preparation, Alvin Johnson, admitted he had two assistant editors who "asserted they were Socialists" and he said he was "informed" another was a Communist.

X

Do not think that these incidents stand alone.

American foundations contributed some $4 million to the London School of Economics and Political Science, for so many years the operating base of the late Harold J. Laski, and the fountainhead of Fabian socialism.

Devotion to the principle of academic freedom has been a tradition of the American Republic since its establishment. But I think that history has demonstrated that the London School of Economics and Political Science was at once something more and less than an institution of higher learning.

In the years immediately before World War II, it was communism's most respectable and effective forward base in the Western World.

The Carnegie Corp. selected Gunnar Myrdal, a Scandinavian Socialist, to do a major study on the race problem in our South.

Carnegie's Myrdal reported in his An American Dilemma that our Constitution "is in many respects impractical and ill-suited for modern conditions" and that its adoption was "merely a plot against the common people."

He also stated that Americans have "a relatively low degree of respect for law and order."

And he bemoans the "anarchistic tendency in America's legal culture."

Even before his Carnegie grant, Myrdal was a Rockefeller fellow at the School of International Studies in Geneva.

This is another example of the incredible fact that the fortunes piled up by industrial giants are being used today to discredit our system of enterprise of free labor and free management that gave them birth.

Our form of government, of course, does not appeal to this European Socialist, im-

ported by the Carnegie Foundation to teach us better ways of living.

Another Carnegie unit financed a book called Business as a System of Power, written by Prof. Robert A. Brady, who likened our Messrs. Knudsen, Stettinius, and Bernard Baruch to Hermann Goering, described our business system as a form of feudalism, and opined that "war is necessary for capitalist survival."

Professor Lynd, in his introduction to this important foundation-supported book, stated that "capitalist economic power constitutes a direct, continuous, and fundamental threat to the whole structure of democratic authority everywhere and always."

Another Carnegie-financed item is the Proper Study of Mankind, a book which was designed under the auspices of the Social Science Research Council, the major intermediary organization supported by the great foundations. This influential book, which sold 50,000 copies, was written by Stuart Chase, who has advocated collectivism by name.

XI

Mr. Chase was the selected apologist for many of the theses which those who operate the foundation combine favor, theses which push research and academic opinion to the left.

Among them is the cultural-lag theory, to which I have referred, that we must change our ways of living and even our social concepts because of our advancing civilization.

It may sound reasonable, that theory, but it is actually a medium for questioning our moral standards and our fundamental governmental and social precepts—an ideal way for those who are collectivist minded to undermine our beliefs and faiths.

The Rockefeller Foundation has been frank in its support of this dangerous cultural lag theory.

The Ford Foundation gave a million to the Friends Service Committee, which, in turn, sponsored the World Youth Congress, a Communist front, and sent a delegate to the World Youth Festival in Prague in 1947, an admittedly Communist affair. It also advocated Red China's admission to the United Nations.

Alfred Sloan Foundation financed public-affairs pamphlets, some of which were the next thing to Communist leaflets. They were sold in Communist bookstores but were also distributed to libraries and frequently used in high schools.

The evidence is plain that the leftist movement in this country has penetrated the foundation world as consciously and intentionally as did the Communists.

It was incontrovertibly established that the American Communists were directed by Moscow to infiltrate American foundations and to use their funds to promote communism in the United Staes.

We know that they succeeded to some extent, but we may never know the full extent, as their methods are devious. Two well-known foundations had their tax-exempt status lifted by the Treasury because of Communist subversion. And I understand the Fund for the Republic is now under investigation.

But in the case of the infiltration of collectivists or socialists into the foundations, we know a great deal about it. They have virtually taken over the operating phases of the major foundations, and through them or in conjunction with them have taken over a vast part of the direction of thought and teaching in our educational system.

We have called this use of the foundations for the promotion of socialism by the name "subversion."

For this our enemies have bitterly criticized us.

The Socialist in the United States prefers to have the term "subversion" confined to Communist penetration.

But the term "subversion" denotes an undermining, a chipping away. In this sense the promotion of socialism is clearly subversive of our institutions.

Moreover, it is my opinion, and I am far from alone, that subversion through socialism offers us a far greater internal danger than the threat of communism.

There is no doubt that socialism and communism go hand in hand. The Socialist may hate the Communist, but the Communist loves the Socialist.

The Communist knows that if the Socialist is able to get the upper hand and to destroy a capitalistic system, the Communist can quickly take over.

There is much misconception about the relationship of socialism and communism.

They are the same and identical thing except for one single difference—the Communist believes in establishing the Socialist order by force, while the Socialist is generally content to achieve it through subversive methods—by perverting a democracy.

I wish I had time to give you case after case of socialist propaganda financed by the Carnegie Corp., the Rockefeller Foundation, the Ford Foundation, and others, each without repudiation afterward, each without any effort being made to counteract the impact of what had appeared.

XII

As I intimated previously, one can perhaps exonerate the trustees who did not understand what was being done with the money they allocated to such projects—exonerate them for having been uninformed; yes.

But one cannot exonerate them for having abdicated their trust functions by relying upon professional employees and advisers and intermediary organizations to do their thinking for them.

Nor can one forgive them for either not having studied the products of their negligence or else having failed to repudiate or counter the evil which reading must have disclosed.

We must congratulate Mr. Henry Ford II for having finally had the courage to repudiate (in somewhat gentler language than one might have hoped for) the irresponsible and dangerous antics of the Fund for the Republic.

But does this belated and qualified disavowal excuse Mr. Ford and his fellow trustees of the Ford Foundation for having created this Fund for the Republic and placed $15 million in the administrative hands of Mr. Paul Hoffman and Dr. Hutchins knowing from their own experience with them, that they could use it for purposes conforming to their own radical political predilections?

I do not say that foundations should avoid the social sciences. They need support, just as do the true sciences, medicine, public health, the humanities, etc.

But I do say that the social sciences form a dangerous area for foundation activity unless they are approached with the greatest objectivity and realism.

There are perhaps dangers even in direct grants to institutions, such as universities, when these themselves are to select the areas of research and its administrators.

But there are natural protections within most such institutions.

The dangers are limited by its traditions, its academic organizations, its inter-conflicting opinion, and other factors which keep such an institution reasonably on the track of objectivity.

It might be better if foundations which wish to support social science research did so solely through undirected and unselected grants to universities and colleges.

But if they, with the help of their intermediary organizations, decide to design and control such research themselves, they must do so in conformance with their duty to the public to whose service they are, and by law must be, dedicated.

This dedication requires objectivity, which in itself is not easy. There are many excuses for avoiding this responsibility.

XIII

For example, professional foundation managers frequently talk about the desirability of using foundation funds as risk capital, in ventures where the chances of success are too remote to attract normal financing.

This is an intriguing concept, and has great validity when you are talking about medical research, and other basically non-controversial areas.

If, however, risks are to be taken with the form of our society, or with the form of our Government, or with public opinion in fields which affect our morals, ethics, and political theory, then I, for one, do not believe this to be a proper use of public trust funds.

When funds as huge and powerful as those of the Ford Foundation can be focused upon the proliferation of unscientific science, the risks to society are so great that I do not believe we can tolerate such risk-taking.

My time is too short to give you more. I must close with a plea to you and other like you to become alert to what has happened in the foundation world—and what is currently happening.

I close, as well, with a plea to the trustees of the great foundations themselves to give closer attention to their own organizations.

As matters now stand, the tremendous amount of good performed by these foundations is being jeopardized by their delinquencies.

It is possible pressure for legislative control of foundations may increase. I would deplore it if such legislation became necessary.

There is an easier cure, one which would permit these huge organizations to continue independently. They have done so much for the benefit of humanity and should be allowed to continue.

In your field of medicine, for instance, so many great accomplishments have been foundation financed.

But the great aggregate of good they have done cannot excuse the evil for which they have been responsible; and the day may come when society is unwilling to permit them full freedom unless they reform from within.

That is what I hope for, that their trustees will come to understand that they must restore these foundations to the full respect which careful management would entitle them, and to the very useful place in our society which foundations should occupy.

Such reform from within would entail jettisoning, once and for all, the political influences to which they have been subjected. It would demand a general housecleaning, both as to their academic advisers, their professional staffs, and the intermediary organizations which they support financially and use as retailers.

A foundation, by its very public character, must be wholly objective and wholly free from any political influence.

This is particularly true, obviously enough, when the political forces which seek to influence it are those which are seeking to propel us toward a state which they see as ideal but which must inevitably pitch us into slavery of socialism.

Our People of the Hebrew Faith

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include

the following excellent editorial from the Chelsea Record, Chelsea, Mass., commemorating the Feast of the Passover.

Our own security and the prevention of Communist expansion is dependent upon a peaceful solution of Middle Eastern tension.

The dangers to Israel and the free world resulting from the Egyptian purchase of arms from Czechoslovakia, called for decisive action by our Government to end the threat of war in the Near East through the promotion of an honorable peace settlement between the parties.

Our American people will not permit the sacrifice of Israel to Communist infiltration of the Near East:

HAPPY PASSOVER

With much pomp and ceremony our citizens of Hebrew faith have been celebrating the feast of Passover during this week and will continue to observe the holiday part of next week. It is a holiday which commemorates Israel's liberation from Egyptian bondage more than 3,000 years ago.

The Jews are a people whose history has been filled with sorrow and sadness, but they have a few occasions of joyous celebration and the Passover holiday is just such a festival.

Family gatherings have been held everywhere, and the beautiful seder services generally held on the first and second nights of the holiday and presided over by the head of the family, and participated in by every member, including the children, was one of the highlights of the occasion. It is at this time that the full story of the observance of the feast is recounted and dramatized by the reading of the Hagadah, a book which narrates the story of the exodus and relates all the accompanying miracles, as well as psalms, prayers, and expressions of thanksgiving.

Today the Israelis are again being threatened, and the Egyptians again appear to be their main enemy. Those who read and understand the Hagadah are beginning to realize that the book, written a good many years ago, is not far-fetched and not a fairytale. It becomes more meaningful to the Jewish people as the years progress.

Not only the Jew but every liberty-loving people are now well aware that liberty must be defended, if not actively fought for in each generation, almost everywhere in the world.

It is the earnest desire and sincere wish of this newspaper that the Jewish people as well as the non-Jew will eventually settle their differences in an amicable manner.

Hon. Walter A. Gordon

EXTENSION OF REMARKS
OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1956

Mr. HILLINGS. Mr. Speaker, the University of California recently named the Honorable Walter A. Gordon, Governor of the Virgin Islands, as Alumnus of the Year for 1955. This recognition is another indication of the outstanding service Governor Gordon has rendered.

I join in paying tribute to this fine Californian and American whose work as chairman of the California Adult Authority and now as Governor of the Virgin Islands is bringing so much credit to our country.

I wish to include in the RECORD at this point, several articles from the California Monthly concerning Governor Gordon:

ALUMNUS OF THE YEAR: WALTER A. GORDON

A new name was added to a distinguished roster of Californians on March 23 when Walter A. Gordon 1918 was named the University of California Alumnus of the Year for 1955.

Gordon, who last summer was appointed by President Dwight Eisenhower to the Governorship of the Virgin Islands, has had a long and truly distinguished career as football star, Berkeley police officer, attorney, football coach and scout, and nationally known penologist. As chairman of the California Adult Authority, which grants parole and fixes terms of imprisonment, he pioneered developments which have contributed significantly to California's excellent reputation for its correctional institutions. He was with the Adult Authority 11 years before resigning to accept the Virgin Islands appointment.

During his student days, Gordon not only won honors as California's first All-American football player as a lineman on Andy Smith's teams of 1916–18, but also excelled in boxing and wrestling. Following graduation, he joined the Berkeley police force and continued studies at Boalt Hall for the law degree he won in 1922. He was in practice for 21 years as an attorney, taking time out for many years to work as a scout and football coach for the Golden Bears during the fall.

Former Gov. Earl Warren appointed him chairman of the California Adult Authority in 1944.

He assumed his duties in the Virgin Islands in September 1955. As the islands' chief executive, he guides the destiny of about 30,000 citizens. In addition 100,000 persons visit the colorful islands annually.

At ceremonies during the Charter Day Banquet on March 23, Gordon became the 13th person honored as a recipient of the Alumnus of the Year Award. Previous persons so honored are: Gen. James H. Doolittle, 1918, air force leader; Dr. Joseph Erlanger 1895, Nobel Laureate in physiology; President Robert Gordon Sproul 1913; Chief Justice Earl Warren 1912; the late Monroe E. Deutsch 1902, University vice president and provost emeritus; Glenn T. Seaborg 1934, Nobel prizewinning nuclear scientist; J. D. Zellerbach 1913, former ECA director in Italy; Kenneth Pitzer 1937, former director of research for the Atomic Energy Commission; Stephen D. Bechtel 1923, international builder; Horace M. Albright 1912, conservationist; General William F. Dean 1922, distinguished military leader, and Lillian Moller Gilbreth 1900, management engineer.

WALT GORDON: CALIFORNIAN, AMERICAN "ALUMNUS OF THE YEAR"

We think one of the finest things which has happened at the University of California in a long, long time is the selection of Walter A. Gordon, 18, as "Alumnus of the Year" for 1955.

The selection was unanimously made after careful consideration of many outstanding nominees by the Awards Committee of the Alumni Council, enthusiastically approved by the members of the Council of the Alumni Association and greeted with thrilling and heart-warming acclamation by more than 1,000 persons present when it was announced at the charter banquet in San Francisco on March 23.

The popularity of this selection, however, is not the reason it was a fine thing.

Perhaps the first and foremost reason that this was a splendid act is simply the fact that Walt Gordon so richly and clearly deserved the honor. The "Alumnus of the Year" award is made to that alumnus of the University of California who is determined to have made the most outstanding contribution to mankind or to the general welfare for the year in which the award is given. Of the many splendid nominees for the award for 1955, Walt Gordon stood quite clearly head and shoulders above the other excellent candidates.

His achievements, his contributions, have been solid and significant. They commenced many years ago, indeed when he was still a student on the Berkeley campus; they continued during his early years as an alumnus and increasingly through later years; and they have culminated within the immediate past to a point where Walt Gordon ranks today not only as an outstanding Californian but as a great American.

Another reason why his selection was such a fine one is simply that Walt is such a swell guy. We don't know if we have ever known a man who seems to be so universally well liked. It has been our pleasure to know and to be closely associated with Walt for nearly a quarter of a century. He has come into contact with literally thousands of people in all walks of life. There may well be people who don't like Walt—we don't know of anyone who doesn't have some detractors—but, frankly, we don't know of any of them. Instead, everywhere we go and among the thousands of people we meet and see, we hear only good words about Walt Gordon. This wide friendship and popularity hasn't happened because Walt is simply a pleasant man without positive views on those things which count in life. Rather, in fact, he does have very definite points of view on most matters of major issue. Rather, he is liked, respected, and almost beloved because he has the qualities of a real man. He has conviction for his own point of view but understanding of the other fellow's beliefs. He has positive suggestions for improvement, not negative reactions which result in impasse or failure. His warm, friendly manner is infectious in breeding true friendships—the kind which last through the years and across the miles. He has an understanding of human problems which surpasses that of almost any man we have met. Perhaps, in the final analysis, this great quality has enabled him to make the kind of positive contribution to mankind and the general welfare for which he has been recognized with this "Alumnus of the Year" award.

We have noted some of the reasons why we believe this was a splendid selection. There are other reasons as well. Perhaps we sum them up when we say that somehow this selection, to us, symbolizes the opportunity that is America. And this is the kind of America which was envisioned by our forefathers when they wrote into the founding documents of our ways of freedom and democracy the fundamental principle of equality of opportunity. As Californians, we can thank God that in this university, in this State of our great land, an award of meaning and importance such at this one is made on the basis of merit alone, and as the result of one's contributions, judged on their value and significance, by fair-minded fellow alumni and fellow citizens.

Walt Gordon, alumnus of the class of 1918, earned his spurs as the first football player in the West to be named to all-American recognition. He earned the respect of many a foe on the mat and in the ring as intercollegiate champion in boxing and wrestling. Several generations of football players were better players then and are better men today as a result of the coaching and teaching of Walt Gordon, assistant football coach at California. Many a California football victory can be credited to the wise counsel of football scout Walt Gordon. Police practices and the administration of justice in the

State of California have received valuable contributions from the work and teachings of police officer Walt Gordon. The practice of the law has benefited, as well, from the work of attorney Walt Gordon. The prison and parole system in the State of California and throughout the United States have benefited immeasurably from the service of Walt Gordon as member and chairman of the California State Adult Authority. Today, the United States and the peoples of the Virgin Islands both derive benefit and satisfaction because Walt Gordon is Governor of those islands. Yes, mankind and the general welfare have been served mightily by the contributions of our friend and fellow Californian whom we hail with pride and honor, our alumnus of the year for 1955, Walt Gordon.

Soviet Broken Promises

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. PHILBIN. Mr. Speaker, in the light of the current diplomatic manipulations of the Red Kremlin, I would like to bring to the attention of my colleagues in the House an editorial which recently appeared in Nowy Swiat, the Polish Morning World, and a pertinent letter written by my distinguished friend, K. Stefan Pomierski, of Glen Cove, N. Y., which was printed in the Tablet.

The material follows:

[From Nowy Swiat of March 22, 1956]

MUCH ADO ABOUT NOTHING

During the last few days it really did seem as if the press of our country was being taken for another ride by clever Red Russian tacticians. Once again voluminous news material and editorial comment on U. S. S. R.'s alleged internal trouble found its way into the columns of our daily newspapers. What happened in Caucasian Georgia has been presented to us as some sort of a revolt, nay, a full-scale revolution.

Stalin's and Beria's homeland probably has many ardent followers of these two paranoiac murderers among members of the local Communist Party. Kremlin bigwigs may have simplified their task of getting rid of them by the well-known method of provocation in which they excel. Khrushchev and his group are past masters in the art that made Machiavelli famous. Khrushchev's 7-hour speech, delivered during the 20th Congress of the Communist Party in Moscow, is still being analyzed in this country. His subsequent attack on Stalin is still making headlines. The New York Times honors the first secretary of the Russian Communist Party by calling him "a modern Oedipus," and poor Khrushchev has much trouble in finding out what it really means.

Though we may be suspected of oversimplifying a very complicated problem, we risk the statement that naive political thinking prompts us to make mountains out of molehills. The Georgian purges—no matter how extensive—serve two purposes: (1) Liquidation of Stalin's and Beria's adherents, and (2) producing much wishful thinking in the West. There is probably little revolt in Georgia. Remnants of the Ramashvili movement are dormant in that mountainous land, and they are the only ones that dream of Georgia's independence.

[From the Tablet of February 11, 1956]

RECALLS RED VIOLATIONS

DEAR SIR: Mr. Bulganin, by submitting to us repeated bids for a 20-year friendship pact, should be firmly reminded of the many pacts which were broken by the Communist dictators whenever it appeared to the advantage of the Soviet Russian regime.

Government officials, Members of Congress, editors, radio and television commentators should not hesitate to tell the American public and the world, over and over again, all the details as to the violations of these treaties by Red Russia.

We must always be strong and united in a grave hour such as the present by giving a fearless answer to impudent demands which obviously have an ulterior motive.

K. STEFAN POMIERSKI.

GLEN COVE.

Rt. Rev. Frances L. Shea

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following inspiring eulogy given at the funeral of the Right Reverend Monsignor Francis L. Shea, V. F., by the Right Reverend Monsignor Patrick J. Lydon, pastor of St. Mark's Church, Dorchester, Mass.

Monsignor Shea is the late beloved pastor of St. Michael's Church, North Andover, Mass.

What a wonderful useful life he led. He contributed vitally to each of us within his reach. His departure is our great loss:

MONSIGNOR SHEA EULOGY TOUCHING

The eulogy given at the funeral of Rt. Rev. Msgr. Francis L. Shea, V. F. Thursday by Rt. Rev. Msgr. Patrick J. Lydon, pastor of St. Mark's Church, Dorchester, and longtime intimate friend of the deceased, follows:

"Fear ye not, for I have redeemed thee and have called thee by name, Thou art mine." Is. 43.

"To pronounce a eulogy simply to add to the reputation of the dead, or to flatter the deaf ears of a corpse with tardy praise would be but an empty gesture. But it can be of great spiritual profit to us all to draw attention to high and noble example, and to meditate on the common virtues as practiced in the everyday life of our beloved friend, Msgr. Francis L. Shea. This is especially true of a dead priest, for the priest is set as an example not only for his fellow priests but for the faithful as well. The strongest appeal that Saint Paul could make to his converts is contained in his words, 'I have given you an example.'

"But very often, as was the case with our dear friend, Monsignor Shea, the priest is by nature shy and reticent and only a privileged few are able to discern his many virtues and admirable qualities. For nearly 50 years, ever since he was a young man at Boston College High School, I have been his admiring friend, and reverently I shall endeavor to uncover some of his virtues that they may edify and be an inspiration for us.

"The text which I have chosen from the 43d chapter of the prophet Isaias was a promise that Almighty God made of old to His chosen people and in which each of us have a share: "Fear not for I have redeemed thee and have called thee by name. Thou art mine." Each of us was truly chosen and created by Him out of nothing and we belong to Him so closely that He tells us He has counted the very hairs of our head. And in this text He reminds us that we belong to Him by a second and more profound title, for He has purchased and redeemed us by His precious blood.

"But in a very special sense this text can be applied to every priest, for from his birth he is the object of God's predilection and special care. Out of all the boys in his neighborhood and in his school, Monsignor Shea had the marks of a divine vocation; he alone had been called by God by name to be His priest, to be His very own.

"Sometimes, as in the case of the rich young man in the Gospel, the one whom God chooses, for He never deprives anyone of his free will, shuts out the divine call, 'because he has much possessions,' too much love of home, hunger for human love, fondness for money, or love of ease.

"In the case of Monsignor Shea, our Divine Lord, who loved poverty, willed that our dear friend, like Himself, should be born in humble circumstances. And one by one, while he was yet very young took from him first, his father and then his dear mother, and one by one all the members of his family until all that remain to mourn for him are his three nephews and a niece. But in all his troubles he never wavered in answering God's call, and in June 8, 1917, nearly 39 years ago, he was ordained a priest by the late Cardinal O'Connell.

"He served a long and inspiring curacy in St. Peter's parish, Lowell, where he did outstanding work with youth and for several years conducted very successful camps for both boys and girls on the shores of a lake in Dunstable. At that time this kind of work was a new and untried departure in parish endeavor. All his priestly life in Lowell, West Roxbury, Medfield, and here in North Andover he has had a special and Christlike love of children. And the young were drawn naturally to him and little children felt at home in his presence. How happy he was when he secured his first school here and was able to build a fitting convent for the good Sisters. But his hunger for the little ones of Christ still drove him on and if God had spared him only a few months more he would have completed another school to accommodate all the children who clamored to enter under his care.

"Monsignor Shea had a ready smile that lighted up his whole countenance and his kindly spirit seemed to be perpetual with him, and made everyone he met his friend. It would be hard to meet a man who had so many genuine friends. He was easy to approach and his simplicity of character at once set everyone at ease. Whether one was a Catholic or not made little difference to him.

"Monsignor Shea never strove to be an orator in the accepted sense of the word, but with his consecrated and unselfish background he was bound to be different from other speakers. When the heart is full the lips become eloquent. He had the heart of an evangelist and was impelled to speak out for Christ, so that his hearers were moved by his direct and earnest message. His mind was well stocked by good reading that both enriched his ministry and gave him facility in explaining the holy mysteries of the faith in clear and simple language.

"For nearly 39 years this good priest had been zealous in caring for the sick and in teaching others how to die. And so he was well prepared himself to meet death unafraid when it quietly and unexpectedly came upon him early in the morning of the day after Easter.

"We cannot separate the grave from Easter. The first rays of Easter morning fell on a broken tomb and on a white clothed angelic spirit sitting on the very tomb. Listen to the comforting words of the angel—'Why weepest thou? He is risen. He is not here.' We must not think that we are about to lay away Monsignor Shea in the grave. St. Paul defines death as 'To depart and be with Christ.' Our Lord said the same thing to the dying thief, 'This day thou shalt be with Me in Paradise.' And to His disciples again he said, 'I go to prepare a place for you, that where I am you also may be.' We must never forget that the tombs of our dear dead are always empty, and if we have faith, we, too, can hear the angels telling us, 'They are not here. They are with Christ.'

"If we have faith, we can be closer to our dead than even when they were alive. Jesus cannot deceive us. He tells us, 'I am the Resurrection and the Life. He that believeth in Me, although he be dead, shall live; and everyone who liveth and believeth in Me shall not die forever.'

"And let us remember, dear friends, that Jesus showed Himself unchanged and unchilled by the grave. He arose from the grave with the same body which hung on the cross and He appealed to His sacred wounds to witness to His identity. Like Him our beloved dead retain all that is noble and beautiful of the affections of earth. They love us. They remember and think and pray for us.

"Therefore we must not think of Monsignor Shea as dead, but as living with Christ. Let us pray for him and every day when we visit this church that he loved so much, let us live with him in sacred intercourse by faith. It will help us so to live that when it comes our own time to die we shall be worthy to live with him, our dear friend, in Christ Jesus. Amen."

Cross-Florida Barge Canal Should Begin Construction Now To Prevent Submarine Threat

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. BENNETT of Florida. Mr. Speaker, I wish to call the attention of the House of Representatives to an excellent editorial in the April 3 edition of the Washington Star, and to emphasize that the implications of this editorial, together with other available information, indicate that we should no longer delay the construction of the Congress-approved cross-Florida barge canal.

This editorial points out that our highest military authorities are united in the view that there is an extremely serious threat to our country from the continuous buildup of Soviet military power. Moreover, the editorial underlines the emphasis of Russia on submarines. As General Gruenther said, the buildup of submarines must be viewed in the light of the fact that there is no cold war value to a submarine. General Gruenther is quoted as saying that there are five times more submarines in the Soviet fleet than Germany had in 1939.

All of this points to a need for constant reappraisal of our military strength. It is my opinion that our armed services have been reduced too drastically. The tremendous loss to our country in World War II from German submarines and the potentially much greater threat from Russian submarines in the future point up the fact that our country should do longer delay the immediate construction of the cross-Florida barge canal. The statistics show that the canal could have been paid for by the losses which would have been prevented in World War II if it had been under operation at that time. Now that the threat to American military and domestic shipping has been so greatly increased, there should be no further delay in commencing this project. The editorial reads as follows:

SOVIET POWER AND THE SEA

As emphasized in their recent testimony before a House subcommittee on defense appropriations, our highest military authorities are united in the view that our country has never before faced a worse threat than the one now confronting it in the form of Soviet armed power, actual and potential.

This power, backed by a steadily expanding heavy industrial base, has within the past decade been built up on a truly massive scale. As a result, equipped as it is with a growing arsenal of atomic-hydrogen weapons, the Soviet Union today is second only to the United States in terms of military might. In fact, in some fields—such as the development of guided and ballistic missiles—it may be ahead of us in certain respects. Moreover, as everybody already knows, its combat-ready army is the biggest in the world, and its air force is rapidly becoming as formidable as our own. Similarly its navy, which was a puny and inconsequential thing 10 years ago, now is very strong, particularly in its submarine branch.

Indeed, in the opinion of at least some of our military leaders, the buildup of Russia's Navy—a navy still far behind ours in many categories, but apparently bigger than Britain's—constitutes the most significant development of Soviet grand strategy since the end of the Second World War. And an especially sobering aspect of that development has been the emphasis placed on submarines. Last year, for example, the Kremlin built more of these lethal undersea raiders than the rest of the world combined, and quite a few of them presumably are capable of launching not merely torpedoes against ships but missiles against land targets. Now totaling about 400 in a combat-ready status, they do not yet include any that are atomic-powered like our *Nautilus*, but large numbers of them are advanced snorkel types whose potentialities are unquestionably deadly.

The fact that the Russians have gone all out in building such craft has elicited another warning from General Gruenther, commander of NATO forces in Europe. Thus, as he declared in Paris the other day, "I can explain in terms of the cold war why they have 175 divisions in Russia, 20,000 planes, and 60 divisions in the satellites. But I can't explain 400 submarines. There is no cold-war value to a submarine. It is a hot-war weapon. They have five times more submarines than Germany had in 1939." And no one who remembers the battle of the Atlantic, and how Hitler's U-boats came close to severing the allied lifeline between America and Britain, needs to be instructed in the significance of such a military statistic. Clearly, coupled with its land and air strength, the Soviet Union's seapower—meaning primarily submarines—adds up to a potential menace of the first magnitude. Small wonder that Admiral Burke, Chief of Naval Operations, has stressed to the House group that "It is essential that the United States recognize this growing threat in time. We cannot be sure today that we are moving fast enough to keep ahead." We ought to make sure. There should be no doubt about it whatever.

St. Patrick's Day

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks, I insert therein a very remarkable tribute to St. Patrick's Day which was recently paid in the columns of the celebrated Clinton Daily Item by my dear and valued friend, and distinguished fellow townsman, Mr. Alexander Cameron Duncan.

Mr. Duncan, who recently celebrated his 88th St. Patrick's Day, is a native of Ireland, a great admirer of the great Scottish poet, Bobby Burns, and devoted to the illustrious Scotch-Irish tradition. I have known Mr. Duncan since my early youth, and it has been his unfailing custom through his long and useful life to celebrate St. Patrick's Day and the birth of the great Robert Burns, apparently with equal zest and spirit.

His love of America where he has spent so many years of his constructive life is truly inspiring, and he is rich indeed in spirit, in courage, in loyalties, and friendships. He is exceptionally active and vigorous and moves about his daily routine with exceptional alacrity.

It is said that "as a man thinketh in his heart, so is he," and that is certainly true of Alexander Cameron Duncan, because in his heart he is a fine, tolerant, Christian gentlemen, a true friend whom the entire community respects, admires, and loves, and an American of whom we can all be proud.

I regard it as a privilege to express to him my compliments, appreciation, and gratitude for his outstanding tribute to the honored St. Patrick, and I am sure it will be interesting to the Members of Congress and a great many people throughout the Nation who read the CONGRESSIONAL RECORD:

ST. PATRICK'S DAY

As I celebrate my 88th St. Patrick's Day I want to remember one grand old Irishman, a friend of mine for many years.

He is Patrick Donahoe who was editor of the Pilot, America's oldest Catholic news weekly which celebrates its 127th year of publication this year.

The celebrated Bostonian was awarded Notre Dame's medal for his outstanding services to the Catholic cause in the United States.

He died at the age of 90, after having for nearly 70 years played an eminent and honorable role in the Catholic life of Boston.

It is 70 years since I saw the peat reek rising from those Irish, whitewashed thatched homes. I was 1 of 10 born in such a house. Four of us remain, all over 80 years.

Saturday, March 17, we celebrate St. Patrick's Day. With St. Patrick's Day spring comes to Ireland, and to the hearts of Eire's sons and daughters wherever they may be.

Throughout the length and breadth of all Eire's many counties from Cork to Caven, from Kerry to Kildare, from Meath to Mayo, St. Patrick's Day is celebrated in every cottage, every castle in every croft and hamlet. There is no whitewashed cottage so humble, no country estate so proud or pretentious that the memory of Eire's patron saint is neglected on this significant day.

It is a day of reverence and reverent memory of pride in Eire's destiny.

In every peat-perfumed cabin, Irish hearts turn to St. Patrick and his great labors of love for his land and folk of Eire. And far beyond the borders of lovely Eire, devoted men and women of Irish stock throughout the world seek out a bit of shamrock to make their hearts rejoice or, failing that, a bit of green ribbon to recall the land and its loveliness, the folk and their rollicking good humor whence they sprang.

For there is no lovelier land than Eire. No sturdier men and women than the folk it breeds. And there is no people so true to its faith, so loyal to its martyrs, so proud of its heroes, as the proud folk of Gaelic blood and speech. To all Eire's clans St. Patrick is patron saint.

ALEXANDER CAMERON DUNCAN.
CLINTON, MASS.

South Dakota's Excellent Press

EXTENSION OF REMARKS
OF
HON. HAROLD O. LOVRE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 19, 1956

Mr. LOVRE. Mr. Speaker, this past weekend the South Dakota Press Association held its annual convention in Sioux Falls, S. Dak. At the same time this fine organization of newspaper editors and publishers observed its 75th birthday. All of us, from time to time, have stressed the importance of what the American press means to this liberty-loving land. During the South Dakota Press Association convention last weekend a very fine editorial appeared in the Sioux Falls Argus-Leader, written by Fred C. Christopherson, editor. This editorial discussed the merits of the weekly newspaper, of which there are nearly 200 in South Dakota, and it pointed out the relationship of the weekly newspaper to the community which it serves so well that I wish to place this editorial in the RECORD. One statement in particular is of interest to my colleagues, I am sure, and I want to call special attention to it. The Argus-Leader wrote:

> The weekly press in South Dakota, we are inclined to believe, is as good as any in the Nation. The editors are representative citizens of their communities and their State. They express themselves freely and well. No political party and no organization control them. Their viewpoints are their own, set forth clearly and frankly.

I am certain that the above statement is true of newspaper throughout the country in most instances. I think it is significant that this comment did not come from an editor of a weekly newspaper, but from a daily newspaper editor, from a man in a position to observe weekly newspaper operation without prejudice one way or the other.

The editorial follows:

The South Dakota Press Association is in convention in Sioux Falls today and to the members we extend a special welcome.

This association is now in its 75th birthday and its meetings in this city have been frequent. Thus it is that the members come here as old friends and renew a happy relationship that has extended over the years.

The SDPA membership is composed largely of the editors of weekly newspapers and it seems appropriate upon the occasion of their visit to pay a tribute to what they have done and what they are doing. The weekly press in South Dakota, we are inclined to believe, is as good as any in the Nation. The editors are representative citizens of their communities and their State. They express themselves freely and well. No political party and no organization control them. Their viewpoints are their own, set forth clearly and frankly.

They mean much to their communities—much more, in fact, than their communities always realize. Invariably they are in the forefront of a movement to build their towns whether it be a bond issue for new schools or a campaign to improve a highway.

Visit these towns and look about you. Rarely, if ever, can you see a good civic project that did not come into being without the vigorous support of the editor of the weekly newspaper. All of these reflect his helpful viewpoint, his loyalty to his hometown, and his eagerness to promote that which is worth while.

The town with a thriving weekly newspaper is a good town. The town without a newspaper is gravely handicapped, as such communities well know. But occasionally it is a case of, so to speak, "not missing the water until the well goes dry." The wise community will appreciate what its press is worth and maintain it.

This is not to suggest that the weekly press can't stand on its own two legs as a business institution. Actually what it has to offer to its subscribers and its advertisers is a good buy, one of the best. For a modest payment, it provides the news of the community and the area week in and week out. It distributes an advertiser's message into virtually every home in the community and the surrounding area. And it's widely and carefully read by the subscribers.

The SDPA has convened more frequently in Sioux Falls than in any other city. This pleases us, of course, and suggests that the meetings have been pleasant and productive. We hope that the current session is equally worth while.

Premier Nasser, of Egypt

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 9, 1956

Mr. MULTER. Mr. Speaker, permit me to direct to the attention of our colleagues the following editorial on Premier Nasser, of Egypt, which appeared in the New York Times of March 30, 1956:

EGYPT ON A RAMPAGE

The rise of Egypt to a position of primary importance in the Middle East today is one of the most dramatic and—in the circumstance—most disturbing developments of post-war history. The importance, in this case, lies in the ability and determination to cause mischief. The democratic West is the sufferer from the policies pursued by Premier Nasser of Egypt; the Soviet bloc is the gainer. Tension and the threat of war have increased. Britain and France are protesting; the United States remains silent.

These are the bare facts and they are more than enough to explain the disappointment in the Western World over the meteoric career of Colonel Nasser. From his personal point of view and from the point of view of Egyptian and Arab nationalism, Colonel Nasser has been a great success. He is today the outstanding figure of the Arab world and Egypt is the most important country.

Colonel Nasser's appearance on the stage of Egypt's contemporary drama in 1952 was welcomed. He was the dominating figure in the revolutionary army movement that overthrew King Farouk. Since February 1954, he has been Premier of Egypt. At first he was merely one of a group of officers on whom he was dependent, but lately he has been all-powerful. It has been argued that any alternative to Colonel Nasser would make matters worse, bringing chaos and confusion. This is an almost invariable argument in favor of dictators. In any event, no one is trying to overthrow Premier Nasser.

The British have publicly complained over the anti-British and revolutionary propaganda of Egypt in East Africa and the Near East, and the French are even more bitter over the incitement to revolt of the Moslems in North Africa that comes from Cairo and the material help given to rebels. All the Western powers expressed their concern (dismay would have been a better word) when Colonel Nasser last September accepted the offer to buy arms from the Soviet bloc, and we now learn that Egyptian officers are being trained in their use behind the Iron Curtain. Unfortunately, it was precisely this dangerous move, which brought Russia into the Middle East for the first time, that sent Colonel Nasser's stock soaring in Egyptian and Arab eyes.

U. S. S. "Saratoga" To Be Commissioned April 14, 1956

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. DORN of New York. Mr. Speaker, I wish to call to the attention of the Members of the House the fact that on April 14, 1956, the U. S. S. *Saratoga*, CVA 60, will be commissioned at the New York Naval Shipyard. Upon commissioning, she will become the most powerful fighting ship afloat in the entire world. I believe that the *Saratoga* name is entitled to such an honor because the new ship will succeed to the name carried by five previous ships which participated in illustrious and memorable service to the United States. The name was originally taken to commemorate the famous Battle of Saratoga of our Revolutionary War, which proved to be its turning point. All of the ships which have since borne this name have fought with great distinction for the United States.

The first U. S. S. *Saratoga* was an 18 gun continental sloop-of-war which was commissioned in April of 1780. Although her life was a short one, she distinguished hereself by capturing several ships carrying heavier armament and taking vessels

into port as prizes of war. When last seen, in March of 1781, the U. S. S. *Saratoga* was heading out in pursuit of a strange vessel which had been sighted on the horizon. She disappeared from sight and her fate was never known.

The second U. S. S. *Saratoga* won her fame on Lake Champlain in the War of 1812. Commissioned on April 11, 1814, she was a 26-gun corvette and first saw action on September 11, 1814. At this time a great battle was shaping up for control of the Great Lakes. The British hoped by gaining control of the lakes, they could invade the United States from the north. In one of the decisive battles, the *Saratoga*, as a result of brilliant seamanship on the part of her captain, was able to defeat the British flagship, which carried 39 guns. As a result of this action, the British plans for the northern invasion of the United States were abandoned, and the United States maintained control of the Great Lakes.

The third U. S. S. *Saratoga* was a first class sloop carrying 20 guns. She received her commission in July of 1842 and served as an integral part of the United States Navy from that date until 1907. During this period of 65 years, the *Saratoga* saw action in the Mexican War, was part of Commodore Matthew C. Perry's squadron in 1853 during the negotiations for the treaty which opened Japan to the West, helped blockade the South Atlantic Coast during the Civil War, and served as a training ship for naval apprentices. She was finally sold to the State of Pennsylvania in 1907 for use as a training ship.

The fourth U. S. S. *Saratoga* was so named for only part of her naval career. She was launched in December 1891, as the U. S. S. *New York*, an armored cruiser carrying all the latest naval improvements. She was Admiral Sampson's flagship in the crucial Battle of Santiago in the Spanish-American War. On February 16, 1911, her name was changed to the U. S. S. *Saratoga*, which she carried until December 1, 1917. During this time she served as the flagship of the Asiatic Station. On this date, the vessel's name was again changed to the U. S. S. *Rochester*, and subsequently took part in the Nicaraguan campaign of 1926–31 and other important naval engagements. In 1938, she was stricken from the list of naval vessels.

The fifth U. S. S. *Saratoga* was probably the most famous of all of the ships to bear this illustrious name. She was launched in April of 1925 and was the first United States vessel to be launched as an aircraft carrier. During the years 1925–41, the U. S. S. *Saratoga* served as a training vessel for aircraft carrier pilots and contributed greatly toward the promotion of naval aviation.

On December 7, 1941, the U. S. S. *Saratoga* was in San Diego Harbor. The following day she was dispatched for the South Pacific carrying marine aircraft to bolster the defenses of Wake Island. Wake Island surrendered before help could reach it, and the *Saratoga's* planes were delivered to Midway Island, where they were of great help in repelling air strikes against the island.

The *Saratoga* next saw action in May of 1942 when she delivered additional aircraft to the carriers which took part in the Battle of Midway. She then became a member of Task Force 17 and served as the flagship of Vice Adm. F. J. Fletcher. From this time until she became a member of the famed Task Force 58, the U. S. S. *Saratoga* carved out a magnificent name for herself. She participated in the landings and capture of Guadalcanal. She conducted successful raids against the eastern Solomon Islands. She was responsible for the sinking of the Japanese aircraft carrier *Ryujo* and for severely damaging the Japanese seaplane carrier *Chitose*. She lent great assistance in the marine strikes in Empress Augusta Bay and later in Tarawa. In March of 1944, she took part in operations against the Japanese-held islands of Java and Sumatra. She then returned to the United States for repairs and joined Task Force 58.

As a member of this notable task force, the *Saratoga* took part in the first carrier-based attack on Tokyo in February 16–17, 1945. She then lent her support to marine units in the invasion of Iwo Jima. During this operation she was severely damaged by 4 suicide planes and 7 bombs. She returned to the United States once again for repairs and spent the rest of the war performing training duties at Pearl Harbor.

The battle-scarred grand old lady of United States aircraft carriers was finally swallowed up by the waters of Bikini Atoll as a result of the underwater blast of the atomic bomb test on July 25, 1946.

The sixth U. S. S. *Saratoga* not only will be the world's most powerful warship, with a 60,000-ton displacement, but will contain all of the latest mechanical improvements since her sister ship, the U. S. S. *Forrestal*, was designed. She has an overall length of 1,039 feet, an extreme beam of 252 feet, and her speed will be in excess of 30 knots—34 miles per hour. She is equipped to carry the latest jet aircraft. Sufficient replenishment-at-sea equipment will allow her to remain away from port for extended periods of time with no loss to battle efficiency.

The ship's complement numbers 3,800 men. These men will be fed by a galley which can dispense 1,100 loaves of bread, 9,400 pounds of vegetables, 1,000 pounds of dairy products, 4,600 pounds of meat, and 12,100 pounds of dry provisions per day. They will be medically cared for by a complete 84-bed modern hospital, and a pharmacy. There are also 6 battle dress stations, 10 decontamination stations, 192 first aid boxes, and 4 dental offices.

The contract for building this vessel was awarded to the New York Naval Shipyard on July 23, 1952. The keel was laid on December 16, 1952.

I believe that a special word of commendation should be given to the men who have worked so diligently on the construction of this vessel. These men of the New York Naval Shipyard have proven that they are a "can do" shipyard and have taken those two words as their motto. They have performed their jobs with such great efficiency and quality that I know that when this vessel is delivered to the United States Navy, it will be as perfect a fighting machine as can be constructed anywhere, anyplace, anytime.

With such a ship in the capable hands of experienced naval personnel, under the command of Capt. Robert J. Stroh as her first commanding officer, the name of the U. S. S. *Saratoga* will go on to greater heights in the annals of our United States Navy. Let us pray that she will win her place in history by her might as a preserver of peace, rather than as a defender in war.

British Colonial Rule of Cyprus

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. MULTER. Mr. Speaker, I wish to direct to the attention of our colleagues the following resolutions adopted by all the Greek fraternal organizations of New York City at a mass meeting held at Manhattan Center on March 18, 1956, in support of the demand of the Cypriot people for freedom and self-determination:

RESOLUTIONS RE BRITISH COLONIAL RULE OF CYPRUS

Two thousand Americans, representing 125,000 fellow citizens of Greek descent in Greater New York, having convened today under the auspices of the Cyprus Federation of America and the Federation of Hellenic Societies, in Manhattan Center, because of the unprecedented banishment of Archbishop Makarios and his associates, reviewed the following points, among others:

1. Greece and the Greek Cypriots have publicly and repeatedly offered to let Britain keep all the bases she needs both in Cyprus and Greece, as has been the case with United States bases in Greece.

2. The military issue is not whether the British are to abandon their base on Cyprus but rather whether that base, whatever its value, is to be strong or weak.

3. As recent events demonstrate, continued British colonial rule of Cyprus greatly weakens NATO and the free world.

4. The issues were narrowed as a result of the recent negotiations to: (a) Amnesty for all political prisoners; (b) the length of time of British control of internal security; (c) the composition of the legislature.

5. The rights of the Turkish minority can be fully protected.

6. The Cypriots, a mature, civilized people, could govern themselves today.

7. The competence and jurisdiction of the United Nations to consider the Cyprus question has already been established. However, action has been deferred in order to give the opportunity to the parties concerned to settle the issue through private negotiations.

8. The British Government broke off the recent negotiations between Archbishop Makarios of Cyprus and Governor Harding.

9. Cyprus presents a problem to American policy to be met by moral considerations of anticolonial principles rather than by commitments to colonial allies.

After considering the above, the following resolutions were unanimously passed:

"*Resolved*, That—

"(a) We strongly protest against the abduction, banishment, and imprisonment of Archbishop Makarios, the elected religious and political leader of the Greek Cypriot community; Bishop Kyprianos, of Kyrenia, and their associates in the movement for freedom, and we urge their immediate release and restitution to their Sees.

"(b) We strongly condemn the sacrilege performed by the British forces in invading the sanctity of the churches and monasteries in Cyprus.

"(c) We condemn the use of force by the British as an instrument of policy designed to stifle the demand of the Cypriot people for self-determination and freedom, as such policy can only lead to further violence and the alienation of our NATO ally, Greece.

"(d) We condemn the use of collective punishment of innocent people as an instrument of retaliation and revenge.

"(e) We strongly request that our Government, in the interest of American foreign policy and prestige, insist that the British abandon their strong-arm methods, resume negotiations in good faith, release all political prisoners, and apply self-determination to Cyprus.

"(f) As Americans, we shall never cease our efforts in support of government by consent in Cyprus and throughout the world.

"(g) In the interest of American military and political policy, we urge all Americans of Greek descent to write to their relatives and friends in Greece and Cyprus, telling them of our full and unending support in order to forestall any possible neutralism and alienation of our NATO ally, Greece.

"(h) We urge our Government to support the position of the Greek Cypriots that the elected majority must have voting control in the proposed legislature in accordance with normal democratic principles.

"(i) We commend the expression of sympathy of our Ambassador to Greece and the statements of our President and State Department, and urge that our Government assist in arriving at a just settlement of this dispute.

"(j) We commission the Committee on the Cyprus Question of the Cyprus Federation of America to forward these resolutions to our Government."

Curb Proposed on Military Landgrabbing

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 26, 1956

Mr. ENGLE. Mr. Speaker, the House Committee on Interior has been holding hearings over the past several weeks on military reservations of public domain lands. There is a growing concern, especially in the far West, about the ever-increasing acquisitions by the military of public land areas, thus precluding the multiple use of these public lands for grazing, mining, lumbering, water conservation, recreation, and sportsmen. Our effort to put a little sense into the continual efforts of the armed services to grab off more and more public lands was recently applauded in the Bakersfield Californian of March 15, 1956. The editorial is as follows:

CURB PROPOSED ON LANDGRABBING

Prompted by the continual efforts of the armed services to grab off more and more of the public lands and some that are not public, Representative CLAIR ENGLE, of California, and chairman of the powerful House Interior and Public Lands Committee, announced this week that he will sponsor forthcoming legislation to curb this trend.

Under terms of Mr. ENGLE's proposed legislation, any withdrawal of more than 5,000 acres from public use status by any Government agency or department will require congressional approval. This will insure a hearing during which the facts of the case may be aired and protests can be heard, a procedure that is not always available under present conditions.

Mr. ENGLE was aroused most recently by the Navy's demand that it have millions of acres of Nevada land allotted to it for gunnery ranges, and the facts as brought out in a hearing conducted by Mr. ENGLE revealed that the Air Force already has more than enough land allotted to it for the same purpose and has offered to share with the Navy.

There is no reason why land cannot be used by planes of both services for this purpose, through coordination and planning, and some of the highhanded and dubious practices in taking over land for military use should be stopped by Congress.

The California Congressman points out that the situation at present leaves Congress and the people no say in the matter whatever. "At present, any executive agency that says it needs any part of the public domain," he asserted in a recent statement, "can request the reservation of that portion of the public domain, and for all practical purposes by its own action set aside large parts of the public land areas of the country. This is the practice being followed by the military. We want to stop that except in case of small withdrawals that would be too numerous and too troublesome to take before congressional committees."

Mr. ENGLE cites an alarming situation and one that should be dealt with by legislation according to his suggestions. There is another point with which the public generally is unaware and which results in a wholesale looting of public lands.

Under present procedures, the military can demand and get millions of acres of public domain for its purposes, legitimate or otherwise, use it as long as it likes, then turn it over to the General Services Administration to be sold as surplus. The public never gets the land back.

Under terms of Mr. ENGLE's bill, the land, after being used by the military, must revert to public domain. This is important. Another provision makes it mandatory for the executive agency requesting the withdrawal of public land for special purposes must give notice of what other types of use could be permitted and under what conditions.

Present conditions and public interest demand that speedy and favorable action be given on Mr. ENGLE's bill and the people will have to let their Congressmen know of this, because the military and other executive departments will have their knives out for this one in Washington.

Flood Control and River Development

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend and revise my remarks, I wish to present an address delivered by me before the annual convention of the Red River Valley Association in Shreveport, La., on April 3, 1956, entitled "Flood Control and River Development—Its Progress and Its Objectives":

During the last 15 years, especially, this has been a land of greatly increasing population. During the easy recollection of everyone here, this country has grown from a population of 142 millions of people in 1940 to 166 million people at the present time. This growth has pushed us into a period of prosperity and development the like of which this Nation has not heretofore seen. New houses, new buildings, new factories, new and wider roads, great airports and other means of expansion. Our transportation facilities have been taxed at times to the utmost and our network of roads has been repeatedly expanded and enlarged only to find that our plans, as wild as they appeared to be, were inadequate to meet the burden of traffic placed upon them.

During this period of time, one would naturally think that as a nation our plans should envision an increase in our program of water transportation and that these plans should go forward with the thought that water transportation should carry its full part in the development of the Nation. Strange to say, such has not been the case. We have not developed our water roads as we have developed our macadam and concrete highways.

Just before leaving Washington I obtained figures to indicate the progress we are making in our river and water development throughout the country. I find the following: During the year 1951 we appropriated in Congress, roughly, $505 million for flood control and river and harbor development; during 1952 we reduced and appropriated $477 million; during 1953 we further economized and appropriated $446 million. In 1954 this sum appropriated went down to the alltime low of $366 million. In 1956, I lead the fight on the floor of the House for more money and we were able to report for the current year the sum of $477 million, an increase of over $100 million. In addition to the sum of $97 million which the House added to the bill which came out of the Appropriations Committee, the Senate added some ten to fifteen million dollars more.

The United States Army engineers were so surprised at this change of attitude of the Congress that they were hardly prepared to spend this additional money, although it was badly needed in the pushing of the projects which had been pending a long time. As a result, I am told that some of the money appropriated last year will not have been fully expended when this present fiscal year comes to an end.

In spite of all of these facts, I am somewhat disappointed that the Bureau of the Budget failed to recommend at least the sum which Congress had previously appropriated. For the coming fiscal year the budget recommends the appropriation of $457 million—a sum which if appropriated will put us back again on the road to an increasing program of water development.

I am president of the National Rivers and Harbors Congress, and in this capacity I am familiar with the attitude of the people of this country in relation to our present problem. Our organization has recommended to the Congress and to the President that we work for a budget of $1 billion per year for all water resources uses. This means that over the long pull we think that this Nation needs an annual appropriation of $1 billion to continue our work of development and to maintain properly the work previously completed. With the present recommendations of the Budget Bureau, we will have to expand our appropriation some $250 million per year to meet this goal. Our budgeted expenses in regard to almost everything else has in-

creased tremendously—food, labor, clothing, construction, have all increased tremendously; but there seems to be the idea that we can continue the water-development program with the same budget and the same expenditures without an increase. Well, it just can't be done.

It is now apparent that Congress is turning the corner. This change is due to what? Last year, when the Appropriations Committee brought to the floor of the House of Representatives a bill which would have reduced the budget estimated needs of rivers and harbors by some $50 million, some of us connected with the National Rivers and Harbors Congress called a meeting of all Members interested, in the caucus room of the Old House Office Building in Washington. At this meeting we had some 60 Members present, and we passed 4 resolutions, asking that I see that they were introduced into the Congress. I am proud to report that everyone of thes 4 resolutions passed the House and that as a result of this action we restored to the bill some $97 million. This was the first time in 10 years that we had been able to reverse the trend toward diminishing appropriations.

That this is a definite trend is well shown by the fact that I as president of the National Rivers and Harbors Congress joined with others and succeeded this year in adopting an amendment in a deficiency appropriation bill which gives New England money she is entitled to receive for needed help as a result of three disastrous floods within the last year and a half. Again, we repeated this action in the case of the Carolinas which came to us this year with a plea for help which no sympathetic person could deny. In three instances, therefore, recently we have reversed the trend of appropriations and have been able to give the Nation something like the money needed for these purposes.

It was at an annual convention of the National Rivers and Harbors Congress 2 years ago that the President of the United States announced the appointment of a Cabinet committee to work out recommendations for a national water policy. Undoubtedly, some definite policy in furtherance of the development of this great natural resource is needed for our guidance. I look forward to a definite policy stabilized over a period of years which will assure us in advance what is to be expected in our program.

We have made tremendous progress under our present system of handling our program—but in all fairness, I think with better planning, we could have made much more progress. I do not favor the establishment of a new Board of Review to further screen our projects. This was the recommendation of the President's Advisory Committee on Water Resources Policy recently. Such a Board is not necessary and adds to the tremendous number of agencies which already have a part in the screening of projects before they are completed. Do you realize that some 28 separate steps have to be taken in the authorization of a project. These usually require a period of several years, with continual checking and investigating going on until the project is finally screened by Congress and becomes the law of the land. A further process—a new board—could only mean that new and burdensome bureaucratic processes would be added to the careful program we presently have set up.

Rather than add to the number of agencies and processes which must be considered in the authorization of any flood-control project, I would say that our chief problem and my chief concern is our increasing difficulty in obtaining money in the Congress. Year by year this has developed into a great fight; and as a rule, we make the heavy appropriations only after a great catastrophe has struck our economy.

In 1927 when the great flood struck the Mississippi Valley, our total approved civil works program was only $1,200,000,000; and the sum of $800 million had been expended on this program. This left a backlog of only $400 million of work to be done on 1927 prices.

In 1937, following the increasing interest in flood control due to the passage of the 1936 Flood Control Act, which, by the way, was sponsored by my uncle, Senator John Overton, the backlog of construction had grown from $400 million to $900 million and at 1937 prices. By the year 1947, when we had adopted the concept of basinwide development as applied to our valleys, our backlog of approved projects had grown to $5.4 billion at 1947 prices.

Today, our situation is anything but envious. We have an approved program of civil works construction, approved by Congress, which totals some $19 billion. Of this program, we have spent some $7 billion through the years, leaving us as of this hour $12 billion in unconstructed projects at present-day prices.

Of course, some of these projects are obsolete and some are undoubtedly not necessary because of intervening developments through the years. But even taking into consideration all of these things, I do not believe that anyone will seriously question the fact that our authorized list of projects will exceed $8 billion. This is the situation at a time when we put all of our power and our influence behind a real program to advance the needs of the Nation. This is the situation at a time when our increased population, our larger cities, millions of acres more land in cultivation and in pasturage all cry loudly for an active aggressive and comprehensive program.

There has been talk in Congress about flood insurance. This was in fact the administration recommendation. Much emphasis has been given by Members of Congress to such a program; and I hope that some method will be developed to lighten the heavy burden which falls upon a community, State, and on the Nation when a great disaster like the New England floods visits a section of the country. I am, however, not too optimistic about such a program.

We can approach this matter much better by a frontal attack. The closing the stable door after the horse has fled type of approach may mitigate the suffering and the hardship but it will not prevent the flood. Far better it is for the Congress to approach this matter from the viewpoint of one who wants to prevent the tragedy rather than extend financial sympathy after the pall of death and destruction has fallen.

My friends, the use of water resources by a people is not a new program. It is as old as are the pyramids of Egypt. In fact, the first information which we have after the dawn of history regarding flood control and irrigation comes fom the Middle East. It was along the Euphrates and the Nile Rivers that man first made a serious effort to conquer the floods.

Along the Nile River which traverses desert country for many miles, ancient Egyptians broke the ground, built little irrigation ditches and dams, and tried in a meager way to cultivate a little fringe of land along the banks of the Nile. They tried their peculiar method of controling floods by throwing their children into the muddy waters of this often-swollen stream, to the crocodiles, to appease their gods and have them stop the ravages of their lands and loss of their lives by flood waters. Perhaps it was the information which their engineers gained from developing drainage and flood-control works which later gave them the skill to construct monuments that stand through the ages, as the sphinx and the pyramids.

Much time has passed since then; and we are still fighting the problem which was old to even Egypt itself 5,000 years before Christ. It is for you to judge just how much progress has been made by us since the days of the pharoahs and the Egyptians. I earnestly believe that had we determinedly set our minds toward the work of eliminating floods in our own land and using our greatest natural resource—water—we would have made much more progress than we can boast of today.

Department of Veterans' Affairs

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks, I herewith include the text of a bill I today introduced, at the request of the Veterans of Foreign Wars, to establish a Department of Veterans' Affairs. It is similar to a bill which I introduced as H. R. 351 in the 82d Congress and as H. R. 23 in the 83d Congress.

I have long felt that the Veterans' Administration should be a department instead of a bureau and with a Cabinet head. It has a tremendous responsibility to perform in the care and assistance of our veterans. It involves the expenditure of very large sums of money, and the head of the Veterans' Administration is responsible for the administering of six large business activities.

The Department of Veterans' Affairs should be treated with the greatest respect and consideration. It is only fair to the veterans and to the country to do so.

The text of the bill follows:

H. R. 10381

A bill to establish a Department of Veterans' Affairs

Be it enacted, etc., That there is hereby established at the east of government an executive department to be known as the Department of Veterans' Affairs, and there shall be at the head thereof a Secretary of Veterans' Affairs, who shall be appointed by the President, by and with the advice and consent of the Senate. The provisions of chapter 1 of title 5 of the United States Code shall be applicable to said Department, and in furtherance of such purpose, section 158 of the Revised Statutes, as amended (U. S. C., title 5, sec. 1), is hereby amended by adding at the end thereof the following: "Eleventh. The Department of Veterans' Affairs." The said Secretary shall cause a seal of office to be made for the said Department of such device as the President shall approve, and judicial notice shall be taken of said seal.

SEC. 2. There shall be in said Department an Under Secretary and five Assistant Secretaries, who shall be appointed by the President, by and with the advice and consent of the Senate, who shall perform such duties as shall be prescribed by the Secretary: *Provided*, That one of such Assistant Secretaries shall be the Surgeon General and another of the Assistant Secretaries shall be the General Counsel. Such Assistant Secretaries shall receive compensation at the rate of $12,000 per annum each.

SEC. 3. There is hereby transferred to the Department of Veterans' Affairs all person-

nel, files, records, property, reservations, and facilities of the Veterans' Administration of both the central office and field stations. The balance of all appropriations and all trust funds of the Veterans' Administration shall be available for expenditure by the Department in the same manner as if originally specified in the respective statutes authorizing or creating such appropriations or funds.

SEC. 4. All contracts and agreements entered into, and all orders, rules, regulations, delegations, permits, or other privileges issued or created by the Administrator of Veterans' Affairs, shall continue in effect until modified, superseded, or terminated. All laws relating to the Veterans' Administration, and those relating to veterans' benefits generally, shall remain in effect except as hereby modified and shall be administered by the Secretary of Veterans' Affairs.

Washington Merry-Go-Round

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. MULTER. Mr. Speaker, on March 21, 1956, I placed in the Appendix of the RECORD the syndicated column of Drew Pearson under the heading "Washington Merry-Go-Round," as it appeared in the Washington Post.

I am happy to say that the item has attracted considerable attention and much favorable comment. I am advised that since the publication of the article, the Federal official involved has resigned.

My attention has just been called to the fact that the column as it appeared in the Washington Post was abbreviated, no doubt on account of space requirements.

The full column without deletions appeared in the News and Observer published in Raleigh, N. C., on March 21, 1956, to complete the record I am setting forth in full as follows:

THE WASHINGTON MERRY-GO-ROUND
(By Drew Pearson)

WASHINGTON.—Ezra Taft Benson may not know it, but a conflict-of-interest political blow-up is simmering right under his nose. It involves Carl O. Hanson, State director of the Farmers' Home Administration in Montana.

The Farmers' Home Administration is supposed to spend its entire time on the difficult problem of helping the small farmer. It is supposed to go right into the farmers' homes and aid with their economic problems. Especially, it is supposed to help the small farmer in time of drought. However, there is conclusive evidence that instead of helping small farmers, FHA State Director Hanson has been acting as a woolbuyer for the Draper Co., of Boston, also helping direct the affairs of radio-TV station KOOK in Billings, and charging up political long-distance calls to the Government.

He was also spending part of his time and some Government money in an abortive effort to elect Wesley D'Ewart to the Senate in violation of the Hatch Act. Government officials are banned by the Hatch Act from engaging in politics unless they are of Cabinet or Little Cabinet rank.

The activities of Mr. Carl O. Hanson are highly important not merely because of irregularity in Benson's Agriculture Department but because they throw light on one reason why farmers are so sore at the Secretary of Agriculture. They recognize that he has very difficult crop-surplus problems, and they would be more sympathetic with crop surpluses if it were not for the manner in which Benson's officials have spent their time politicking and helping big companies rather than small farmers.

For instance, Secretary Benson himself, on October 9, 1954, personally and publicly demanded the defeat of Senator JAMES MURRAY of Montana, and the election of GOP Congressman Wesley D'Ewart. Immediately Benson's boys in the Agriculture Department took the cue and went into high gear—not for the farmer and his difficult problems, but for candidate D'Ewart.

This was during the tragic drought of 1954. Despite that, farmers' home director Hanson made more than 100 long-distance calls for private or political purposes and allowed them to be charged up to the taxpayer. This column has obtained a record of Hanson's supposedly official phone calls at that time, and they show that he even phoned D'Ewart at the Royal Hawaiian Hotel in Honolulu, December 16, 1954. Cost to the taxpayers, $15. This incidentally was after D'Ewart was defeated.

It was also at a time when Hanson should have been working his head off to help farmers borrow money to meet the drought disaster.

Instead, he was employing persons whose services he used for unofficial and political purposes, including his personal and private business. John Costello, appointed by Hanson, acted as chauffeur and errand boy, including wool-purchase duties for Hanson. Darrell Coover, appointed by Hanson, served for 1 month, not on FHA business, but purely as a political organizer.

Mrs. Katherine Carter, Hanson's private secretary, reported that on some days she wrote as many as 14 letters not pertaining to FHA official business.

The personal letters she wrote for him on office time included letters to Mr. Malcolm Green, president, Draper Co., Boston, as well as letters to Charles Crist, his radio business partner; and typing wool contracts on FHA time.

Mrs. Carter had quite a difficult time trying to divide her boss' legitimate Government business calls from the personal and political calls and naturally took the commonsense step of asking her boss which was which.

This made Hanson sore and he told her, in effect, to mind her own business.

Miss Kathleen Roche, the secretary who succeeded Mrs. Carter, also had a tough time sorting out Hanson's phone calls. Sometimes calls came in collect from such people as A. P. Davies, lobbyist for the American Meat Institute and wool producer Ed McReynolds.

On one occasion after Hanson had placed about 15 long-distance calls to various persons with whom he discussed his wool-buying business, Mrs. Carter asked him how he could get away with private business while in Government service.

Hanson replied that his superiors in Washington knew about his private business and condoned it, and that his wool-buying netted him three times as much as his Government salary.

Another man Hanson used to call long distance was Martin Littleton, ex-attorney for Frankie Costello, king of the gambling underworld. Littleton was then a radio-TV speaker for Candidate D'Ewart. Other calls went to Al Schlaht, D'Ewart's campaign manager and publisher of the Billings Yellowstone News; also Bill McKay, head of the Montana Republican Committee.

What makes the farmers' blood boil is that the State directors of the Farmers' Home Administration under Charley Brannan, all career civil-service men, were ousted by Benson. They had kept out of politics, concentrated on the problem of helping farmers.

Benson, however, removed their civil-service standing which made them open to firing. The Supreme Court, later, ruled that this technique was illegal and Benson had to hire these men back.

In addition, Secretary Benson had to pay $100,000 out of taxpayers' money to make up the back salaries of FHA State directors whom he fired. Meanwhile, he has been paying out Government money to his own politically-minded State directors like Carl O. Hanson, who seems more interested in continuing his own wool-buying and violating the Hatch Act than in helping small farmers.

Negro Mob in Washington

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article from one of the South's most outspoken newspapers, the News and Courier, Charleston, S. C., under date of Wednesday, April 4, 1956, entitled "Negro Mob in Washington." It is a crying shame that the newspapers in metropolitan Washington suppress news in the local papers from the people. However, regardless of the Iron Curtain of Washington, the people know what is going on, and they realize that despite the protestations of those in authority, integration is a hollow and hypocritical mockery. The South has found the answer to the race question, regardless of those who claim we have not.

The article follows:

NEGRO MOB IN WASHINGTON

An outbreak by a mob of Negro teen-agers in Washington is a blot on race relations in the National Capital. The youths threw stones, knives and clubs at the police and misbehaved disgracefully.

What propaganda value the Communists will make of this event the News and Courier does not know—nor do we particularly care. The News and Courier is more interested in domestic peace within the United States than in the opinions of our countrymen that may be held by East Indians, South Asians or North Siberians.

A combination of race agitators and politicians seeking Negro votes has stirred useless and avoidable race troubles within our own country. In the South, white and Negro people lived in harmony until 2 years ago, when the Supreme Court ruled that separate public schools no longer are legal. Since then race relations have deteriorated steadily.

Washington for years has been feeling the impact of Negro migration. Now it is feeling some of the more acute pains of racial aggressiveness, encouraged by a deliberate campaign to arouse Negroes.

We do not attempt to analyze the immediate cause of the outbreak Monday in Fort DuPont Park, on the southeastern edge of Washington. We are told that more than 1,000 Negro teen-agers were engaged in defiance of police after two rival gangs started fighting. We know also that in some other big cities, outside the South, Negroes have formed gangs and created reigns of terror.

These will get worse, we predict, so long as race propaganda and coddling persist.

Many reasons will be ascribed for Negro lawlessness. Much blame will be heaped on the South. But it is obvious that race relations in the segregated South are better than in the nonsegregated cities of the North, East, and West.

Surely that fact will seep into northern minds and illuminate the problem. Meanwhile, southern people of both races should guard against any such demonstrations as occurred Monday in Washington.

The Red River Valley

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, at the recent annual convention of the Red River Valley Association, Maj. Gen. John R. Hardin, division engineer of the lower Mississippi Valley, made a brilliant address on the subject of flood control and navigation in the Red River Valley. General Hardin is one of our superior engineers who has devoted his life and his talents to the military service. A large part of his time has been in the civil functions work of the Army engineers, and in this capacity he has displayed an understanding and shown an exactitude in his judgment far beyond that of the average efficient engineer. The contents of his address makes big news for those of us who live in the Red River Valley in Louisiana, Arkansas, Texas, and Oklahoma.

The address follows:

SPEECH BY MAJ. GEN. JOHN R. HARDIN, DIVISION ENGINEER, LOWER MISSISSIPPI VALLEY DIVISION, CORPS OF ENGINEERS, UNITED STATES ARMY, BEFORE THE RED RIVER VALLEY ASSOCIATION, SHREVEPORT, LA., APRIL 3, 1956

It has become the custom for the Division Engineer, Lower Mississippi Valley Division, to address this Association on the status of water resource improvements within his division. Today, I would like to tell you something of the progress we have made and what we hope to accomplish during the coming year. In addition, I should like also to devote some time to a discussion of the whys and wherefores of the economics of navigation developments.

First, where do we stand now, and where are we going?

The construction of Texarkana Reservoir was begun in 1948, and progress has continued without interruption. We expect that $1,226,000 will be made available to us for fiscal year 1957, which amount will allow us to complete this project. Channel improvements below the dam and some relocation items are all that remain to be done. Railroad and highway relocations are nearly completed. We are all very anxious to see water in this reservoir as soon as possible. We have approved a plan to impound water to within 5 feet of conservation pool level beginning on or about July 1, 1956, provided present progress is maintained on certain highway and railway relocations. Before raising pool level above this stage, it will be necessary to advance the remaining highway work to a point where the risk of flooding will be minimized.

Since 1954, when construction was undertaken on the Ferrells Bridge Reservoir, $3,697,000 has been made available to us for construction of this project. We anticipate that about $4,300,000 will be made available for fiscal year 1957, which will allow us to continue the acquisition of land, continue relocations and the construction of the dam, and to initiate construction of the control and diversion structures for the outlet works.

I know you will be happy to learn that our latest cost estimates indicate that this project will be built for less than the $20,900,000 originally estimated. If this forecast is borne out by experience in the next few years, it should result in a substantial reduction of the costs to be borne by local interests.

The project which we refer to as "Red River levees and bank stabilization below Denison Dam" is a major component of the comprehensive flood-control plan. The project consists of raising and strengthening levees and providing bank stabilization works at locations where it is more economical to protect flood-control structures than to relocate them. The levee portion is about 83 percent complete, and the bank stabilization program is about 41 percent complete at the present time, based upon the monetary authorization for this feature. During this coming fiscal year, we hope to have about $500,000 made available to us for use in continuing the stabilization work at critical locations.

There is, as you know, an authorized survey for Red River Bank Stabilization Works, which has as its purpose the development of a general plan for stabilization work on the Red River, its need, and its justification. Initial funds have been appropriated for this study, and we hope to make some progress in the remainder of this fiscal year. Due to a shortage of technical personnel, we have had to devote available talents to what we considered was work of higher priority.

Let us turn our attention now to the Overton-Red River Waterway, about which so much has been written and said lately. As I am sure all of you are aware, there has been more than a little doubt as to justification for and even some opposition to this project. These attitudes emphasize the necessity for reevaluating the economics of this very large undertaking before entering the construction stage. However, we are required, as a matter of longstanding policy, to demonstrate to the satisfaction of the Chief of Engineers, the Bureau of the Budget, and the congressional committees that the project is sound before construction funds are requested. We must know beyond any reasonable doubt that the project is thoroughly justified, which means that we must make up-to-date estimates not only of the costs of building the project but of the benefits which will be derived from it. This is necessarily a time-consuming process. It is a process requiring great thoroughness. And since so very much depends upon the results of our findings, I thought it would be of interest to you to hear something of the manner in which we conduct the economic study as a part of the initial detailed planning.

When the report was prepared recommending the Overton-Red River Waterway, and which the Congress authorized in 1946, an economic study of cost and benefits was a most important element of the supporting data. We are all aware that great changes in the economy of the region have occurred since the time of authorization. New industry, new wealth, greater population are all obvious changes. Costs of everything have likewise changed in the 12-year interval since 1944. A comparison of costs and benefits arrived at long ago had to be reexamined before it could be said that what was a good investment for our country then was still good in 1956.

This necessary reevaluation involves a survey of current potential transportation savings, drainage benefits, up-to-date detailed construction cost estimates, and a determination of the costs of relocating bridges, gas lines, power and telephone lines, roads, real estate costs for rights-of-way, and spoil disposal areas. All these details are required because the economic value of the project is based not only upon Federal cost but upon local costs as well.

The costs of relocating highways are based upon estimates prepared from data furnished by and coordinated with the Louisiana highway department. As you know, local interests must pay for all highway relocations and for the modification of existing highway bridges over navigable waterways, and the relocation of utilities. Such costs have increased greatly since the project was originally authorized. Not only have costs of materials and labor risen, but there are many more highways, bridges, and utilities in the valley than there were at the time of authorization.

Experienced staff appraisers of the New Orleans District Real Estate Branch, with the active assistance of the real estate personnel of my office, spent several months making up-to-date field reconnaissance survey to determine real estate costs for this proposed project. They spent considerable time in extracting data from Parish records of real estate transactions and other real estate documents. They also interviewed local real estate people, farmers, bankers, school trustees, store owners, and local, State, and Federal agricultural representatives. The data obtained were combined with an evaluation of present land uses, current market price of commodities, and a consideration of the effect that the canal will have upon land values. The result was a summarized land value estimate which we believe to be the most reasonable estimate possible.

We are now refining our cost estimates for construction. We are also making engineering studies of the exact canal alinement, in cooperation with the Louisiana Department of Public Works and other interested parties, to select the best alinement possible from an engineering standpoint.

I have discussed only a few of the more important factors we are having to take into account in determining the cost of constructing this waterway. On the other side of the ledger, we are making an analysis of the benefits that can be expected from the project once it is in being.

Since many of you are businessmen and all of you are taxpayers, with a personal interest in the investments your Government makes, I thought it might be of interest to you to hear something of the manner in which we conduct a study of the benefits which are expected to be developed from a project of this kind. Time does not permit my discussing the minute details involved in making a complete transportation analysis, but a discussion of a few of the highlights should provide an insight into the complexity and the thoroughness of such an undertaking.

To make an accurate determination of the potential traffic that might move on the proposed waterway, we must make a study of existing commerce in the area—not just that along the banks of the river, but the commerce that might reasonably be expected to move into or out of the area by water.

As an example of the extent to which we explore such possibilities, we make an analysis of commerce being carried by railways and trucks, into and out of the area, not only to determine the types of commodities but also their points of origin and their destination. There is a sound reason for this. A waterway can handle commerce moving in certain directions only. For example, tonnage originating in the Red River Basin bound for New Orleans or Memphis would be readily evaluated for its potential by the water route, while tonnage with a destination such as Tucson, Ariz., would not. Then, of the commerce considered favorable from a directional standpoint for waterway

movement, we must determine what portion is suitable for waterway shipment because of its type. These include bulky commodities and commodities which do not depend upon speed of shipment. Then, it is necessary to evaluate the acceptable portion for waterway movement.

Our next step is to subject this list of commodities to an analysis, the purpose of which is to determine the expected future needs for the commodity. As you can readily see, this involves a study of trends of regional economics. For example, if we are attempting to determine whether more or less commercial fertilizer will be shipped into a region, we can only evaluate this if we know something of the future requirements for commercial fertilizer in the area in question. In addition, we must consider the prospects of whether in the future there is any likelihood of a material change in the source or the destination of the commodities being studied. For example, let us again suppose that substantial quantities of commercial fertilizer were being imported into the region for regional use. If a manufacturer of commercial fertilizer built a plant in the region to supply its use, water shipments of this commodity should decrease.

Of course, we cannot foresee all, or even any substantial part, of the distant future. But we can be realistic, and we can use experience and the science of economic evaluation to make a reasonable prediction as to what can be expected. This requires a rather searching look into the economic future. While we may, in all propriety, consider increases in potential waterway movements due to population increases or requirements for an expanding industry already established, we cannot be unduly optimistic in our assumptions concerning future migration of new industry to this area by reason of building the waterway. Our approach, therefore, must be a conservative one supported by facts as sound as we can determine them.

Even at this point in our analysis, there is still much to be done. We must now determine the savings in the cost of transportation that can be effected, which involves a number of factors. We must analyze present railroad freight rates between points of origin and destination, and in certain cases truck rates also. In addition, insofar as we can, we must find out what contract prices are in existence for large truck movements. Where commodities are bound for far distances we must consider combinations of rail-barge and truck-barge rates.

After this it is necessary to analyze the cost of barge movements. For example, we know from experience and current rates on other portions of the great inland waterway network that it costs a certain amount to move a certain commodity a certain distance on a canal such as that proposed. Knowing the expected tonnages and the distances they will be moved, we can determine the costs of shipments using the waterway in comparison with the present costs of shipment by other means.

In our study we include, in addition, the costs of loading and unloading at each port and the port costs of transferring commodities for transshipment, and the like.

Putting it as simply as possible, in studying the feasibility of a project we make a thorough economic analysis, weighing benefits against costs, very much as an industrialist who is contemplating a plant expansion or the enlargement of a sales territory.

The Overton-Red River Waterway is a project which is naturally of great importance to you. There is, justifiably, a great interest in seeing it undertaken and brought into being. But I am sure that as citizens and taxpayers you are equally anxious that the project be determined as a sound investment before it is undertaken. And that is where we stand on this project at the present time.

The first trial balance on this economic study has almost been completed. There is a great deal which we have yet to determine, and we may have to revisit the area and carry our transportation studies further. With your active cooperation, I am sure that the job will be much easier, and I am certain that this is one thing we can count on. With so much at stake for the future of this valley and the contiguous areas, we must not at this stage jump to hasty conclusions. Biased opinions are easily rendered, but careful, dependable findings in complex problems such as this are difficult and time-consuming. I would urge that we all keep an open mind until our studies are completed.

Wisconsin Another Warning of Farm Sentiment?

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. GROSS. Mr. Speaker, in view of the pending vote on the farm bill, the following editorial from the April 5, 1956, issue of the Des Moines Register is timely:

GOP TROUBLE IN MIDWEST

Political observers who are well acquainted with the habits and current motivations of Wisconsin voters are interpreting the outcome of Tuesday's primary election in that State as a sharp warning of trouble ahead for the Republicans.

Their analyses of the returns show that Senator ESTES KEFAUVER has increased his popular following in the State. The Democrats made their best showing in a good many years in the proportion of voters casting ballots for candidates for delegate to the Democratic National Convention. Returns from rural areas indicated that farm votes were cast in protest against the Eisenhower administration's price-support policies.

In the light of Senator KEFAUVER's recent victory in Minnesota, these interpretations of the results in Wisconsin carry more weight than they would standing alone.

The ballot box evidence in these two midwestern farm States points to real trouble ahead for the Republican Party where the farm and small-town vote is concerned. Unless the administration finds some way to check this trend, Republican strength in Congress from this region may be still further reduced next November.

The administration's biggest hope is that President Eisenhower's personal popularity will offset some of these losses. To what extent that hope is well founded cannot be measured by the Wisconsin election.

Senator KEFAUVER polled approximately 316,000 votes Tuesday. Four years ago, his total was 207,520. The total Democratic vote cast at that time was 241,525. He had nominal opposition from two other candidates. This represents a gain for the Democrats of more than 74,000 votes.

The Republican vote Tuesday for Eisenhower delegates totaled close to 418,000. Four years ago, the total was 776,624. This represents a drop of approximately 358,000 votes. But 4 years ago, a hot contest between supporters of Robert A. Taft, Earl Warren, and Harold Stassen added spice and interest to the Wisconsin GOP primary. This year there was almost negligible opposition to the Eisenhower slate.

But neither was there a contest in the Democratic Party this year. This increase in the number of Democratic ballots must be interpreted, then, in either of two ways. KEFAUVER's personal popularity has increased enough to attract more voters to the Democratic ticket, or the gain shown by the Democrats represented a protest drift away from the Republican Party.

It would seem that the latter might be more nearly correct, since all other polls of Wisconsin sentiment have shown a much wider spread between President Eisenhower and Senator KEFAUVER in personal popularity than the election returns would indicate.

The Farm Bill

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. COOLEY. Mr. Speaker, tomorrow the farmers of the Nation will have their day in the House of Representatives. Tomorrow we will have a showdown and when the votes are taken the farmers of America will be able to count their friends one by one. The farmers will then know whether Members of Congress are interested in their welfare and in their livelihoods. The tragic downward trend in farm income has led the farmers of the Nation to the brink of bankruptcy. The question each Member of the House will decide for himself tomorrow is whether or not, he, as a Representative in Congress, understands the desperate plight of agriculture and is willing to pull the farmers back from the brink of bankruptcy or whether we shall let them continue on in their distressing and disturbing plight.

The bill we will consider tomorrow represents a real effort to check this downward tragic trend in farm income and to increase farm income in this good year of our Lord, 1956. The deletion of a single provision of this bill would tend to give speed and momentum to the decreasing of farm income.

Mr. Speaker, I have just received a very thought-provoking letter from one of the great farm leaders of the Nation, the worthy master of the National Grange, Herschel D. Newsom, to which was attached a table containing some very interesting figures. I hope that all Members will read and consider the comments and figures submitted to me by this great farm leader, a man in whom all Members of Congress must have great faith and confidence and a man who is loved and respected by farmers of our country. Herschel Newsom is a man with great vision, and he has worked diligently and intelligently in the cause of agriculture, a cause to which he has dedicated his life and his time and his efforts. I hope that the advice of this man, a real friend of the farmers and an American in the true sense of that word, will be given consideration by every Member of Congress.

Mr. Speaker, I also today received a letter from one of the most intelligent and dynamic farm leaders of our country, a man who is held in high esteem by the people of my State of North Carolina and who has worked year in and year out for the farmers of my district and State, Harry B. Caldwell, the Master of North Carolina State Grange. The last paragraph of Mr. Caldwell's letter is brief and to the point, and I hope that it will be read by every Member of this House when the CONGRESSIONAL RECORD comes out tomorrow morning:

THE NATIONAL GRANGE,
Washington, D. C., April 10, 1956.

The Honorable HAROLD COOLEY,
Chairman, House Committee on Agriculture,
House Office Building,
Washington, D. C.

DEAR MR. CHAIRMAN: Thousands of rural families and farmers are hoping that the scheduled motion to recommit the farm bill—with instructions to delete the wheat program long advocated by the National Grange and by wheatgrowers themselves, and also to delete certain other measures contained in the bill as reported out by the committee on conference—can be defeated by a resounding vote in the House of Representatives.

Recommittal for any purpose at this date would surely serve to delay this needed legislation. So far as the soil-bank provisions of this legislation are concerned, it is already late enough in the spring that they are of questionable value to farmers this year, at least in the South. Further delay would tend to destroy any remaining potential value, for 1956, of the soil bank and other factors in the bill which may tend to influence spring planning and planting.

It is the position of the National Grange that, even though the report of the committee on conference fails to conform perfectly with Grange views, the bill now before both Houses of the Congress is a constructive bill because it recognizes the seriousness of the decline in farm income and takes action to deal with it—this year. This action is absolutely necessary. It is of paramount importance if the income position of farmers is to be maintained in 1956, and not lowered further.

All of us need to recognize that there is no such thing as a perfect farm bill in the eyes of all the different interests. Therefore, we believe the time is at hand for all who are truly interested in agriculture and the farmer—and the farmers' plight—to put an end to their predilections and accept what appears to be a reasonable and workable compromise.

All of us need to recognize, also, that the principal effect of the motion to recommit—for any of the reasons so far advanced—would be to reduce farm income this year.

It is our earnest hope that the Congress will approve this conference report forthwith and that it can become operative speedily.

While it is abundantly clear that the conferees have been motivated by their wise and proper recognition of the 1956 emergency in farm income, it is equally clear that the measure contains a number of constructive features that contribute to the development of a sound, long-time, farm program.

The domestic parity program for wheat, for example, is a highly constructive advance in farm legislation. It is, in fact, one of the most significant changes in the farm program that has been made in many years. It recognizes the desirability of preserving the right of American farm producers to have access to markets on a competitive basis; it further recognizes the fundamental fact that American farmers alone cannot be expected to compete, even in their own domestic primary markets, at world price levels when no other Americans are expected so to do. It is highly regrettable that some spokesmen for American farmers have failed to recognize this fundamental fact and value in the grange wheat program.

The National Grange and rural families generally are deeply appreciative of the diligent effort made by yourself and your colleagues from the House Agriculture Committee to draft and present a measure that will have constructive and wholesome influence on farm income in the immediate future.

We are in possession of highly significant figures that indicate clearly that the decline in farm income and rural purchasing power is much more serious than has been recognized by the sponsors of this motion to recommit this bill. It is not our purpose to burden you with a mass of figures and statistics, many of which you are undoubtedly familiar with, but I am taking the liberty of enclosing a set of figures from one of the fine farm production areas of this country near my own home. Even a casual study of these figures will clearly indicate the validity of the above statements. These figures themselves clearly indicate the reason that we are beginning to get increasing numbers of reports to the effect that bank examiners are cautioning rural banks against further expansion of credit to farmers for the purpose of paying interest charges which are not available out of current farm income. These are the factors that are contributing to the rapid increase in farm mortgage indebtedness.

Let me repeat that it is the earnest hope of the National Grange that your colleagues in the House of Representatives will vote against the scheduled motion to recommit this measure, and will then forthwith proceed to approve it by a resounding margin.

Respectfully yours,

HERSCHEL D. NEWSOM,
Master.

CHANGES IN FARM EARNINGS AND RELATED FACTORS, BY TYPE OF FARM, ILLINOIS, 1953, 1954, AND 1955

TABLE 1.—*Average size of farm—tillable acres—for grain, hog, and cattle farms, Illinois, 1953, 1954, and 1955*

Type	Tillable acres		
	1953	1954	1955
20 grain farms	389	394	394
20 hog farms	248	255	289
10 cattle farms	280	280	294

TABLE 2.—*Acres planted to corn and average yields per acre by type of farm, Illinois, 1953, 1954, and 1955*

Type	1953		1954		1955	
	Acres in corn	Yield per acre	Acres in corn	Yield per acre	Acres in corn	Yield per acre
		Bu.		*Bu.*		*Bu.*
20 grain farms	136	71	136	51	134	74
20 hog farms	107	68	103	45	112	69
10 cattle farms	103	69	84	54	115	67

TABLE 3.—*Average net management returns per farm for grain, hog, and cattle farms—Illinois, 1953, 1954, and 1955*

Type	1953	1954	1955
20 grain farms	$7,836	$4,632	$1,161
20 hog farms	6,640	4,265	[1] 2,900
10 cattle farms	513	[1] 1,358	[1] 6,795

[1] Loss.

Decrease in earnings per farm during 2-year period 1953–55:

	Per farm
Grain farms	$6,675
Hog farms	9,540
Cattle farms	7,208

NORTH CAROLINA STATE GRANGE,
Greensboro, N. C., April 10, 1956.

Hon. HAROLD D. COOLEY,
House of Representatives,
Washington, D. C.

DEAR HAROLD: We have examined the conference committee bill and report and I wish to commend you and your colleagues for the results achieved. I am sure that farmers throughout the United States are grateful for your continued efforts in their behalf.

Farm income has dropped to a critical point and unless steps are taken to bolster commodity prices there is serious trouble ahead. Farm prices in most instances are down to support levels and are likely to continue at those levels for some time to come. Consequently, we were pleased with your efforts to raise the level of supports. We believe that this provision in the pending bill will bring some increase in income for farmers during the current year.

We also appreciate your support of the Grange sponsored domestic parity program for wheat together with a similar provision for rice. We believe that these provisions will help producers hold important world markets without destroying prices for their products on the domestic market.

We were also pleased to note that our tobacco growers have been included in the soil bank section of the bill. This may result in some voluntary reductions below acreage allotments by growers and thus help to bring supply into better balance with demand.

We hope that Congress will accept the conference committee report and that any motion to recommit this legislation with instruction to delete the domestic parity program for wheat or reduce price support levels will be defeated.

Again thanking you for your vigorous efforts in behalf of our farmers, I am

Cordially,

HARRY B. CALDWELL,
Master, North Carolina State Grange.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

The Road Back to a National Labor Relations Act

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 11, 1956

Mr. HUMPHREY. Mr. President, in the March 1956 issue of UAW–AFL Auto Worker, Mr. Robert W. Gilbert has contributed an important and thought-provoking article entitled "The Road Back to a National Labor Relations Act." Mr. Gilbert's article is an important contribution to the growing literature on the subject of the invasion of federally granted labor rights by State legislatures, agencies, and courts.

The dangers resulting from the abuses of labor injunctions by State courts were pointed out 3 years ago in the staff study entitled "State Labor Injunctions and Federal Law," prepared for the Subcommittee on Labor and Labor-Management Relations of the Senate Committee on Labor and Public Welfare.

Mr. Gilbert has rendered a distinct service in summarizing recent developments in Federal-State jurisdictional problems in the field of labor relations, and I invite the attention of my colleagues to his illuminating article.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ROAD BACK TO A NATIONAL LABOR RELATIONS ACT

(By Robert W. Gilbert)

Last December 2, the Supreme Court of California handed down two very important labor decisions recognizing the "exclusive primary jurisdiction" of the National Labor Relations Board over union disputes with employers engaged in interstate commerce.

These two cases, *Benton* v. *Painters Union* and *Garmon* v. *San Diego Building Trades Council*, followed the recent trend of decisions by the Supreme Court of the United States. Under such cases as *Garner* v. *Teamsters Union* and *Weber* v. *Anheuser-Busch, Inc.*, the Nation's High Court has again firmly established this pattern of Federal-State labor jurisdiction:

1. State courts and labor boards may not regulate strikes, picketing and other concerted union activities which are prohibited by Federal labor laws.

2. States may not regulate concerted union activities which are protected by Federal labor laws.

3. State labor agencies may not conflict with NLRB procedures and policies in employee representation cases.

4. State courts may not grant relief to an interstate business against union activities unless the employer has first applied to the NLRB and the Board has "affirmatively declined jurisdiction."

What happens where the National Labor Relations Board has refused to take the case? The United States Supreme Court hasn't ruled on that point yet. In a memorandum decision handed down in January 1954, Kinard Construction Co. case, the Court held that a State could not act to halt picketing where the employer did not first apply to the NLRB for relief, leaving open the question as to "whether the State court could grant its own relief should the Board decline to exercise its jurisdiction."

In the Garmon case, the California Supreme Court attempted to guess how the United States Supreme Court will eventually answer that question. A 4 to 3 split decision, the majority opinion in the Garmon case was written by former Associate Justice Edmonds, since retired from the California high court. It declared that State courts are free to issue injunctions once the NLRB has ruled that it won't take jurisdiction over the particular employer.

According to the Garmon decision, State courts may even enforce Taft-Hartley restrictions against picketing for a closed shop contract with an interstate concern although the closed shop is permitted under State law—in a case where the NLRB's regional director has already dismissed a previous representation petition filed by the employer.

Why has there been so much conflict in the courts over the location of the boundary line between Federal and State jurisdiction in labor matters? Two decades of trade union history disclose the background of this important problem.

After long and bitter experience with repressive State laws and anti-union injunctions, organized labor hailed the passage of the Wagner Act by the New Deal 74th Congress in 1935 as a Magna Carta. A national labor policy protecting the right of employees to form and join unions and to engage in concerted economic activities for purposes of collective bargaining had become "the supreme law of the land."

The Senate Labor Committee, in reporting on the Wagner Act, pointed out that—

"Section 10 (a) gives the National Labor Relations Board exclusive jurisdiction * * * and * * * establishes clearly that this bill is paramount over other laws."

Between 1935 and 1947, the United States Supreme Court struck down several State laws and State labor relations board decisions because they conflicted with policies adopted by Congress and the NLRB. Then, in 1947, organized labor condemned the passage of the Taft-Hartley Act over President Truman's veto by the reactionary 80th Congress as a slave labor law. Taft-Hartley reversed the Wagner Act policy encouraging self-organization of employees and collective bargaining, under the pretense of restoring equality of bargaining power between labor and management.

The Taft-Hartley Act made serious inroads on the concept of a truly national labor policy. It deleted the word "exclusive" from the definition of NLRB power to prevent unfair labor practices. It authorized the Board to abdicate its jurisdiction in favor of State labor agencies under certain circumstances. It amended section 14 of the Federal Labor Act to wipe out union-shop agreements in those States and Territories adopting so-called right-to-work legislation.

The Taft-Hartley Act was the go-ahead signal for revival of another NAM-inspired drive for antilabor bills in the State legislatures. In 1947, 14 States adopted restrictive laws against union security. (Three of them have since repealed these right-to-wreck laws.)

Even more liberal States like California (which had rejected the right-to-wreck measure at the polls in 1944) adopted a so-called jurisdictional strikes law in 1947. (This law still opens the door to strike-breaking through the creation of company unions in a manner forbidden by the NLRB, despite some amendments passed in 1955.)

From coast to coast, efforts were made by antiunion employers to use State courts to enjoin picketing, striking, and boycotting under the pretense of local enforcement of the Taft-Hartley Act. Such efforts were rejected by the California Supreme Court in the case of *Gerry* v. *I. L. G. W. U.*, decided in June 1948, holding that the Taft-Hartley amendments could not deprive the NLRB of its exclusive jurisdiction.

When a Los Angeles trial judge sent a retail clerks' union leader to jail for supposedly picketing in violation of the Taft-Hartley Act, the California Supreme Court freed him on a writ of habeas corpus in the fall of 1948.

Meanwhile, the United States Supreme Court began backsliding in the face of the rising torrent of antiunion propaganda. It upheld the Arizona and Nebraska right-to-work laws as constitutional in January 1949, and permitted the Wisconsin Employment Relations Board to enforce restrictions on maintenance-of-membership agreements that March.

On February 28, 1949, the Supreme Court handed down its startling decision in the case of *International Union, United Automobile Workers, A. F. L.* v. *Wisconsin Employment Relations Board*, popularly known as the Briggs-Stratton case.

That ruling allowed the Wisconsin Board to order the UAW–AFL's Local 232 to cease and desist from engaging in sudden work stoppages at plants where the UAW–AFL had been certified by the NLRB.

Soon realizing that it had gone too far in Briggs-Stratton, the Supreme Court struck down a Wisconsin Board order restricting union security in February of 1950; invalidated a Michigan strike vote law that May; and, in February of 1951, knocked out a Wisconsin ban on public utility strikes. These three State actions were held invalid because they interfered with rights conferred upon employees by section 7 of the National Labor Relations Act.

The State courts were slow to respond to this backswing of the Supreme Court pendulum in the direction of restoring a national labor policy. Even the relatively liberal California Supreme Court held in a 4–3 decision on March 10, 1953, that the national labor policy did not prevent an injunction against picketing an interstate business under the State Jurisdictional Strikes Act. (*Sommer* v. *Metal Trades Council.*)

That same December, the United States Supreme Court proved the error of this California version of the Briggs-Stratton doctrine. In *Garner* v. *Teamsters Union*, it held that a State antipicketing injunction must fall where it conflicts with the Federal policy. The Garner opinion specifically found that "the public interest is

served by freedom of labor to use the weapon of picketing."

Labor attorneys, like this writer, were doing their utmost during this crucial period to persuade the NLRB to actively oppose conflicting State court rulings. In the Capital Service case, I wrote the NLRB General Counsel, on behalf of the A. F. of L. unions involved there, demanding that he "institute legal action in the Federal courts to compel (the employer) to cease prosecuting its State court suit" while charges were pending before the board. The United States Supreme Court eventually held, on May 17, 1954 (*Capital Service, Inc.* v. *N. L. R. B.*), that the board could secure an injunction in Federal court forbidding the employer to enforce a California court order against A. F. of L. picketing, for the purpose of protecting the Federal agency's exclusive jurisdiction.

In March 1955, the Weber decision came down, invalidating a Missouri antipicketing injunction in a so-called jurisdictional quarrel between two rival labor unions because the NLRB has "exclusive primary jurisdiction to pass on the union's picketing."

State courts are at last beginning to accept the mandate of the United States Supreme Court that they must show deference to the national labor policy, as evidence by the Garmon and Benton decisions of the California Supreme Court on December 2, 1955. (However, the Benton case permitted an antipicketing injunction to stand against the Roofers' Union in the same case because it applied to a local business enterprise of the same employer which did not affect interstate commerce like his interstate painting business, being picketed by the Teamsters and Painters Unions. As mentioned above, the Garmon case permitted an antipicketing injunction to stand where the board's regional director had dismissed the employer's petition on the ground that his business did not affect interstate commerce enough to justify the attention of the NLRB.

The Garmon decision did expressly recognize that—

"The reason for preventing State courts from acting in cases in which the Board has jurisdiction is to * * * avoid diversities and conflicts likely to result from a variety of local procedures and attitudes toward labor controversies."

Free collective bargaining is one of our Nation's strongest bulwarks against tyranny, both foreign and domestic. If we are to indeed remain "indivisible, with liberty and justice for all," America must adopt a national labor policy which is more equitable than the Taft-Hartley Act and which will apply uniformly in all of the 48 States and the Territories.

Now that the Supreme Court has returned to its traditional view that the national labor policy is the supreme law fof the land, the next major goal should be to elect a President and Congress this November who will be pledged to eliminate the antilabor features of the Taft-Hartley Act. Elimination of the right-to-wreck feature of section 14 (b), which makes State union-security laws paramount to the Federal law, is must legislation.

School Segregation in the South

EXTENSION OF REMARKS

OF

HON. RICHARD B. RUSSELL

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 11, 1956

Mr. RUSSELL. Mr. President, when the white people of the South made it clear that they intended to resist and to seek to reverse the recent unconstitutional decision by the Supreme Court in the school cases, veritable torrents of abuse and bitterness were leveled at them from some so-called liberal sources.

It is refreshing to find that in areas other than the South there are those who have seen through all the implications of the decision. There came to my desk an editorial from the Standard-Times, a daily newspaper published in New Bedford, Mass., dealing with this subject, from which I wish to read one sentence:

We are sorry for the southern whites and southern Negroes to be pawns in this politicking of the Supreme Court.

I am sure there are thousands of persons throughout the country who will agree with this editorial, and there are many thousands, both white and Negro, who live in the South who will appreciate having such a stalwart and understanding friend in the North.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IKE ASKED FOR IT

In two recent press conferences President Eisenhower discussed the school segregation issue in the South, saying this is "a time when we must be patient" and try to avoid "a tremendous fight that is going to separate Americans and get ourselves into a nasty mess."

Unfortunately, the mess which the President deprecates, already exists and should have been foreseen, when, under White House pressure, the Supreme Court reversed the law of 60 years standing with reference to school segregation in the South.

Several cases involving alleged discrimination against Negroes in Southern schools were pending in the Supreme Court when former Governor Warren became the new chief justice. The views of the President against segregation were well known, as may have been those of Chief Justice Warren. But to make doubly sure the Supreme Court made the right decision, the President instructed Attorney General Brownell to appear in the case, as a friend of the court, urging desegregation.

Two important provisions of the Federal Constitution are involved in the desegregation decision. The 14th amendment, approved in 1868, forbids any State to "deny to any person within its jurisdiction the equal protection of the laws."

The other provision of the Constitution directly affecting the desegregation problem is that one which specifically says, "The powers not delegated to the United States, by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people."

Under the former provision of the 14th amendment, no State could discriminate between Negro citizens and whites with reference to schools or otherwise. Under the second provision, the 10th amendment, control of the schools was specifically reserved to the States, as not having been delegated to the Federal Government.

Obviously, under the 10th amendment the South had the undisputed right to control its schools, unless its policies violated the 14th amendment forbidding discrimination between Negroes and whites. For 60 years the Supreme Court had ruled the 14th amendment requires equal school and other facilities, but not identical; in other words, schools and other facilities "may be separate, but must be equal."

The Warren decision, which the President now faces with pleas for patience, destroyed the school formula of the South, a formula under which admittedly the Negroes of the South and the South had made steady and peaceful progress for more than half a century.

In a windy decision by Chief Justice Warren himself, the Chief Justice said in effect, "The very fact of segregation constitutes discrimination, gives the Negro a sense of inferiority, etc."

That this is untrue is evidenced by the fact many of the leaders of the Negroes in the South and the North, including many of the Negro school teachers of the South, not only feel no inferiority as a result of segregation, but object to attempts to force desegregation upon either Negroes or whites.

Though the President may not himself have been influenced by political considerations, the Warren decision was heavily weighted with politics.

Leaders close to the President undoubtedly told the President desegregation, if accomplished during his administration, would go a long way toward winning back the Negro vote of the North. This vote had been lost to the New Deal of the Roosevelt-Truman era.

Not only was such a purpose highly improper, but it has not and it will not work. For one thing, there is no segregation problem in the North—for there is no segregation. For another thing, the Negro vote, to whatever extent it was and is Democratic, is influenced by the New Deal philosophy, which only can be cured, if at all, by the process of education, a process which has been rudely struck down in the South by the recent Supreme Court decision.

Another equally improper consideration which is thought to have been influential in the Supreme Court's "political decision" is that there was thinking emanating from the State Department that desegregation would eliminate Communist-inspired criticism of the United States in India and others of the countries of the dark races.

Here again the administration did not see beyond its own nose. The antipathy of India does not spring from segregation in southern schools, etc. It springs from the fact that India, while recipient of our generous bounty, is basically Communist in its sympathy and is interested in the segregation issue of this country only because it suits its own propaganda purposes.

We're sorry for the southern whites and southern Negroes to be pawns in this politicking of the Supreme Court. We're sorry for Ike now that he sees what he helped to procure and produce. It's going to take a lot more than patience to solve this one—on Ike's part as well as of those in the North and South whom he beseeches.

Joint Disarmament and the Foreign Aid Program

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, April 11, 1956

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech I recently made concerning mutual reduction of 15 percent in the arms budget of the United States and the Soviet Union with part of the savings to be allocated to the joint foreign aid program administered by the United Nations.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR ESTES KEFAUVER AT JEFFERSON-JACKSON DINNER OF YOUNG DEMOCRATIC CLUBS OF MARYLAND, BALTIMORE, MARCH 10, 1956

As we meet here tonight, the representatives of the world's great powers are gathering in London to prepare for the resumption of disarmament talks which have a life-or-death significance for our Nation and for all nations.

The peace-loving peoples of the free world are looking to the United States for responsible leadership in breaking a 10-year-old deadlock on reduction of armament which must be resolved if our way of life is to survive.

I fervently pray that our country's representatives will be inspired to display true leadership when they face up to the Russians during the coming crucial meetings.

It is high time that this Nation began using the weapons of resourcefulness and imagination and initiative in dealing with the Communists.

They are weapons far more powerful than the hydrogen bomb.

They are the only diplomatic weapons with which we can persuade the Russians or maneuver them into joining us in our clearly demonstrated determination to limit the weapons of destruction which are as pressing a burden upon the Russian people as they are upon our own.

I have been a frequent critic of the Eisenhower administration because it has come forward with no plan for disarmament until a few days ago—although Secretary Dulles says that he has reason to believe that the Russians would like some relief from their great burden of armaments.

Harold Stassen is in charge of creating a disarmament plan. He has tried hard to carry out his assignment. But he cannot get the members of the Eisenhower team to agree with him. On one thing, Secretary Dulles disagrees. On another, Secretary of Defense Wilson disagrees. There are varying degrees of disagreement throughout the rest of the administration.

If we had a President other than President Eisenhower, he would have made a decision by now between the opposing forces on the team. But President Eisenhower insists that only unanimous agreements be brought to him. This is the same policy which he has applied with unhappy effect to the Joint Chiefs of Staff. The result is that despite the peace offensive of the Soviet Union, the United States is unable to start one of its own.

Our allies are growing restive because of our inaction. It is damaging our prestige in such United Nations gatherings as the forthcoming talks in London. It is eating away at our leadership of free world forces. Yet the team can make no decision and the President will not.

I said earlier that I am a frequent critic of this administration.

I have reason to be—both as a Democrat and as an American.

But I am not so partisan a critic that I will not recognize even a small modicum of inspiration when the administration finally bestirs itself into action rather than merely abiding by its familiar and melancholy waltz pattern of following while the Russians lead.

I think President Eisenhower's letter earlier this week to Russian Premier Bulganin, proposing to negotiate on reductions in the level of nuclear and conventional armaments was a step in that direction.

Like all of you, I was pleased by the Russian Premier's preliminary reaction, which was a grudging concession that the Eisenhower proposal was—and I quote—"good."

I do not think the Eisenhower proposal goes far enough. But if it has elicited this initial Soviet response, then it might provide the basis for fruitful negotiations across the conference tables in London.

Last summer, leaders of this administration went to the "summit" at Geneva full of hope and little more. They returned with nothing but bruised feelings. Their hopes were dashed by Soviet hostility and vastly superior Soviet diplomacy. As a result, we suffered a major defeat in the eyes of the world.

This time the hope must be balanced by a full quota of stern determination to persuade the Soviets that they have nothing to gain by obstructionist behavior. This time, the hope must be supported by positive programs, so skillfully conceived that for the Russians to spurn our honest offers to halt the arms race would hand them a major defeat in the eyes of the world.

But I wonder if the administration's representatives are going to London so armed to meet the Russians?

I refer you to a front page story in yesterday's New York Times, which reported that Harold Stassen was flying to London today with—and I quote—"a new set of disarmament proposals in his briefcase with a suitcase full of hope."

I don't like the comparative weight of his baggage, do you? I wish Mr. Stassen well on his mission, but I was rather disturbed when the New York Times reported a news conference held by Mr. Stassen in these terms—and again I quote:

"The accent was on his hopes, rather than on the substance of the proposals he planned to put before the United Nations Subcommittee on Disarmament when its so-far fruitless negotiations are resumed in London March 19."

Are we in for another summit disaster? Is Mr. Stassen, who tries hard enough to wage peace, going to be forced to stuff rejected and inadequate proposals back into his briefcase because the "team" simply lacks the spark needed to create disarmament programs calculated to capture the imagination of peace-loving peoples throughout the world?

Will Mr. Stassen come home with his suitcase barren of hope because the "team" simply can't agree on a program so expertly contructed that the Russians cannot reject it without serious loss of face—particularly in the uncommitted areas of the world where they have seized the initiative from us?

My friends, if ever this Nation needed a change in leadership, the time is now. However, under our democratic processes, that change will not come before next November. But it will come!

In the meantime, November is eight months away. And eight months can be an eternity in the fast-moving world of today. The time to achieve a reduction of armaments is during the next few weeks in London.

One of my chief complaints about this administration is that it has failed to take hold of proposals previously made which offer great hope of achieving peace. I am thinking particularly of a far-sighted proposal by the late Senator Bryan McMahon which should be given fresh consideration at this critical moment in history.

The administration is also duty-bound to give careful consideration to fresh programs—whatever their origin and even if they stem from Democratic sources.

The administration has long acted as if it considered the conduct of our international relations its own special preserve. This has been particulary true in the field of armament reduction. Well, it's high time it put the conduct of our foreign relations on a truly bi-partisan basis—as we Democrats did.

I have a plan to propose to the Eisenhower administration which would, I believe, put a powerful brake upon the arms race—and, at the same time, help us to meet the new and insistent Soviet challenge of nonviolent expansion in the Middle and the Far East.

I offer it to the administration in a completely unpartisan spirit. Indeed, if the administration accepts this plan, and actively strives to put it into operation, it can become one of the proudest plants in the GOP campaign platform.

And if it succeeds, every Democrat will give this administration credit for a major achievement in helping to secure the peace we Democrats so earnestly desire.

The plan is simple.

I call upon President Eisenhower to instruct our representatives in London to propose that Russia join us in an immediate and mutual reduction of armament expenditures by 15 percent.

Coupled with this proposal, and to be made a binding portion of the arms reduction agreement, would be the condition that one-third of the amount saved will then be put into a pool for economic aid to underdeveloped areas.

This joint point 4 program should be administered by the United Nations in such a manner that neither the Soviet Union nor the United States could individually claim the credit for its successes or be blamed for its failures.

In this manner, the Russians will be prevented from making the sort of inroads in the underdeveloped areas which their propaganda drive is now accomplishing in the Far East.

And—who knows?—perhaps a joint endeavor of this nature, administered impartially by the United Nations and combining a reduction in the tools of war with an increase in the tools of economic self-sufficiency for a third of the world, might constitute our first real advance toward peace in 10 years.

In order to extend the greatest benefits of the program to the underdeveloped nations, the first act in its implementation should be the calling a U. N. sponsored economic conference to permit the underdeveloped nations to determine the most lasting long-term benefits from the sizable economic resources which the mutual cut in armament expenditures would provide.

If the Russians refuse to go along with these proposals, they will not only stand condemned in the eyes of the world as foes of arms reduction and peace but—more important, the peoples of the underdeveloped nations will see them stripped of their pretenses and exposed as aggressors who dangle offers of economic aid only for propaganda purposes.

If they are forced to go along with us, then they will help us to accomplish a task for which there is an urgent need in terms of humanity and which will serve our own democratic purposes by strengthening the defenses of the recipient nations against the economic chaos on which communism thrives.

I do not wish to bore you with figures, but let us examine briefly what the allocation of one-third of the savings in arms would mean to whole populations in other parts of the world whose major concern is keeping 1 day away from hunger:

Our budget for arms is roughly $35 billion. Although a sizable portion of the Soviet outlay for arms is concealed in other expenditures such as heavy industry, all available intelligence indicates that Soviet expenditures approximate our own.

Simple arithmetic shows that this plan would funnel approximately $3 billion into a fund to further freedom and prosperity among the new nations of the world who are struggling desperately to achieve self-sufficiency.

Surely this is a plan in keeping with the forward-looking traditions of the Democratic Party, the party which created the Marshall plan, NATO, and point 4.

I am the first to admit that the implementation of this program presents obvious administrative problems. But, for the love of humanity, let us not permit paper problems to stand in the way of creating a new force for good in the world.

From our purely domestic viewpoint this plan has the merit of offering a reduction in the income taxes paid by the average American. With one-third of the savings going to assist young nations in need of help, the other two-thirds could be lopped from our national budget and passed along to the taxpayer who needs relief most—the little fellow.

Importance as they are, however, it is not with reductions in income taxes that I am concerned most.

The question of peace and war is the most crucial of our times. Not only is our own safety involved but the safety of all men everywhere.

Civilization as we know it, and even life itself, may hang in the balance.

The balance has been going against us under this administration.

Let us swing that balance our way and win world opinion through concrete proposals designed to relieve international tensions, improve the economic conditions of the nations, and take the peace propaganda offensive away from the Russians.

I think the plan I have outlined constitutes one such proposal. I commend it to your attention and to the attention of this administration with a warning that time is running out and the time for action is now.

The Congress and the Constitution

EXTENSION OF REMARKS
OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 11, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Congress and the Constitution," which I recently made on the radio.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CONGRESS AND THE CONSTITUTION

There is one fundamental idea which underlies the structure of our governmental machinery—the unwavering distrust of a strong Executive, be he President, King, Prime Minister, or Governor. The Federal Constitution, as well as the constitutions of the 48 States, contain specific limitations on the powers of their Chief Executive, including limited succession, confirmation of executive nominations, removal of executive officials, restraints on spending, and others.

It is, of course, natural that this should be so. The colonists who tore away from England had had enough of strong executives, of autocratic kings and autocratic governors.

When independence was established, they worked to design a government in which the executive would be under the control of the people. Their success is visible in the Constitution.

They made the Executive subject to the watchfulness and the will of Congress, subject thereby, to the will of the people. Congress was established as the eyes, ears, and the voice of the people. It performs the noblest function of government; that of making the laws. The function of the Executive is to put those laws into effect exactly as Congress wrote them. Nothing more.

Examination of the Constitution will reveal how carefully the Founding Fathers spelled out the differences between the authority of the people and those of the President. The decisions of the President are always limited by the higher tribunal of the Congress, but decisions of the Congress—within the Constitution, are final.

The Congress has the conclusive power to pass laws. The President may veto legislation, but his veto is never final. It can be overturned by a two-thirds majority of the Congress and that decision is final.

The President has the power to grant pardons and reprieves. But that power does not include pardon of impeachment which is a decision of the Congress.

The Constitution provides that the President shall be Commander in Chief of the Armed Forces of the United States, but he cannot use those Armed Forces in war, except by the action of Congress. The power to declare war is vested, exclusively, in Congress. Again we see that the decisions of policy are those of Congress—the management or administration of those decisions are the President's.

The President negotiates treaties and foreign agreements, but any treaty so concluded is worthless unless two-thirds of the Senate consents to their enactment.

The President can nominate officials and judges, but his power to appoint them depends upon the consent of the Senate.

The complete dependence of the Executive on the approval of the Congress is inherent in the fact that the Congress controls the power of the purse—the raising and spending of funds. Without money, no Executive can operate and without congressional action there is no money.

Finally, we see the intention of the Founding Fathers, to make Congress the supreme authority, in the provision for impeachment. The Congress can remove, by impeachment, any civil official or Federal judge. Why the Congress can, by impeachment, remove the President, himself. But there is no parallel authority to remove Members of Congress. No one can remove a Member of the Congress during his elected term of office. Why? Because he represents the people, and in this land, the people reign supreme over the affairs of Government.

It is for these reasons that Alexander Hamilton, in the Federalist papers, speaks eloquently of the "superior weight and influence of the legislative body in a free government." It is upon this superior weight that a free government must rest. Once the balance of influence shifts to the Executive, free government has set foot upon the road of self-destruction.

Yet, that road has already been set upon by our Nation. We are, in fact, well on our way toward its end. The Executive has become superior to the Congress in weight and influence.

As the affairs of the Nation became more numerous and life more complex, there began a trend toward increasing the scope of the Executive. Today, actually, it is the Executive, as represented by the person of the President, who wields virtually all of the power of government. The Congress has helped increase the Presidential power by a direct abdication of its functions.

We have a growing body of laws which vest tremendous powers in the hands of the President, or some Presidential appointee. I recall that in the recent farm bill before the Senate, there were over 20 instances of the delegation of congressional power to the Secretary of Agriculture, including such vital functions as the determination of how much money shall be spent under the various farm-support and soil-bank programs.

A second source of increasing Presidential power is open usurpation. Usurpation was effective because the Congress failed to exercise its powers, especially its powers to remove officers who tried to operate above the law. The recent example of a President making war in Korea without asking for congressional consent, is an example of autocratic Executive power in this country.

When such an act is committed, the Congress has a clear obligation to assert its authority. To declare war is constitutionally the power of Congress alone. Any other method of making war is, therefore, clearly unconstitutional. A President who thus violated the Constitution violated his oath of office to uphold and preserve it. Congress had the power and the duty to act. It did not act and thus another of its powers slipped into the hands of the Executive.

Why is it that Congress has allowed this state of affairs to come about and then to continue? I think the answer is rather simple. The voters, the people for whom the Congress speaks, have been indifferent. We have concentrated increasingly at election time on the Presidency. That has been the star of the whole show, with the congressional candidates all too often playing a secondary role. Yet it is the Congress that makes the laws upon which the Presidency operates.

Perhaps the increasing power of the President is largely due to the changed attitude of the people as a whole. We look now to the Federal Government for the solution of most of our problems, problems which traditionally have been met by the State and local governments, or private initiative. The President is symbolic of the Federal Government as an entity, whereas the Member of Congress represents, first of all, his constituency back home.

A continued weakening of that congressional authority will have as its inevitable result the creation of an all-powerful Executive. In other words, a system of dictatorship.

What is the answer? Because Congress is in your hands as the voting public, so is the answer. The election of a Congress, determined to protect the traditional constitutional concept of Congress and Executive, will automatically restore the balance of power.

We know, from experience, that an aroused Congress is the best defense against the encroachment of Executive power. Even in these times, when the Executive power had reach its high point, Congress, once aroused, has shown the power it can wield.

Twenty years ago a powerful Chief Executive, one who had what many considered a rubberstamp Congress, attempted to destroy the judicial authority of the United States by packing the Supreme Court. No one expected anything but consent from the Congress. Yet a small handful of determined Constitutionalists refused to accept this emasculation of the Constitution. They decided to fight out the issue on the floor of Congress. When the battle was over, a very surprised President found that he had been defeated.

We have seen more recent struggles between President and Congress. Another President took it upon himself to decide the assignment of troops to any part of the globe at his whims. The Congress again took issue and there ensued one of the great historic debates in our history. The result was a reassertion of the right to declare war only by the will of Congress.

When the Internal Security Act of 1950 was passed, it was vetoed by the President and all authority and propaganda of the executive branch of Government was mobilized to make that veto stick. But an aroused Congress, determined to protect the security of the Nation, set aside the veto.

The story is the same with the Immigration and Nationality Act of 1952.

In these glorious flashes of reasserted congressional authority, we can see the potential salvation of our Republic. Only the Congress has the constitutional force to oppose Executive dictation, to force a return to limited Presidential power.

But Congress will do the job only if those who make up its membership are dedicated to that cause. Weak, compromising men, men who prefer that the Presidency have both authority and responsibility, will never be able to do that job.

The answer, therefore, lies with the Congress. Those who believe in the traditional constitutional form of government for this land must concentrate their effort on the election of a constitutional Congress. Each Member of Congress is an important link in that chain.

In the selection of candidates to run for Congress in either party, you, as the individual voter, must do everything possible to assure the nomination of candidates unequivocally dedicated to the preservation of constitutional American government.

In your district, a few hundred votes may assure victory to the side of constitutional government, whereas, millions of votes are needed in a nationwide election.

Important as the Presidency is, the restraints Congress can place upon the Chief Executive can render harmless attempts to usurp power.

So, I say to you, make certain that no one is elected in your district who does not adhere to constitutionalism, that no one is elected who believes in globalism, in one-worldism, in unlimited authority for the President. If you do your part, the victory will be ours.

American Foreign Policy

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 11, 1956

Mr. HUMPHREY. Mr. President, the rabbi of the Congregation B'Nai Jeshurun, in New York City, Israel Goldstein, has recently distinguished himself with an outstanding speech on American foreign policy. I regard this speech as an admirable and constructive statement regarding present American foreign policy deficiencies and the opportunity we have to correct them. I ask unanimous consent that the speech be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

ADDRESS BY DR. ISRAEL GOLDSTEIN

We have witnessed since the meeting at the summit the steady evaporation of the Geneva spirit. Indeed, only a few days ago the spirit breathed its last and was interred by Secretary Dulles without benefit of ceremony.

History will record who was the assassin of the short-lived Geneva spirit. It will note that the Soviet leaders revived the Stalin policy of cold war and that they again plainly showed that they are bent on world domination. It will take into account the Soviet's cynical and ruthless penetration of the Middle East, and the inflammatory remarks of Bulganin and Khrushchev in the Far East. For a time there was a glimmering of hope that the Communist regime would relax the terrible pressures on the millions it holds in thrall. We had hoped, for example, that it might loosen the stultifying grip it clamped on Jewish communal life, but all evidence points to the contrary. Recent observers, men like the editor of Davar and Harry Schwartz of the New York Times, both of whom recently visited Russia, have given us accounts of Jewish life in the USSR, which leave little room for hopefulness. These plain facts will instruct historians as to who destroyed the Geneva spirit.

But what we are likely to forget now, as the Geneva spirit is relegated to the historical dustbin, is that at best it was not meant to be a final adjustment of East-West rivalry. It was meant to be an interval in which two opposing concepts of life, the democratic and the totalitarian, agreed to put aside the threat of military warfare and to wage the battle for the adherence of men by the thrust of ideas instead of the thrust of bayonets or atom bombs. The spirit of Geneva in no way relieved the democratic nations of the responsibility of winning the uncommitted millions of the world. On the contrary, it should have inspired us to multiply our efforts to rally behind the banners of liberty, progress, and the common welfare, those peoples of the world who yearn to live in dignity and freedom. The threat of mutual annihilation has convinced all of us on both sides that the struggle today must become a struggle for the minds of men; and this form of civilized warfare will go on.

The foreign policy of our country is the instrumentality through which we conduct this struggle. All our cultural resources and energies should therefore be enlisted in fashioning this instrument. This should be a time in which discussion, debate, reexamination should be encouraged. Such reappraisal of our foreign policy can indeed prove agonizing, but the results of failure to engage in such reappraisal could prove even more painful. It is difficult then to understand why at this crucial juncture there should be such bitter resistance by the administration to criticism of its foreign policy. While a common front may have been necessary during wartime, insistence on rigid uniformity is harmful at a time when it is necessary to evolve a policy that must accommodate itself to fluctuating events and new realities.

When the administration seems to be heading in an ill-considered direction in an area as vital as foreign policy, criticism can hardly be viewed categorically as stemming from mere political partisanship. Certainly there is every evidence that the Communists are forging ahead of us in terms of winning, if not the adherence of many people of the world, at least serious attention to their insidious propaganda. This fact of itself makes it exigent for us to devise a new and more dynamic counter-policy.

There was a time when our military commitments were an extension of our foreign policy. Today this process is being reversed. Now our foreign policy has become an extension of our military undertakings. At a time when we should be uniting the peoples committed to democracy, we are busy concluding military pacts and erecting strategic frontiers having regard to nothing but military considerations. We refuse to differentiate between one nation from another. We equate democracies with dictatorships. We unite in one vast military scheme petty potentates and peoples yearning to be free. We construct for ourselves worldwide Maginot lines, like NATO, SEATO, Baghdad, the Balkan Alliance, etc. To the dismay of the architects of our foreign policy our Maginot lines have proved to be no defense against ideas and we have already seen how easily Soviet Russia plays leapfrog with our pacts and penetrates into those very areas which we had regarded as safe and invulnerable to Communist infiltration.

Thus we have let the Communists steal a march on us. They have offered the oppressed and those who have smarted from the indignities of the colonial past, honeyed words and an appearance of solicitous regard for their welfare. Posing as champions of anti-colonialism, they have purloined from us those democratic and humanitarian symbols which once made us the beacon of hope throughout the world. They exploit the grievances and aspirations of the awakened millions throughout the world. We, on the other hand, are letting slip through our fingers the friendship and good will of scores of millions in Asia and Africa.

The simple truth is that we have markedly failed to convey a more inviting image of ourselves to those millions. What is sorely needed is a tremendous expansion of our information service which will do us justice. But an even greater change in our policy is needed in the economic area. The recent successes scored by the Soviets derive in considerable measure from their promises of technical and economic aid. We have failed to respond adequately to this crying need. This is an area in which, if we will it, we can easily outdo the Russians; and it is astonishing that we have not concentrated on it. Nothing is clearer than the fact that we must imaginatively enlarge our point 4 type of program and aid generously in the economic development of the poverty-ridden lands.

It would be naive not to concede that in the interest of security, it is legitimate and desirable for a nation to seek allies and friends—and even at times to form alliances with countries with which it cannot see eye-to-eye. But this is different from courting nations whose philosophy and views are diametically opposed to it. We have tended to blind ourselves in this regard. In our frantic search for allies we have overlooked the sorry record of Franco Spain; we have shirked our responsibility in extirpating Nazism in Germany, and, as a consequence, we have discouraged our democratic friends in Europe who view our protestations and slogans with skepticism. Expediency is understandable as an element which must be given some consideration in a balanced and judicious foreign policy, but when it becomes the overriding impulse, when it obscures all other needs, then a fatal process is set in motion. A nation with moral pretensions, even a powerful one, cannot afford to lose its moral position and its moral influence. When expediency becomes the raison d'etre of our foreign policy, we have lost our moral position and influence. Our military weapons may be massive but our ideas have become minuscule. We can threaten devastating holocausts but we cannot kindle a flicker of hope in the minds and souls of men.

Let us take the example of how we have fared recently in the Middle East.

Let us suppose that we had adopted a policy addressed to the interest of the misery-ridden peoples of the Arab lands and had shared with them the American economic genius and democratic promise, would the situation in the Middle East have been different? I think that merely to ask the question is to answer it. It is plain that we have been in downright error when for the past 20 years we have vacillated in our policy, falsely encouraging the hopes of bellicose Arab potentates and dictators. We should have made it clear that the interests of America were pinned on moral aims and not tied to oil. We should have said to all peoples of the Middle East, Arab and Jew alike, "Let us join together in constructing a meaningful and impenetrable bulwark against communism. Your rivers are flowing into the sea. Let us join together and create power projects to give you light and water and industry. You have vast lands lying arid, let us in common irrigate them and plant them and give you shade and

food and farms. You have suffered from disease; let us together bring you sanitation and medical assistance and hospitals and restore your health and vigor. You have great traditions unknown because of illiteracy and lack of educational facilities. Let us help you build your schools, train your teachers, print your books, and help you share in the human heritage of learning. Let us raise your standards of life. Let us share with you the blessings of democracy and so help you order your life that all men shall have equal opportunity. You Arabs need not be envious of the great strides which your neighbor, Israel, has made in economy, industry, education, and health, and in the development of its democratic institutions. Everything which Israel has achieved lies within the realm of your own possibilities. Let us protect each of you from aggression by the other. We want Arab and Jew to flourish and prosper.

Had such a policy been pursued, the picture in the entire Middle East might be different today. The Soviet Union could not hope to wean the Arab peoples away and the leaders of these peoples would not have hazarded the chance of allying themselves with Russia, if such a true and firm pact based on morality and humanitarianism had bound the Middle East to the Western World.

Our opportunity for recovering the ground we have lost throughout the world still remains. Secretary of State Dulles, in a major address on foreign policy, has recognized the fatal inadequacy of the system of military arrangements which he himself has created. In a series of eloquent passages, he set forth the great need for projecting the true interests and aims of America to the rest of the world, when he said: "We need to recapture the spirit which animated those who during the last century went throughout the world carrying the benefits of a new way of life. * * * They believed in a moral law and in its concepts of justice, love, and righteousness. * * * Our Government gave aid and comfort to those elsewhere who sought to increase human freedom. * * * What the world needs to know at this juncture is that our Nation remains steadfast to its historic ideals and follows its traditional course of sharing the spiritual, intellectual, and material fruits of our free society; in helping the captives to become free and helping the free to remain free * * * free in the sense of genuine opportunity to pursue happiness in the spirit of our Declaration of Independence."

If these indeed become not merely rhetorical declarations but guiding principles of American policy, we should quickly see a rejuvenation of democratic hopes and a building of alliances far more formidable than the military barriers we have erected against communism. The policies of the democratic countries would no longer be static, confined within a military straitjacket, but would become dynamic, surging forward and winning not only the uncommitted peoples but even ultimately bringing some measure of relief to those suffering under the yoke of the Communist regimes.

However, America, a democracy, unlike the Soviet, a dictatorship cannot afford to turn into a Janus presenting two different faces to mankind. We cannot present ourselves to the world as the pure apostles of democracy when certain of our practices at home flout the deepest values of democracy. We cannot promise peoples the freedoms of democracy while at home we deny or restrict these freedoms. We cannot dispatch emissaries of freedom from ministries of injustice. The colored peoples of the world will not believe us when we tell them that we want to help them to be free and equal when at the same time we discriminate against them within our own borders. The desegregation decisions of the Supreme Court of the United States were more eloquent messages to the minds of men in faraway parts of the world than any military assurances. But the lawless defiance of these decisions by local constituted authorities and the outrages of justice such as the brutal murder of Emmet Till, and the failure to convict and punish his murderers have undone a thousand pledges and have betrayed the highest interests of the United States.

We cannot export what we do not ourselves manufacture. Our message of equality, our effort to create among our allies a sense of mutual respect, become ludicrous if we still harbor an immigration law which discriminates against them, and offers gratuitous insult by arranging ethnic and racial groups in a mythical hierarchy of superior and inferior groups. We cannot pose as the friends of all men when our immigration laws are animated by a spirit of suspicion and hostility toward the stranger knocking at our gates.

We must restore the wholeness of the American personality. If the words of our Secretary of State are to carry conviction abroad, we must also make them meaningful at home.

Let us indeed restore this spirit in which our Nation was conceived, as the guiding spirit of our foreign and domestic policy. Only then, as a vigorous, free, democratic America, can we go forth in the vanguard of the democratic world to insure victory in the struggle for the minds of men.

Vice President Nixon

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, April 11, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a thought-provoking letter from former Representative John J. O'Connor to the editor of the New York Times. I think the letter warrants the attention of the American public.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LAW OFFICES JOHN J. O'CONNOR,
Washington, D. C., March 18, 1956.
EDITOR, NEW YORK TIMES,
New York, N. Y.

DEAR SIR: In today's Sunday Times, your Washington correspondent, Mr. Arthur Krock, has a political article, as usual, headed "NIXON Gets Big Lift for Place on Ticket," discoursing on the President's kindly references to his Vice President and the extraordinary spontaneous write-in primary vote in New Hampshire in behalf of Mr. NIXON.

In his article, Mr. Krock, under a heading "Hard-Core of Opposition," lists certain grounds of antagonism to Mr. NIXON as (1) being personal, that the Vice President is too cocky, etc., (2) that President Eisenhower will lose votes if Mr. NIXON is on the ticket, (3) that Mr. NIXON has expended himself (whatever that may mean), (4) that he is an oppositionist, and (5) that he has gone too far and too fast for a young man. That's all.

It is astounding that Mr. Krock, with his long attendance at Washington, does not express the real, down-to-earth opposition to Mr. NIXON, as, for instance, columnist Mr. George Sokolsky has so well done, to wit: that it all stems from Mr. NIXON's service on the House of Representatives Un-American Activities Committee, where he took the lead in exposing the pumpkin papers, which led to the incarceration of Secretary of State Acheson's beloved protege, Alger Hiss. That, together with other outstanding patriotic service on that great American committee, which I, as chairman of the Rules Committee of the House of Representatives, had some hand in creating, back in 1938, on which championship your newspaper approved me at the time. Mr. NIXON incurred the everlasting wrath, hatred, and brutal opposition of all the Communists and their supporters, the leftists, the pinks, the State Department perverted crowd and their ilk, including President Truman and other officials who supported the Hisses and the Whites, etc.

In bulk, this motley crew adds up to millions in this country of ours. Having done their job on Senator MCCARTHY, they drool to vent their spleen on their present victim, quite naturally, like Senator MCCARTHY, a veteran of our national defense.

That's the "hard core of opposition" to Mr. NIXON, and nothing other or less.

I do not personally know Mr. NIXON, nor Senator MCCARTHY, and as a lifelong Democrat, it is not likely that I shall campaign in support of Republicans. But because there may still remain, despite the New Deal, a small vestige of decency and sportsmanship in politics, I feel compelled to address you, Mr. Editor, and I trust you will deign to publish this letter.

Yours very truly,
JOHN J. O'CONNOR.

Resolution Relating to Senator McCarthy, Adopted by Abraham Lincoln National Republican Club of Chicago

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 11, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution of the Abraham Lincoln Republican Club of Chicago.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

THE ABRAHAM LINCOLN
NATIONAL REPUBLICAN CLUB,
Chicago, Ill., February 29, 1956.
The CLERK OF THE UNITED STATES SENATE,
Capitol Building, Washington, D. C.

DEAR SIR: The following resolution was passed by unanimous vote of 1,000 persons attending the Abraham Lincoln birthday celebration in Chicago on February 11, 1956, and it is requested that this resolution be brought to the attention of the entire membership of the United States Senate:

"PROPOSED RESOLUTION

"Whereas the United States Senate did condemn Senator JOSEPH R. MCCARTHY, of Wisconsin, for failing to discuss his income and personal finances before a partisan political committee of the Senate; and

"Whereas Senator MCCARTHY has been overwhelmingly vindicated by the Internal Revenue Department of the United States Treasury by proving conclusively, after an exhaustive investigation, that Senator MCCARTHY had overpaid the Government of the United States by more than $1,000; and

"Whereas the recent trial of Paul Hughes in New York City demonstrated beyond the shadow of a doubt that a certain clique of leftwing politicians and newspapermen plotted to spread a campaign of hatred against this outstanding American Senator: Therefore be it

"Resolved by the Abraham Lincoln National Republican Club and guests attending the all-day Lincoln celebration in Chicago on Saturday, February 11, 1956, That the United States Senate is urged to rescind its former action against Senator McCarthy and pass a resolution of commendation for his fearlessness in exposing the Communist conspiracy, and for his great Americanism."

Very truly yours,

Edgar C. Bundy.
President.

Interview by James T. Farrell With Adlai Stevenson

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, April 11, 1956

Mr. LEHMAN. Mr. President, on Sunday, March 4, the weekend magazine section of the New York Post published an article by Mr. James T. Farrell, the renowned American novelist. That article consisted of the impressions of an interview Mr. Farrell had with Gov. Adlai Stevenson. Having been written as it was by Mr. Farrell on the basis of a long meeting with Governor Stevenson, it conveys as well as anything I have seen a deep sense of Governor Stevenson's attitude on civil rights and other basic issues of the day.

I ask unanimous consent that this article by Mr. Farrell, published in the New York Post of March 4, be published in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

A Talk With Adlai Stevenson

(By James T. Farrell)

After speaking with Adlai E. Stevenson in his refreshingly modest office here in Chicago, I have the impression, strongly and firmly, that he is determined to provide an unmistakable example of political responsibility in his campaign to win the Democratic presidential nomination next summer.

He does not wish to compromise himself by making promises which he cannot reasonably hope to fulfill if he is elected. And he intends to speak the same language on issues in every part of the country.

Governor Stevenson has thought much and seriously on the issues which involve freedom and the fate of the individual in modern society. Steeped in American tradition, both in a personal family sense and more generally, he retains a vivid image of the freedom and individuality of the American Midwest in Lincoln's time. He wishes to see that earlier spirit of individuality retained and reenforced in an age of technological and political revolutions which are altering the entire character of modern life.

Like Lincoln before him, Stevenson believes America is "the last best hope of democracy." He regards the coming presidential campaign as "a seminal test" of our democratic society. He is far from convinced that we are in an era of automatic progress and prosperity. Complacency can lead to stagnation which could well rot the foundations of our progress. And he asserts that the danger from abroad and inherent in communism has not lessened.

On the Israel-Arabian issue in the Middle East, he wishes to see the arms balance restored but also repeated his earlier proposals to calm down the situation; he is apprehensive of any inflaming of passions. The series of shocks which have occurred to people all over the world in recent decades have, in his mind, created increased anxiety and dangerous tensions; and he warns that we could drift away from reason toward violent and destructive passions.

While he has great hope for the future of America, he likewise is much concerned about its future. Each generation must reengage in the struggle for freedom. Ideas and beliefs such as these stand behind the campaign he is now making. And in that campaign, he is prepared to risk defeat rather than to contribute toward rousing ugly and dangerous moods.

Sunburned from his California campaign trip, Stevenson was harried for time. He had a mountain of mail awaiting him; speeches for a rough campaign trip to Minnesota had to be prepared; there were many consultations. At the outset he stated he was too pressed for time to talk, but then, carried away by his ideas, he spoke frankly and openly.

The question of civil rights is on his mind. According to his view, the use of force in the present circumstance involves the logic of secession. He is concerned with preserving unity in the country. Reactions to the stand he took on civil rights in Portland, Oreg., February 13 were mixed.

However, he received a considerable number of letters supporting his position against the use of force, and his proposal and appeal for steady and orderly progress toward greater equality. Also, he appeared to be somewhat surprised by antipathetic reaction to his position.

Stevenson takes modest pride in the record on civil rights of his own administration as Governor of Illinois. He took a summary of that record from his desk to hand to me, but on looking at it, he remarked to his press assistant that the staff had failed to point out that the accomplishments of his administration were not all his personal doing, and that credit should have been given to others as well as to himself.

Among the actions he took as Governor of Illinois was that of issuing an order desegregating the Illinois Nation Guard. In addition, he ordered that all leases for concessions in Illinois State parks carry the following paragraph:

"The concessionaire agrees that no person shall be denied or refused full and equal use of accommodations and facilities on account of race, color, or religion."

Governor Stevenson also said that when he was special assistant to Frank Knox, wartime Secretary of the Navy, he drafted the first memorandum concerning desegregating in the naval forces. While he was recently campaigning in California, a Negro, Lt. Comdr. Dennis Nelson, visited him. Thanks to the Stevenson memorandum, Lieutenant Commander Nelson had been able to gain promotion in the Navy and he was almost indignantly surprised to hear that Stevenson's record on civil rights had in any way been impugned.

Stevenson reiterated his intention not to approach the question of civil rights from motives of political expediency. But he also said with some fervor that "we must press with uninterrupted and uncompromising pressure" toward the achievement of equality. He appears quite fully to appreciate and understand how the counsel of patience can be misunderstood by those who carry in their souls the stains and the injuries of oppression and inequality. But to him, patience is not a word implying inaction.

He believes that the courts, due process of law, and steady persistent education are the only reasonable means whereby we can keep moving ahead to enlarge our civil rights and to approach our ultimate goal of equality. Stevenson thinks, on this question as on all others, not only of an immediate action but also of ultimate and definitive solution.

He seeks consistently to propose means of action which will lead ahead to the ultimate goals solutions. And on the issue of civil rights and equality especially, he wants to avoid violence and the inflaming of ugly moods.

He used the word "tensions" in this context and as well when he commented more generally. He stressed and then re-emphasized that the appeal to and the use of methods of reasonableness and reliance on reason provide the only sound and solid basis for lessening or dissipating these tensions.

Adlai Stevenson is a complicated man. His mind is quick, active and very flexible. He is open to argument and will change his views if convinced that they are not sound. When he talks, ideas come forth almost on top of one another; they tumble out of him. He is highly articulate and can present his thought with clarity and lucidity that approach being unusual in American politics. But at the same time, he is shy, modest and reticent. He is decidely reticent about his personal feelings.

This fact results in the growth of some false impressions in the developing public image of Governor Stevenson. He does not fit the ready-made cliches which are accepted as an image of the politicians. He retains his own traits of character, his independence of mind even under the gruelling pressure of a campaign. It seems to me that he knows that he must first of all be true to himself and his own nature if he is to be prepared to serve in the high office which he seeks and well might win.

The world is not as rosy as it is made out to be by "the hucksters of Madison Avenue." But rather than play Cassandra, he stresses our need to accept the challenges of our era, to face them with dedication and intelligence, to meet and to master them. And in this context, he states and repeats with determination and conviction that he will not, no matter what it cost him, contribute to any worsening of dangers and to irrational emotionalism; these, he fears can tear away the fabric of American freedom.

Inspired by the example of Lincoln's Illinois, he tends to see freedom and equality like twins. His views on both have been strongly colored and clearly inspired by the speeches and writings of Lincoln. In an address on Lincoln, delivered in November, 1951, when almost no one thought of him as a Presidential candidate, he asserted:

"The struggle for human liberty must go on. It must be re-fought by every generation, for democracy is threatened not alone by foreign ideologies but by selfishness, indifference, intolerance, demagoguery and disloyalty to public trust right here at home. Lincoln's fight is not finished."

In terms of new situations, Lincoln's fight must go on. The ideals of Lincoln should be our ideals. For this represents the best in the American tradition. And his sense of that tradition is markedly influenced by the fact that Stevenson is a Middle Westerner. His memory and knowledge of the Middle Western past gives him a strengthened sense of change. He knows and knows well what miracles of change have happened in America. In continuing a path which allows for even more miracles and change, he believes we must constantly guard and enlarge freedom and equality.

On February 13, he said in Portland, Oreg.: "Freedom, as I understand it, means that a man may advance to the limit of his natural endowment without hindrance because of his race or religion.

"Equality, as I understand it, means that a man may advance to the limit of his own merits. And particularly it means that every citizen shall be guaranteed equal treatment under the law."

He insists these conceptions demonstrate that he has a clear and steady position on civil rights and that he has consistently maintained this position over a number of years. And when he stated that we must press with uninterrupted and uncompromising pressure toward the achievements of our goals of freedom and equality, he looked straight across the table at me and his eyes lit up. He was talking like a man with tested convictions.

The presure of the Stevenson campaign is now beginning to grow. The rise in the volume of mail has been regular and now the Stevenson office receives an average of at least four to five hundred letters a day. Stevenson attempts to answer as many of these letters as is physically possible.

He continues to give much time and thought to his speeches. However, he sometimes has a conference with speech writers and they prepare a draft for him. He then goes over the draft, changes, revises, and makes the speech his own. He consults often with his staff when he is in his Chicago office, and he is usually very easy and familiar with those who work for him. The Stevenson research staff is small, but Stevenson stresses research. He always wishes to present only facts that can be bulwarked with proof. He tries to have a solid layer of fact underneath the eloquence and the rhetoric which he manages so ably.

Governor Stevenson spoke of the National Stevenson for President Committee with special pride. This, an outgrowth of Volunteers for Stevenson in 1952, was recently established. Barry Bingham, publisher of the Louisville Courier-Journal, and Mrs. Edison Dick, a former Wendell Willkie Republican, act as cochairmen of this organization.

Stevenson believes that this committee serves the Democratic Party and will aid significantly in strengthening and building it. He has real hope, regardless of the outcome of the campaign, that the National Stevenson for President Committee will bring new members to the Democratic Party and that their loyalty will be deepened. It will also play a role toward achieving the constant rededication of the party to the principles he believes must bind it together. These are principles affirming freedom, emphasizing the steady and orderly progress in the never ending struggle for liberty and in the constant effort to achieve greater material improvement.

Stevenson talks more of issues than of politics. In fact, it is difficult to approach him on questions if one's views are framed merely in terms of sheer political expediency. Most clearly, he wants to win, and he is moving ahead into high speed with determination. But he wants to win in terms of his principles; he is resolved to act and speak in such a way that he will have served his principles and his country to the best of his ability.

Neglected Friendships

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, April 11, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "Neglected Friendships," from the Concord Daily Monitor, Concord, N. H., published on Tuesday, April 3, 1956. The editor and publisher of this paper is James M. Langley, who represented this country in the recent trade negotiations with the Philippines, and who has particular insight into American-Filipino relations.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEGLECTED FRIENDSHIPS

The deterioration of our relationships with Iceland to the point where that nation's Congress has asked us to withdraw our troops from this vital mid-Atlantic NATO base illustrates the difficulty the United States seems to have in maintaining cordial relations everywhere abroad. There is, somehow, a failure in following through once we establish a good relationship.

The Philippines is another case in point. Anti-American feeling there has been rising steadily for some months, whereas only last year the relationship had been better than for a long time. The improvement culminated in the resounding support Filipinos gave President Magsaysay's supporters in the fall congressional elections and the repudiation they dealt Senator Recto, previously the principal critic of the administration and an outspoken foe of the United States.

Now the Magsaysay Government is at pains again to defend American aid, military and economic, and in the areas of trade is forced to oppose highly nationalistic and unrealistic proposals which would choke off both export and import business and reduce badly needed foreign investments.

Some of this sentiment arises from politician jockeying in anticipation of the national elections which will occur in the Philippines next year. More of it seems to arise from failure on the American side to treat the Philippines, too often, as other than an orphan. The United States has extended considerable aid, but it has not managed to do so in such a way as to convince some important Filipinos that it is done for other than purely selfish reasons.

There is also the problem of Communist agitation, ever present in most of the nations with which we must deal. In the Philippines this communism is of the Chinese variety, principally, at present, and is subtle subversion rather than the violent and recognizable Huk sabotage which President Magsaysay has been largely instrumental in eliminating.

One of the stickiest situations between the United States and the Philippines, as in Iceland, is our bases arrangement. Ever since the Philippines were given their freedom an agreement has been sought which would spell the arrangement out, but no agreement has been reached.

The New York Times, in commenting upon the Philippines editorially, describes the situation as serious, if not critical.

It is follow-through which we seem to lack in our handling of such matters. We take too much for granted. The Secretary of State shows up in Manila occasionally and some kindly and sincere words are exchanged but when the Ambassador on the ground tries to get action from Washington in the interim between such calls we stall, or we withhold giving him enough leeway to make some progress upon his own.

Often effective personnel in our embassies is all pulled out at once. Too often lame ducks are appointed ambassadors. Coordination between our Department of State and other agencies of our Government, particularly those which come under the Defense Department, is poor.

The problem is not one of too little personnel. If anything, it is just the reverse, the old, old story of too many cooks. It is also a problem of attitudes, and American tourists are not the only Americans who somehow manage, even when they try not to, to look down their noses.

We never before had so many world responsibilities and we seem not to have learned how to assimilate them. At times we overemphasize attempts to fit our relationships with each country into set, universal patterns, which, if it could be done, would simplify world affairs, but is nevertheless one source of considerable irritation to many nations, particularly small and newly independent nations which do not have the machinery or the manpower or the wherewithal to handle international matters as the older and greater states may.

Advancement of Soviet Precision Time Industry

EXTENSION OF REMARKS
OF
HON. EVERETT M. DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 11, 1956

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Swiss Find Russ Precision Time Industry Is Advanced," written by Robert W. Richards, and published in the Elgin (Ill.) Daily Courier-News of March 31, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SWISS FIND RUSS PRECISION TIME INDUSTRY IS ADVANCED

(By Robert W. Richards)

WASHINGTON.—When Communist Party boss Nikita Khrushchev spoke of how Russia is developing its precision time industry, he wasn't boasting, Swiss experts have disclosed.

The Swiss have examined the new Soviet watches, now in full production, and found them excellent, according to a published report in the current Horological Journal.

The disclosure by Khrushchev in a 7-hour harangue of the 20th congress of the Communist Party, that the Russians are manufacturing watches to develop skills for precision time instruments of war is cited by Senator STUART SYMINGTON, Democrat, of Missouri, as another example of Red technological progress in the military field.

The Missouri Democrat, a persistent critic of administration defense policies, inserted in the CONGRESSIONAL RECORD an article by Frank Kuest, of the Washington bureau staff of the Copley newspapers, which was published February 29 in the Elgin, Ill., Courier-News.

WATCH PRODUCTION AMAZING

SYMINGTON said it was significant that in his February 15 speech the Communist Party chief quoted amazing production of watch movements for so infant an industry. He also noted that only a small percentage of the 19,500,000 watch movements turned out were going into the consumer market.

Commerce Department analysts, going over the Khrushchev's address sentence by sentence, according to Correspondent Kuest, were struck by the fact that reference was made to units of production rather than percentage of gains.

As the reporter pointed out, the manufacture of a single watch in 1950 and 2 in 1951 could be cited as a 100 percent gain. But Khrushchev disclosed a planned production of 16 million watches in 1954 to sell to Rus-

sians, with a goal of 22 million by 1955. These figures, according to Swiss sources, were not quite realized but 200,000 wrist watches in steel cases have been sold to the civilian population of the Soviet, though they are not obtainable in Moscow.

The Probleda watch, with a second hand, is obtainable in the capital of the U. S. S. R., though only a small quantity of the intended production of 140,000 have been sold.

What was important to the Swiss industry, however, was the good quality of manufacture of the new Russian timepieces.

NECESSARY FOR DEFENSE

Russia's watchmaking was regarded here as a necessary adjunct of its military machine. Without the skills needed to fabricate time percision tools of war, as the three American watch companies—Elgin, Hamilton, and Waltham—long have maintained, a nation would be seriously if not fatally handicapped.

In contrast to Russia's embargo on Swiss watches, this country imported 5 million Swiss watch movements in 1947, while the 3 United States producers were turning out 2,300,000.

By 1954 the 3 domestic companies produced 1,716,000 movements while imports rocketed to 7,390,000. That same year, according to Khrushchev, Russia produced 16,800,000 timepieces, of which 5,600,000 were available for sale to the public.

The balance, it is believed, either went to the Russian Army or into intricate military devices.

The Plight of Our Schools

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 11, 1956

Mr. EVINS. Mr. Speaker, we all recognize that the schools of our Nation are overcrowded and many have waited with expectation and hope that Congress would approve a sound and proper legislative measure to provide assistance by way of Federal grants-in-aid to school building construction. The President's Committee on Education has recently made extensive recommendations in the field of education and while I do not agree with all of the proposals, many of them are worthy of our earnest and thorough consideration, particularly the recommendation for a Federal-State fund matching program for school construction on a basis similar to the Hill-Burton hospital construction program.

In this connection, Mr. Speaker, I ask unanimous consent to have reproduced in the RECORD an editorial appearing in the Washington Sunday Star, dated April 8, last, with reference to the plight of our schools. Some of the frills mentioned in the editorial need to be eliminated but basic and fundamental issues should be resolved.

The editorial follows:

THE PLIGHT OF OUR SCHOOLS

There are several highly debatable points in the report just submitted to the President by the Committee for the White House Conference on Education. But this is understandable. For the report makes no fewer than 79 recommendations in a sweeping study of 6 broad aspects of the complicated and acute problems confronting our country's system of public elementary and secondary schools.

Perhaps the most controversial section of the report is the one that unanimously indorses the majestic ideal and the great lifting of sights (unique to America) that envision education, in both grammar and high schools, as a thing that should embrace far more than the three R's or the so-called tough subjects designed to discipline the mind and make it grow. Although it recognizes, in passing, that these subjects are important and fundamental, the President's committee has placed singularly little emphasis on them.

Instead, declaring that it is no longer proper to restrict teaching to mental skills, the committee's 34 members—headed by Neil McElroy, president of the Procter & Gamble Co.—have been at pains to emphasize their approval of an educational enlargement (carried out over the past 25 years) that covers 15 areas in addition to the three R's. These areas, which are not duplicated in most other countries, include classes in cookery and housekeeping, training leisure-time activities like dancing, and instruction in swimming and automobile driving. The committee is all in favor of such programs, although it acknowledges that they greatly increase the need for classroom facilities, require many more teachers, and create a real danger that our elementary and secondary schools, in trying to do a little of everything with what some people regard as mere frills and furbelows, may wind up doing nothing well.

Yet, despite the challengeable character of its philosophy as regards the intellectual regimen that our children should face, the President's committee has rendered excellent service to the Nation in reemphasizing the great seriousness of our shortage of teachers and school facilities. A few statistics point up the story. At present there are about 35 million Americans enrolled in our grammar and high schools, and this total is expected to grow to almost 48 million by 1965. But already, owing primarily to an 18-year lapse in the building of its educational plant, the United States urgently needs to have between 200,000 and 500,000 additional classrooms by 1960—a need that simply is not being met at the current rate of construction. Similarly, chiefly because of poor economic inducements, our supply of competent teaching personnel falls far short of present and prospective requirements.

What is to be done about this? As far as school construction is concerned, the President's committee—with only a few dissents—has found that the States and local communities have the fiscal capacity, especially because of our steadily expanding national economy, to carry most of the load, but it recommends, among other things, Federal financial aid on a short-term emergency basis. As for teachers, the committee forecasts a difficult situation for the next 10 and possibly 20 years, but it feels confident that the supply will be sufficient in the long run if immediate steps are taken to improve the economic status of the profession with sharp pay increases (eventually doubling the present low scale) and related rewards comparable to what is offered in other fields of endeavor.

The problems involved in all this are obviously going to plague us for many years to come. Certainly, as Chairman McElroy has said in his letter of transmittal to the President, "The issues confronting the schools are so complex and so bound to the inevitable changes of time that no one report can hope to be more than an installment of what must be a continuing study." But the situation is by no means insoluble. The White House committee has made that much very clear.

Some Curious Relationships

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Wednesday, April 11, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article entitled "Some Curious Relationships," written by George Sokolsky, and published in the New York Journal-American on Wednesday, April 4, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOME CURIOUS RELATIONSHIPS

(By George E. Sokolsky)

Just as the Burgess and Maclean espionage cases will not die down in Great Britain, so does the Harry Dexter White espionage case stay alive in the United States. The fact that Lauchlin Currie, formerly administrative assistant to President Franklin D. Roosevelt, has lost his American citizenship, makes one think of White because Currie was one of the select group of White's friends and associates who met at the Athens Cafe in Washington on May 11 (no year given.) The list was found among Harry Dexter White's papers with the following names:

Mr. Appleby, Executive Offices; Mr. C. B. Baldwin; Mr. Oscar Chapman, Interior (he will invite Mr. Fortas and Mr. Mike Straus); Mr. Ben Cohen, White House; Mr. Oscar Cox, FEA; Dr. L. B. Currie, White House; Dr. Ezekiel, Agriculture; Mr. Murray Latimer; Dr. Lubin, White House; Mr. David Niles, White House; Mr. Randolph Paul; Mr. Milo Perkins; Mr. Pritchard, NWA; Mr. Aubrey Williams; Mr. Fortas, Interior (Under Secretary); Mr. Jonathan Daniels, White House; Mr. James Rowe (?); Mr. Wayne Coy, Budget Bureau (?); Mr. Leon Henderson (?); Major Kades; Mr. Michael Strauss, First Assistant Secretary, Interior.

HAVEN'T SCRATCHED SURFACE

It has now been made public, along with other documents, by the Senate Internal Security Subcommittee. A trying volume to read, because it is only a compilation of documents from which is is impossible to draw any conclusions; it is nevertheless important because just as the British have suddenly realized the dangers of espionage by British officials in the interest of Soviet Russia, so here in this country, despite the work of various congressional committees, the FBI, the Departemnt of Justice and other agencies, the surface has not yet been scratched and we are not yet in a position to define in unmistakable terms, which will hold up in any court, what is a spy, what is a subversive, who is just a fool, who is a fighter for a strict interpretation of individual rights acecording to the Constitution.

Take this list, for instance. It includes more non-Communists than Communists and precisely what does it prove that Harry Dexter White arranged for them to dine at this rather obscure restaurant on a day in May? What did they talk about?

However, when we look at the record, we find some curious relationships. Paul Appleby, for instance, is now associated with Governor Harriman in New York State, in charge of the budget. In 1946, Appleby was reported to have said:

"A man in the employ of the Government has just as much right to be a member of

the Communist Party as he has to be a member of the Democratic or Republican Party."

In 1953, he explained this away as follows:

"The real character of the Communist Party greatly differentiating it from our conventional parties had not then been revealed."

POSITION BELIES IGNORANCE

But that is nonsense. Mr. Appleby must have read or heard something about the Russian Revolution by the year 1946. He must have read or heard something about the Soviet form of government, the one-party system, the power of the politburo, the authority of Stalin. He could not have achieved the important position of Under Secretary of Agriculture and be as ignorant as he claimed to be of one of the important movements in the history of our generation.

I know nothing about Paul Appleby's relationship to the Communist Party, one way or the other, but it is fairly clear from his statements and from a memorandum dated March 23, 1944, in which he recommends Nathan Gregory Silvermaster for his loyalty and good citizenship, that Harry Dexter White knew how to use highly placed friends and that Appleby did not know how to resist such men as White, Lauchlin Currie, or Alger Hiss who wanted to designate Appleby as Assistant Secretary General of the United Nations.

For all we know, this party at the Athens Cafe might have been nothing more important than a sorority meeting in a girls high school, but then in the development of the Washington bureaucracy, these were important persons who held key positions in many departments and who were able to influence the decisions of those above them. It would be of public value if one of the persons on this list came forward with a picture of what these No. 2 men in Government were doing under the leadership of Harry Dexter White. Perhaps they will say that they were only appraising the difference between vodka and slivovitz.

The Heritage of Old Age Should Not Be Despair

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 11, 1956

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter:

THE HERITAGE OF OLD AGE SHOULD NOT BE DESPAIR—NEWSLETTER No. 179

APRIL 9, 1956.

DEAR FRIEND: The fastest growing population group in our country consists of the men and women age 65 and over. Today there are 13½ million of them. With 1,000 more joining their ranks daily, their number is expected to increase to 20 million by 1975.

For some of them the golden years are the culmination of a rich, rewarding life. They view advancing age with a dignity and charm like that of President John Quincy Adams, who was congratulated on his 81st birthday by a friend who asked: "How is John Quincy Adams today?"

"Quite well, thank you," Adams replied. "John Quincy Adams is quite well. But the house in which he lives is becoming quite dilapidated. Time and the seasons have nearly destroyed it. It is tottering on its foundations and the roof is worn quite thin. Yes, the old tenement is becoming quite uninhabitable and I fear that John Quincy Adams will have to move out of it soon. But he himself is quite well, thank you, quite well."

For most elderly people, however, advancing years bring increased burdens. A recent study by the reliable Twentieth Century Fund reveals that nearly three-fourths of those aged 65 and over either have no income of their own or earn less than $1,000 per year. But this deplorable lack of sufficient funds represents only one aspect of their difficulties. The Council of State Governments reports that they are particularly subject, as well, to unequal opportunity for employment; inferior housing; separation from family and friends; widowhood for more than half the women; inadequate medical care; lack of hospital insurance just when chronic diseases hit; hospitalization in mental institutions because of insufficient nursing homes and rehabilitation facilities; spiritual deterioration because of belief that the community is no longer interested in them. The list is long, the impact heavy.

What is the Federal Government doing to help them? Unfortunately, not very much. The Department of Health, Education, and Welfare, which is supposed to be concerned with their plight, has attacked the matter with all the ferocity and speed of a snail. Last year Secretary Oveta Culp Hobby appeared before the Appropriations Committee and admitted the Federal Government was 10 years behind in its work on behalf of older persons. Yet she requested a budget of only $65,000 to deal with the enormous task. We hoped for a more sympathetic attitude when Secretary Folsom appeared this year, but there was none. The Secretary said he wanted the same budget and to continue with the same system of using a small general staff and leaving to agencies such as the Social Security Administration, the National Institutes of Health, and the Department of Labor the responsibility for developing adequate programs to cope with the problem. This was the arrangement which brought sharp criticism by the Appropriations Committee upon the Department for its indifference to the needs of older persons, and the demand that substantial progress be made during the next year. But if the committee expects any improvements after having voted the same inadequate budget, it is indulging in wishful thinking. What is needed is a Bureau of Older Persons established within the Department of Health, Education, and Welfare, to help the States make an intensive effort in the field of aging and to coordinate their activities.

A few days ago President Eisenhower announced that he was creating a National Council on Aging whose members would be made up of representatives from each of the agencies now dealing with problems affecting older persons. What this means is that the President has now given a name and status to the present hit-or-miss, decentralized system. Apparently, the same policy of postponement, of drift without direction, is going to continue.

One feels about the President's action the same as Sir Harry Lauder's caddy must have felt after having completed 18 holes of golf with him on a bitterly cold day. The caddy had done a fine job. After paying him the regular fee, Lauder slipped something into the caddy's hand saying: "That's for a glass of hot whiskey, lad." The caddy opened his hand. There in his palm was a lump of sugar.

Almost a century ago Benjamin Disraeli wrote in one of his novels: "Let us hope that the heritage of old age is not despair." That is still our hope.

Your friend,

SIDNEY R. YATES,
Member of Congress.

Sports Builds Brotherhood

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 9, 1956

Mr. EBERHARTER. Mr. Speaker, many Members of Congress, I am certain, will remember former Congressman Samuel A. Weiss, of Glassport, Pa., who voluntarily retired from Congress in 1946 to become judge of the Court of Common Pleas of Allegheny County, Pa.

Judge Weiss has through the years gained a wonderful reputation for sound judgment, fairness, and tolerance, and has worked untiringly and energetically to help bring about a closer understanding between all peoples. The speech which he made at the 20th annual John T. Taylor memorial award at the Amateur Athletic Union dinner held in the William Penn Hotel on March 22 is an example of his continuing efforts in this direction.

Under leave to extend my remarks in the RECORD, I include Judge Weiss' speech:

SPORTS BUILDS BROTHERHOOD

(Address by Judge Samuel A. Weiss, chairman of the Olympic Fund, at the 20th Annual John T. Taylor Memorial Award, to Arnie Sowell, great Pitt track champion, at AAU dinner, William Penn Hotel, March 22, 1956)

Mr. Toastmaster, reverend clergy, honored guests, Dr. Joyce Brothers, and Col. Eddie Eagan, and ladies and gentlemen, this is a wonderful occasion, this great outpouring of Pittsburgh's finest citizenry to pay tribute to Arnie Sowell, Pitt's great track champion, a colored chap of humble but proud parentage and one of the greatest runners in the world. The complexity of this Dais reflects the spirit of America, for here you see people of every walk of life and of every faith, color, and creed joining together in the real spirit of brotherhood to pay tribute to a humble colored chap. That is the real American heritage, established by our forefathers who left foreign shores because of religious and political persecution abroad to establish in this Nation a shrine of liberty dedicated to freedom and justice for all. That is the spirit that is inculcated in the mind and heart of every American youngster and runs in the veins of the blood of our American youth today. It has clearly reflected in the character of our youngsters in every war we fought to preserve freedom.

As a Member of the United States Congress during World War II, I had the privilege to travel through war-torn Europe before the end of that catastrophic conflict in June, July, and August, 1945, and we witnessed great cities in shambles, desolation, poverty, and misery everywhere. But the real spirit of brotherhood was reflected in the American cemeteries on the European battlefields at Andilly, France; Solers No. 1 and No. 2 in France; the 1716th General Hospital Cemetery base in Italy overlooking Mount Vesuvius; and the desolate cemetery in Anzio. We Congressman saw the thousands of crosses of Christianity intermingled with the stars of David and it reflected deep thought as I observed the names on these crosses and stars:

Hallahan, Shanahan, Patterson, Rusziewski, DiGiocomo, Donatelli, Rosenberg, Wash-

ington—yes, black boy and white boy, Catholic, Protestant, and Jew—they fought together, they bled together, they died together, so that we might live together.

A month ago friends of Mr. Hyman Rogal, outstanding communal leader and brother of Max Rogal, another devoted citizen, honored his 45 years of devoted service to the Y. M. and W. H. A. of Pittsburgh by having a beautiful mural painted in his honor at the "Y" depicting the four chaplains on the sinking *Dorchester* that has become a national symbol of brotherhood.

As a part of this national symbol it was my great privilege as a United States Congressman, together with 32 Members of the House and Senate, to be present when they christened the U. S. S. *Dorchester*, the largest troopship ever built in the history of America. Five weeks later she embarked on the high seas with the largest number of GI's ever to attempt a crossing of the Atlantic. On the third day of her voyage, on a dark and stormy night, the *Dorchester* was struck broadside by a German torpedo and the entire crew knew the ship was doomed. On board this ship were these four chaplains, who have become a world symbol of brotherhood by the *Dorchester* disaster. They were Lt. Alex Goode, a rabbi and a friend of mine from York, Pa.; Lt. Clarke Poling, whom I also knew, and son of Dr. Daniel Poling, one of the greatest Baptist ministers in America; and I can truthfully tell you that Clarke was a chip off the old block; and Lt. George Fox, a Presbyterian chaplain; and Lt. John Washington, a Catholic priest.

"These chaplains uttered words of cheer and words of prayer to the boys struggling in the water; they threw out lifebelts with the captain and his officers, to thousands of the youngsters; the lifebelts gave out and they took off their own and threw them to several struggling soldiers. Within minutes after the *Dorchester* was struck it began to sink. These God-fearing four chaplains were last seen kneeling together with their arms around each other with prayers on their lips and their eyes to the Heavenly Father. Here were 4 chaplains, of 3 faiths, who practiced, worshiped, and lived until their very death, the simple religious ideology 'the fatherhood of God and the brotherhood of man' and 'greater faith hath no man.'"

Why can't we follow such an example? We, of the Christian-Judaic heritage, firmly believe in God, and would not dare to breach His covenant. Do we not all believe in that great pronouncement enunciated in the Old Testament and spread the world over through its quotation in the New?

"Have we not all one Father,
Hath not one God created us all,
Why do we deal treacherously every man
against his brother profaning the
covenant of God."

We live in a troubled world, really a powderkeg where the slightest spark may ignite and inflame mankind to its destruction because in modern warfare civilization is doomed.

So, I believe, competitive sports events is the greatest common denominator to help build world brotherhood. It will take years and years of diplomatic statesmanship at the United Nations and through out State Department to attempt to accomplish what can be done by our athletes in one world olympic event.

American sportsmanship is unparalleled anywhere in the world. There are no barriers, boycotts, or segregating obstacles to a champion, regardless of his faith, color, or creed. I have attended several championship fights in New York. I have seen around me doctors, professors, lawyers, clergyman, cabbies, bankers, laboring men, rich and poor alike, of every religious faith, stand is rising ovation as Joe Louis, great colored heavyweight champion walked slowly to his corner following one of his knockouts. He was a great champion, of deep humility and a credit to his country and his people. The same holds true on the barred gridiron where the American sportsman yells himself hoarse for a Joe Savoldi (Italian), "Biggy" Goldberg (Jew), Johnny Michelosen (Lithuanian), "Levy" Jackson (colored), and Flanagan (Irish). They don't care what his faith or color, as long as he plays the game clean and hard. Why do some Americans hate? Is not my story proof enough that this is contrary to God's philosophy:

"Do not hate thy brother in thy heart, but love thy neighbor as thyself."

What difference does it make where a man was born, the color of his hair, the crook in his nose, the shade of his skin?

It behooves all of us to always remember and memorize the words of Rochelle:

"Just today I chanced to meet,
A man upon the crowded street,
And I wondered whence he came,
And I asked him, tell me true,
What was once his nation's name,
Are you Pole or Russian Jew,
English, Irish, Italian, Prussian,
And he held his head on high,
And he made me this reply,
What I am is "naught" for me,
In this land of liberty,
For in my soul as man to man
I am just American."

So, Arnie Sowell, I salute you, as a great young American deserving of the tribute being paid you by the AAU, as the "1955 Pittsburgh athlete of the year," and I feel certain that when you go to the Olympic games at Melbourne, Australia, if you display the same fighting qualities and determination as displayed by Col. Eddie Eagan, one of our honored guests tonight, who won the middleweight boxing championship at the 1920 Olympics; and the determination displayed by Dr. Joyce Brothers, charming and lovely psychologist who won the Revlon $64,000 question on boxing, and who is also an honored guest tonight, you cannot fail. For your splendid parents, present tonight, taught you to fear God and love your neighbors, and this lesson you have learned well, for your coach at the University of Pittsburgh, Carl Olson, one of the best track coaches in America, said:

"Arnie Sowell is one of the greatest runners in the world, but beyond that, he is a young man of God, a gentleman, and a real scholar."

Speaking for Harry Keck of the Sun-Telegraph, our toastmaster and one of the most respected and able sports editors in America, the more than 500 friends gathered here tonight and for all Pittsburghers:

"This court concurs in Carl Olson's utterance."

May God bless you, Arnie, and all other athletic award winners tonight, including Al Wiggins, greatest swimmer in Ohio State history and last year's athlete of the year, and we know, Arnie, that you will bring back the bacon from Melbourne.

United States Stand on Cyprus

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, April 11, 1956

Mr. LEHMAN. Mr. President, Ambassador Phelps Phelps, who has served the United States Government in far flung posts from Samoa to the Dominican Republic, has recently addressed communications to the Newark Evening News and The New York World Telegram commenting on the resolution which I and other Members of the Senate have introduced subscribing to the principle of self-determination for Cyprus.

I ask unanimous consent that these two letters to the editor be printed in the Appendix of the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

[From the Newark Evening News of March 20, 1956]

UNITED STATES STAND ON CYPRUS

To the EDITOR:

SIR: I should think that every real American would want to give his wholehearted support to the resolution on Cyprus, sponsored by New York's Senator HERBERT H. LEHMAN and signed by 17 other senators. When you come down to it, self-determination was one of the first objectives of our own Revolution, second only, perhaps, to the burning desire for human dignity and equality. And where else should a people seeking self-determination look for leadership but to the United States, who fought to obtain it, and then fought again and again to keep it?

Yet, when our leadership is sought, we persist in shilly-shallying until we lose the respect of our own allies, as well as the respect of those who would have us lead them. We have evaded our moral responsibilities to the point where we are in danger of losing the cold war, and we will lose it unless we decide now to take a stand upon the Cyprus and similar issues which (as Senator LEHMAN's resolution says) "is consistent with that principle of self-determination to which the United States has historically subscribed."

The stand we take cannot be motivated by any desire for friendship with any nation, nor by a desire to keep any nation's good will. It must be taken upon a principle and the principle of self-determination is one of the rocks upon which our country was built.

Yet, at the Caracas conference of 1953, Secretary of State John Foster Dulles departed for Washington before the issue of colonialism could be discussed in his presence. And in 1955 we again evaded our moral responsibilities when the Algerian question was brought up in the U. N. Assembly and our delegate failed to take a stand; when the problem of New Guinea came up at the same Assembly, and our delegate refused to vote, and when that Assembly decided against a discussion of Cyprus principally because we and a few others opposed it.

Millions of Europeans, Africans and Asians who also seek self-determination were keenly disappointed at such actions, as they are now disappointed at our attitude, thus far, on the Cyprus issue.

PHELPS PHELPS,
Former Ambassador to the Dominican Republic.
NEWARK.

[From the New York World-Telegram and Sun of March 20, 1956]

SENATOR LEHMAN'S RESOLUTION CALLED WORTHY OF SUPPORT

(By Phelps Phelps)

The resolution on Cyprus sponsored by Senator HERBERT H. LEHMAN and signed by 17 other Senators deserves our support. We are a nation whose existence owes itself to our belief in the principles of self-determination. Yet, when those to whom these principles also are sacred seek our help, we evade our moral responsibilities and side with nations bent upon preventing the exercise of these principles.

The Lehman resolution asks merely that we "impress upon Britain the wisdom of seeking to exercise leadership in the cause of freedom rather than by the use of force for the sake of repression, and not to use her own security interests as an excuse for the frustration of the legitimate aspirations of the people of Cyprus."

NEWARK.

The Quest for Understanding

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter:

THE QUEST FOR UNDERSTANDING—NEWSLETTER
No. 178

MARCH 19, 1956.

DEAR FRIEND: Veteran Congressmen are like doctors in affecting a professional air of poise and self-confidence. Rarely do they seem disturbed. Even though they may be torn inwardly by doubt, fear, or anger, outwardly their attitude is one of totally unruffled composure.

Witness, for example, the ease with which Hanry Clay disposed of a hostile Congressman whom he encountered in one of the narrow corridors of the Capitol. The angry man refused to move over. "I never give way to scoundrels," he snapped as he pressed forward. Clay bowed and stepped aside. "I always do," he retorted as he continued on his way.

Members of the Appropriations Committee, handling as they do the purse strings of Government, generally possess this quality to a great degree. Long experienced in intricate problems of Government finance, they take even the most unusual and extraordinary budget request in stride. However, a hearing before our committee last week subjected us to an extremely rigorous test.

We were visited by a delegation of some of the Nation's most eminent scientists. They were asking for $28 million to complete preparations for the International Geophysical Year, the worldwide scientific exploration which will take place in 1957. They came loaded with charts, graphs, mathematical formulas and a disarmingly simple manner. But as soon as they began their presentation we knew we were going to have a rough time.

Dr. Richard Porter, one of the country's great experts on rockets, was the first witness. He discussed the proposed experiment to launch a small sphere, called the earth satellite, into outer space to revolve around the earth like the moon. Dr. Porter soon had the committee members revolving quite dizzily around him. In response to the blunt question, "How are you going to get the thing up there?" Dr. Porter replied: "We get it up there by rocket propulsion * * *. This is the fundamental equation of the rocket." Turning to the blackboard, he wrote the following:

$$\Delta v = Vg \log \frac{m\ 1}{m\ 2}$$

Then he proceeded to make the formula clear: "The change in velocity in any kind of rocket," he explained, "discounting gravity and the effects of air, in other words, just the effect of the rocket propulsion, is equal to the exhaust gas velocity times the logarithm of the mass at the beginning, divided by the mass at the end."

Chairman ALBERT THOMAS, of Texas, was equal to the occasion. "That is just simple," he said—"go ahead, Doctor." The doctor went ahead. For a brief period he moved through his complicated processes, and then, as though he had had enough, he summed up: "The satellite stays up because of centrifugal force. It is projected into its orbit by a three-stage rocket weighing 22,000 pounds at takeoff. It probably will be a spherical object about 20 to 30 inches in diameter. The final object will weigh about 20 pounds. It will carry instruments for at least one experiment at a time, which will radio information back to us on earth."

Until this summary, one of the committee members had been wishing for a more simple, if less scholarly explanation, like that of the astronomer who, while observing the heavens through the huge telescope at Mount Wilson Observatory, suddenly announced: "It's going to rain." His students were impressed, and one asked, "How do you know, sir?" Still peering through the telescope, the scientist declared: "Because my corns hurt."

It was the chairman who asked the $28 million question. He wanted to know whether the enormous amounts of time and energy and the scientific brains and effort to be poured into the experiment would bring commensurate results. Dr. Porter's answer was in the affirmative. "The important thing is not knowledge," he said, "but understanding. Understanding comes from knowledge. It comes from all kinds of knowledge. By taking the bits of knowledge we will get from the programs on aurora and air glow, and the upper atmospheric rocket program which gives only spot pieces of information, and by taking the continuing information we will get from the satellite program, I very confidently predict that the greatest upsurge of new scientific understanding of our time will follow."

The committee approved the funds for the experiment. Aware of our own limitations, we did not want to impose restrictions on those who know none—who are looking toward the horizon beyond the horizon—who are looking for greater understanding.

Your friend,

SIDNEY R. YATES,
Member of Congress.

Do You Trust Your Diplomats?

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mrs. KEE. Mr. Speaker, Mr. Marquis Childs has written a most timely column which I feel is worthy of serious consideration by every Member of Congress.

Our diplomats abroad are the eyes and ears of our Nation. They are, actually, our first line of defense. The responsibility for keeping our Government accurateley and currently informed of developments abroad is execlusively theirs. They are highly skilled men in the profession and in order to do the job properly, they must be dedicated and outstanding men.

Entertaining is a very important part of their job—a part that cannot be ignored. State dinners and informal receptions accomplish much toward selling America's viewpoint. At the same time this form of entertaining creates a feeling of friendship and good will.

Our diplomats abroad, with a much heavier responsibility, are paid much less salary than the majority of our American businessmen representing their companies in foreign lands.

I do not know of a single conscientious diplomat who has not had to go deeply into his own pocket each year to cover the expenses of his minimum representation. I feel that we owe an obligation to our experienced diplomats to provide an adequate representation allowance. So, in the appropriate words of Mr. Childs:

We must recognize that we are grown up and we must act like grownups. The time has long since been overdue for us to put trust and confidence in the men and women who represent us overseas.

The full column by Mr. Childs, which appeared in the Washington Post and Times Herald for Tuesday, April 10, 1956, is as follows:

WASHINGTON CALLING
(By Marquis Childs)
DO YOU TRUST YOUR DIPLOMATS?

In 75 embassies and nearly 300 consulates throughout the world the United States has its representatives. It is a sad reflection on the richest and most free-spending nation that these representatives are treated like poor relations who cannot be trusted with the silverware.

The Department of State has come to Congress with a request for $1 million for what is called, in the language of bureaucracy, the "representation allowance."

This is the money granted our diplomats to pay for entertaining they must do in their job of winning friends and influencing people. It is the personal exchange across a dinner table or at a garden party that is the most effective form of enlisting friends.

Yet when it comes to funds for this purpose Congress reflects what seems to be a curious split in the American character. Even Congressmen who should know better talk about "diplomacy by dipsomania" and the "whisky allowance" while columnists and commentators come up with sour jokes about the "Martini circuit."

This seems to reflect a dark suspicion of diplomats in general and of American diplomats in particular.

The niggardliness that results puts a severe handicap on our representatives abroad and often imposes serious personal hardships on them. It is one reason for the decline in morale and standards in the American Foreign Service.

In the course of travel in Europe and Asia in the past 2 years this reporter encountered many instances of what the hardship means.

Take, as an example, Consul John Jones in a far eastern city where American trade in vital materials is important. This is a typical case, only slightly disguised.

It is part of Jones' job to entertain local officials and businessmen as well as many Americans on business trips. He gets an annual "representation allowance" of $330, which becomes available at the beginning of the Government year on July 1.

On July 4 he gives the required Fourth of July party, costing about $400. The new year, therefore, is only four days old when he has spent $100 out of his own pocket. And all his entertainment thereafter must be at his own expense.

This is a Moslem country where virtually no alcohol is consumed but where proper soft drinks, sandwiches and so forth cost about as much as Martinis.

And Consul Jones' wife is suffering from her second attack of amoebic dysentery and there is no English-language school for their children. Consul Jones' salary is $8,500 before income taxes, and living in this remote part of the world involves extra expenses.

Manifestly, it is unfair to add to his other hardships the necessity for paying out of his own pocket to do his job.

One reason political ambassadors occupy the important diplomatic posts—London, Paris, Rome—is that no career foreign service officer, unless he happens to have a private income or a rich wife, can afford these posts. The representation allowance for Great Britain for the Ambassador down through the consuls, this year is $21,900.

That may sound large for "entertainment." But suppose a big international conference is being held in London at which the United States is contesting with the Soviet Union to put across the American view. An embassy reception, with American officials having a chance to talk informally to the delegates, would be extremely helpful.

Such a party for 750 to 1,000 guests would cost from $4,000 to $5,000 or, at one whack, a third of the $15,000 personally allowed the Ambassador out of the $21,900.

What galls American paying out of their own pocket to do an essential job is that countries maintained by American dollar aid have diplomatic missions around the world that spend lavishly.

In one capital visited by this reporter last year, the American Ambassador was using an official limousine of 1951 vintage and somewhat uncertain habits, while the Ambassador of a power supported entirely by United States dollar aid rolled up in a block-long 1955 Cadillac. The American Ambassador was not complaining mind you, but he did think the contrast was a little pointed.

If we are really to play a part in the power struggle and if, as we like to tell ourselves we are, the richest and the most powerful Nation in the world, then we must put aside these mean reservations.

We must recognize that we are grown up and we must act like grownups. The time has long since been overdue for us to put trust and confidence in the men and women who represent us overseas.

Minnesota Primary Results Demand Parity Prices

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 11, 1956

Mrs. KNUTSON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article which appeared in the Minneapolis Tribune and reflects some of the reasons for the crushing defeat of the Republican farm program in the Minnesota primary. This is most important in consideration of the farm bill before Congress. I wish to call attention to the fact this county went Republican by better than 2 to 1 in 1952 but reversed itself to a practical 2 to 1 vote in the Democratic primary in 1956. This is concrete evidence of farm wishes for adequate income.

The article is as follows:

[From the Minneapolis Tribune of April 8, 1956]

How Is Farm Situation? Everyone's View Differs

(By Leonard Inskip)

LITCHFIELD, MINN.—A farmer last week signed a $1,025 note to Northwestern National Bank of Litchfield and went out and bought a used bailer.

A second farmer bought some parts for his rake and got busy patching up the worn implement to make it last another year.

A third farmer laid cash on the counter when he purchased a new tractor.

Those three farmers—their fortunes and misfortunes—are part of the farm picture in Meeker County, one of the counties in the heartland of Minnesota. A few years ago all three might have been in the market for new equipment.

How badly has the Meeker County farmer been hit by falling farm prices? Is his buying power way down?

The answers of farmers and businessmen reveal varying opinions. Ask 10 people their views and you may get 10 different answers.

"More farmers have been hurt than not," replies a businessman. "My business shows it."

"Sure, farm income was down last year, but the situation has been exaggerated by politicians and newspapers," answers a Government worker. "Some farmers told me they had their best year."

"Farmers in general had as good a year last year as in recent years," says one farmer.

Perhaps one measure of how farmers themselves feel about their present situation was shown by last month's primary election vote.

In the 1952 primary, there were 2,001 Republican votes in Meeker County, compared with 424 Democratic. In the regular election the vote was Eisenhower, 5,750; Stevenson, 2,833.

In the 1956 primary, however, there were 1,344 Republican ballots called for, compared with 2,619 Democratic.

Said Ralph V. Johnson, a young Greenleaf Township farmer who voted Republican and who supports Secretary of Agriculture Benson: "The results probably were caused by farm unrest."

Johnson admitted his own income dropped last year.

"I had to pay an income tax in 1955, but didn't this year," he said. "And I'm not going to buy any more implements than I absolutely have to."

Johnson, who is considered a progressive farmer by his neighbors, said he is trying to cut corners to improve his operating efficiency.

Andrew W. Johnson, another Greenleaf farmer, is a Purple Heart veteran of World War II fighting on Luzon.

He stepped from his barn and looked at a small tractor parked in the barnyard.

"I'd like to get a tractor with more power this year, but don't think I'll be able to," he said. "We went pretty heavy in hogs last year and all we got back was the feed cost."

"I'm putting off buying any implements until the Democrats get back and prices come up," said James Pollack, Forest City Township, as he loaded a sack of feed into his car.

"I'm not going to buy one thing this year—can't afford to," said Pollack, a small, part-time dairyman.

Pollack formerly worked at the Lake Street plant of Minneapolis-Moline Co., which began a partial shutdown of the plant last week.

Moline, like many other farm-equipment manufacturers, is faced with the problem of farmers not buying enough new machinery to keep factories humming.

Richard Woetzel and his son, Erhard, who operate a 160-acre dairy farm in Dassel Township, were shoveling manure from their barn.

"I shipped a couple of cows last week and got about $120 apiece for them," Woetzel said. "Shortly after the war I would have got about $300."

Last year Woetzel bought a bailer, but spent $50 to keep his side rake going.

This year it looks as though the rake will need new teeth but Woetzel thinks he'll patch it up rather than buy a new one.

Even though his total farm income dropped from $8,000 in 1954 to under $7,000 last year, Woetzel invested money in home improvements in 1955.

A. R. Anderson, cashier of the Dassel State bank at Dassel, said farmers aren't as well off as they once were, but pointed out that bank deposits have been holding up well.

Sales of new implements are down, Anderson said, and "a lot of farmers are going around to auction sales and picking up used machinery."

A Dassel implement dealer agreed: "Sales haven't been what you would call rushing."

He said his shop's repair work has increased.

"The older farmers aren't digging into their socks to buy at this time, and the young guy has had pretty rough sledding."

He pointed out price increases by manufacturers last year haven't helped sales very much.

Despite this, he said he was optimistic that 1956 still will be a pretty good year for sales.

An official of another Meeker County bank, who asked not to be identified, said, "I don't believe farmers are hard up. Our deposits don't show it, if they are.

"Generally speaking, good farmers are making money and they're buying all they need to buy," he said. "There is always some who can't buy all they want.

"The farmer in most trouble is the young person who entered farming in recent years," he said. "And he's either sold out by now or has had a rough time."

Clarence Weber is one of the leading implement dealers at Litchfield. He handles International Harvester products. Recently International Harvester reduced its output at 2 tractor plants by 20 percent.

"I've sold more tractors so far this year than at the same time last year," Weber said. "The average farmer is buying as much this year as last and more than one farmer has told me 1955 was his best year."

While Meeker County hog raisers suffered low prices last fall, crops generally were excellent.

Weber admitted he had his first repossession of a tractor in 10 years this year, but said it came back from a farm too small to be an efficient operation.

The implement dealer, by the way, diversified his operations somewhat recently by taking in a partner in the implement business and by branching out into lumber sales.

Howard Grant, county agent, estimated county farm income was down about 10 percent last year, but said he also knew many farmers who had a good year.

He said Litchfield implement dealers have told him sales are normal to good, with one dealer reporting some sales between $5,000 and $10,000.

William S. McGee is president of Northwestern National Bank, Litchfield's largest.

His bank, he said, has not made as many farm machinery loans this year.

"Farmers got hurt on hogs last year," he said. "It was only the wonderful crop that saved us."

McGee said farm debt is still healthy in relation to the Nation's economy, but "the farmer is beginning to worry he won't be able to meet his obligations."

"Farmers are getting smarter," said a Litchfield businessman. "They're learning a good tractor will run for 15 years and doesn't have to be traded in every year any more than I have to trade in my car."

He said one implement dealer recently went out of business at Litchfield and that another has taken on an appliance sideline.

"Generally, business is down quite a bit for many retail establishments," he said. "I don't think things will get any better this year because the odds are against our getting a crop as good as last year's."

One firm, which 3 years ago had no trouble with overdue payments, now has a man on the road 3 days a week making collections.

Another businessman said politicians and newspapers have put farmers in "an unsettled state of mind" and have made the farmer "very much afraid of what is going to happen to him."

He cited this example:

"One farmer I knew became so convinced the small farmer is doomed that he bought a $10,000 annuity policy rather than putting the money into his farm as he should have done.

"He figured that if he's out of business in 20 years he'd still be able to get by with his annuity policy and social security."

This businessman divided farmers into four groups: those with their farms paid for, those with a mortgage only on the farm, those with mortgages also on equipment and marginal, hand-to-mouth operators.

The first two groups, he said, comprise about 30 percent of the country's farmers and have weathered falling prices fairly well.

The second two groups, totaling 70 percent, have suffered from low prices, he said.

One implement dealer noted there are vast differences among farmers' attitudes toward increased Government aid.

"I know one young lad who's adopting new pasturing and feeding techniques he figures will save him $5,000 a year," he said. "You don't hear him crying about Benson, the administration and price supports.

"But when you talk about new modern farming methods he's all ears—and he's buying new machinery from me."

The county's farmers are reported to be fairly evenly divided between membership in the Farm Bureau and the Farmers Union. Both are competing for members.

Quite frequently, the individual farmer's views on what should be done about the farm problem reflect those of the organization to which he belongs.

The Racial Problem—Editorial From Cordele Daily Dispatch

EXTENSION OF REMARKS
OF
HON. E. L. FORRESTER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. FORRESTER. Mr. Speaker, on March 26, 1956, I placed in the CONGRESSIONAL RECORD a splendid editorial in defense of the South, written by Hon. James H. Gray, publisher of the Albany Herald, Albany, Ga. Mr. Gray was born, reared, and educated in Springfield, Mass., and his editorial appeared in the CONGRESSIONAL RECORD on March 26, page A2634.

The Cordele Daily Dispatch, a newspaper published at Cordele, Ga., carries an editorial written by Hon. E. W. Mathews, publisher, who was born, reared, and educated in the North, but who came south just a few years ago and in that short time has become a leading and influential citizen and wedded to the southern way of life.

Mr. Mathews thinks as does Mr. Gray, as evidenced by his editorial of March 22, 1956, reading as follows:

E. W. "SASSYFRASS" MATHEWS SAYS

Look magazine ran an article in this week's issue, which was promoted through every newspaper in the State of Georgia, we presume. The article was based on segregation and what it is like for a Negro soldier in Albany, Ga.

There is only one way to solve the segregation problem, in the way of this old fellow's thinking, and that is to leave the southern people of both races alone, and they will solve it in their own way, and it will probably be better for all concerned.

We were raised in the North. Old Sass in a few cases went to schools which were attended by a few Negroes. We thought little of it at the time, but as we look back those 45 or more years, when we were in the lower grades, the Negro student in the schools which we attended had a poor way of life.

First of all, in those days there were many less students than there were desks, so the Negro student was placed in the rear of the room, with empty seats surrounding him. He was never called upon to go to the blackboard, nor was he ever given the opportunity to recite or read in front of the class. He was in effect segregated in a nonsegregated school.

Negro teachers: Old Sass nor any of his children ever had a Negro teacher, nor do any of the four of us ever remember one being in one of our schools. Mrs. Sass attended segregated schools in West Virginia.

When Yankee magazines and newspapers and some of their crackpot writers, approach the segregation issue from a sensible point of view without the thought in mind of creating mass hysteria and racial animosity instead of using the segregation issue as a means of building circulation the entire country will be far better off.

Unfortunately we did not carefully scan the advertisement inserted by Look magazine in our newspaper or we would have refused to run it. The agency which sent the advertisement for the sake of the commission, is equally guilty of collecting an advertising commission which placed money before the well-being of the entire country.

Along with the publishers of magazines who are prone to rabble-rousing tactics for the sale of their publications, we place politicians of both the Republican and Democratic Parties in the same basket.

We have seen progress in the racial problem in Crisp County, for instance the building of a new Negro school in Cordele, which is far better than any which is being attended by the white students.

Crisp County and its school board will soon start construction of a new consolidated Negro school. The school will be equal to any other school in the county.

We have seen the laying of sewer lines in the Negro section to give better sanitary facilities, and many Negro owners of property rented to their own race gave Old Sass fits because they had to spend money to improve the living conditions of their own people.

We have seen the completion of a 175-unit Negro housing project, and at no time has it been completely filled, mainly because the Negro who could rent it for the same money he paid for a shack, did not want a better way of life.

Let the magazines and the large newspapers of the North investigate some of these improvements and the fact that there are more Negro teachers employed in southern Negro schools than there are in the entire North and they might be able to write an article which is fair to the white people of the South.

I have always maintained that we human beings react alike under similar circumstances. I certainly hope that the people of other sections will ponder in their hearts the truth that all of those who come from other sections into the South agree with the South and deplore the meddling and agitation caused by perhaps well-meaning citizens who do not know what they are talking about.

Israel: A Brief History of Recent Arab-Israel Relations and Suggestions for a Lessening of Tensions and Restoring the Balance of Power in the Area

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. AUCHINCLOSS. Mr. Speaker, I am grateful for the privielge of inserting in the RECORD the excellent address made by our colleague, the gentleman from New Hampshire, the Honorable CHESTER E. MERROW, on Sunday evening, April 8, before the Jewish National Fund, Third Seder Celebration in Lakewood, N. J., which is in the district I have the honor to represent. It is a speech containing much wisdom and sound judgment and is a constructive contribution to the problems facing our country in the Near East.

The Third Seder Committee of the Jewish National Fund is headed by Irving L. Kantor who has done an outstanding job in administering his responsibilities. The Third Seder under his leadership has contributed more per capita to the Jewish National Fund than any other comparable community in the United States and this is certainly something to be proud of. Such an achievement does not happen by chance but is the result of outstanding leadership, devotion to duty, and the cooperation of everyone who is interested. May I point out, Mr. Speaker, that cooperation is not forthcoming unless there is respect and confidence in the leadership.

Mr. Robert J. Novins, the chairman of the United Jewish Appeal of the Toms River, N. J., community of Jewish farmers, also has contributed much in this undertaking. It is a great privilege for me to represent in the Congress these fine Americans and I am very grateful to my colleague, Congressman MERROW, in meeting with them and bringing to them the wisdom of his experience.

Mr. MERROW's address follows.

TENSION IN THE MEDITERRANEAN

The United States is much concerned with the tense situation that exists throughout the Mediterranean area. This section has always played an important role in the history of the world, and today, with the problems in North Africa, the striving for self-determination in Cyprus and the struggle by the young state of Israel to maintain its security, the Mediterranean holds the spotlight in international affairs. It is fervently hoped that satisfactory solutions to these problems may speedily be found. These issues must be resolved so that a general holocaust will not be loosed in this section of the world.

I welcome the opportunity to be here today to speak about one of the critical situations in the Mediterranean area, namely the relationship between Israel and the surrounding Arab states. Since the United States wholeheartedly backed the formation of the state of Israel in accordance with our traditions of freedom and self-determination, we are deeply interested and gravely concerned with the tension that exists in the Middle East. We are resolved that the state

shall not be overrun or destroyed, and we seek a peaceful solution to the controversy existing between Israel and the Arab states.

ESTABLISHMENT OF ISRAEL

On May 15, 1948, the new state of Israel was proclaimed an independent nation—a sovereign unit in the ranks of the world powers. Israel was established by a United Nations resolution, vigorously supported by the United States. The Declaration of Independence read by David Ben-Gurion pledged that, "The state of Israel will be based on the precept of liberty, justice, and peace, taught by the Hebrew prophets." Israel is the youngest democracy, and as such, is the great hope of freedom in the Middle East.

Israel has been an energetic and valuable member of the United Nations and has contributed greatly to the development and the success of this organization. I had the privilege of serving as a delegate on the United States Delegation to the 10th General Assembly from September 20 to December 20, 1955, and can attest personally to the valuable and statesmanlike contribution of Israel to the United Nations. Therefore, it is not only the United States which is interested in the welfare of this state, but the United Nations is deeply concerned since Israel was formed under United Nations' aegis.

Faced with weighty internal problems inherent to nationhood, Israel also had to deal externally with problems of, far greater moment. The tiny nation found herself wedged between the Mediterranean Sea and unfriendly Arab nations whose harassing border incursions and warlike utterances and actions compelled her to divert a large part of her resources from economic development to the defense of her frontiers. Even though this had to be done in the interest of self-preservation, there has been great economic development in the state of Israel.

On various occasions I have visited the country and have found that the progress is tremendous. It is a modern democratic state, in an area that is much in need of development and democracy. To compound the difficulty, Communist arms and technicians are being supplied to Egypt and to Syria, creating a grave menace to the national survival of the state of Israel. In view of this worsening situation, we will do well to turn our attention to a reexamination of Arab-Israeli relations and the role of the United States in the Middle East.

FIGHT FOR SURVIVAL

At the end of World War II, the centuries old dream of the Jews for a national homeland came true. Directly after the proclamation of the state of Israel by the United Nations, the states bordering on Israel engaged in open warfare against her. The United Nations immediately began an investigation of the matter, but it was not until many bloody exchanges had occurred and nearly a year of strife had taken place that any reasonable arrangement was found to terminaate the bloodshed. On February 24, 1949, an armistice agreement was signed by the interested parties and a momentary truce was instituted. But it was only a reprieve, for the hostile forays of the Arab nations have continued unabatedly from that date to the present time.

It would appear that the enemies of Israel are determined to destroy the tiny state and obliterate her from the Middle Eastern map. The Arab states have steadfastly refused to accept the new state of Israel as a reality and refuse to sit down at the peace conference table with her. This acceptance and conference should and must be forthcoming before the present difficulties can be resolved.

The United Nations has established the state and under no circumstances will we or the other powers allow Israel to be destroyed. Antagonistic groups within the bordering nations continue to boycott, infiltrate and sabotage Israel. At the present moment, Egypt, in making a bid for Arabian leadership in the Eastern Mediterranean, is attempting to use the northern frontier countries of the Baghdad Pact as its principal target.

The Baghdad Pact includes Britain, Turkey, Iran, Iraq, and Pakistan. The Baghdad powers are scheduled to meet in Tehran from April 16 to April 20. Deputy Under Secretary of State, Mr. Loy Henderson, will be an observer at this meeting. It is felt that the United States must put its weight behind this pact lest under the pressure of Saudi Arabia, Egypt, and Syria, together with the agitation of the Soviet Union, the pact may disintegrate and then the way would be paved for penetration by the Soviet Union in the Middle East. It is unfortunate that Col. Gamal Nassar, Egyptian Premier who apparently is the main instigator of the opposition to Israel, has served notice on all that the Arabs will not hesitate in using force, even though it may automatically mean war.

BORDER DISPUTES IN 1955

Last summer the middle eastern crisis was further aggravated by operations by the Arabs in sporadic forays across Israeli frontiers. Attacks were met with counterattacks, terminating in an interchange of accusations and flagrant truce term violations by all parties. When the United Nations truce commission's investigation was completed, the Security Council held seven meetings between March 4 and April 19, 1955. The decision of the Security Council on March 29, 1955, was a condemnation of Israel's attack on Egyptian forces. The basis of this action was that the United States and the other world powers said the attack was in the nature of a reprisal—a premeditated act. They felt that the fact that Israel's borders had been harassed for months by Egyptian raids and infiltrators was not adequate justification.

TRIPARTITE DECLARATION OF 1950

The Tripartite Declaration of 1950, entered into between the United States, Great Britain, and France, recognized "that the Arab states and Israel all need to maintain a certain level of armed forces for the purpose of assuring their internal security and their legitimate self-defense and to permit them to play their part in the defense of the area as a whole."

The declaration also stated: "The three governments take this opportunity of declaring their deep interest in and their desire to promote the establishment and maintenance of peace and stability in the area and their unalterable opposition to the use of force or threat of force between any of the states in that area. The three governments, should they find that any of these states was preparing to violate frontiers or armistice lines, would, consistently with their obligations as members of the United Nations, immediately take action, both within and outside the United Nations, to prevent such violation."

ANTI-ISRAEL BROADCASTS

By the middle of the summer, the official radio mouthpiece of the Government of Egypt, Saut el Arab, had increased its anti-Israel barrage of slander and vituperation, with such statements as the following: "We cannot always remain in a state of war with Israel. We are therefore compelled to mobilize all Arab potential to exterminate her finally. Therefore let us plant in the hearts of the younger generation a hatred of Israel."

This sort of emotional nationalistic fervor can only lead to further misunderstanding and tension, with the passions rising in an ever ascending crescendo toward war and disaster.

SECRETARY DULLES' SPEECH ON AUGUST 26, 1955

Hoping to break this deadlock which has formed in the Near East, Secretary of State John Foster Dulles on August 26 devoted a major policy speech before the Council on Foreing Relations to the problem of how this stalemate might be broken. His proposals were among the most constructive efforts brought forth to stabilize the situation. He suggested that there be compensation for the 900,000 Palestinian refugees by Israel to be financed by an international loan, participated in substantially by the United States. The Secretary stated that security could be assured "only by collective measures which commit decisive power to the deterring of aggression." Mr. Dulles stated that, "President Eisenhower has authorized me to say that, given a solution of the other related problems, he would recommend that the United States join in formal treaty engagements to prevent or thwart any effort by either side to alter by force the boundaries between Israel and its Arab neighbors. I hope that other countries would be willing to join in such a security guaranty, and that it would be sponsored by the United Nations." The Secretary of State pointed out that the existing boundary lines were established by the armistice agreements of 1949. He said that the drawing of permanent boundaries is a difficult task and that the lines fixed by the armistice agreements of 1949 were not designed to be permanent in every respect. He reaffirmed the willingness of the United States to help in reaching a solution to the boundary problem and other matters.

Israel's reaction to this was favorable, of course, but its leaders felt it was only one step toward resolving the dilemma. They pointed out that Israel had always been ready to make peace with the Arabs and offer concessions on the resettlement and compensation of refugees as part of a general peace settlement. However, they insisted that the fact of a united Arab front pledged to destroy Israel as a sovereign state left them no choice but to make Israel stronger militarily and to strengthen its ties with other areas. Israel maintained that if there had been any genuine attempts by the Arab groups to compromise or diminish their intransigent attitude, she would be open to negotiation and suggestions. But Israel could see no such change in the Arab attitude forthcoming.

In July 1955, for example, David Ben-Gurion offered to meet with Premier Gamal Nasser "or any other Egyptian statesman who is ready to meet with me in order to consider ways and means of improving relations between Israel and the Arab States." No reply was made to this, but within the month armed bands of Egyptians were making deep raids into Israeli territory, west and north of the Gaza demarcation line. It has been obvious that from the Arab point of view the war was not over—after all, only an armistice had been agreed to, they argued. It is no wonder that Israel feels that she must do all she can to balance the military strength the Arabs are acquiring from the Communists.

On February 6, 1956, several Republican Members of Congress sent a letter concerning the Israeli-Arab situation to Secretary of State John Foster Dulles. I support the views expressed in this letter and to it give my wholehearted endorsement. I quote certain parts of the letter: "Under the Tripartite Declaration of 1950, our Government recognized 'that the Arab States and Israel all need to maintain a certain level of armed forces for the purpose of assuring their internal security and their legitimate self-defense and to permit them to play their part in the defense of the area as a whole.' Because of a fear of growing imbalance of arms, the Government of Israel desires to purchase defensive arms strictly for purposes of self-defense. We have individually, and now collectively,

taken the position that Israel as a firm part of the free world should be allowed to obtain in the open market such weapons as would assure her protection against aggression. What is the position of the State Department on this matter?

"We do not contend that tension in the Middle East can be finally resolved by the provision of defensive arms alone. We are convinced that immediate negotiations for the conclusion of a treaty of peace between Israel and the Arab world should be undertaken. These negotiations should be effectively implemented by our Government in association with those governments which joined in the Tripartite Declaration of 1950.

"It is vital that prompt and decisive measures be taken to end the threat of war in the Near East.

"To achieve this end the negotiation of formal treaties guaranteeing the existing frontiers of Israel and the Arab nations is essential, but essential also is a willingness to negotiate such treaties. We believe that a treaty of peace and a guaranty of existing frontiers should be offered to all interested parties in the Middle East and should be implemented promptly as to the frontiers of that nation or those nations which accept the proposed peace terms. Otherwise we continue to be faced with the refusal of some nations to enter into peace negotiations or even to recognize the existence of the State of Israel. What is the position of the State Department in this regard?

"There are two additional matters as to which we seek information from the Department: first, we do not believe that economic aid should be extended to any nation which is engaging in warlike or aggressive maneuvers against any part of the Free World. Therefore, we would like to go on record as urging our Department of State to consider most carefully further extension of economic aid, denying such aid to those countries which by their actions endanger the peace and security of free nations. What is the position of the State Department in this regard?

"Second, we agree with your August 26, 1955, statement concerning the immediate desirability of economic and technical help in resettling those Arab refugees whose continued presence in their present location delays or impedes the possibility of a total solution of the Arab-Israel problem. What progress has been made by our Government and associated nations toward the solution of this matter?

"We recognize that the continuing effort of our Government to counter the spread of world communism has many facets. Action taken anywhere may have repercussions in all parts of the world. But we do urgently feel that our constituents will be better informed by frank statements of the position of the Department of State wherever that is possible, consistent with national security. As Members of Congress, who support the aims and objectives of this administration, we are particularly anxious that our constituents be advised that the Department is taking positive steps toward the protection of free nations such as Israel and toward the dissolution of dangers which, in threatening the peace of Israel, threaten also the peace of the Free World."

UNITED NATIONS ACTION IN 1956

As a further blow to the Israeli efforts to maintain a balance of power in this troubled Mediterranean area, on January 19, 1956, the United Nations Security Council unanimously voted to condemn Israel for an attack on a Syrian military post which took place on December 11, 1955. Even though Israel agreed that United Nations action must be supported, nevertheless, she felt she could not solely depend on the United Nations because the Soviet Union has a veto in the Council. From January on, therefore, the State of Israel has been pressing for more dependable and quicker means to meet the threat of aggression from the Arab States.

On the 4th of April the Security Council of the United Nations unanimously requested Dag Hammarskjold to go to the Middle East. This was done by the adoption of a United States-sponsored resolution. It is hoped that the Secretary General's mission will result in decreasing tensions in that area. Mr. Hammarskjold will endeavor to obtain better compliance with the armistice terms. His recommendations, which are to be reported to the Council within a month, are anxiously awaited.

ISRAEL STRIVING FOR SECURITY

Israeli leaders have been striving persistently for some additional guaranty for her security, especially in the form of a mutual-defense treaty with the United States and military assistance to Israel in order to remove the arms imbalance being created by Communist arms shipments to both Egypt and Syria. Israel is well aware of the long-run value of the Tri-Partite Declaration by the United States, Great Britain, and France to intervene in the event of organized aggression by either side, but, nevertheless, she does feel that at the moment of attack, arms and military materiel will be needed if she is to withstand the initial shock of the aggression for which no big power declaration can effectively act as a substitute. In other words, a security guaranty is not a substitute for defensive strength. As a supplement to arms it would be an excellent idea, but it cannot be considered an alternative solution, but rather as one piece in the whole fabric of security and defense guaranties.

I have always maintained that the Near East is an area vital to the security of the United States and that of the free world. The little State of Israel forms an important bastion of freedom and independence in that area. I feel that it would be perfectly proper and timely for the United States to supply arms to Israel in the context of that nation's legitimate self-defense and within the larger context of the security of the United States. This is possible within the framework of the mutual-security legislation, which is the basic law governing United States military assistance to friendly nations. I have been a firm supporter of this legislation since its first enactment in 1949 and I have consistently supported aid to the State of Israel under the mutual-security program.

Israel is already getting arms and assistance from France. We have taken the position that we have no objection to the shipment of arms to Israel by France and Great Britain. In view of the unwillingness of the Arab States to reach an equitable solution on the frontiers and, in view of the determination to oppose Israel as is evidenced by the attitude of intransigence, Israel should receive arms from the West to guarantee her security. Such arms are necessary in our own national interests.

The shipment of arms to Israel would, in my opinion, serve as a necessary military deterrent, the element which needs to be restored in order to maintain security in the region. Israel, it must be explained, does not insist upon a numerical superiority in arms but only an adjustment of the existing military imbalance resulting from transactions of the Communists. It is my firm conviction that a United States arms shipment would be a positive step to settle, or at least to lessen the present trying conflict, and certainly would further American and world democratic interests in sustaining and strengthening the new democracy of Israel. This is a feeling that is increasing in the United States as the situation in the Near East steadily deteriorates.

CONCLUSION

But apart from the moral and spiritual blow which this would mean to the whole free world, it is only too apparent to us that the loss of the sovereign state of Israel would be a crushing defeat to the United States, since the disappearance of this citadel of freedom would not only break the bonds of world democratic soldarity but would also open up the Near East to Soviet domination. The United States surely will not allow this to happen, and it is becoming a matter of increasing concern to every American.

I feel, as I have stated, that it is proper for us to furnish arms to Israel on the basis of the legitimate self-defense of the nation and within the larger context of the security of the United States. This situation must be settled peacefully, for if war comes it may well destroy not only Israel but may well engulf the entire world. Israel is the bastion of democracy in the Middle East. The state has been established by the United Nations and with our wholehearted support. We were the first to recognize Israel. Our influence and leadership must be used to make the existence of the state of Israel a recognized and accepted fact and we must vigorously oppose any solution to the Near East problem that would interfere with the sovereignty and security of the state of Israel.

The integrity of Israel is essential to our own security. Israel has made a valiant struggle for freedom and democracy. Israel stands foursquare against the Communists and anything that would impair the state would be of assistance to the Communists in their endeavor to firmly establish themselves in the Middle East. Stability in this area must be restored and arms are essential for self-protection. At the same time every effort must be exerted to reach a peaceful and satisfactory solution in this troubled area. If we help Israel build the necessary defensive strength to protect herself against aggression, she will be able to build in peace the model of freedom which I believe firmly will inevitably have a profound influence on the whole area of the Near East. Thus, by setting an example of peace and democracy, Israel will fulfill her historic mission.

Israel is the bulwark of democracy in an area where the Communists are using every effort to secure a foothold. This bastion of freedom is the free world's greatest hope of halting the incursion of communism in an area vital to our security.

The Right Step

EXTENSION OF REMARKS

OF

HON. JAMES G. DONOVAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 11, 1956

Mr. DONOVAN. Mr. Speaker, Steve Nelson, one of the most notorious Communist conspirators in the United States, a spy, saboteur, and traitor, was convicted in the Court of Quarter Sessions of Allegheny County, Pa., of a violation of the Pennsylvania Sedition Act and sentenced to imprisonment for 20 years.

A few days ago a divided United States Supreme Court, 6 justices against 3, reversed Nelson's conviction on the grounds that Congress has given exclusive jurisdiction to the Federal courts in the field of sedition, espionage and treason and that the State courts of Pennsylvania had no right to prosecute Nelson. So Nelson was freed.

There was no congressional intent to take away power from the States to jail Communist conspirators traitors when the Federal laws against subversion were enacted.

On April 9, 1956, I introduced H. R. 10335, a bill designed to make it clear to the Supreme Court that State Courts may jail seditionists when they have the evidence.

My bill is directed at and confined singly to the field of sedition. Its language is specific and clearly confers on the States the right to prosecute acts of sedition, and treason, against the United States and the States themselves.

It has widespread support. I cite the following editorial that appeared today in the Boston Daily Record of April 10, 1956:

THE RIGHT STEP

Congressman JAMES G. DONOVAN, of New York, has given the House of Representatives in Washington a bill empowering States to prosecute persons for sedition.

This is necessary legislation and it should have the support of every member of the New England congressional delegation.

Mr. DONOVAN says his measure is designed to correct the Supreme Court's decision of a week ago holding that State sedition laws are superseded by the Federal Smith Act.

There was no congressional intent to take away the power of the States to imprison Communist traitors when the Smith Act was passed in 1940," he points out, adding:

"My bill spells this out and makes it clear to the Supreme Court that State courts may deal adequately with their own seditionists when they have the evidence."

There were many New Englanders, including the leaders of both the Democratic and Republican Parties, in Congress when the Smith Act became the law of the land.

None of them, we are positive, had the remotest idea of stripping their own States of their traditional authority to crack down on the Communist conspiracy.

The Pilates in the Kremlin

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, April 11, 1956

Mr. BEALL. Mr. President, the recent renunciation of Stalin by the same men who once idolized him has caused much conjecture throughout the world. Many persons and newspapers have viewed the Communist turnabout with alarm, and the Baltimore Catholic Review, speaking editorially, has called the resultant situation a new era of "smile and guile." The editorial is extremely thought-provoking, and I, therefore, ask unanimous consent that it be printed in the Appendix of today's RECORD, so that it can obtain additional distribution. The Catholic Review, in which it was printed, is the official organ of the Archdiocese of Baltimore.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE PILATES IN THE KREMLIN

The debunking of Stalin and the creation of an atmosphere of "smile and be happy—we want to be good," brings us around to the inevitable question: Have the leaders of the Soviet Union had a change of heart? The question is impossible to answer, and we might suggest, irrelevant.

Throughout history, nations of all types—good and bad—have been forced to adjust policies to meet the needs of complex times. In each case, the stated motives have been defined merely in terms of propaganda and form only part of a given picture. The Russia of Lenin had a set of motives which seemed plausible and drew sympathy from many. But the real fruits of revolutionary communism—evil and hate—came into their own during the reign of Stalin. It was he who set the pattern for the new colonialism, a monalithic, nationalist-Communist empire. And through the years of his rule down to the present time, the Communists have lived on a policy of brute force. They have trampled underfoot even the most elementary rules of morality. Hateful, violent persecution has no sooner disappeared from one corner of the world than it reappears in another. The advocates of communism have no respect for supernatural values and attempt to destroy in their path all hope.

But despite the fact that almost a third of the people of the world are under the oppressive rule of godless atheism, the policies of the late Joseph Stalin have been proved a failure. The top-heavy structure of Soviet colonialism creaks under the cracks of discontent. In addition, a formidable portion of the world's nations have banded together and served notice that Red colonialism can expand only at the price of war. And even the Soviet leaders know that war in the hydrogen bomb age must be avoided at all costs.

This is the main reason why it is irrelevant to ask whether the Communists have had a change of heart or whether they pursue their revolutionary objectives. What does matter is that the Soviets have been forced to seek a method of living with the rest of the world—how they go about it is what really matters.

The repudiation of Stalinist practices seems logical, inasmuch as he perfected the blood bath technique. But the present board of governors at the Kremlin cannot escape history. If Stalin be guilty, they also are guilty. Were they not his trusted lieutenants? Did they not act with him and for him? And since Stalin passed to the Seat of Judgment have they not continued his policies?

This new era of smile and guile is a dangerous one. Some of our fellow citizens may want to buy the new Kremlin line hoping that it leads to peace. But until the godless ideology is renounced by those who now espouse it, there can be no peace. Not until the Christian leaders now languishing in alien dungeons are released to exercise their rightful ministry, can there be peace. Not until the love of God replaces the hate of man can there be peace in the home, the nation or the world.

This is the lesson to be derived from the Pontius Pilates of the Communist world. Blood is still on their hands.

The Blazing of New Trails in Medicine

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Wednesday, April 11, 1956

Mr. McNAMARA. Mr. President, on March 29, John S. DeTar, M. D., of Milan, Mich., was installed as the new president of the American Academy of General Practice at the academy's eighth annual assembly in Washington. On Friday, April 13, another Michigan man, John A. McCartney, will be installed as president of the American Pharmaceutical Association at that organization's 103d convention in Detroit. Mr. McCartney is director of trade relations for Parke, Davis & Co., in Detroit.

I am, of course, very proud that 2 Michigan men have been selected to head these 2 important organizations. The relationship of these two incidents, while coincidental, serves to point up the vital relationship between doctors and medication. Dr. DeTar personifies the famous family doctor, while Mr. McCartney represents the pharmacist who develops, manufactures, and distributes medication to the doctors and to the public. Both groups, working together, are continually blazing new trails in medicine.

In this connection, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which I recently read in the Prescriptionist, a professional pharmaceutical publication, dealing with the use of drugs in the treatment of mental illness at St. Elizabeths Hospital in Washington, D. C.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FAMILY REUNION

(By Bernard Zerbe)

The people above are walking through the grounds of St. Elizabeths, the famed hospital for the mentally ill in Washington, D. C. This happy family scene is a familiar one at the hospital these days, with more and more husbands, wives, and children visiting the hospital—talking freely, enjoying the knowledge that soon complete return to normalcy will be at hand.

Not too many months or years ago, such a scene would have been rare. It has developed only recently, since the advent of new pharmaceuticals for the mentally ill. These new drugs transform completely unmanageable people into cooperative, quiet, calm, willing patients. No longer the disturbed movement of the hands, jerking motion of the head, twitching, turning, leg crossed over leg, recrossed again—and again—and again, in a heart rendering futility of movement.

This is a story that is being repeated the world over today, through the use of the tranquillizing drugs. Some people, less fortunate than the patient in the picture, may have to take these drugs for long periods, perhaps for life, but the fact remains, it will be a new life, a life crowded with pleasure, free from torment, for everyone.

It has been said, and printed, it is regrettable that these new drugs are so costly; yet a day's treatment may possibly cost less than the price of a pack and a half of cigarettes. And even if the cost soared to the price of a carton of cigarettes, what price can be placed on freedom of mind, relief from tension, rebirth into a new and real world? Can cost be translated into mother's reunion with son? Father's release from worry?

Costly? Hardly. Early in 1956 the Director of St. Elizabeths reported that his hospital had operated so successfully that it had a $100,000 surplus in its budget—a rather remarkable report. When asked to explain this, he credited the new drugs as being the major factor. "Shorter duration of hospitalization, more visitations to the home, reduction in more costly treatment formerly

used"—these are the things that saved the $100,000.

Here then is living proof that modern medication, produced in our Nation's pharmaceutical laboratories, is actually saving money. While the individual unit price may seem high, the overall cost is minimal.

In all areas of health today, in heart disease, cancer, polio—make your own choice, pharmaceuticals are adding years to life. Who is to measure a year in pennies, nickels, dimes, or dollars? And who is to measure the tremendous contribution such medication makes to the national income, by returning men and women to productive lives.

All of this is contained in a little capsule or pill that is often no more costly than a package of cigarettes.

How many do you, or your friends, smoke a day?

New England's Economic Problems and the Textile Industry

EXTENSION OF REMARKS
OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 11, 1956

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Seymour E. Harris, chairman of the New England Governors' Textile Committee, before the New England congressional delegation, April 11, in Washington, D. C.:

NEW ENGLAND'S ECONOMIC PROBLEMS AND THE TEXTILE INDUSTRY

1. OCCASION FOR MEETING

The New England Governors' Textile Committee invited the New England congressional delegation to discuss the economic issues of New England with them and particularly with relevance to New England textiles and pending legislation.

The following issues seem especially germane for the consideration of the congressional delegation:

2. THE NEW ENGLAND ECONOMIC SITUATION

In the last 4 years New England has shared in the national prosperity and, what is more, has maintained its advantage of 9 percent of per capita income over the national average, a much better record than in the preceding 25 years. In manufacturing a loss of 62,000 jobs in textiles from 1947 to 1953 was offset by gains of 45,000 in electrical machinery (especially helpful to Massachusetts), 41,000 in transportation equipment (especially important for Connecticut), and 35,000 in miscellaneous (large gains for Rhode Island and Massachusetts). New Hampshire showed the largest relative gains, and Massachusetts and Rhode Island, the smallest.

3. LOSSES IN MANUFACTURING AND GAINS ELSEWHERE

From 1951 to 1955 (first quarter), New England lost 9 percent of its manufacturing jobs; but these losses were more than made up by gains of 14.4 percent in nonmanufacturing. (The largest gains were 95,000 jobs in Government, 51,000 in services and miscellaneous, and 58,000 in wholesale and retail trade.)

4. TARIFFS AND QUOTAS

Right along we have insisted that reductions of tariffs on textiles are unjustifiable. For example, in a recent period of almost 4 years (through September 1954), New England lost 38 percent of its textile jobs and even the South lost 7 percent. To injure the industry further through increased foreign competition under these conditions seems to us to be irresponsible behavior, to say the least. Our negotiators should not have cut tariffs on textiles—as they did recently at Geneva and may do again. If United States policy requires tariff cuts (and we have some reservations here), the burden should be put on the growing and thriving industries. Mr. Stanton, of Berkshire-Hathaway, one of the leading and most loyal New England manufacturers of textiles, will discuss the threat of Japanese exports and suggest remedial legislation inclusive of a quota. The vast majority of the Committee and the New England Governors unanimously have asked for a quota.

5. FLOOD INSURANCE

Three congressional committees have had flood insurance under consideration. The complaint has been made that there is not adequate interest. We assure the able chairman of the House Banking and Currency Committee, Congressman SPENCE, that there is great interest in this legislation. The Senate Banking and Currency Committee has two bills under consideration, an administration bill and the Lehman-Kennedy, etc. bill. The differences between these bills are not too serious. They both rightly stress rates not based purely on an actuarial consideration—that is, rates which would be prohibitive. They both see the need of ceilings on individual policies.

On March 26, the New England Governors issued a strong statement in support of insurance. In this statement and in a discussion with the Chairman of the New England Governors' Textile Committee, the New England Governors made it clear (1) that flood insurance was a must; (2) that they objected to the sharing of costs by States on the grounds of unconstitutionality (Governor Herter based his statement on legal interpretation); and (3) that they hoped for a higher ceiling on individual policies (otherwise, as Governor Ribicoff pointed out, serious unemployment might result.

6. FLOOD CONTROL

Flood control outlays in New England have been most inadequate and continue to be. The Government program $52 million, a minimum program, has been whittled down to $17 million of obligational authority for fiscal year 1957. (Included in the program was $12.45 million requested for beach erosion and navigation. But $3.1 million was granted.) In the last 5 years we have received from one-fifteenth to one-twentieth of what might have been expected relative to national outlays. In part, this is the result of failure to push ahead in New England as well as an unwillingness of Congress to tackle the problem vigorously.

7. TAX DEDUCTIONS FOR OUTLAYS TO PREVENT FLOODS

We would also like to see legislation enacted which allows extra outlays incurred by textile mills and other factories for the purpose of preventing floods to be written off much more quickly than is possible now. The Under Secretary of the Treasury Department has insisted that legislation is necessary to get this relief of taxes.

8. TREASURY TAXES AND DISBURSEMENTS IN NEW ENGLAND AND ELSEWHERE

We bring to your attention once more the large transfers of cash out of New England and other Northern States which help accelerate development elsewhere and aggravate the outflow of capital and industry from New England. Not alone some outlays in the South but excessive outlays, for example, for irrigation in the 13 Western States may be questioned. This problem is discussed in our Textile Report to the New England Governors (February 1956). This is relevant in re pending flood, farm, school construction, highway, etc., legislation.

9. SOME FEATURES OF TREASURY OPERATIONS

Note (1) that 5 competitive Southern States get 3 times as much out of the Treasury as they put in vis-a-vis the 3 major industrial States of New England.

(2) That the 10 richest States (mainly Northeast) pay 10 times as much in taxes per capita as the 10 poorest States (in the South and West).

(3) That Government financing through loans provides New England about one-sixth as much as might be expected from New England's contribution to the Treasury—in other words builds up the South and West at a rapid rate, in part at our expense.

(4) In 1 year (1952), New England transferred $1.3 billion net or 7 percent of its income via Treasury transactions.

10. DETAILS ON IMPORTANT PROGRAMS—LEGISLATION PENDING

In re pending legislation the following may be of interest. In 1954 (and similar results generally for 1953), New England received back in re taxes paid as compared to the national total as follows. (Thus in school construction we received 13 percent or about one-eighth back compared to our relative contribution to the Treasury taxes.)

	Percent
A. Aids to State and local government:	
School construction	12.83
Slum clearance grants	0.00
Aid for highways	62.63
Hospital construction	48.43
Old-age assistance	75.27
School district grants	64.71
All State and local aid ($2,958 million)	69.36
B. Projects within States:	
Army corps—civil projects	8.00
Reclamation, etc	0.00
Soil conservation	27.63
All ($944 million)	97.69
C. Grants and payments to individual groups:	
VA readjustment benefits	65.74
VA pensions	93.66
Unemployment insurance	99.24
Old-age benefits	117.66
All ($9,824 million)	95.57
D. Loans to individuals and groups:	
Small Business Administration	40.48
Farm Credit Administration	40.21
Rural Electrification	0.80
Commodity Credit Corporation	0.80
All ($6,173 million)	16.21
E. Loans: guaranteed and insured, ($4,934 million)	77.11

11. WHERE NEW ENGLAND LOSES

Note that New England gets back relatively little in aid programs, in operations of Federal Government in States and localities, and in loans. She does much better on insurance, veteran programs, and Government contracts.

Other important issues

We can discuss only briefly the following:

12. MINIMUM WAGES

The new $1 minimum, the industrialization of the South, and the more aggressive unionism in the South are contributing to a narrowing of wage gaps between North and South. With manufacturing wages up by 48 cents per hour (8 cents per year) since 1949 (the year of the last change in minimum wages), the increase of 25 cents in the minimum for 1956 may well be inadequate. It almost certainly will be 3 years from now. Preparations for a reexamination should begin now as well as improved enforcement.

13. MERGERS

We urge implementation of the 1954 tax revision which threatens disallowance of tax deductions for absorbing firms under merg-

ers which are undertaken for tax purposes. New England has suffered greatly from these mergers. In this connection, we bring to your attention administration proposals of a 90-day notice to FTC of mergers.

14. ABUSE OF TAX EXEMPTION

We are disappointed that a few southern Senators killed the amendment in the 1954 tax codification bill which would have discouraged the abuse of tax exemption by southern municipalities, determined to entice northern manufacturers to move South.

15. APPRECIATION OF THE HELP OF NEW ENGLAND CONGRESSMEN

We have always had the finest cooperation from our Congressmen—both Republicans and Democrats and on a nonpartisan basis. We appreciate this.

Bank's Report Received With Enthusiasm

EXTENSION OF REMARKS
OF
HON. EARL CHUDOFF
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. CHUDOFF. Mr. Speaker, as chairman of the Subcommittee on Public Works and Resources of the Committee on Government Operations, it has been my good fortune to have under the jurisdiction of the subcommittee the Virgin Islands and the Virgin Islands Corporation. These islands, which we purchased from Denmark in 1917, are making wonderful progress and going forward in a fine manner.

The new West Indies Bank & Trust Co. of the Virgin Islands held its third annual stockholders' meeting on March 15, 1956. It is amazing to see that the resources of this bank during the year 1955–56 increased from over $2 million to over $6 million. The bank is going a long way toward improving the economy and the business of the islands, and is making available small loans to those people living in the islands who could never get them before.

It is my thought that every Member of Congress should read the following article which appeared in the Daily News of the Virgin Islands, Charlotte Amalie, on March 16, 1956:

BANK'S REPORT RECEIVED WITH ENTHUSIASM

The West Indies Bank & Trust Co. held its third annual stockholders' meeting yesterday, March 15, 1956, at its main office in Charlotte Amalie. A large, enthusiastic audience was present. Mr. Silverman was given a rising vote of confidence after reporting on the excellent progress made by the bank during the calendar year 1955. Mr. Silverman pointed out that the total resources of the bank during the year increased from $2,871,589.50 to $6,171,250.51.

Mr. Silverman, in his statement, looks forward to even greater progress during the calendar year 1956. He stated: "It is definitely certain that with the improvement in the tourist economy of the islands, the stimulation of business which is expected from the return of the internal-revenue taxes under the Revised Organic Act, and the wise administration of these new funds by our government under the leadership of Governor Gordon, there should be a great economic uplift in store for the people of the islands. We at the West Indies Bank & Trust Co. expect to share and participate in this business upswing. We confidently believe that we have already generated considerable improvement in the economy of the islands. We know that we can continue to serve the people of the islands faithfully, with integrity, confidence, hope, sound judgment, and with ample security, as we have demonstrated, for the funds of our depositors which are held in trust by your bank. We believe that we are making an important contribution to the economy of the islands by our business loans, our construction loans, and through our general banking business methods. Gearing these activities to the tourist economy of our islands, I know we can look forward to another year of unprecedented progress for our people, the community, and of the growth of your bank."

In Mr. Silverman's closing remarks he pointed out the true significance of the existence bank; by comparing it to the bloodstream of an individual. He said:

"The circulation of money in a community is as vital as the circulation of blood in the individual. In each case "poor circulation" creates an anemic condition. Our bank seeks to circulate (through loans to persons of integrity and responsibility) every dollar for such purpose that the law allows. Money soundly loaned, to persons of enterprise creates conditions that set people to work. Working people create fresh wealth that eventually finds its way back to the bank in the form of new deposits—to be loaned anew for the creation of more wealth—more jobs."

Elections were held. The following persons were elected to the board of directors: Joseph Alexander; Dr. Roy A. Anduze; Gaston Benjamin, David Chinnery, Harry Gould, Henry L. Kimelman, R. H. Amplett Leader, Alexander Moorhead, Ralph Paiewonsky, Irwin W. Silverman, and Marion H. Thayer.

Mrs. Thayer is the first woman to be elected as a member of the board of directors of a bank in the Virgin Islands and the 31st woman to be elected to the board of directors of all of the banks in the United States. One hundred and sixty-three thousand nine hundred and seventy-nine shares, or 65 percent of the total stock outstanding was voted in person or by proxy.

Immediately after the stockholders meeting the board of directors met, and the following persons were elected as officers of the bank: Joseph Alexander, chairman of the board; Irwin W. Silverman, president; Ralph Paiewonsky, first vice president; R. H. Amphlett Leader, second vice president; Henry L. Kimelman, secretary, and Alexander Moorhead, treasurer.

Mrs. Breaux, of Texas

EXTENSION OF REMARKS
OF
HON. JACK B. BROOKS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. BROOKS of Texas. Mr. Speaker, Texas has given many outstanding leaders of courage and foresight to our Nation. It is my privilege today to recognize another of these leaders—Mrs. A. J. Breaux, of Beaumont—and to call attention to the splendid editorial about Mrs. Breaux published in the Beaumont Enterprise March 27, 1956.

Mrs. Breaux has long been interested in the vital issues which face our Nation, having held the important positions of national vice president of the American Legion Auxiliary, chairman of the national security committee, and president of the Department of Texas Auxiliary. She is at present chairman of the Legion's National Americanism committee.

After years of important service to her country in these vital posts, Mrs. Breaux is now a candidate for national president of the American Legion Auxiliary. I would like to take this opportunity to respectfully call to the attention of the House of Representatives and the people of our country her splendid qualifications of the highest degree of loyalty and integrity and her unswerving devotion to the people of the United States.

I would at this time insert the editorial from the Beaumont (Tex.) Enterprise:

MRS. BREAUX'S CANDIDACY

The nationwide campaign now underway to make Mrs. A. J. Breaux national president of the American Legion Auxiliary is being given strong support in Beaumont, Mrs. Breax's home town, and in other parts of Texas where her work for the American Legion is well known. She is at present chairman of the Legion's national Americanism committee.

Mrs. Breaux has held important positions in the Legion Auxiliary for years, serving as national vice president (southern division), as chairman of the national legislative committee and chairman of the national security committee. She was also president of the Department of Texas Auxiliary.

Mrs. Breaux's many frends in Beaumont and Texas, not to mention Auxiliary members in other parts of the country who know something about her distinguished record of service, feel that she has earned promotion. They hope that she will receive a deserved regard by being elected to the national presidency of the Auxiliary at the convention to be held next September 3–6, in Los Angeles.

Meanwhile, an intensive campaign to prepare and distribute biographical and other material has been started in Mrs. Breaux's behalf. Her Beaumont friends are confident that she will be just as successful in the top position of the Auxiliary, if elected to that post, as she has been in the many lesser offices she filled with credit to herself and the Auxiliary. If she should be elected president, both Beaumont and Mrs. Breaux will be signally honored.

Rt. Rev. Francis L. Shea

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Lawrence Sunday Sun, Lawrence, Mass., memorializing the late Right Reverend Francis L. Shea, a man of boundless energy who interested himself in every cause for the betterment of mankind.

HIS MONUMENTS

In North Andover, there are three living memorials to the Right Reverend Francis L. Shea, who passed away on Easter Monday.

When he first became pastor of St. Michael's parish, only a relatively few years ago, the parochial "plant" consisted of the church and a wooden frame social hall that is now 75 years old.

Next to the church was the brick former Merrimac Public School building, which had been abandoned by the town. Monsignor Shea mentioned to a few parishioners that he was considering the idea of acquiring the school. Some of the reaction was discouraging. But there were those, even in those early days of his pastorate, who were inspired by his spirit. The parish purchased the old school and began to fill it up with children. By 1954, it was bursting at the seams with its pupil population.

Ere this overflow occurred, however, there was a need for a convent to house the nuns of the Order of Sisters of Charity of Halifax, who teach in the school. Monsignor Shea passed the word, and the parish built the convent.

The acute problem was in housing the school population, and it seemed that raising sufficient funds for the purchase of land and the building of a modern schoolhouse was out of the question. But the monsignor and his curates went ahead. Committees were organized among the parishioners. Then, one Sunday, teams of men of the parish deployed through the town, encouraged by a gift of land as a site for the structure. They raised in cash and pledges the amount of money necessary for a secure beginning of the project.

Construction of it is well underway. It will be one of the finest school buildings in the entire area, an asset to the parish and to the town and to the education of hundreds of today's children who will be the town's citizens in the years ahead.

No man could have done more for so many people. He gave them what they needed. He gave them his very life.

Monsignor Shea was an exceedingly rare type of man. He had the faculty of drawing people to him with such affection that they would strive to the limit to accomplish any project in which he demonstrated an interest. He was a brilliant organizer, purely and simply because his flock followed him without question or hesitation. He catered painstakingly to the spiritual welfare of his parishioners, and, at the same time, to their material comfort and advancement.

As gentle and unspoiled as the day he was born, "this saintly man" (and we quote the words of Archbishop Cushing, spoken several years ago) walked through life with no purpose other than to do good for all around him, to brighten their lives in the reflection of his own shining spirit, and this through the application of the holy virtues of his religious office.

Even though they attended his funeral, there are many people throughout Greater Lawrence today who cannot bring themselves to accept the fact of his death. In fact, no man really dies who leaves so many living memorials to his greatness.

Navy League Speech

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 10, 1956

Mr. MINSHALL. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD at this point an address delivered in Cleveland, Ohio, by Rear Adm. E. W. Grenfell, United States Navy, which I commend to the attention of each Member of Congress.

The address follows:

NAVY LEAGUE SPEECH

(By E. W. Grenfell, Rear Admiral, United States Navy, Cleveland, Ohio, October 27, 1955)

Mr. Hughes, honored guests, members of the Navy League, ladies and gentlemen, I am highly honored to have been invited to speak to you, members of the Cleveland Navy League. I am happy to see several of my old friends—one is Mr. George Codrington to whom the Navy will always be grateful for his exceptional foresignt in bringing about the expansion of the Cleveland Diesel Engine Corp. just prior to World War II—this foresight enabled his company to provide the United States Navy with submarine engines in pace with the submarine shipbuilding program, and thus this effort was instrumental in helping our submarines in their successful submarine warfare.

I am also delighted to see my old friend, Mr. T. Keith Glennan, president of the Case Institute of Technology. Many of you may not realize that it was he who was basically responsible for the great advancement made in underwater acoustics, which were extremely beneficial to both the antisubmarine and submarine service of our Navy.

And what a pleasure it is to salute your esteemed president of the Ohio Navy League, Mr. Tom Hughes. Tom began his submarine career as a guaranty Engineer over 18 years ago when he walked aboard my submarine, the USS *Pickerel*, and brusquely wanted to know "When do we get underway?" Since that time, Tom has had so much to do with our submarine navy that he might well be selected for one of our submarine commanders.

I open my talk today with three quotations:

1. "Naval strategy has indeed for its end to found, support, and increase, as well in peace as in war, the sea power of a country; and therefore its study has an increase and value for all citizens of a free country, but especially for those who are charged with its foreign and military relations."

2. "The ships that thus sail to and fro must have secure ports to which to return and must, as far as possible, be followed by the protection of their country throughout the voyage. The necessity of a Navy, in the restricted sense of the word, springs, therefore, from the existence of a peaceful shipping."

3. "A peaceful, gain-loving nation is not far-sighted, and far-sightedness is needed for adequate military preparation especially in these days."

The above quotations and particularly the last one—a word of warning to all of us—might have been written yesterday. Strangely enough, they were written 65 years ago by the greatest naval strategist of all times, Capt. A. T. Mahan, United States Navy. Nonetheless, these quotations are just as applicable to today's principles of modern warfare as they were 65 years ago. The freedom of the seas today is even more important than it was then, for our country in these times is more dependent upon the resources of other nations whose needed materials must be carried by ships on the surface of the ocean.

From the foregoing the subject of my talk today now becomes appropriate—The Need for and the Type of Your Navy of the Future.

It is not my purpose here today to tell you that there is a greater need for a Navy than there is for any of our other fine services. I am well aware that the history of our country has always shown that we have never had enough of any one military service at the beginning of any war. Thus it should be emphasized always that it is necessary for our country to have a well-balanced nucleus of all our 4 services all highly trained and with a firm and resolute esprit de corps; 4 services that will be extremely well prepared to answer the call when and if that tragic day should ever arrive—the beginning of another world war.

I feel it is appropriate to point out to you that all the military leaders whom I have ever known are actually peace-loving, God-fearing gentlemen. By virtue of their profession, however, they must constantly be on the alert and keenly aware of not only the military readiness of their own forces but those of any potential enemy. Consequently, it is our duty to our country and to you, our taxpayers, that we analyze this military problem constantly.

In this connection, the new Chief of Naval Operations, Admiral Arleigh Burke, asked me to give you this personal message which I read with pleasure:

"In any war of the future, the highways of the seas will be more vital to our security and to our standard of living than they have ever been before. We must continue to protect merchant shipping which is essential to the operation of our defense industries and our civilian industries. We must be able to sustain and support our sister services overseas. We must be able to support our friends and allies. We must do all these things and in addition, we must be capable of projecting military power from and across the seas.

"We think that our Navy will be able to make a significant contribution either in a limited war or in a general war. We think the Navy can contribute both during the opening rounds and the slowing-down phases of a nuclear war. The Navy has already developed mobile nuclear reprisal forces—the new aircraft carriers with long-range aircraft, guided missile ships, and submarines. Seaplanes, too, will add a lot of punch and versatility to the Navy's air attack. All these forces will pack a terrific atomic wallop. They will be able to approach their targets from many directions. They can use many launching points. They will force the enemy to dilute his effort and they will multiply his problems of defense.

"The Marines have developed a new landing technique by helicopter assault. We must be able to land the Marines on hostile beaches. We must be able to land them through ports which may have been destroyed. We must be able to sweep mines and mine enemy waters. In short, the Navy must be able to defeat all kinds of threats regardless of what kind—or how or from where they may come."

As Admiral Burke has indicated to you the highways of the seas are more vital to our security today than they have ever been, and their protection will be even more important in the future.

Technical progress has given this Nation, as well as other nations, new opportunities to project increasing amounts of military power from the sea.

Looking across the Pacific and the Atlantic from the shores of the United States, the sea offers the United States the opportunity to rapidly move our mobile, nuclear naval forces to any location on the high seas. The security and the survival of our country demands that we exploit the advantages of the nuclear age. The Navy already has the first elements of a family of sea-based weapons capable of launching nuclear attacks from 75 percent of the earth's surface. This means that any enemy must now start thinking in terms of dispersing his offensive and his defensive efforts. Dispersal costs time, money, and effort. This means that, if he is wise, he must now start planning to defend his entire periphery. This too, will drain his vital resources. This means he will no longer be able to wholly concentrate his attention on the destruction of our retaliatory forces that are based ashore, both those within our continental United States and those forces are based overseas. No

longer can be concentrate his efforts against our fixed bases, our cities, and our communication centers. Should he make such a blunder, he will certainly invite his own destruction from the sea.

The Navy has developed a complete family of sea-based mobile reprisal forces. We are now building new aircraft carriers capable of launching many types of long-range atomic bombers. We are now procuring globe-circling, missile-launching submarines. We are producing missile-launching surface ships and all types of new missiles. We are converting all our major combatant ships from oil to atoms as quickly as possible. We are developing long-range jet seaplanes capable of dropping mines and atomic bombs, and doing many other naval tasks necessary for control of the sea. We are developing the many sea-based supporting facilities that will give the seaplane its maximum reprisal potential, for there is much more to a seaplane reprisal capability than the aircraft itself. Its success will depend on the myriad weapons of the sea which can provide it with both direct and indirect support—the submarines, the surface ships, the floating docks that can maintain, supply, and support its operational needs.

We are becoming more proficient in antisubmarine warfare, in minesweeping and minelaying. The Marines' new helicopter assault capability gives them more versatility and flexibility.

Our air defenses are, of course, being improved, particularly around the Arctic Circle; however, the Navy still has the job of protecting the weak flanks in both oceans.

In future wars we must be able to protect our own and friendly ports. We must be able to protect convoys. We must be able to defend against any threats to our ocean lifelines. More than this, we are obligated to our friends and allies under the terms of the NATO agreement. We must see to it that countries bordering the Mediterranean—Greece, Turkey, and Italy—are supplied and supported. Those countries must have the protection and the active combat support of the United States Navy. Their sealanes are their lifelines. The same holds true with Scandinavian Peninsula, as well as all the free nations of the Western Pacific—Japan, South Korea, Formosa, the Philippines, Burma, Thailand, New Zealand, and Australia. Those countries are dependent upon the Navy's ability to maintain control of the sea, which includes the air above and the subsurface depths below the sea.

The United States is committed by mutual defense treaties to the active support of 42 nations comprising 680 million people on 6 continents and across the world's major oceans.

But there are other reasons why the need for a Navy is growing more important with each passing year. It is a distressing thing to say, but Britain, our stanch ally who once ruled the seas, has been forced by budgetary reasons to reduce her combatant strength.

Simultaneously, the Soviet Navy, in sharp contrast, has been increasing both her naval and air forces. Nor has there been any recent indication of any letup in Soviet arms development and production. The Soviets have had a traditional interest in science, but they have also benefited by the influence of German scientists and military personnel who have augmented the Soviet regime following World War II. German scientists have introduced the great importance of the offensive capabilities of the submarine and the guided-missiles weapons system. At the present time, the Soviets are continuing to improve themselves in atomic warfare. They are building high-performance aircraft, swept-wing fighter jets, and long-range jet bombers. They are developing highly advanced mine-warfare systems, high-speed destroyers and cruisers that can be used as commerce raiders. They are developing a naval air capability. Their submarine production is staggering to contemplate.

Looking at the picture from the Soviet viewpoint, it must be apparent that the United States is in critical need of certain vital materials from foreign lands, materials such as iron ore, bauxite, manganese, tin, cobalt, chromium, rubber, mica, even coffee, sugar and spices.

If they can cut these vital lines of sea communications required for United States industrial survival, they will have made a long step toward ultimate victory. They must also realize that it would be just as effective to cut the sea line near the Eurasian Continent as it would be near the United States Continent. Their Navy is being planned accordingly. Additionally, there is a continuing build-up of long-range air arms and long-range guided missiles for a strong offensive against the United States mainland.

It is interesting to note the tremendous naval build-up that they have made in the past 10 years. From 1945 to 1955, according to Jane's Fighting Ships, the Soviet Navy has increased in size to the following figures: Battleships, 3; cruisers, 26 (with 6 more under construction); destroyers, 127; frigates, 47; submarines, somewhere between 370 and 400; patrol vessels, 102; ice breakers, 26; and many other miscellaneous craft.

In addition to the above, and for those people who belittle the Russian Merchant Marine effort, Lloyd's Register of 1954 shows them to have 1,052 vessels of almost 2½ million tons gross. This has been accomplished in spite of the fact that the Soviets have a shortage of steel manufacturing facilities.

This new naval effort of the Soviets plus their air potential, which has been mentioned many times by high ranking Air Force officers, indicates their evaluation of the importance of sea power and the ultimate supremacy of sea lanes.

Fantastic as our future naval plans may seem, this is the goal of the Navy today. This we can do provided all of us work hard and provided the Navy has the complete support of:

1. All of the people—you.
2. The Congress of the United States.
3. The dollars—and it will cost a lot.
4. The necessary engineers—and here industry must share with the Navy.
5. The large pool of maintenance experts required for such highly complicated electronics systems—here, again, industry must share with the Navy and curb its raids on our highly skilled manpower pools in the service.

The Navy will also require a high quality of patriotic, motivated men and women in both the enlisted and officer ranks of its service, and it is here that organizations like the Navy League can help by telling the young men and women of this country of the needs for such high caliber people in our service.

We must work fast. We must be right. We need your help and you need ours.

And now a word about another need for our Navy—a more peaceful need. As many of you are well aware, the resources of our land are being used up at a rate which is most serious. In many cases some of our vital raw materials have already been exhausted. As a result, a few of our farsighted scientists are turning their eyes and minds to utilization of the oceans and the valuable assets that can be derived therefrom. Oceanographers and ocean engineers do not believe that the sea is mysterious and unworkable, as some fiction writers would have you believe. They feel that with modest technical research and engineering effort some ocean industries may compete with land industries in the near future, particularly where some of the land resources are getting slimmer every year.

They point out that oceans are 40 times as big as the United States, and that the emergence of an island to slightly above the surface of the ocean imparts international significance to offshore real estate. It is likely that Texas towers or permanently anchored factory ships will add international significance to some of the offshore real estate that does not quite come to the surface.

The importance of this problem is noted by the fact that there was an international meeting at Rome this summer to consider the international aspects of the living resources of the sea.

History has shown that possession is usually nine points of the law, so if we want to be in on the ground floor of any international expansion seaward, we had best have some homesteaders or at least explorers in the field. It would appear certain that offshore real estate will be of great importance even though it is somewhat submerged. I think you can readily see then that if the above is so, our Navy will have another new and very important mission—the protection of these homesteaders and to aid them in the pioneering of their mission. The oceans will attract business and industry, and when it does they will need protection.

And thus this is the message I bring you today—a message which clearly proves that the United States will continue to need a Navy for many, many years to come. It will need a vastly improved, highly technical, and even more powerful Navy.

Since the War of the Revolution, and each and every war thereafter, our Navy has always been ready to combat the foe—has always been ahead of the other fellow, and it always will be ready. To do this, however, we need your help; we need you to understand the problem and support the reasons for the need of a Navy. We need your help to convince the people that a modern, superscientific, highly technical Navy must be so maintained and that its present end-mission is every bit as important as the mission of any other military service. The Navy will not win any war singlehanded any more than any other service has or ever will. But we sure can help and be an important cog in the military mission, just as we were in World War II—we will do so again.

The Honorable John W. McCormack

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 11, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Telegram-News, Lynn, Mass., Sunday, April 8, 1956.

This editorial reflects my sentiment and I heartily commend it and call its attention to Members of Congress because of its real value and interest. It is my privilege to have it incorporated in the RECORD since few men are better qualified for the position of President than our beloved majority leader JOHN W. MCCORMACK:

MCCORMACK FOR PRESIDENT

The most exciting political news to reach Massachusetts voters in many years is the disclosure that strong affirmative forces are at work espousing the candidacy of Congressman JOHN W. MCCORMACK, of Boston, for the Presidency of the United States.

The campaign to boom the McCormack candidacy was launched by Thomas Dorgan, clerk of the superior civil court for Suffolk County, recently, and has gained wide momentum. Dorgan has urged Bay State Democrats to write McCORMACK's name onto their ballots in the April 24 Presidential primary in order that the attention of the Nation will be focused upon this great American.

As majority leader of the National House of Representatives, there is no questioning the fact that Congressman McCORMACK boasts the necessary experience and ability to serve as the Nation's leader. He has been a bulwark of strength for the free world for longer now than most political leaders can remember.

It is Mr. Dorgan's contention that with all the talk about dark-horse candidates from New York, Texas, Oklahoma, Missouri, Michigan, and Ohio, Massachusetts should not be overlooking its own favorite son.

He would be an ideal candidate and a more powerful standard bearer for the Democratic Party than anyone who has been mentioned among all the Presidential possibilities.

Supporters of McCORMACK describe him as the Abraham Lincoln of the modern age with a record saturated with honesty, ability, courage, and true Americanism. Never once in his long career has his faith in America wavered. During some of this Nation's darkest hours he was a stalwart leader fighting back the threats of fascism, communism, and other sinister influences. He has never known the path of anything but righteousness and courage.

In Washington, Congressman McCORMACK has been a favorite of Presidents, Senators, congressional colleagues, Cabinet members, and other national leaders. They have always recognized in him a man who although a great Democrat has always been ready to do what was wise for the people of America.

In Lynn where Congressman McCORMACK has many friends and supporters, it is to be hoped that the vote on April 24 will be a tremendous one in his behalf. Lynners should be firm in their determination to write the name of this great American on the ballot.

Congressman McCORMACK's political appeal has always been augmented by his charming and gracious wife, a former operatic singer, who has been a tremendous asset to him over the years.

Vice Presidency

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. QUIGLEY. Mr. Speaker, an editorial published by the Carlisle (Pa.) Evening Sentinel, on Friday, April 6, is pertinent to the hearings currently being conducted by a special subcommittee of the Committee on the Judiciary. This special subcommittee, headed by our distinguished chairman, is considering the very grave and serious constitutional question of how to meet the crisis we shall face in the event of the inability of the President to function.

The editorial follows:

THE VICE PRESIDENCY PROBLEM

With President Eisenhower prepared to seek a second term, despite his age and his heart attack, many voters will take a closer look than usual at the party nominee for Vice President. Eisenhower is convinced that he can carry on full time for another 4 years in the White House, and his doctors give him a good chance to do so. But the very fact that the President would be 70 at the completion of a second term—and the fact that his heart is no longer perfect—pushes the Vice Presidency into special prominence in this election year.

Eisenhower himself has urged Congress to look into the problems that may arise when a President is incapacitated. The Constitution states that the powers and duties of the President shall devolve on the Vice President, not only in case of the President's death, but also in case of his inability to discharge the duties of his office. Yet the Vice President never has taken over except when a President has died in office. A House Judiciary subcommittee is to open hearings April 11 on the questions that would be raised by Vice Presidential succession on account of Presidential disability.

Proposals to ease the burdens of the White House occupant, either by delegating specific duties to the Vice President or by creating an additional office of Administrative Vice President, have been advanced by Members of Congress and others. Although the administration has displayed little interest in such proposals, President Eisenhower has given Vice President NIXON more tasks, and more varied tasks, to perform than have been carried out by any previous Vice President.

The Vice Presidency was not slated for the insignificant place it has held throughout most of American history. Quite the contrary. Under the Constitution as adopted, Presidential electors voted only for President. The man who came out second best in that contest was designated Vice President. By the nature of things, all those voted for were presumably of Presidential stature, as witness the first two Vice Presidents, John Adams and Thomas Jefferson. It was only after the 12th amendment required separate ballots for President and Vice President that the second post began to decline.

John Tyler restored its prestige for the time being. Tyler was the first of 7 men who have succeeded to the highest office through the death of the President. His succession after William Henry Harrison died in 1841 set a precedent in more ways than one. Despite cloudy constitutional language, Tyler took the oath prescribed for the Chief Executive and won recognition as President—not Acting President. But, notwithstanding this demonstration that a Vice President might become President in fact, nomination of an outstanding leader for the second office became more than ever the exception, not the rule.

National nominating conventions have concentrated on the race for first place on the ticket. When that is settled, the delegates are ready to go home. Hence they give little thought to choice of the man who, if the party wins, may be on his way to the White House. Selection of the Vice Presidential nominee thus is left largely to the chosen standard-bearer and simply ratified by the convention.

To change all this and make the Vice Presidency an office for which prominent party men would compete, it has been suggested that the Vice President be relieved of his relatively unimportant duties as presiding officer of the Senate and be placed squarely in the executive branch as an acknowledged Assistant President. Then he would be in close daily touch with White House affairs and well prepared to step into the President's place if need arose.

Two former Vice Presidents recently have had their say on other means of getting first-class men into the office. Henry Wallace urged a campaign to make the public, and in turn convention delegates, better aware of the importance of the Vice Presidency and of the need to apply other standards than the balancing of the ticket when making the Vice Presidential nomination. ALBEN BARKLEY favored nomination of both President and Vice President by direct, nationwide primary.

What, if any change in the status of the Vice Presidency might be made, is a big question. Despite all the pressure that may be applied so that Mr. Eisenhower, if elected, can delegate many of his own tasks to the Vice President, it cannot and should not be presumed that the Constitution will be quickly amended. On a matter like this, it is much more likely that many more years will elapse before any revision is made or an amendment added to the Constitution.

This is not a problem that can be solved except through long study and discussion—if there is any good reason why the Vice President's status should be changed in any respect. Simply because a President has been ill and is still in impaired health is no reason to throw powers to the Vice President to which the Vice President should not have the right. It would be better to elect a new President.

In the present situation, the GOP is pushing for more time off for the President and more work and power for the Vice President and the GOP has good reasons to seek action—for political expediency. The GOP could lose the election because of the health and who-will-follow issues. How many votes may be lost because of these issues cannot be counted. But, many of the electorate, of both parties, like Mr. Eisenhower so much that they may vote for his opponent because they would rather see "Ike" live and smile, than be seriously ill again and perhaps die because of selfish Republican politicians who care nothing about Mr. Eisenhower but seek to exploit their jobs and further their own ends. These politicians have made the mistake of drafting the President. Whether the harm is to be undone and "Ike" to retire in glory and honor, the electorate will decide—not politics.

Statement of E. J. Russell, of Troy, N. H., Woolen Manufacturer, at the New England Governors' Textile Committee Meeting With the New England Congressional Delegation

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of E. J. Russell, of Troy, N. H., woolen manufacturer, at the New England Governors' Textile Committee meeting with the New England congressional delegation:

It gets harder and harder for us to understand the situation that continues to grow in Washington in regard to the textile industry, including our invitation to other countries to increase exports to us. We have today a wool manufacturing industry comprised of 600 establishments in more than 30 States. In 1947 the census showed over 800 establishments.

About 55 percent of this industry's production capacity is in New England; 20 percent in the Southern States, whose capacity is now growing; 15 percent in Middle Atlantic

States; 7 percent Midwest; 1 to 2 percent Far West. In the year 1946 we had 37,369 woolen and worsted looms in place, and in 1954, 26878. It was expected that the census at the end of 1955 would show about 21,000 plus.

The United States Department of Commerce Facts for Industry, March 6, 1956, shows woolens and worsted looms in place total 17,679 under date of December 31, 1955. Number of active looms by shift active on last full working day of the year: First shift, 13,419; second shift, 11,755; and third shift, 7,167. I call this to your attention to show that the industry still has more than ample capacity to meet present needs. In spite of the above, imports are increasing at a fast rate.

As imports increase and profits decline more manufacturers find they must do something and that something has in many cases turned out to be liquidation. At Geneva in 1947, to become effective on January 1, 1948, a reservation was negotiated which reads as follows:

"The United States reserves the right to increase the ad valorem part of the rate applicable to any of the fabrics provided for in item 1108–1109 (a) of this part to 45 percent ad valorem on any of such fabrics which are entered in any calendar year in excess of an aggregate quantity by weight of 5 percent of the average annual production of similar fabrics in the United States during the 3 immediately preceding years."

In the negotiations which gave birth to the above reservation, ad valorem duties slashed to a flat 25 percent from the rates in effect under the 1930 Tariff Act of 50–55–60 percent depending on valuation.

We feel that the 5 percent has been reached, because for the years 1952–53–54 the average production in the United States was 281,001,000 yards and imports of woven fabrics wholly or in chief value of wool in 1955 were 19,456,000 yards, or 6.9 percent. Let me call your attention to the makeup of this 6.9 percent. Fabrics the weight of which was 9 ounces or less, 16.8 percent; 9–13 ounces, 7.9 percent; 13–16 ounces, 3.8 percent; 16–20 ounces, 6.2 percent; 20 ounces and over, 9.3 percent—an average of 7.6 percent of products made for civilian use, or 6.9 percent including production of 24,567,000 yards for Government use.

But we find these figures do not stand the test because of a conflict of standards in that our imports are compiled on a pound basis and our domestic statistics information on a linear-yard basis.

During the month of February 1956 imports from the United Kingdom increased as follows: Square yards woolens, 85 and 74 percent in value in pounds. Worsteds, 65 and 56 percent in value in pounds. Market reports indicate that imports and commitments for Japanese and Italian fabrics have increased so we should reach the 5-percent trigger point somewhat sooner this year.

I would add here that in 1951 Japanese imports were only 178,000 square yards. In 1955 they were 2,262,000 square yards. Also much improved in quality over cloth seen here before World War II.

Wages paid in United States of America, $1.53, no fringes included. British and French, 45 cents; Italy, 30 cents; Japan 14 cents.

In July 1953 the National Association of Wool Manufacturers addressed the President of the United States calling his attention to the Geneva reservation and mounting imports of woolen and worsted fabrics and the fact that volume of such imports reached a 30-year record high in 1952, that 1953 imports were likely to surpass that record and urging that he give effect to the Geneva reservation.

In 1954 the statistical difficulties were pointed out to the Committee for Reciprocity Information and suggested that steps be taken to iron them out.

The changes in the number of plants and the decline in employment was called to the attention of Mr. Arthur S. Flemming, Director, Office of Defense Mobilization, in a petition under date of March 14, 1956, petitioning as follows: "Wherein the Director is requested to investigate or reappraise what the petitioner consider to be the threat to national security presented by wool textile imports within the meaning of section 7 of the Trade Agreements Extension Act of 1955."

It is a question as to what our situation would be in case of another large mobilization in this country and could the requirements be met because of the continuous heavy liqudiation taking place in our industry.

In spite of all this the textile industry is one of the largest employers of labor in the country. We know industries that are replacing us in our New England section are paying lower wages. We also know that our older employees have a hard time finding new employment at as good pay. Our so-called skilled employees' skill are useless to them in other industries when we close. No employment or comparable wages are available in many cases in the towns where textiles move out or close down.

I would also like to direct your attention to manufactured products being imported. On Monday I spent the day at the Carwood Manufacturing Co., in Widner Ga. Mr. Harris, the owner, told me he had closed his shirt division where he made 75,000 dozen shirts yearly because he felt he could not compete with imported products.

I would like to close by reading a clipping from the Daily News Record of Monday, April 2, 1956:

"NAGOYA, JAPAN, April 1.—There is plenty of room to increase American imports of woolen goods, a visiting United States trade mission has informed Japanese businessmen.

"The opinion was given during discussion of a request by the Japanese for the mission to use its influence to prevent any increase in American tariffs or other restrictions against Japanese pottery, plywood, and sewing machines. The mission's answer concerned mainly these items but included woolen goods.

"Members of the mission, headed by Eugene Braderman, United States Department of Commerce, advised Japanese manufacturers to give further close study to American wool textile fashions."

Out, Damned Spot!

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. QUIGLEY. Mr. Speaker, the wave of Russian speeches down-grading the late Joseph Stalin, has caught the headlines of the world press and provided much grist for columnists, commentators, editorial writers, as well as for the Secretary of State, who seems to feel the change inaugurates an era of good will.

One of the most refreshing and alert commentaries on the change is the following editorial published in the April 1, 1956, issue of Justice, official newspaper of the International Ladies' Garment Workers' Union:

OUT, DAMNED SPOT!

Capitalist propaganda became Communist doctrine last month. Overnight, Stalin—"beloved" leader of the Soviets—was transformed into the tyrannical executioner of its masses. The current rulers of Russia, meeting in solemn congress in the Kremlin, spoke only evil of the dead. The mighty Stalin, only 3 years in his grave, was at last given his real name—murderer—by those who, in the long years of his rule, bowed and scraped before him and smiled at him and sang his praises and hailed his benevolence and kissed him front and back.

There have been other times when Soviet leaders threatened to become civilized. Ultimately, such promises have turned out to be mere maneuvers through which they spread a little further the orbit of their dictatorship. Let the world befare. These are men bloated with a power they mean to keep and expand.

They come to the court of world opinion with bloody hands: Khrushchev, mass executioner in the Ukraine; Bulganin, Stalin's industrial executioner; Malenkov, Stalin's personal hatchetman; Mikoyan, chief purger of the Caucasus; Molotov, who waded through the blood baths of the 1930's to negotiate Stalin's love pact with Hitler.

These men comprised Stalin's collective leadership. The world that finally caught up with that other brutal despot—Hitler—held his colleagues as accessories of his bloody crimes. Those who shared Hitler's power and triumphs, it was judged, should also share his guilt and his extinction.

Now these Russian Goerings and Soviet Himmlers are trying to save their own necks with the biggest lie of all. It is reported that Khrushchev wept as he told the Communist congress that under Stalin he had often feared for his own life.

Did he weep as he kept killing to prove his continuing loyalty to Stalin? Did he smile the smile he has beamed throughout his Far Eastern travels as he gave the command to execute? Where was this butcher, now bleating like a lamb, when the Red Army officers were shot in the night, when the peasants were cut down like wheat? At which side of Stalin was he standing, silent and smiling, when Victor Alter and Henryk Ehrlich were martyred?

The bloody spots on their hands will not out. In the spotlight of the world's longing for peace, they repudiate the paranoic whose every wish was their command. But they do not repudiate his works.

They have not opened the gates of the slave labor camps. They have not ripped the gag from speech and press. They have not permitted free political parties or free trade unions. They have not taken the gun out of the backs of the Russian people. They have not smashed the chains with which they bound millions in the European satellite countries they conquered for the greater glory of Stalin.

Under penalty of death, their subjects will have to applaud them. But what more despicable creature is there in the world than the non-Russian Communist, who must now prove his loyalty to the Kremlin by echoing the charges which, until now he castigated as capitalist propaganda. If Stalin's death was communism's greatest good, what refuge in reason remains for those who won the coveted Stalin prizes, who enlisted in his peace offensives, who must now be immobilized by the fear of that ism which, sooner or later, must supplant Khrushchevism.

Not silence. Through silence, the murders and their camp followers prosper and survive. Here at home, the full impact of scorn, of exposure, of shame must be directed at those who were stupid but dangerous party-liners in the past and are ready to be so again in the future. In the arena of international affairs, peace will not be won by good-will tours arranged by the democracies for these Russian butchers. Their hands are bloody. Their tyrannical purpose is unchanged. Wherever they walk, they besmirch freedom.

Flood Control and Insurance

EXTENSION OF REMARKS
OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 11, 1956

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

PRESENT STATUS OF FLOOD CONTROL AND INSURANCE

To: The Conference of New England Governors.

From: Seymour E. Harris for New England Governors Textile Committee.

(1) Recommendations of New England governors on September 23, 1955: The governors recommended expenditures of (a) $34.3 million for fiscal year 1957 for flood control projects recommended by Army Engineers and approved by the New England governors; (b) $12.45 million for construction in 1957 of navigation and beach-erosion projects; (c) authorization of an expenditure of $1.5 million for emergency funds by the Chief of Engineers for immediate planning of flood-control projects authorized in affected or potentially affected areas; (d) a supplemental appropriation of $3.5 million by next February 15 to start construction of such projects; (e) $200,000 to expand and expedite the authorized $600,000 New England hurricane survey; (f) $100,000 for studies of additional flood protection.

Total, $52.05 million.

(2) The report of the Joint Congressional Committee on Flood Control: The following table is reproduced from page 103 of the hearings before the Joint Committee on the Economic Report (this was produced by the Director of the Budget after needling by the committee at the hearings of February 1):

Accelerated northeast flood-control program, Corps of Engineers

[Fiscal years; in thousands]

	Number of projects	Total cost	New obligational authority requests in 1956 supplemental		New obligational authority requests in 1957 supplemental	
			Planning	Construction	Planning	Construction
Connecticut	1	$16,000	$140			$360
Massachusetts [1]	7	42,360	340	$400		7,866
New Hampshire	2	37,820		100	$600	1,250
Rohde Island	1	4,200				600
Vermont	9	64,330	571	300	500	5,828
Total New England	20	148,710	1,051	800	1,100	[2] 15,904
New York	1	9,200	80			1,030
Pennsylvania	6	46,510	455	300	160	4,000
Grand total Northeast	27	204,420	1,586	1,100	1,260	20,934

[1] Includes 2 projects under construction. [2] See note.

Note that the total amount of new obligational authority for New England for fiscal year 1957 is $17 million against the governors' request of $52 million. (See reservations in statement to Congressmen.) (Outlays on flood control are about one-half the amounts requested. Note also that the budget provides only $3.1 million of the $12.45 million requested for navigation and beach erosion, and there is apparently $1 million of the $1.2 million requested for a survey of hurricanes.)

The following colloquy occurred (p. 111) between Congressman CURTIS of Missouri and the Director of the Budget, Mr. Hughes:

"Representative CURTIS. One final detail: The chairman, Senator DOUGLAS, was commenting on the flood-control measures, and you mentioned that this had been cleared with the various governors of the States.

"I presume you included Governor Ribicoff, of Connecticut.

"Mr. HUGHES. Oh, yes; there is a regular group of New England governors that have worked together on this under the chairmanship of Denny Roberts, of Rhode Island.

"Representative CURTIS. The reason I wanted to mention it is because it seemed to me there was a partisan implication there, and I know Governor Ribicoff served with me, I served with him, in the House, and he is a good Democrat, and I am sure that there are no political implications in this. I suspect that your statement that they are moving ahead as rapidly as possible is accurate, because I never have yet known any Army engineers who are not willing to accept funds from the Congress if they can get them.

"Mr. HUGHES. This has not been a political situation at all. It has been entirely nonpolitical. Both parties have been in it, and the discussions have been on the basis of need and not on the basis of any political consideration, to my knowledge."

(2) Details of projects in budget, fiscal year 1957 (pp. 615–618):

Program and financing

[In thousands of dollars]

	1955 actual	1956 estimate	1957 estimate
1. Navigation projects:			
Housatonic River, Conn	321	329	125
Beals Harbor, Maine		200	
Portland Harbor, Maine	682	118	540
Scarboro River, Maine			205
Fall River Harbor, Mass			500
Mystic River, Mass		500	1,000
Portsmouth Harbor, N. H., and Piscataqua River, Maine and N. H		400	600
2. Beach erosion-control projects:			
Revere Beach, Mass			75
Winthrop Beach, Mass		150	60
Hampton Beach, N. H		130	10
3. Flood-control projects:			
(a) Local protection:			
Hartford, Conn. (Folly Brook unit)		344	
Norwich, Conn		227	370
3. Flood-control projects—Continued			
(a) Local protection—Continued			
Adams, Mass	487	1,213	2,726
North Adams, Mass	1	720	2,000
Woonsocket, R. I			600
Worcester diversion, Massachusetts			840
(b) Reservoirs:			
Thomaston Reservoir, Conn			360
Barre Falls Reservoir, Mass			1,150
Buffumville Reservoir, Mass			1,200
East Brimfield Reservoir, Mass			340
Hodges Village Reservoir, Mass			360
Otter Brook Reservoir, N. H			1,250
East Barre Reservoir, Vt			800
North Springfield Reservoir, Vt			500
Townshend Reservoir, Vt			420
Waterbury Reservoir, Vt			808
Wrightsville Reservoir, Vt			1,000

Listing of local protection projects (p. 619):

1. Worcester diversion, Massachusetts.
2. Woonsocket, R. I.

Reservoirs:

1. Thomaston Reservoir, Conn.
2. East Brimfield Reservoir, Mass.
3. Hodges Village Reservoir, Mass.
4. East Barre Reservoir, Vt.
5. North Springfield Reservoir, Vt.
6. Townshend Reservoir, Vt.
7. Waterbury Reservoir, Vt.
8. Wrightsville Reservoir, Vt.

(4) Federal flood indemnity program (Budget 1957, p. 349) (note that expenditures of but $25 million are provided for 1957):

Budget authorizations, expenditures and balances

	1955 actual	1956 estimate	1957 estimate
Budget authorizations available: Proposed authorization to expend from public debt receipts			$100,000,000
Expenditures and balances:			
Total expenditures (out of current authorizations)			25,000,000
Obligated balance carried forward			75,000,000
Total expenditures and balances			100,000,000

5. Provision of various flood-insurance bills:

	Senator LEHMAN	Senators KENNEDY-SALTONSTALL	Senator CARLSON	Staff
1. Administered by	Federal Disaster Administration	Small Business Administration	National Disaster Insurance Corporation.	Same as KENNEDY-SALTONSTALL.
2. Risks covered	All kinds of natural disasters inclusive of war.	Floods only	Floods, tidal wave, earthquakes, hurricanes.	Same as LEHMAN.
3. Coverage available	Up to $300,000 per policy for natural disasters and up to 75 percent of property value for war. Includes personal property.	Up to $250,000 per policy for industrial and residential real estate, nothing for personal property.	No limit for personal or real-estate insurance.	Up to $60,000 for 1 to 4 family houses and up to $250,000 per policy for natural disasters.
4. Premium rates	Set by Administration; varies with risks for natural disasters; uniform for war.	Set by Corporation. Vary with risks and importance of insurance to general welfare.	Same as KENNEDY-SALTONSTALL.	Set by President or his designee. Criteria same as KENNEDY-SALTONSTALL.
5. Payments to policyholders.	Value minus $200 for natural disasters; 75 percent for war damage.	Limits to be set by Corporation	Same as KENNEDY-SALTONSTALL.	100 percent first $1,000 and 80 percent amounts in excess of $50,000; up to 80 percent on amounts in between; no limits on war.
6. Total liability	$2 billion maximum for natural; $10 billion for war damage; no limit for war injuries, etc.	$500 million maximum first 6 months might rise in 1957 and 1958.	Maximum not specified	$2 billion natural; $10 billion war.
7. Private companies	Sell Federal insurance; write own; compensated for losses.	Same as Lehman	Alone write disaster insurance with Government subsidies.	Same as LEHMAN.
8. Financing	$1 billion borrowed from Treasury for natural disaster and $10 billion for war; other money from premiums.	Appropriation, premiums, salvages, investments.	Treasury buy $50 million of Corporation stock.	Do.

Source: Adapted from Congressional Quarterly, Jan. 6, 1956.

6. Recent developments: The Senate Banking and Currency Committee has been holding hearings on the administration bill, as well as on the bill supported by Senators LEHMAN and KENNEDY. Apparently, the committee is almost ready (March 22) to come to some decisions. Matters of disagreement, among others, include the financial participation of States (in the administration bill), ceilings of commitments (now apparently at $3 billion of coverage), and alternative rate structures (actuarial or influenced by considerations of public interest).

The major differences between the administration bill (S. 2862) and the Lehman, Kennedy, etc., bill (S. 3137), both under consideration in February–March 1956, are the following:

1. Coverage per policy is limited to $100,000 ($10,000 residential) in the Lehman bill and to $250,000 in the administration bill.

2. Rates are not based merely on an actuarial estimated basis. But the administration bill excludes rates below 60 percent of actuarial rates. The Lehman bill would set rates consistent with risks as far as possible but only to such an extent "as in the judgment of the Commissioner shall be consistent with the aim of offering insurance and reinsurance at rates reasonable enough to make available to those who need it at rates they can afford."

3. In the administration bill, States are required to pay half of the differences between estimated and offered rates.

4. Both bills set a maximum ultimately of $3 billion of coverage. But the administration bill provides only $500 million of Treasury cash and the Lehman bill, $1.5 billion.

5. The Lehman bill envisages coverage of all disasters ultimately; but in the meanwhile asks only for a study of disaster insurance.

At present (March 26) the Congress (Subcommittee on Public Works of Appropriation Committees) is considering the $141 million appropriation for flood control recommended by the administration.

The Farm Bill

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. CRETELLA. Mr. Speaker, with the farm bill being the major topic of the day in Congress, I submit for the RECORD two editorials of March 27 and 31 from the New York Times.

Much effort has been expended on the part of some to obscure as effectively as possible the real issues of the bill and the long-range benefit which would accrue to the farmer from the carefully thought out administration proposals for flexible supports and soil bank.

As one who will vote on this bill, I believe I have no choice other than to vote for the recommittal of the legislation, which, in its present hodgepodge form, would raise as many problems as it sought to solve.

The editorials follow:

[From the New York Times of March 27, 1956]

PRICE SUPPORTS AS AN ISSUE

Secretary of Agriculture Benson, speaking before the National Press Club, declared that, so far as he is concerned, he would be preferably willing to let the question of flexible versus rigid farm supports be an issue in this year's election. "There is more sentiment among farmers for flexible price supports today," said he, "than at any time since the war."

We hope the Secretary is correct in his estimate of the position of farmers on flexible supports. There has never been any question in our mind that the American farmer, once he perceives clearly the economic implications of the issue of flexible supports versus high, rigid supports, can be depended upon to make the intelligent choice. There have been times, however, when we have wondered if the Administration has done all that it might to force the hand of the politicians who promise to guarantee the farmer 90, and even 100, percent of parity for his products, without telling him what the consequences of such price-fixing are going to be in terms of his (the farmer's) longer-term future.

We are familiar with the arguments for flexible price supports, and in our opinion they are unanswerable. But if they are answerable, it seems to us that it is high time that they were answered by one or more of our candidates for the Presidential nomination who have elected to advocate high, rigid supports. Some of the friendly critics of Adlai Stevenson have actually suggested that in Minnesota he permitted Senator Kefauver to take the play away from him. Was this because Mr. Stevenson advocated flexible supports? Not at all. It is because while the Senator from Tennessee was promising the farmers 100 percent of parity for their crops Mr. Stevenson had the instinctive honesty to suggest that high, rigid supports might not of themselves solve the farm problem. To the best of our knowledge, this is the nearest any of the Democratic candidates, actual and potential, have come to holding high, rigid supports up to the light.

[From the New York Times of March 31, 1956]

FROM BAD TO WORSE

Even after the Senate had passed its aimless and self-contradictory version of a farm bill on March 19 the President did not abandon hope that Congress would produce a bill that reflected to at least a reasonable degree the spirit of the administration's farm program. He apparently felt that the Senate-House conference committee, being a small group, would take its responsibilities seriously, even though neither House of Congress had seen fit to do so, and, by combining the good features and the less undesirable features of the two bills, come up with a workable measure.

Unfortunately, not only has the committee shown no interest in selecting from the two measures before it those that bore some relation, however distant, to the administration's program; it seems to have been trying to outdo the efforts of those who framed the two bills to make a shambles of the comprehensive and integrated program into which the administration had put so much thought and effort.

The conference committee began by choosing the provision for high, rigid price supports contained in the House measure over the (at least theoretically) flexible support provision of the Senate version. That, it was to develop, was the tip-off as to what might be expected from this group. This vote to reject flexible supports, the very heart of administration policy, has been followed by vote after vote looking in the same general direction. Among the gimmicks that have been approved since then, though known to be opposed by the administration, are the dual system of determining "parities," the so-called "two-price" system for wheat (which is really a three-price system, providing for both foreign and domestic dumping), a similar set-up for rice, a provision for raising the price peg under "manufacturing milk," and one for freezing the existing acreage for cotton.

Not only has the conference version of a farm bill become increasingly objectionable from the standpoint of the administration with each passing day; its deterioration has begun to raise questions as to whether it can command the support even of the Senate. Meanwhile, another question that had begun to be asked a week ago seems to have

been answered. The question was: "What is the conference committee trying to do—is it trying to procrastinate so long that it will be too late to derive any benefit from whatever farm measure should be passed by the two houses, or is it trying to confront the President with a bill it knows he cannot possibly sign with a clear conscience?" At this point one might be forgiven for concluding that the answer is: "Both."

Stevenson Has Just Begun To Fight

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. UDALL. Mr. Speaker, it is now clear that Adlai Stevenson's suporters have just begun to fight. Three weeks ago some commentators were quick to declare that Minnesota was a mortal blow to his campaign, but for Governor Stevenson this election has been a challenge and not a defeat.

There are too many undeniable marks of greatness on Adlai Stevenson for his party to thrust him into the discard. Our times demand vision and the very best available leadership—reasons why Stevenson is an imperative this year for his party and his country.

The case for the Stevenson candidacy was convincingly presented in a recent editorial which appeared in the St. Louis Post-Dispatch.

I present that editorial herewith:

THE STEVENSON SITUATION

From our Washington bureau Marquis W. Childs has now written his second article concerning opposition to Adlai E. Stevenson within the Democratic Party.

The gist of what Mr. Childs has reported is this:

Democratic Party chieftains from farm and mountain States met in Denver early this month to plan presidential campaign strategy. They agreed that the Democratic nominee should offer a strong appeal to the farmers. Because former Governor Stevenson had taken a moderate position on farm legislation they came to the conclusion that it would be necessary to find a new standard bearer for 1956.

These leaders now interpret the Minnesota primary as proving them right. Senator KEFAUVER, so they say, outran Mr. Stevenson because the Tennessean took a more advanced position on agricultural price supports and the farmers of Minnesota rallied to his stand.

This is first of all a matter within the Democratic Party. Whom the Democrats nominate for President is primarily their own concern. They will be judged in November in terms of how their nominee rates by comparison with the Republican nominee.

But when a major party nominates for the presidency it takes a step that is also of concern to the entire country. For potentially that nominee, whomever he may be, is a prospective President. Thus the Minnesota primary and the deductions from it are matters of widespread public interest.

The former Illinois Governor developed a large and devoted following in a short few weeks in 1952 because he was something new and fresh in contemporary American politics. He pledged himself to "talk sense to the American people." Moreover he kept that pledge. He refused to promise more than he believed he could deliver. And he did not talk one way in one part of the country and another way in another part.

Indeed in the 1952 campaign Mr. Stevenson made it very clear in New Orleans that he believed that racial discrimination must pass from education, employment, and other important aspects of democratic life. And he let it be known in Texas how he felt about having 3 or 4 States gobble up the vast offshore oil wealth of the Nation.

Adlai Stevenson would be wholly out of character if he went about the country promising farmers the moon in an effort to be nominated. Were he to do so, he probably would lose as many votes as he would make. Millions of people are for Mr. Stevenson because he knows that there are no easy, pat solutions, because he invites them to serious, hard study of the issues, because he himself is the kind of man who will work thoughtfully and diligently on our problems within the framework of our institutions.

Can it really be true that these very qualities of sincerity and integrity which commended Mr. Stevenson after his nomination in 1952 should now handicap him in the 1956 race? If so something has happened to the sense of values of his party.

No one can be sure of how to weigh the factors in the Minnesota primary. If thousands of Republicans voted for Senator KEFAUVER to rebuke Democratic Governor Freeman and Senator HUMPHREY—and the number who did so apparently was large—the vote was not only not a vote on Mr. Stevenson's views and policies. It was not even a wholly measurable Democratic vote.

Certainly it would be an irony if a special situation in Minnesota started a political snowball that rolled up in Florida and California where other Stevenson-Kefauver tests are yet to come.

It would be an irony and it could cause the Democratic Party to offer less than its best-qualified men as its 1956 nominees. Our times call for the qualities of statesmanship. Folksiness and handshaking have their place but alone they are no substitute and never will be.

Our President Is Doing Something for the Old Folks

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. DEROUNIAN. Mr. Speaker, we all recognize the growing need for a positive and specific program for our senior citizens, an ever-increasing group. To aid in this, I introduced a bill during the first session of this Congress, H. R. 3307, and this is one of a number of bills seeking to offer a solution to the problems involved in caring for our old folks. Now the President has announced that a Federal Council for the Aging will be set up, to develop a coordinated policy and give the needed impetus to a definite and active program. The following article from the Baltimore Sun of April 8 sets forth an outline of the problem and the plans and I commend it to the attention of my colleagues:

COUNCIL ON AGING WILL BE CREATED—PRESIDENT TAKES STEP TO GET NEW UNIT ESTABLISHED

(By Rodney Crowther)

WASHINGTON, April 7.—Doing something for the old folks—who constitute an ever-enlarging percentage of the population—was this week recognized as one of the major concerns of Government.

President Eisenhower, taking note of the multifarious activities in behalf of the aged which are now being carried on by the Federal, State, and local governments, moved to create what he named "a Federal Council on Aging." Its task will be to co-ordinate the programs.

So much is being done already for the aged by so many departments and agencies and so much new is in the process of being set up, that the President and other responsible officials thought it was time that they begin letting their right hands know what their left hands are doing.

REVOLVING CHAIRMANSHIP

The new council, which is to have a revolving chairmanship, will be headed initially by Roswell B. Perkins, Assistant Secretary of Health, Education, and Welfare. Perkins has been at work on proposals for the council for more than a year.

In a letter to a dozen departments and agencies, who were asked to name representatives to the council, President Eisenhower made it plain that the aim of the council would be to supplement the efforts of the agencies already administering programs for the aged.

The major aim will be to develop a coordination of policy, of planning and programing, so that duplications and much waste effort can be avoided.

The initial move of the new council will be to gather together here in the national capital some 200 to 300 Federal and State officials who currently administer programs for the aged. The meeting will be held June 5 through 7.

DETAILS NOT COMPLETE

Secretary Perkins said today that the details and the agenda for the gathering have not been completed. It has not even been decided whether it will be a public or a closed meeting, but probably the latter.

"It will be the function of the council," President Eisenhower said in his letter to the departments, "to review existing programs in the light of emerging needs, and make recommendations to the appropriate departments and agencies as to emphasis, priorities and provisions for unmet needs.

"Initiation of new programs and activities, and changes in existing policies will remain the responsibility of heads of the departments or agencies directly affected."

Already there are well over a dozen major programs for the aged being conducted in the fields of health, housing, employment, insurance and retirement. Some are strictly Federal programs. Many are joint programs between the States and Federal Government.

Recently the Department of Health, Education, and Welfare took a look at what is already being done to help the aged and what has been proposed for legislative action.

It adds up to an astounding total of activities affecting in all well over half of the 14 million persons who are now in the category of aged—that is, over 65.

The two major programs, both in the social security program, are old-age and survivors insurance program and public assistance.

At the beginning of this year, insurance benefits were being paid to 6,400,000 persons aged 65 and over. This is an increase of 2 million persons in 2 years.

Monthly payments to the aged are now averaging $78 for a retired worker with no

eligible dependents and $130 for a retired couple.

HELP FOR BLIND

In the field of public assistance, which is a Federal-State program, there are currently 2,500,000 needy persons 65 and over receiving cash assistance. The Federal share of grants to States for old-age assistance is running around $946 million a year.

Federal-State assistance is also going to the blind—half of these recipients being over 65—and to totally and permanently disabled persons, more than half of whom are over 55.

The Federally aided public assistance programs are in operation in every county in the United States and in the Territories.

But besides these major activities many other Government programs are aimed at helping the aged.

The 1954 tax-revision act gave a credit for retirement income from public and private pension plans. Allowable deductions for medical expenses were liberalized, affecting older persons particularly.

EMPLOYMENT PROGRAM

The Department of Labor has initiated a broad program of research and action toward helping older persons find employment.

Approximately 3 million of the over-65 are gainfully employed and projects under way to offer job opportunities to the aged are expected to cause a steady increase in the figure.

There has been an intensification of research in the field of chronic disease, also of great benefit to the aged.

Since 1953 appropriations for medical research have increased from $51 million to $93 million.

Under the 1954 amendments to the Federal-State hospital-construction program a new emphasis has been given to construction of chronic-disease hospitals and nursing homes, it has been pointed out. These offer the aged long-term care at a lower cost per patient-day than the general hospital.

MANY PROPOSALS MADE

Vocational-rehabilitation programs have made vast strides in the last few years, benefiting thousands of aged. Since 1954 the number of persons rehabilitated annually has tripled.

Many proposals have been made for enlarging some of these programs and adding new ones.

For example, Congress has been asked for added funds for programs to provide broader employment opportunities. An increase in Federal funds of over $4 million has been asked for vocational rehabilitation programs.

Congress has been asked for increased support for Labor Department activities aimed at broadening job opportunities for elderly workers.

Legislation is now pending to broaden social-security coverage and make it virtually universal.

The administration has asked Congress for an increase of $27,400,000 in appropriations over the current year for the National Institutes of Health. Of this, $3,100,000 is for heart research and related activities; $7,300,000 is for cancer research; over $2,400,000 is asked for arthritis research.

As for the special problems of mental illness, the budget submitted to Congress asks an increase of $3,600,000 in research and related activities and, contingent on recommended legislation, $1,500,000 for a program of grants to the States for special demonstration projects in treatment of mental illness.

Health services to the aged are also being expanded and improved. Legislation has been requested for additional public assistance grants, to be matched by the States, for paying medical-care costs of indigent older persons.

Oil and Gas Leasing Regulations for the National Wildlife Refuges

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from Mr. Charles L. Horn, chairman, Minnesota Emergency Conservation Committee, Minneapolis, Minn., addressed to Assistant Secretary of the Interior Wesley A. D'Ewart on March 27, 1956, regarding oil and gas leasing regulations for the national wildlife refuges.

The letter follows:

MINNESOTA EMERGENCY CONSERVATION COMMITTEE,
Minneapolis, Minn., March 27, 1956.

Mr. WESLEY A. D'EWART,
Assistant Secretary of the Interior,
United States Department of the Interior,
Washington, D. C.

DEAR MR. D'EWART: We thank you for your letter of March 21 in which you make further comment with reference to the program of the Department of Interior regarding oil and gas leasing regulations for the national wildlife refuges. You state that the leasing regulations are ground rules for the application of laws established by Congress. We agree and wish to add that the laws have been on the statutes since 1920. However, it is well to bear in mind that the Secretary has discretion in the issuing of leases and the records will show that only 11 were issued during the 33 years prior to 1953. Both former Secretary Wilbur and former Secretary Ickes refused to issue some leases on refuges and their action was upheld by the courts.

You make much of the regulations employed by the Michigan Department of Conservation for safeguarding wildlife lands in that State and state that there has been no loss of wildlife values on the Michigan refuge lands because of oil and gas development over a period of several years. May we say in reply that there is always danger from leaks, even with the big operators who are reliable but what about the wildcatters? There is also interference with trucks, drilling rigs, seismograph explosions and other exploratory activities, as well as serving pumps always are a nuisance and are not compatible with wildlife. Even when there are no direct losses, leasing is not good.

By your letter you would have us believe that the leasing program has been a minor one, even though 577 leases have been granted, not 89 as first reported. It would appear that these additional several hundred leases were issued without the knowledge or consent of the Fish and Wildlife Service and, therefore, your statement that all of the leases have had the approval of the Service would appear to be groundless.

There has also been a reference made to the "stop order" that Secretary McKay was supposed to have had in effect. It is a matter of record that within a month after you testified before the House Committee the Department admitted to 495 more leases.

We acknowledge that the Secretary has the authority under the basic law, but it is our opinion that the Secretary could have exercised the same rigid control as was maintained by his predecessors. As a matter of fact, there is no justification from the standpoint of supply of oil, for the Department's own records show that the oil industry is refraining from pumping 1½ million barrels of oil per day now from producing wells due to economic reasons.

In reviewing the program of the Department of Interior for the past 3 years, we can express no surprise over the position taken by the Secretary with reference to these gas and oil leases. The leasing program is in keeping with the Department's policy on all natural resources: Its hydropower policy, its Indian land policy, its California duck-baiting policy. During these 3 years practically nothing has been held sacred, including our parks and our monuments, and the Fish and Wildlife Service has lost many of its key career men, and their places have been filled by old men turned out of administrative positions in several States. It has been a 3-year program of the Government by edict insofar as the Interior Department is concerned; the two most glaring examples being that of the edict on the sale of Indian land and the edict of opening inviolate game areas established by statute to wildcatters.

Lastly, you make mention of the fact that the revised oil and gas regulation for national wildlife refuges has been in effect now for more than 3 months, and during that period no leasing has been done except on the Lacassine National Wildlife Refuge in Louisiana. You are right. The reason for this, of course, is because opposition became so strong that the Department had to call a halt. However, there are about 300 applications on file and it is a matter of record that the Department disregarded its own "stop order" and it may be assumed that it will go ahead again when it can.

Sincerely,

MINNESOTA EMERGENCY CONSERVATION COMMITTEE.

A Bill To Amend the Civil Aeronautics Act of 1938

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. ZELENKO. Mr. Speaker, today I am introducing a bill to amend the Civil Aeronautics Act of 1938 requiring that no civilian aircraft should be operated within the territorial limits of the United States, unless the owner thereof has given proof of his ability to respond in damages in such amounts as the Board shall prescribe, for the death or injury to any persons or damage to property resulting from the operation of such aircraft for which the owner thereof may be liable.

Commercial airlines adequately protect the public in this regard. However, the rise in the number of privately owned civilian aircraft with its concurrent rise in accidents have caused a problem somewhat similar, although smaller, to that involving the use and operation of automobiles.

Many thousands of our citizens have been maimed and killed, and their property destroyed in accidents involving the use of privately owned airplanes. Adequate compensation for such damage has not been forthcoming due to the

fact that many private owners of such aircraft are not financially responsible. This has resulted in economic privation and permanent suffering of the victims of these accidents who have found themselves with uncollectible judgments or claims.

This bill will provide adequate protection for the public in such situations.

Fluoridation of Drinking Water

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. WIER. Mr. Speaker, under permission to extend my remarks in the CONGRESSIONAL RECORD, I include a letter from F. B. Exner, M. D., F. A. C. R., 316 Medical and Dental Building, Seattle, Wash., to Dr. Leona Baumgartner, commissioner of health, New York, N. Y., relative to the fluoridation of public drinking water in the State of New York.

Dr. Exner's letter is as follows:

SEATTLE, WASH., *April 6, 1956.*

Dr. LEONA BAUMGARTNER,
Commissioner of Health,
New York, N. Y.

DEAR MR. BAUMGARTNER: There appear to be points on which it is necessary to set the record straight. A letter bearing your signature, and dated March 27, says:

"As to the Exner material, we did have a copy of Dr. Exner's letter submitted to Mayor Wagner shortly after our report appeared."

Your letter of transmittal to the mayor, relative to your report, was dated October 24. My report was sent in three installments—in May, August, and October. Only the last was received after your report was sent. Yet your report was largely composed of material which was completely discredited in my first two installments, and no attempt was made to refute my evidence.

Your letter of March 27 goes on to say:

"In it, Dr. Exner repeated the viewpoint he expressed during the 1952 Delaney hearings, but it had no new material."

I did not testify before the Delaney committee. It is not viewpoints but facts that concern us. And my report contained a vast amount of new material.

Moreover, I did testify before the Wolverton committee in 1954. That testimony was available to you, and is sufficient to discredit your report completely, yet you made no attempt to refute or answer it.

Another letter bearing your signature, dated April 2, says:

"A hasty glance shows that with many articles coming from Dr. Exner it contains instances of material quoted out of context and of earlier references which have been refuted later on."

In case you didn't know, all quotations are out of context; and this is never grounds for criticism unless the omissions are such as to subvert the meaning. This cannot be revealed at a hasty glance, but only by careful comparison with the originals. I have encouraged this by giving exact references to my sources; and if you had investigated you would have found that the originals are even more damning than space permitted me to demonstrate, even by quotation.

You will also note that I have used exact and extensive quotations, just to avoid any possible charge of distortion or quoting out of context; whereas your report consists almost wholly of unsubstantiated claims, and of indirect quotations, without exact references, and often distorted almost beyond recognition.

As for the "earlier references which have been refuted later on," I fail to see how this strengthens your case, since they are the reports on which your report is based; and since, moreover, my purpose in quoting them has been to demonstrate their complete lack of reliability. If it is true that they have also been refuted by others, that merely adds weight to my report, and invalidates yours even more completely.

As an example of your uncritical acceptance of questionable statements, on page 24 you say: "The Bartlett group showed 'no clinically significant physiological or functional effects resulted from prolonged ingestion of water containing excessive fluoride, except for dental fluorosis.'" If you had examined the actual data, you would know that the death rate in the upper middle-age group of subjects (50–65 years) was more than 6 times as high in Bartlett as in the control city of Cameron.

Perhaps death is not a "clincially significant physiological or functional effect" or, on the other hand, perhaps the difference was not caused by fluoride. The point is, however, that no attempt was made to prove that it was not. The difference, like many other differences that were found, was simply ignored. And, on February 29, 1956, Dr. Arnold, of the Public Health Service, admitted that this was the only study of the effects of fluoride on adults, on which the claims of safety are based.

As I pointed out to the mayor, in my open letter of January 20 (published in the CONGRESSIONAL RECORD for January 26, page A833), Dr. Dean, father of fluoridation, was forced to admit under oath that charts he had presented in evidence to the California Public Utilities Commission contained data he knew to be worthless when he made the charts. Yet he has published the same charts in the January 1956 issue of the Journal of the American Dental Association as evidence of the safety and effectiveness of fluoridation.

You used conclusions from the same data in your report, yet if you had read my report, or examined the original data, you would have known they were worthless. You did neither, or you just didn't care.

On page 6 of your report, you say: "In general, fluoridation involves the supplementary daily ingestion of about 1 milligram of fluoride ion per person."

If we are talking about people and not averages, this means that everybody drinks about a quart of water a day, and you don't have to be a scientist to know that that isn't true. Water consumption from the public supply varies so widely that any effect of fluoride which occurs frequently enough to be recognized when there are 10 or even 15 parts per million of fluoride in the water, will occur occasionally where there is 1 part per million. In other words we can know that in any large population, some of the people will be seriously poisoned by the recommended concentration of fluoride.

This was why 1.0 ppm was set as the maximum tolerance for fluoride in a public-water supply, by PHS in 1942, and there have been no proofs of greater safety since. There is, in fact, more evidence that this amount is dangerous than there was at that time.

In your letter of April 2, you say "So far we have not found a single case in which harmful effects have been proven."

In the first place, the burden rests on you to prove that what you propose is safe, rather than on those who object to poison in their water to prove it dangerous. No such proof is offered, only third hand opinions based on discredited evidence.

If you had looked, however, you could have found evidence of harm. Cases of mild fluorosis are now officially reported from Newburgh. (See JADA, vol. 52, pp. 321–2.) Mild fluorosis is the kind you tell us will never be found with fluoridation. Dean's 1934 classification was used, according to which, in mild fluorosis:

"The white, opaque areas on the surfaces of the teeth involve at least half the tooth surface. The surfaces of molars, bicuspids, and cuspids subject to attrition show thin white layers worn off and the bluish shades of underlying normal enamel. Faint brown stains are sometimes apparent, generally on the upper incisors."

Such teeth are so disfigured you can see it from across the room; and the brown stain, which is faint in children, because progressively darker and disfiguring as long as the teeth are retained.

The disfigurement, however, is the least important part of the damage. It was produced by actual poisoning of the enamel-forming cells of the tooth bud while the tooth was forming and before it erupted. And we now know that at the same time that the tooth buds were poisoned, other body cells were poisoned and other functions were disturbed. The enamel damage is the most obvious, and one of the earliest effects to become evident. Other effects may take 40 years to give trouble, but that only makes them more treacherous, not less serious.

When the experimenters at Newburgh say the mottling they have produced is not objectionable, they do not mean that it is not objectionable to those who have it. They mean that they, themselves, do not object to causing harm to that many people. In fact, a spokesman for the Public Health Service said, in 1951:

"The criterion we have been using is that if there is some 10 to 20 percent fluorosis in the community, that would not be objectionable because in those places the degree of intensity is not greater than the accepted definition of mild" (4th annual conference of State Dental Directors, p. 65).

If you investigate, you will be forced to the conclusion that these things are true. Then you should certainly withdraw your recommendation to flouridate.

If you fail to do so, we can only conclude that you, like the Public Health Service, are willing to cause positive harm to 1 person in 5 in the hope of conferring a hypothetical benefit on some portion of the remainder. If such is your attitude, New York City is badly in need of a new health commissioner—one with a conscience, and who will take her duties seriously.

Sincerely yours,

F. B. EXNER,
M. D., F. A. C. R.

SEATTLE, WASH.

P. S.—Since this is a matter of grave public concern, I shall have to make this an open letter. F. B. E.

Serious Situation Facing New England Textile Industry

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

At a breakfast meeting of the New England Senators and Representatives with members of the New England Governors' Textile Com-

mittee today, Seabury Stanton, industry member from Massachusetts and chairman of the executive committee of Berkshire Hathaway, Inc., outlined the serious situation which faces the textile industry as a result of ever-increasing Japanese textile imports into the United States.

Mr. Stanton said that imports of countable cotton cloths from Japan had tripled between 1953 and 1955 and that Japanese exports to this country in January and February of this year were at a rate almost doubled that of last year. He pointed out that in the case of certain New England fabrics, such as velveteens and ginghams, the Japanese were supplying from 50 to 80 percent of the American market.

During the last quarter of 1955 when the new low tariff rates were first in effect, the Japanese imports greatly alarmed the industry, but because of a slight lift in the general textile activity during that period, the significance of these imports was not generally understood by the public. With business currently declining and prices being depressed, the increasing imports are going to cause and aggravate unemployment and short time. Some mills have already curtailed in New England and elsewhere as a result of this situation. Berkshire Hathaway, which operates 14 mills in New England, will have to curtail production unless relief from this situation is secured promptly.

Stanton termed as irresponsible the policy of the Government in reducing the tariffs and encouraging unrestricted Japanese imports at a time when employment was falling and earnings are low in the textile industry. "The Federal Government should be thinking of ways to correct the depression in the industry rather than to aggravate it," he said. "Repeated denials by Government officials that the industry is considered expendable is beginning to have a hollow sound," said Stanton, "as layoffs and curtailment continue and Japanese textile employment, profits, and production rise.

"The textile industry wants to share in the dynamic American economy and the workers feel that they should share in the rising standards. This can never be accomplished so long as our Government adopts a laissez faire attitude toward cheap, low wage Japanese competition. We should strive to bring the Japanese up to our level and not drag American industry down to their level," he said.

Catholics and the International Labor Organization

EXTENSION OF REMARKS

OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 11, 1956

Mr. KELLEY of Penusylvania. Mr. Speaker, under permission to extend my remarks, I am including the statement of the Catholic Association for International Peace concerning the International Labor Organization.

You will recall that this International Labor Organization has been under fire from the United States Chamber of Commerce and the National Association of Manufacturers' representative, Mr. William L. McGrath.

I have, of course, been a strong advocate of the ILO after my experiences as a participant on four different occasions.

The statement follows:

CATHOLICS AND THE INTERNATIONAL LABOR ORGANIZATION—POLICY STATEMENT BY THE SUBCOMMITTEE ON ECONOMIC LIFE

The International Labor Organization (ILO), one of the oldest of the so-called specialized agencies of the United Nations, is currently being subjected to severe criticism in certain circles in the United States on the grounds that the organization is now dominated by the Soviet Union and some of her satellites and is being used by the Communists for their own evil purposes. Within recent weeks this criticism has taken the form of an outright demand that the United States withdraw from the ILO. The extreme nature of this criticism and the persistence with which it is being repeated and publicized have forced a number of American Catholics to make a searching examination of conscience with regard to the ILO. The question inevitably arises: If the ILO, as is claimed, is really an instrument of Communist expansion, should not the United States break away even at the risk of destroying the Organization?

THE ISSUES CONFRONTING CHRISTIANS

The Catholic Association for International Peace cannot stand aside in this controversy. Participation in international life is a duty imposed by numerous directives issued by the Supreme Pontiff himself, and cannot be evaded by any conscientious Catholic. Moreover, it is incumbent on all of us to try to promote the cause of international peace. On the other hand, we do not want peace on any terms, and the means we employ to secure it must be adapted to the aims we seek. In other words, we must ask ourselves whether or not the ILO as at present constituted is an adequate instrument whereby Catholics, in cooperation with other men of good will, can promote international peace.

HOPES PLACED IN THE ILO

The ILO, which was established immediately after World War I, is the outcome of a generous idea, which opened up great hopes for the future. The representatives of employers, workers, and government had never previously met together at the international level to discuss questions of common concern unless their immediate interests were at stake. The founders of the International Labor Organization hoped to provide them with an international forum where, if possible, labor problems could be studied objectively and conflicting points of view could be frankly discussed in an atmosphere of mutual respect. The purpose of the discussions is not to pass laws at the international level, nor to amend the laws of individual countries behind the backs of their respective parliaments or legislatures, nor even to impose regulations on the countries concerned. The ILO issues no binding instructions; it works by means of persuasion. Nonetheless its influence is very real. As was noted by the Most Reverend Patrick A. O'Boyle, archbishop of Washington, a few years ago: "The ILO * * * is a living proof of the fact that it is possible for the nations of the world to cooperate with one another on behalf of the international common good."

The ILO is a meeting place for men with widely differing backgrounds, not only by reason of their social position (as Government officials, company directors, employers, wage earners, etc.), but also by reason of their political and religious opinions. This wide range enables the most conflicting opinions to be compared, and this in itself is conducive to better understanding and mutual confidence.

The ILO can take pride in its contribution to the development of human relations in industry. It is, as has been said, an international forum, where men of good will who believe that social progress ought to be the fruit of joint cooperation among the parties concerned contribute their hopes, their knowledge, and their experience in an effort to solve their problems and promote the general welfare. In the words of a former United States employer-delegate: "The ILO has served as a valuable forum for the presentation of progressive ideas on modern capitalism, on facilitating cooperation between management and labor."

An organization of this kind was not launched without long preparation. The Peace Conference at the end of the First World War did not lightly establish an official institution to deal with labor problems by means of international discussion. It did not require the peoples to accept an administrative body for which they felt no need. The International Labor Organization is the result of efforts stretching back for more than half a century.

The deplorable consequences of industrialization were clear to thinkers and statesmen as well as to the leaders of the workers and of industry; but unregulated competition made it impossible to adopt the measures that were needed in to name of common humanity.

The leaders of the Catholic social movement were acutely aware of this. As early as 1884, Monsignor Mermillod founded an international union in Fribourg, which met once a year to discuss current problems in the field of labor-management relations and in the field of social legislation. In 1887 the Swiss Descurtins urged the Federal Council of his country to call an international conference to organize an International Labor Conference. It was this which led to the Berlin Conference of 1890, at which the Holy See was represented by Bishop Kopp, of Breslau.

The year 1891 marked the appearance of Pope Leo XIII's encyclical, Rerum Novarum, which called upon Catholics everywhere to work for a worldwide solution to the labor problem. Moreover, in the early years of this century, the Holy See sent an official representative to the meetings of the International Association for Labor Legislation, and regularly made a financial contribution to it. It did so because participation by the church in an international effort to assist the workers and to bring about a far-reaching settlement of labor problems was the logical outcome of her social teaching.

The influence of the Catholic social movement on the establishment of the International Labor Organization was, moreover, acknowledged by the first Director-General of the International Labor Office, who wrote, at the time of the promulgation of Quadragesimo Anno: "The ILO is well aware that it is not a spontaneous creation, or the result of a sudden burst of enthusiasm, but rather that it owes it origin to efforts carried out over the years to bring about a close and active union of all the forces that followed the same ideals. The seed was sown in fertile soil which had been carefully prepared by workers who were devoted to social justice, among them those who took their inspiration from the encyclical Rerum Novarum."

Pope Pius XI himself made a similar statement in Quadragesimo Anno: "Furthermore," he said, "after the terrible war, when the statesman of the leading nations were attempting to restore peace on the basis of a thorough reform of social conditions, did not they, among the norms agreed upon to regulate in accordance with justice and equity the labor of the workers, give sanction to many points that so remarkably coincide with Leo's principles and instructions as to seem consciously taken therefrom?"

These being the origins of the ILO, it is not surprising that Catholics from all countries should have played an active part in its work, and that from time to time some of the delegations of the organization should

have included priests as well as laymen. While they cannot all be named here, mention should be made of a name of which Americans are justly proud—that of Msgr. Francis J. Haas, later Bishop of Grand Rapids, Mich.—who was chosen by the American Federation of Labor as a member of its workers's delegation to the Philadelphia Conference in 1944 (a unique case in the annals of the ILO).

QUESTIONS FOR THE FUTURE

At the present time, however, several questions arise in the minds of many Catholics in our own country. Does not the work of Catholics within the ILO—however admirable it may have been—belong to the past? Has not the situation changed since the Soviet Union and her satellites have become members of the ILO? Does not their membership in the organization provide them with a forum for expounding their own ideas and spreading their propaganda? May Catholics continue to work in an organization in which Communists are associated with them? Does this not ignore the clear warning of the Holy Father, in his encyclical, Divini Redemptoris, that "No person who wishes to preserve Christian civilization may collaborate with communism in any way whatsoever"? Does Catholic participation in the ILO violate the Decreee of the Holy Office of July 1949, which forbids Catholics, under ecclesiastical penality, to promote or support communism?

A REALISTIC SOLUTION

It is true that the Communists have 32 votes out of a potential 280 votes in the ILO Annual Conference, and that they are represented in the ILO governing body in the ratio of 1 to 39. We must also keep in mind that in the international labor field there are, besides the Communists, others who are either steeped in or tinged with Marxian doctrine. Nevertheless, the ILO is not a Communist organization or a Communist-dominated organization. Catholic participation in the ILO—and the same may be said for United States participation in general—is directed toward making the principles of social justice prevail in the international field. When Communists appear on the scene, are we to withdraw and make a weak surrender without a fight?

Here in the ILO we have the whole world of labor represented. When we work to protect the truth and show that it is only on the basis of sound principles of social justice that labor can find an answer to its problems and preserve the freedoms and dignity of the individual, are we not contending against communism and Marxism? If the ILO were to become an instrument or agency of communism or Marxism, then indeed we should be the first to denounce it and to recommend that the United States withdraw from it. As long, however, as it remain what it is, we should remain in it and contend for what is right. We have a duty as a nation to make our contribution to the international family of nations. In doing this, we must not be merely negative in opposing what is false, but also constructive in trying to make sound principles prevail.

Instead of advocating withdrawal, it would be preferable for American Catholics to insist that the United States participate in the ILO in a constructive, intelligent, and wholehearted manner, accepting its full share of responsibility for shaping the activities of the organization so as to promote social justice and international peace. This requires the cooperation of Americans from all walks of life who can work together with imagination and common sense—of government officials, trade unionists, and employers. Our government should accept, not evade, its responsibility in the matter of conventions on labor standards. Our government, employer, and worker delegations should seize the opportunity to use the ILO as a forum to promote social progress and to stimulate the improvement of social and economic conditions in less developed countries. It is time to go forward and assume leadership, not to withdraw and allow the Communist bloc to benefit from our default.

THE LEADERSHIP OF THE HOLY SEE

In conclusion, it should be pointed out that Catholics who are interested in this controversy will want to keep in mind that the Holy See, as already indicated, has been one of the ILO's strongest supporters from the very beginning of the organization. In November 1954, the Holy Father enthusiastically welcomed the members of the ILO governing body in a special audience at the Vatican and, echoing the sentiments of his predecessor, vigorously endorse the important work that they are doing for the cause of social justice. "Over the past 30 years and more," His Holiness said, "you have patiently and untiringly built up an achievement of which you can justly be proud."

In January of the present year, Father Joblin, a French Jesuit, was appointed to the staff of the ILO, replacing Father Albert LeRoy, S. J., a veteran member of the ILO secretariat. Father Joblin's appointment was made with the advice and consent of the Holy See, long after the problem of Communist representation in the ILO became a public issue. This obviously indicates that the Holy See is not prepared to withdraw its support of the organization.

In summary, the Communist problem in the ILO is admittedly a serious one, but surely it can be handled by methods less drastic than the withdrawal of the United Staes from the organization. As a matter of fact, United States withdrawal would only make matters worse and would play directly into the hands of the Communists. In the absence of the United States, the Soviet Union and her satellites could the more easily use the ILO as a sounding board for their own propaganda to the embarrassment not only of the United States but of all the other countries of the free world. Indeed, there is reason to believe that the Soviet Union and her satellites have come into the ILO precisely for the purpose of destroying the organization. It is our judgment that United States withdrawal would help them to achieve this end.

India Questions Advisability of United States Aid Program

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, there has been considerable comment at home and abroad regarding our foreign aid program and especially the application of it to India.

As a part of my remarks I am including an article that appeared in the Times of India under date of January 18, 1956. It is a statement by one Mr. J. J. Singh. Members of Congress who are interested in a viewpoint which has not often been expressed by nationals of other governments will be interested, I am sure, in the statement by Mr. Singh.

The article follows:

REFUSAL OF UNITED STATES AID WILL ENHANCE INDIA'S PRESTIGE—MR. J. J. SINGH'S STATEMENT

Mr. J. J. Singh, president of the India League of America, said in New Delhi on Tuesday that India should decline any more aid from the United States as acceptance of it, he felt, contributed to a worsening of Indo-American relations.

Mr. Singh, who has worked for Indo-American understanding for many years, said the aid created certain expectancies in the United States, which India was rightly not willing to meet, and this in turn created disappointment and bitterness in America.

India could do without United States aid, he argued in a statement and declared she would increase her national prestige if she declined it.

Mr. Singh, who has been touring India for the past 2 months and is returning to America shortly, said he was equally against receiving aid from Communist countries and added, "Our slogan from now on should be: Trade but not aid."

The following is the text of Mr. Singh's statement:

"After mature consideration and study of the matter for the past 2 years, I have come to the conclusion that India should thank the United States for the aid so far received but decline to accept any more aid from the United States henceforth. I propose this because I am dedicated to the cause of creating better understanding between the people of India and the people of America.

"FRAYED RELATIONS

"It is a well-recognized fact that relations between India and America are not too happy. I wish to suggest that one of the causes for the frayed relations is the fact that India receives United States aid. This creates certain expectancies in the United States which India is rightly not willing to meet. That, in its turn, creates disappointment and bitterness in America, thus worsening Indo-American relations.

"Can India do without United States aid? I think she can, even though India badly needs foreign exchange for her second 5-year plan. There is a gap of approximately $1,600,000,000 between what India needs and what she expects to be able to raise. But this gap is not going to be filled by America. In the next 5 years, the most India may expect to get from the United States Government, either in the form of aid or loan, is about $300 million.

"In 1956, fiscal, the United States Government asked the United States Congress to appropriate $72 million for India. This figure was cut down by the United States Congress to $60 million. And, but for the urgent entreaties of the United States Ambassador in New Delhi, Mr. John Sherman Cooper, this sum would have been further cut by $10 million.

"From all indications and information available, it would be correct to assume that future aid will remain at the present level. This is further confirmed by President Eisenhower's budget message of January 16. It would be wrong to assume that if the Democratic Party were to come into power after the 1956 presidential elections, American aid to India will be substantially increased.

"According to the American system of Government, all funds must be appropriated by the United States Congress. The President and the executive branch of the Government can only make requests. As a result of my study of United States congressional circles, I can boldly state that economic aid to India will not substantially increase, whether the Democrats are in power or the Republicans are in power. The fact is that American tax-

payers are sick and tired of shelling out their money to foreign countries and particularly to countries which are not in their corner. And India is not in their corner.

"Will America be offended if India declined to take this aid? I can give an emphatic 'no,' as an answer. Not only will most Americans welcome such a move by India but it will increase our national prestige. Instead of being treated as 'ungrateful beggars' we will be treated with more dignity and respect.

"This is not to say that the overwhelming majority of the American press, which attacks us mercilessly today, will all of a sudden end its tirade against us. But, at least, no one will be able to accuse us of 'taking advantage of the cold war.' Nor will they be able to say that while we are taking money from the United States, we are siding with the Communist bloc to the detriment of the United States.

"BURMA'S CASE

"Burma has declined to take United States aid. Ever since that day, Burma's stock and prestige has gone up in America. Burma is as much a 'neutral' as India is, but one seldom sees Burma being attacked for her neutrality in America while we are constantly flayed on that score.

"A certain progressive section of American opinion as represented by the former United States Ambassador at New Delhi, Mr. Chester Bowles, is strongly in favor of the continuance of United States aid to India. This group feels that if India—a democratic republic—fails to build herself up economically, industrially and otherwise, and if, on the other hand, Communist China, a dictatorship, succeeds in her efforts to build herself economically and industrially, a dangerous example will have been set for the underdeveloped countries of Asia, who might then adopt totalitarian methods to achieve their ends.

"Basically, the argument is correct. But in practice, it does not stand scrutiny. Is it being contended that if India did not receive 50 or 60 million dollars annually from the United States, she will go Communist? The second 5-year plan envisages an expenditure of almost $14 billion in both the public and private sectors. Surely no one, American or Indian, can believe that out of this gigantic sum of $14 billion, the lack of $300 million from America will be the deciding factor whether India remains a democracy or becomes a Communist state.

"I must add that I am not opposed to India receiving economic help from international organizations, voluntary agencies, foundations, etc. Nor am I opposed to American private enterprise investing in India on our terms, or American industrialists, selling us machinery plants and other capital goods on a mutually suitable credit basis. I am opposed only to United States Government aid which has to be legislated and at which time United States Senators and Congressmen and the press have a field day attacking our leaders and our country. I am not being chauvinistic when I say that the time has come when we should think of our national honor and not expose ourselves any more to untempered tirades against us by continuing to take this aid.

"Besides these considerations, our generation will have a legacy of great faith and confidence if we were to build up our country without outside aid. Therefore, I am equally against receiving aid from Communist countries. I think our slogan from now on, should be, "Trade but not aid."

"This may create additional burdens for our people and may require greater sacrifices, but under the leadership of Prime Minister Nehru, I believe, our people will willingly tighten their belts and cheerfully make sacrifices in the service of the motherland."

Anglo-American Position in Middle East

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, April 9, 1956

Mr. MULTER. Mr. Speaker, permit me to direct the attention of our colleagues to Mr. Joseph Alsop's column of April 2, 1956, in the New York Herald Tribune, which is as follows:

MATTER OF FACT

(By Joseph Alsop)

THE HIDDEN CRISIS

LONDON.—A bright spring sun has shone on London all this past week, bringing out the young green in the parks and squares, and gilding the whole beautiful, luxurious London scene with an extra sheen of gaiety and hope. But beneath the smiling surface, at least in the small circle of those who know the inwardness of Britain's world position. Middle Eastern developments are causing gloom so deep that it all but approaches despair.

"It feels now like 1936 or even 1937." Again: "This is the worst moment in the last ten years; I've not felt like this since just before Munich." And once again: "Finding a way out in the Middle East is so urgent that it may not be just a matter of days, but even a matter of hours."

These are not the remarks of shallow and hysterical men. They are statements that have been made to this reporter in the past few days by responsible and experienced leaders of the British government—brave men who have played great parts and have not flinched or quailed through all the perils Britain has experienced since the rise of Adolf Hitler.

The third of the foregoing quotations, moreover, is a paraphrase of the summation in a personal message sent by Prime Minister Sir Anthony Eden to President Eisenhower some days ago through an American official with whom the Prime Minister discussed the present Middle Eastern situation.

The opinions the Prime Minister expressed were so grave in all their implications that the American official asked for a summary of the conversation, in order to make sure his report was correct in detail. The hard-driven Prime Minister himself wrote out the informal message on the spot.

This is only one of a series of similar British messages to Washington, furthermore, all sent in recent days and all on the same theme. A very long formal message, setting forth the entire situation in fullest detail and urgently asking for determined American action on several fronts, was sent off rather more than a week ago. A further message, asking for clear proof of American support for the Baghdad Pact in the form of economic aid, was subsequently sent by Foreign Minister Selwyn Lloyd to Secretary of State John Foster Dulles.

As these words are written, the American response has not yet come through. The long days of waiting, no doubt occasioned by the absence of both the President and Secretary of State from Washington until only a few days ago, have given the British leaders the feeling of "shouting warnings into a feather bed." Although Prime Minister Eden has just visited the President, some members of the Cabinet have even advocated another flight to Washington, either by Eden himself or by a qualified personal emissary capable of putting the facts before President Eisenhower on a man-to-man basis.

Such, then, is the atmosphere within the governmental circle. The cause of it is relatively simple. In brief, the abrupt dismissal of Lt. Gen. Sir John Bagot Glubb from command of the Arab Legion in Jordan revealed a much greater fundamental insecurity in the British position in the Middle East than had been previously imagined.

Perhaps the London view is wrong, but the wisest men here think there is momentarily danger of a new coup in Jordan, paid for by Saudi Arabian oil dollars, organized by the Communist underground, and spurred on by the violent propaganda of the Egyptian radio. Another successful coup in Jordan, installing an anti-Western government there, would place the pro-Western government of neighboring Iraq in serious danger; and in this and other ways would directly imperil Britain's access to the vital middle eastern oil source. In addition, it would vastly increase the likelihood of an Arab-Israeli war this year—and the chances of war this year are already quoted at even by the highest authorities in London.

Jordan is by no means the only point where the situation is thought to be near the explosion point. Britain simply has not the military strength and economic resources needed to contain the Middle Eastern situation single handed. Meanwhile, no common Anglo-American policy in the Middle East has yet been agreed on in working detail. No agreement has even been reached in Washington on the practical implementation of the so-called Tripartite Declaration, by which we are committed to join Britain and France in punishing any aggressor in the Arab-Israeli conflict. In these circumstances, Britain is like a man who feels an enemy's hard fingers reaching for his jugular vein (which in Britain's case is the Middle Eastern oil source), yet can do nothing to ward off the attack. The blandest complacency appears to reign in Washington. But it is also well to remember that just as Britain's jugular vein runs through the Middle East, so too the strategic and political jugular vein of the United States of America happens to run through Britain.

Dependent Medical Care Bill

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Wednesday, April 11, 1956

Mr. JACKSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Washington Post on the bill to provide medical care for the dependents of military personnel.

There being no objection the editorial was ordered to be printed in the RECORD, as follows:

MILITARY CARE FOR CIVILIANS

The bill providing medical care for the dependents of military personnel which slipped through the House the other day calls for close scrutiny in the Senate. Its aim is laudable. At present the dependents of servicemen are given hospital and medical care if they live near military facilities; otherwise they are left to fend for themselves. Certainly this discrimination should be eliminated, and we think it is reasonable for the Nation to assume full responsibility for the medical care of the families of its defenders. Some large questions arise, however, as to how this care should be provided.

The measure passed by the House would allow the servicemen to have his dependents cared for in military hospitals or to

obtain health insurance with the Government paying part of the cost. As the insurance benefits he would obtain would afford far less security than medical care in Army, Navy, or Air Force hospitals, the emphasis would necessarily be upon expansion of those facilities to care for all, or nearly all, servicemen's dependents. Not only would this entail a great expense to taxpayers; more serious, it would result in the drafting of doctors to treat the wives and children of soldiers, with little regard for the needs of the remainder of the country.

Wives and other dependents of servicemen are civilians, and where feasible they should be cared for in civilian hospitals. It is true that military hospitals need some civilian patients so that their doctors will have experience in treating all types of cases. But this need can be met without moving toward the construction of military hospitals to care for nearly 3 million dependents of servicemen.

In our opinion, Congress ought to provide for paying all the cost of an insurance plan to assure medical care for these dependents, but the great majority of them should be treated in civilian hospitals when beds in such hospitals are available. It is not sound practice to build Federal hospitals and draft doctors to accommodate one group of civilians in discrimination against all others.

Dulles and Mohammed

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 22, 1956

Mr. MULTER. Mr. Speaker, I wish to direct to the attention of our colleagues the article by Mr. Elias Gilner in connection with the recent testimony of Secretary of State John Foster Dulles before the Senate Foreign Relations Committee. It appeared in the March 12, 1956, issue of Congress Weekly and is as follows:

REFLECTIONS IN THE NIGHT

(By Elias Gilner)

DULLES AND MOHAMMED

All of us have nightmares once in a while and I am no exception. The other night I found myself at the hearing of the Foreign Relations Committee when the Honorable John Foster Dulles was giving history-making replies to the Senators. I sat down between Senators FULBRIGHT and MORSE and listened.

As long as they dealt with oil and bases I did not interfere. The Senators have dealt with so much oil and natural gas lately that no outsider could possibly tell them anything. As to bases, everybody knows what base means after the shipment of the 18 tanks to haremland. So these two phases of the inquiry I permitted to proceed without interruption.

But when the Honorable J. F. D. made reference to the belief that a Jew had killed Mohammed, I had to break my silence.

"Mr. Secretary," I asked, "were you there when that murder was committed?"

He reflected for a while and with his wonted profundity replied:

"No, Senator; I don't think so."

I made a mental note of my new status and, glancing at Herbert Hover, Jr., I proceeded with more huzpah:

"Mr. Dulles," I said, "did your Saudi-Arabian informer give you the name of Mohammed's assassin?"

"No," said the Secretary.

"Did he tell you whether the assassin was Ashkenazic or Sephardic?"

"I don't follow you, Senator."

"I expected that," I murmured. "If you don't know the difference betwen these two, I'll drop the question. But I'll ask you another. Since you ventured into history, Mr. Dulles, and from this seat in the Chamber of the United States Senate, you are suggesting a new blood-libel, could you possibly tell me when, where, and under what circumstances Mohammed died?"

He mopped his brow. "It was in Arabia—ahem—in the seventh century; wasn't it?" he replied, uncertainly.

"Pretty good, Mr. Secretary," I encouraged him. "But you couldn't give me the exact date, place, and circumstances of his death; could you?" I made a point of stressing the word circumstances. He could not, and looked helplessly at me. Out of compassion for his mute plea, I said:

"O. K., Mr. Secretary of State, I'll give you the answer. No one killed Mohammed. He died of fever in the midst of those of his disciples who had deemed him immortal, in Medina, Arabia, June 7, 632."

Mr. Dulles, a bit discomfited, mopped his brow for a while in complete silence. Herbert Hoover, Jr., leaned over and whispered something into his boss' ear. Mr. Dulles nodded and pounded the table.

"But," he exclaimed, "the Saudi-Arabians declared that there was a Jew in it, so there must have been. After all, how can we doubt the word of slavetraders. Besides, our base at Dahren would be imperiled."

My patriotic feelings were aroused and I said: "Contrary to all precedents at such proceedings, and to your attitude toward Israel, I'll show you that I have a human heart. I'll help you.

"Well, there was a Jew, an apostate who became a leader of the faithful whose memory to the Saudi-Arabians, as Sunnites, is anathema. The man's Moslem name was Abdallah ibn-Saba. He was a Yemenite and founded the sect of ultra-Shiites long after Mohammed's death. You may recall, Mr. Secretary, that the Moslems are divided into Sunnites and Shiites. The Sunnites are the orthodox Moslems; the Shiites (the Iranians are Shiites) are sectarians (derived from the Arabic word shiah—a party) who championed Ali's right to be Mohammed's successor as the prophet's cousin and son-in-law. Abdallah ibn-Saba was an ultra-Shiite inthat he believed in the transmigration of souls and regarded Ali and his legitimate successors as incarnations of God. With this view the strictly orthodox Sunnites violently disagree. Over the ages Ibn-Saba's followers clashed with the Sunnites and in 780 they, with the aid of the more moderate Shiites, the Zaidites, even succeeded in wresting the caliphate from the Sunnites. This information, Mr. Secretary, will bring you no additional oil but will help you lay the ghost of a new blood libel, that is, if you are interested in correcting a false impression."

When I awoke, I recalled that the previous day was Purim and I had read the Megillah—the Book of Esther. Drowsily I began to wonder whether my meditations on Haman had not somehow catapulted me into the Senate Chamber. With the usual optimism of a Jew who had seen a lot of bad times and read about many more far worse ones, I said to myself: Ultimately all Hamans went down to defeat and the Jewish cause triumphed. Hence now, too, Israel's cause will triumph.

The important thing is to see to it that the ancient concept of kol yisroel chaverim (the brotherhood of Israel) is converted from a phrase into reality, from a thought into true brotherly deeds—big and small. The big deeds will give us strength; the small ones—warmth. And there is hardly a match or a substitute in our contemporary Jewish life for some of the heart-warming little deeds initiated by our forefathers in the distant past.

For instance, take shalach mones—the sending of gifts on Purim. Decades back in the European countries, however bad the overall conditions, however poor the given families, they managed on Purim to send a small gift, a token of a brother's heart throbbing for his brother in freiden un in leiden—in joy and in suffering. Here most of us have dropped this tradition and our Purim days are the grayer for it.

These meditations stemmed from a little incident which had occurred that morning. I was on my way out and opened the door when in walked three children. The oldest, a girl of about 12, was carrying a covered platter. It emitted a wonderful scent. The platter contained shalach mones from our neighbors, a young orthodox couple with whom we have a nodding acquaintance. But they remembered us on the morning of Purim. They remembered us even though we are not orthodox. What mattered to them was that we were Jews and neighbors; that in the hoary past an arrogant Amalekite, a Haman, conspired to annihilate us; that he failed; that the Jews of Susa celebrated, danced in the streets, showered gifts upon each other out of hearts brimming with joy.

And now, 26 centuries later, anti-Jewish, anti-Israel conspiracies are still taking place. Their forms are different, their intent the same. So my neighbors across the driveway felt the need of saying to me, to us; remember, our hearts are one. The chain between the Jewish hearts of Susa, of New York, of Tel Aviv and Jerusalem is not broken. Their hearts throb with joy in days of gloom and doubt. They can throb with hope and faith despite discouragement and cynicism.

Accept the token of it all—shalach mones. A platter of good things, good scents. A gift of remembrance that we are one. A small, warm, pleasure-bringing gift. A symbol of brotherhood. A reminder that big gifts to a people in peril can bring it new strength and ward off the threat.

(EDITOR'S NOTE.—As we go to press it is announced that Secretary Dulles, in a corrected text of his remarks before the Senate Foreign Relations Committee, has deleted his statement that Mohammed was killed by a Jew.)

Farm Legislation

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. DIXON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following telegram:

Congressman H. A. DIXON:

I would like to respectfully urge you reject the conference report on farm legislation and particularly request you eliminate the three price system on wheat dual parity provision rigid 90-percent support price on basic commodity. It is my opinion if present bill is enacted it seems certain to increase flour prices substantially and force the consumer to pay the equivalent of tax on the price of bread. This type of legislation in my opinion is unfair to the great mass of working people and should be defeated.

FRED KUHLMANN,
CONTINENTAL BAKING CO.
OGDEN, UTAH.

All Eyes on the House

EXTENSION OF REMARKS
OF
HON. HORACE SEELY-BROWN, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. SEELY-BROWN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of April 10, 1956:

ALL EYES ON THE HOUSE

Last week at his press conference President Eisenhower, asked for his opinion of the pending farm bill, which was still in conference committee, said he preferred not to render a final judgment until "a whole bill is in front of me." He admitted at that time, however, that he might settle for something less than the administration's original aims. "I have never been one," he told the newsmen, "to believe that you must hold up good things in order to attain perfection."

In some sectors there was a temptation to read into this statement a declaration that Mr. Eisenhower was prepared to make sweeping compromises on the mangled version of farm legislation that emerged from the Senate or the even more horrendous one that was nearing completion in the joint conference committee. It seems more reasonable to believe, however, that the President was merely demonstrating once more what he has demonstrated frequently in the past, namely, that he is a reasonable person—that he is prepared to accept things that he doesn't like, so long as the bill that comes before him represents a genuine attempt to carry out the spirit of the legislation he has requested.

In taking the position he did on that occasion Mr. Eisenhower seemed to be leaning backward in making it clear to the Senate-House conferees, who were abundantly aware that the bill on which they were at that moment putting the final touches, was unsatisfactory. If anything of the same spirit prevailed in the conference committee it was well concealed. The response of Senator ELLENDER's Senate Committee on Agriculture reflected the truculent, and even belligerent, attitude that characterized the record of the committee since it took charge of this legislation more than 2 weeks ago. If the President should veto the catch-all bill then entering its final stages, and ask only for the soil bank (the most important single proposal in his program), he was told that "he was going to wind up with a goose egg."

But those farm bloc leaders who may have interpreted as evidence of weakness Mr. Eisenhower's willingness to make certain concessions in order to get the substance of his program could have been told that they were courting trouble. It is one thing to give the President less than everything he has asked for; it is quite another to go along with him on the principal item in his program—especially when that promises something tangible for the farmer right away in this election year (which is the farm politician's idea of the way to solve the farm problem)—and then to proceed deliberately to write into the measure provision after provision that looks in the diametrically opposite direction.

Secretary Benson has rpeatedly warned Congress that, unless it was cleared up, the bill could not possibly be considered acceptable, but the farm members have completely ignored the warnings. It has appeared increasingly evident that they were determined to present the White House with a measure so repugnant to the spirit of the Administration's farm program that Mr. Eisenhower would have no alternative but to veto it.

Tomorrow Congress has its next to last chance to show whether it really wants to see at least a reasonably workable farm bill passed this year. Tomorrow the conference measure goes before the House for the latter's approval. Secretary Benson has specified more than once the five points by which the conference report falls short of being "a good bill." The President had a chance over the weekend to see with his top advisers "the whole bill" of the conference committee "before him." And it will hardly come as a surprise to anyone who has watched the steady deterioration of this legislation since it emerged from the committee in the Senate that he didn't like what he saw. As Republican House Leader MARTIN said in a statement giving the substance of the White House view, "The conference report doesn't meet the test of a good bill."

The country wil be watching what happens in the House tomorrow, as well it should. One sizable group in particular will be watching it. That is the membership of the biggest and most important farm organization in the Nation, the American Farm Bureau Federation, whose president, Charles B. Shuman, citing the five points raised by Mr. Benson—and one more—called upon Congress last week to reject this report.

Juvenile Delinquency and the School

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. BERRY. Mr. Speaker, under leave to extend my remarks, I wish to insert an editorial on juvenile delinquency written by Joseph Paul Bitzer, of Lemmon, S. Dak. The editorial appeared in the March 29, 1956, edition of the Lemmon Tribune and has aroused considerable local interest.

JUVENILE DELINQUENCY AND THE SCHOOL

(By Joseph Paul Bitzer)

Juvenile delinquency is considered to be one of the big social problems throughout the United States today. Cooperation and understanding are needed to solve it, and just as soon as the day comes when young people will know that they can no longer get by in doing things which are considered to be wrong, delinquency for the juvenile will no longer be the serious problem it is today.

THE SCHOOL PROBLEM

We hear a great deal about the school and juvenile delinquency. We also realize that there is a school problem throughout the Nation. Delinquency gets a good beginning in the school because here is a center where many students are forced to assemble for supposed-to-be learning purposes. Many types of personalities and ideas are represented in the school, and students have learned one thing for sure, and this is that school authorities in most cases are more afraid of the students than the students are of the school authorities. These students are not born bad, but when they are together they realize, by cooperation, they can really "go to town" and have a good time and worry little about getting caught and being punished. It is surprising how successful adults could be if they would practice some of the splendid cooperation for the good which the delinquents carry on for the supposed-to-be bad. Young people are quick to notice that in many situations adults who are to be playing the game fair are just as rotten, if not more so, than they themselves are.

Students are usually very honest in explaining what they are up to and why. A group of students told me the other day that they realized that they were not acting properly, but "why worry," when they will win out anyway. These same students told me how they saw to it that every year new teachers would come to the school and they also explained how they got rid of the teachers they didn't care for. The interesting thing is that the students knew what they were talking about and they had confidence in themselves.

There is a typical pattern. Certain students do not care to study or perhaps they just do not care for a certain teacher. Rather than come to school and give the teacher a chance and perhaps learn something from the teacher, the students go home, make up a story of some sort which will shock the parents and then the parents go to the school board, and the school board doesn't care for any trouble, so the superintendent is questioned and he and the other administrators feel it best to avoid trouble so the teacher is fired—does not get a contract for the next year, and then the teacher is given sugar coated explanations which are to build up his ego rather than have him feel that the student don't want him, and the school board and administrators do not care to "back him up," even if the teacher could be right and the students wrong.

Schools could and should be practical and often teachers and administrators could learn a few lessons from the students, but generally speaking the school should be operated so students go to school to learn to do what they are told, know what is meant by responsibility, and by this procedure the students will be able to "give and take" much better when it is their turn—when they are in charge of things themselves.

Many persons put all the blame on the school board. School board members, in many situations, are not supposed to be professional educators. And if the administrators would do their part and the teachers would cooperate, and the students would be trained to do their part, our schools would then be functioning in such a way that the school problems of today would be a thing of the past and students could actually say it is a privilege to go to school and they would also learn something and then they would qualify for their important role in life when the time came. Cooperation and understanding are needed.

CONCLUSION

Juvenile delinquency is one of the major social problems in the United States today. The only way we can remedy this evil is to let the offenders know that they can no longer get by with the things they have been doing and are doing. The evil is recognized and now it is time to do something about it—Put a stop to it now.

A Modern Medical Research Plan

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Wednesday, April 11, 1956

Mr. JACKSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Dr. Harvey D. Bingham which appeared in the professional journal, Northwest Medicine, of July 1955.

There being no objection the article was ordered to be printed in the RECORD, as follows:

A MODERN RESEARCH PLAN

It has long been apparent to all men of scientific mind that nature is very generous in divulging her secrets to those gifted with vision. Consequently, the following plan for a worldwide research problem evolved on the theory that nature is figuratively standing with open hands waiting for us to see the obvious wealth of knowledge she is holding forth. These secrets are not so hidden that they require years of tedious searching with elaborate and expensive research equipment, but, are secrets that lie in the open, waiting to be assembled, evaluated, and put to use in bringing about a higher state of world health.

In this day, when wars and prevention of wars cost billions of dollars, when yearly costs of governments run into staggering sums, cost of the following research program is but a trifle, while the valuable accumulated data would be tremendous. How great would be the benefits to humanity if more money were spent improving man's health and less spent on designs for man's destruction.

BASIC PLAN

The following basic plan, simple in effect, is to send medical men to all friendly nations to spend a minimum of 1 year accumulating data concerning all phases of health, and factors influencing health, in these countries. They would then return this information periodically to a central station for evaluation and analysis.

These men, presumably young physicians willing to work for a year or more on a salary before starting their own practice, will intimately mingle with the people of their designated country, constantly inquiring into the habits of those people concerning their predominant diseases, diets, life expectancy, climatic and economic influences, family life, birth control, and thousands of other factors which influence the health of those people. In this way, secrets of why one nation is free from one disease or has a high morbidity or mortality from another disease may be uncovered.

I believe that diet will be of special value in that it could easily lead us into more intelligent research on metabolic disorders. Diet alone may tell us why one nation has exceptionally strong teeth, another free from arthritis, and may provide clues concerning control or cure of many diseases thought to be due to a disturbed metabolism.

ORGANIZATION

Now, how can such a program be organized, financed, and conducted, and become an effective working institution?

Let us assume, due to its merits, that a large foundation such as Ford, Rockefeller, or the United States Government provides the financing.

As in any undertaking, a leader must be selected. This man must be carefully picked for his ability as an organizer, coordinator, and for his proven research stature. He will be chief director and will supervise all phases of the experiment. He will assemble the necessary personnel to classify and evaluate the data as it is received from the field. He will be responsible for assigning various problems to various medical centers and pharmaceutical houses for research and evaluation. He will direct publication and distribution of all pertinent material for the benefit of anyone interested in research.

PERSONNEL

In assembling his personnel, he will seek applicants from class A hospitals graduating interns. Care will be exercised to pick young physicians of high mentality and of an especially inquiring mind. Let us assume he will offer each suitable applicant a salary of $5,000 a year with all expenses paid. Factors such as ability to speak a foreign language may determine where the young physician is to be sent. When he departs for his designated country, he will be given a detailed chart showing the information desired. Each month he will send a complete report to the home station with his conclusions and theories. He will travel the length and breadth of his territory mingling with all classes, always asking questions, observing conditions, and in every way possible gathering information concerning the health of that nation. He may observe that there is total absence of asthma or tuberculosis in his territory and not know why until his information is digested later at some research center. Because of his medical background, he will be able to gain valuable information from physicians and hospitals in his territory. In this way stubborn diseases, whose cause and cure have eluded us, may begin to be controlled. Vital clues may become obvious and lead to solutions of medical problems which have defied solution for centuries.

Many countries have areas in which there are no physicians or hospitals. Whole tribes of people live and die without ever having had other than tribal medicine man care. Many of these treatments have merit because primitive medical care has been handed down from generation to generation and has been found to have value without anyone ever knowing why this or that herb or cure was efficacious. The investigator may be taxed to the utmost in elliciting this information from tribal medicine men or midwives.

Because so many of our drugs are of plant origin, a student of botany could well be included in the team. Also, due to the influence of vectors in transmission of disease and their effect on general health, consideration should be given as to advisability of an entomologist (could be a qualified student) being on each team to accumulate all possible information concerning insect life in the given area. Presence or absence of certain insects might well be the clue to presence or absence of any one disease in that area.

BASIS OF PLAN

Practicality of this research plan received strong support in the recent Vidiclinic on coronary heart disease. Some astute observer noted that Italians suffer less from coronary heart disease than do Americans. Thus a research group from Minnesota is now actively endeavoring to discover the cause. This could easily become the pattern for many other diseases which plague the human race.

Major premise behind this theory is based upon the reason that discovery of a great number of medical facts has been by accident rather than by elaborate and expensive research. Diabetes, a common, well-known disease, was discovered many, many years ago in the Near East by someone observing that honeybees swarmed around the urine of some soldiers and ignored that of others. An account of the early history of chinchona bark was reported by the botanist de Jussieu who visited Loxa in 1739. He learned of a Jesuit missionary who had suffered an attack of malaria and who was cured by chinchona bark administered to him by an Indian medicine man from a neighboring village. Dr. William Withering, of Birmingham, England, obtained knowledge of the value of digitalis in treating dropsy from a home remedy used by an old lady in Shropshire in 1775. "Beautiful lady" or belladonna was used by Italian women in the 14th century to dilate their eyes and thus enhance their beauty. Physostigmine was first discovered in the 17th century when Negroes of the Calabar coast of West Africa were observed to be using it as an ordeal for persons accused of crimes. Curare, a relatively recent discovery, was first found in South America, where it was used by the natives to poison the tips of their arrows. This caused a quick paralysis. Now it is used widely in surgery as an adjunct to various anesthetics. Thus, could we be passing up valuable medical information because we are so unobserving of natural phenomena. Why not a planned method of observation?

In view of the colossal sums of money spent yearly on research, I believe this method will show far quicker and greater returns per dollar spent.

The United States and Middle East Oil

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1956

Mr. MULTER. Mr. Speaker, Dr. Joseph B. Schechtman, a specialist in Middle East affairs, has written the following article entitled, "The Bogey of Arab Oil," which contains a number of interesting observations on United States oil needs. It appeared in the Congress Weekly for March 12, 1956:

The discussion of United States policy in the Middle East is being largely dominated by the oil argument. Those advocating the necessity—if not the desirability—of concessions to Arab demands, irrespective of their justness and reasonableness, point out that already in 1952, proved oil reserves in Middle East were reckoned at some 55 percent of world reserves, or 72 percent of those outside the Soviet Union.

Last month, when President Eisenhower was conferring with Prime Minister Eden on a common Anglo-American policy, there appeared in the New York Times of February 3 a well-timed upward revision of this estimate. It was based, as the paper itself candidly stated, on an obscure table buried in the background documents attached to the so-called McKinney report on peaceful uses of atomic energy. This table was compiled by Wallace E. Pratt, who was described as a man who had spent a lifetime in the petroleum industry, i. e., in the service of oil companies—and who himself acknowledged that his data reflected the views of all the major oil companies. In striking contradiction to the assessment by the United States Department of Interior (buried in the same documents), which estimated proved Middle East oil reserves at 97.5 billion barrels at the end of 1954, and to that of the Oil and Gas Journal which evaluated them at 126.3 billion barrels at the end of 1955, Mr. Pratt's table asserted that those oil reserves amounted to 230 billion barrels, thus more than doubling all previous estimates. According to this presentation, the Middle East contains three-quarters of the entire proved reserves of the non-Soviet world.

Since both the peace economy and prospective war requirements of the free world are largely dependent on an adequate oil supply, these figures were clearly intended to provide the Arab States with a powerful, almost irresistible, means of pressure. It is claimed that the Arab States by denying to the United States and its allies access to their oil riches, by canceling American and British concessions, could divert the lifeblood which the free world must have for its very existence. This thesis is disputed by Dr. Benjamin Shwadron, editor of Middle Eastern Affairs and author of the authoritative book, The Middle East, Oil and the Great Powers. In a letter to the New York Times, he showed that the rulers of oil-producing Arab countries could ill afford to dispense with American and British oil companies since their budgets are almost com-

pletely dependent on the oil revenues they receive from them.

Let us examine the prevailing notion that the free world cannot do without "Arab oil," and how realistic is the possibility that the Arab rulers could do without the Americans and the British.

The term "Middle East" as depository of oil reserves is being currently used as synonymous with oil-producing "Arab States," more specifically with Saudi Arabia and Iraq, which are both oil-rich and violently opposed to any pro-Israel move of the Western democracies. This is a gross misrepresentation. Of the 8,800 million tons of proved oil reserves in the Middle East (1952 estimate), Saudi Arabia was credited with 2,250 million tons and Iraq with 1,650—a total of 3,900 million tons, or 44.4 percent of the total. The remaining 55.6 percent was divided as follows: the Sheikkdoms of Kuwait (where half of the concession is in American hands) with 2,500 million tons; Qatar with 300 million; and Bahrein (the entire concession is American) with 40 million; Iran with 2,000 million tons (40 percent of the concession is American); and Egypt with 80 million tons has never been a source of supply for the world market. Thus, Saudi Arabia and Iraq by themselves are not nearly as formidable as when they are falsely identified with the "Middle East" as a whole.

Nor should the term "proved reserves" be considered as identical with actual production. In 1952, the United States, with one-third of the world reserve, was producing half of the world's oil consumption, while the Middle East, with over half of the world's reserves, was yielding less than one-fifth of world production. It must be taken into consideration that in the years 1951–54 the Arab sector of the Middle East had largely profited from Dr. Mossadegh's cancellation of the British oil concession in Iran. The Iranian nationalists expected that this step would cause a major calamity in the Western World's oil supply. They were badly mistaken. During the 3 years when no oil was flowing from the refineries of Abadan—Saudi Arabia, Iraq, and Kuwait eagerly availed themselves of the opportunity to increase spectacularly their oil production, and in terms of crude oil easily made good the loss of the 32 million tons of the Persian output. Saudi Arabia alone raised her production from 26,196,852 tons in 1950 to 46,174,073 tons in 1954. Stephen Hamsley Longrigg in a study, Oil in the Middle East, published in 1954 under the auspices of the Royal Institute of International Affairs, noted that "already by 1952 there were those who saw more embarrassment than satisfaction in the reappearance of major Persian supplies on the market."

The abortive Iranian attempt must have brought home to the Arab oil-producing countries the hard truth that by abstaining from production they leave no unfillable void in the world petroleum market, and that the losses sustained during such abstensions are almost never recoverable. Indeed, though Iran had in 1954 concluded a new oil agreement with a consortium of eight Western companies, she has as yet not even approximately restored her former place in the oil production of the Middle East region.

It is not likely that Saudi Arabia or Iraq would be very tempted to repeat the disastrous Iranian performance. Their loyalty to the cause of the Arab League can hardly be expected to go so far as to risk the loss of their oil royalties which, in 1954, amounted to $260 million for Saudi Arabia alone and which constituted more than three-fourths of her entire budget. Saudi Arabia's conduct at the time of the Palestine partition decision is indicative in this regard. John B. Philby, probably the most qualified expert on Arab affairs, writes in his Arabian Jubilee:

"The only really effective action which the Saudi Arabian government could have taken, namely the cancellation of the American oil concession as a policy against American championship of the Jewish cause, was never considered seriously, or considered only to be rejected out of hand as prejudical to the economic interests of the country, in spite of a spate of propaganda sponsored by unfriendly elements in Iraq and Transjordan."

King Ibn Saud assured the Arabian American Oil Co. at the time that its concessions were in no way jeopardized. The New York Herald Tribune reported on February 27, 1948, that "in return for his friendship, Aramco redoubled its lobbying in Washingington to convince the Government that support of Palestine might force abandonment of the potentially greatest investment in any foreign country." Forcefully pursued by William B. Eddy, former United States Minister to Saudi Arabia, this argument failed to impress the United States Administration. Herbert Feis, a State Department adviser, noted that the "fear that the Arab States might cancel the concessions owned by American or British oil enterprises if their governments consented to the partition of Palestine * * * has shown itself unfounded." In his opinion, "the fear now that, in the event of a war with the Soviet Union, the Arab States would willingly turn towards the U. S. S. R., and transfer control of the oil resources," is equally unfounded.

The possibility of the oil-producing Arab countries breaking off agreements with the United States under any circumstances is very slight, but even such an eventuality would prove far from catastrophic. The fact is that the United States is in no way dependent on oil supply from the Middle East. The known underground producible reserve of crude petroleum in the United States is estimated at nearly 28 billion barrels. This is, however, far from the limit of this country's actual oil resources. According to A. I. Levorsen, Professor of Geology at Stanford University, and past president of the American Association of Petroleum Geologists:

"Today, as always, since the beginning of the oil industry, the biggest petroleum resource is that which is as yet undiscovered. The present known reserves are but a working stock, and they reflect a balance between costs—of discovery, production and carrying charges—and the incentive to discover new reserves. The fact that the present United States reserves represent only twelve times the current consumption is not necessarily alarming, since the average proved reserve has for many years fluctuated between 12 and 15 times the annual consumption. Discovery in the past has more than kept pace with consumption, and reserves are currently the greatest recorded."

Harvard's professor of geology, Kirthley F. Mather, considers it "a safe expectation" that "the actual reserves of oil beneath the United States surface are twice, and perhaps as much as three times, the proved reserves of 28 billion barrels."

Any discussion of oil needs and supply in this country must take into account the fact that American geologists, engineers, and economists have devised refinery techniques which insure the most efficient use of every barrel of oil brought to surface. At the same time, every effort is being made to speed up the discovery of new pools, either in new localities or by deeper drilling in oil-fields, as well as to increase the percentage of recovery from already discovered pools by improved methods of production.

In addition to domestic oil resources, the United States can always count on proved reserves in the Caribbean-Gulf of Mexico region which, as of January 1, 1949, amounted to over 20 million barrels, while total proved reserves for the remainder of North and South America are estimated at 18 million barrels.

It should also not be overlooked that modern science and technology have provided an alternative source of supply for petroleum products. Already now, an appreciable fraction of American requirements is being met by the synthesis of liquid hydrocarbons from natural gas. A pilot plant for the synthesis of petroleum from oil shale has been put into operation at Rifle, Colo., by the United States Bureau of Mines. Methods of synthesizing petroleum products from coal, developed by German scientists before and during World War II, are being checked and improved in the research laboratories and demonstration plants of governmental bureaus and private corporations in the United States. During the war, these methods produced substantial quantities of synthetic gasoline that helped materially in providing power for the German war machine. In peacetime the success of the oil-shale industry in Scotland and Sweden proves not only the technological but also the economic feasibility of this expedient.

Outlining the prospects of supplanting natural oil by synthetic sources, Kirthley F. Mather describes these alternative sources as almost unbelievably abundant. In the United States alone there is enough oil shale and coal available to provide the equivalent of 2 billion barrels of crude oil each year for at least 1,000 years. A. I. Levorsen puts the United States natural gas reserve at 174 trillion cubic feet; Canada has a reserve from 5 to 10 trillion cubic feet.

It is true that the presently available methods of synthetic oil production are still too complicated and expensive to permit competition with natural petroleum products. Professor Mather is, however, confident that this is not an insuperable obstacle and that there is every reason to expect the gradual replacement of natural oil by synthetic products which will prove adequate for all human needs, for as long a time as they are needed.

It is evident from these figures that this country relying solely on its own production will be more than adequately supplied for the foreseeable future. Should the two oil-rich Arab states, in a sudden burst of destructive fanaticism, ever decide to cancel American and British oil concessions, those oil companies will of course suffer financially, but there is certainly nothing frightening about this prospect for the vital interests of the United States and its allies. They can do without Arab oil.

Why I Am Dedicated to Teaching

EXTENSION OF REMARKS
OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 11, 1956

Mr. GATHINGS. Mr. Speaker, recently, in the Lepanto (Ark.) Record for March 24 there appeared an essay written by Mr. J. D. McGehee, superintendent of schools at Lepanto, which was awarded high recognition in the Lion Oil Co. teacher essay scholarship fund.

This essay, entitled "Why I am Dedicated to Teaching," is an affirmative document characteristic of the highest ideals in the field of education. It indicates the basic ingredient which ranks our educational system among the leaders in the world—a devoted and a dedicated teaching staff.

Mr. McGehee, who is recognized as one of the leading educators in Arkan-

sas, has made of his position in the Lepanto schools a forum for work in all phases of community endeavor and has extended the scope of educational assistance into all phases of community living. In this, Mr. McGehee has broadened his own abilities and has given to his community even a greater service.

The Lion Oil Co., one of the fine industries of Arkansas, has carried on a program of public service far afield from its commercial endeavors. The diversified programs of the Lion Oil Co. have made Arkansas a better place for its citizens to live and prosper. Many young people have earned scholarships and many adults have received assistance for research and others have received recognition for service because of the enlightened and public spirit of the Lion Oil Co.

For these reasons, it is an honor to place in the CONGRESSIONAL RECORD this essay and commend both Mr. McGehee, the educator, and the Lion Oil Co., the highest type of American business.

WHY I AM DEDICATED TO TEACHING

(By J. D. McGehee)

Any reason that I may give as to why I am dedicated to teaching could probably be categorized as a selfish one.

First of all, I just plain love children and youth. I love all children—the meek, the lowly, the dirty ones, the retarded ones, the mentally alert, the extrovert, and the introvert. I love to observe, to work with, and to assist this stream of humanity in its constant search for ways to dramatize the God-given talents peculiar to each individual.

I love the challenge that accompanies the enthusiasm, the profound faith and optimism of youth. I love to live, and children were not born to die—only to live.

I love to live and work on the frontiers of society as we attempt to recreate and fashion from day to day a dynamic, democratic social order. I love to work in the broader aspects of teaching with adult citizens. I love to be a part of the leadership that helps the citizens of a community crystallize their thoughts and desire, and in turn helps establish worthy community goals which tend to strengthen democratic institutions.

I love to soldier in an army of dedicated citizen-teachers who have as a common goal the eradication of man's age-old problems—ignorance, injustice, and poverty. I love to think that I am on the front line of defense in this great struggle for freedom as we know and love it in a great constitutional democracy. I teach with the high hopes that my children may have the opportunity to teach also, provided they choose to do just that.

During World War II, on the battle-scarred fields of Europe, I made a covenant with my conscience that given an opportunity, I would forever dedicate my life and talents to the field of public education, for it was then and is now my sincere conviction that the strong public school more than any other institution stands as democratic capitalism's greatest ally.

Finally, the spiritual values inherent in the discipline of teaching is a soul-searing experience. The opportunities in teaching for learning, for traveling, and for sharing one's experiences with others, are unequaled.

Perhaps more than all this I teach because I am dealing with individuals who have a spark of divinity in their souls and minds, and somewhere in the interaction of minds I link myself with immortality.

And as I teach, I hope to pass on a way of life that is ever expanding and more bountiful in individual choices and awards. In this process I ask only that there are some to hear, and learn, and understand, that they may shape and endure, and thus truly fulfill themselves.

Loyalty to American Idealism

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 11, 1956

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include the inspiring address delivered by Timothy J. Murphy, national commander in chief, Veterans of Foreign Wars of the United States, the evening of March 24, 1956, at the Hotel Bradford in Boston, Mass., on the occasion of a reception to National Commander in Chief Timothy J. Murphy by the Department of Massachusetts, Veterans of Foreign Wars:

LOYALTY TO AMERICAN IDEALISM

(Address delivered by Timothy J. Murphy, national commander in chief, Veterans of Foreign Wars)

"It is of the utmost importance that there be, among our people, a great revival of faith in those ideals which lie at the bedrock of our freedom ,our economic order, and our American way of life." (From top award, Freedoms Foundations, Valley Forge, 1955, by Vincent Godfrey Burns.)

In an address on Americanism, by a good VFW member, Judge Michael Musmanno, said: "I asked my father 'what it was you said when you kissed the flag?' He replied: 'I said thank God for a country where an immigrant coal miner's son can become a judge.'" That father expressed simply but more eloquently than he knew, the meaning of America, the land of opportunity in contradistinction to life in the Old World; for him a basic American ideal had been realized in the distinction attained by his son. Yes, they came from everywhere, the Englishman and the Dutch, the Irish, Welsh, and Scots, the Italian, Greek, and French, the Teuton, Norse, Spaniard and Slav, Negro and some orientals—all seeking freedom—religious, political or economic, and all contributing in various ways to making American a land of one people with one language who can say with pride: "This is my home."

They know it to be a home because in it they enjoy the maximum of freedom. They know it to be a government conceived in the name of Liberty, and one established by, and for, the average man. Most know that it did not just suddenly happen, this Union of free States but is in the light of history a culmination, the promised land at the end of the long and bloody road on which man travelled in his quest for freedom. Immortal documents mark its tortuous and uphill course: Magna Charta, the Mayflower Pact, Jefferson's Rights of British America, the Declaration of Independence, the Constitution of the United States, the Bill of Rights, and the Emancipation Proclamation. Freedom emerged triumphant but it still must be defended.

We recognize that much remains to be done to make our democracy work fairly and efficiently particularly in the realm of its economic system and civil rights but some instead of offering constructive criticism and working for the betterment of the state chisel away at things that made the land great. They play directly into the hands of our formidable enemy. Those offenders are the "parlor pinkos," half-baked intelligentsia, and some left of left "liberals" found in all segments of our society; those who harm the most operate in the higher institutions of learning, public schools, and in publicity media. Some have been exposed, others ran to cover and many asked the protection of the fifth amendment. However there are many misguided individuals today, who although not Communists follow various left-wing Professor Snerds, men with impressive academic degrees and called the higher thinkers. It is believed that too often these disciples of the Snerds, the young teachers and writers, parrot the remarks and line of thinking of this peculiar species of pinko in order to claim membership in what they believe to be a stratospheric intelligentsia—a lofty place in the world of the mind, far removed from the ordinary citizen. Many of this ilk tag veterans and veterans organizations as hero worshippers, practitioners of a corny, outdated Americanism, and always hitting the Congress for handouts. This type of intellectual is so above the crowd that he thinks little and cares less of what the John Does and the Bill Browns think about public and international issues. The voices from the grassroots are for him a thing of sound and fury, signifying nothing. He does not know that democracy as a way of living with others is usually defined as a government by the people. For such Snerds and their satellites we must be on guard.

This must be watched for particularly in the school teachers with strong leftist tendencies who instruct our youth. Some of them wittingly and some of them unwittingly are directly down the alley of the Communist master plan for infiltration with the intent of winning the minds of our young men and women.

What is the Russian plan? One of the best terse explanations that I have seen was disclosed by one who should know, a Russian and naturalized American, Nicholas T. Goncharoff. The ex-Russian tank commander in World War II is now Director of the Free Russian Youth Club in New York City. His mother died of undernourishment in 1933 because of Stalin's organized famine and his father was exiled to Siberia and seen no more along with many more of the 100,000 clergy and priests sent there by Stalin between 1928 and 1938. Goncharoff, naturalized citizen and good American, who had had enough of it in Russia, told a group of prominent American businessmen what aside from general espionage, he believed the plan of the Communist conspiracy in the United States to be.

First. To use the official institutions of the United States, especially the educational institutions to influence the youth of America.

Second. To work with energy and great cleverness between both the professors and the intellectuals in the United States.

Third. To infiltrate labor unions—especially steel unions, oil and electric.

Fourth. To take advantage of all the mistakes of the social, economic, cultural and religious agencies in the United States. And never to work directly as a Communist but rather to influence the people who are pacificists and isolationists. To achieve misunderstanding, dissatisfaction with and also the possibility of splitting the allies of the United States.

This might be called the long-range mission of the Communist Party in the United States. We are all wise to the short-range, kiss-and-make-up policies. And as Cardinal Spellman said last year: "We Americans need to remember how definite a sentence of death has been passed upon us by the very power by whom we have been asked peacefully to coexist." But mark you at the very top of the list given by the Russian-American was the use of educational institutions to influence youth, and the influence that they hoped to exercise on certain intellectuals and professors.

For this reason I beg of you report to the FBI all those that you believe to be Com-

munists and fellow travelers but watch closely the Professor Snerds and their followers. The first important check is have they or do they now belong to Communist-front organizations? Every member of the VFW should have the Senate's latest valuable study: "The Communist Party of America: What it is. How it works."

It is also time to grow apprehensive when teachers belittle the stature and ideals of the Founding Fathers. Teachers that call John Adam an unintelligent lawyer; or Thomas Jefferson insincere; or George Washington a mediocre individual who had aspirations to become new world royalty are, if the teachers are sane, trying purposely to weaken our youngsters belief in the greatest men our country ever produced, and inferentially to belittle our institutions and Government. They are not the people we want to teach our children.

Watch this also: such apologists and debunkers of our history, often men who claim to have little in common with the average man, will disparage veterans' parades such as Loyalty Day, and decry our turning out on certain days to perpetuate the memories and keep alive the history of our heroes and revered dead. Their reaction to these activities is that veterans are publicity seekers and showoffs. We must be standing for some of the things that they would forget; we must be fighting for some of the American issues that they oppose.

If democracy is a right way of thinking, then it should be made a reality in every phase of home and school thinking and practice. I submit that sound patriotic education, solid Americanism, supported by facts, will more than anything else develop in our youth a profound love of country and a hatred of communism. Now, not all educators will go along with this, particularly the Snerds. Sometimes they write considerable twaddle about professors and their rights—how they should be the judges of the books and courses of instruction presented. Now let's get this straight, we of the VFW most certainly stand for academic freedom, freedom of speech and thought, but not for the freedom of leftwingers and their varying degree of pink satellites to influence youth by pointing out the charms of the Soviet world, plugging the philosophy of Karl Marx, and playing down the precious depository of American happiness, the Constitution of the United States and those who framed it.

Many prominent Americans have taken up the cudgels in this fight that will continue in varying degrees as long as these are totalitarian philosophies. Paxton Blair, former justice of the Supreme Court of New York, said: "It must be affirmed that every citizen in a free economy, no matter the wares he plies, must defer to the sovereignty of the consumer." Our children and our grandchildren are the consumers of education. We pay the bills. It is the duty of those who love this land, have defended its institutions in wars, and expect to pass them on to posterity to scrutinize with care both the teachers and the books of youth—our most precious possession. Do we not want our progeny to preserve liberty for themselves and posterity? I do hope that all fathers and mothers will keep a keen eye on the kind of education that their children are receiving. We should expect schools to give students a workable understanding of the democratic way of life. Is that being done in your community?

It is desirable that young people think hard and straight about the basic American principles. There is plenty of room for divergence of opinion on details; that is one reason we have elections. But no authoritarian system in the world would dare accept the basic principle that men, irrespective of their race, religion, or class are born as in this American world with equal rights that the founders thought to be unalienable—"life, liberty, and the pursuit of happiness." That is the essense of it all, the alpha and omega of the system, the law, and the prophets.

The Declaration of Independence, the charter of liberty, and the Constitution of the United States, the charter of human rights, were expressions of the thoughts and feelings of the plain people—farmers, laborers, mechanics, shopkeepers, and artisans. Their unorganized but deeply felt ideas of a democracy were, after much debate, given polish in language and exactness in content by such men as the Adamses, Jefferson and Madison, Franklin and Hamilton, and others. But these great leaders would have approved the words of Carl Sandburg, the poet:

"Let us make pioneer prayers.
Let working clothes be sacred."

And here in the New World, amid a political scene that had then become chaotic, the representatives of the people, and voicing the people's highest aspirations drafted the Constitution; in the oft-repeated words of Gladstone "the most wonderful work ever struck off at a given time by the brain and purpose of man." This accomplished at a time when only the most cultured, highest born, and most aristocratic men could hold office in Europe, and where the people had little, if anything, to say about the government—lands wherein there was also much racial and religious persecution. But a new race had developed over here, one of men who had tasted liberty, and as the repression of their rights became more pronounced, the people rebelled. In fact, the bloodless revolution of 1689 in the Bay Colony of Massachusetts brought back a modicum of self-government that had been previously enjoyed, but historians are agreed it foreshadowed the spirit of '76.

In this respect, it is of interest that in the commemoration this year of the 175th anniversary of the State constitution of Massachusetts, our State bar association has developed a comprehensive program to inform school children of the history and implications of their constitution and its influence in the drafting of the Constitution of the United States. It is of interest that the Bill of Rights of the Federal Constitution is an almost verbatim copy of the declaration of rights of the Massachusetts constitution. It is a program designed to inform as well as to inculcate respect for the people of that day who were both spiritually and mentally prepared to preserve liberty "for themselves and posterity."

There have been many fine talks and lectures on the subject. Among them that of Rear Adm. Samuel Eliot Morison, noted historian and official historian of the Navy. In his brilliant address, he pointed out that after all the Massachusetts State constitution was the product of many plain people, the hardworking down to earth men of simple life but who expressed themselves freely as to the issues and particularly such things as a bill of rights. These talks took place at town meetings, in gatherings at the village stores, and in the churches of the State. The farmers of western Massachusetts said that they wanted a constitution that would "protect them from themselves." But a constitution was brought forth and adopted in 1780 with John Adams often called the father. This cross section of the people, the average man of their day wanted as Al Smith said in a speech at Harvard on the Federal Constitution, something that would "guarantee" and "safeguard." He called the Federal Constitution, the "night watchman of democratic representative Government," and added, "Keep your eye on the Constitution." Smith knew back in 1933 that crackpots, "pinkos," "one worlders," and now the Communists and their fellow travelers would do all possible to try and to erode it by subtle means.

Admiral Morison wrote of these early Massachusetts people as being "tough but nervous" a "tenacious but restless race." He said they were "a people with few social graces, yet capable of deep friendships and abiding loyalties; law abiding yet individualistic, and impatient of restraint by Government or regulation in business." To them and those of the other colonies who forged a Nation of States should go our highest homage and a perpetual remembrance by us, the people who inherited their good earth. May we of the Veterans of Foreign Wars in this confused time intensify our efforts to remember our patriots, what they stood for and what they accomplished. I hope that we will always sponsor a loyalty day and carry on our Americanism program even though some of our fellow citizens pooh pooh it. We do not propose to pass on a watered down heritage, and we shall resist in every way possible the efforts of the Communists, Snerds, and others who try to lessen its greatness.

We know that this Nation that shelters us and nurtures us is not perfect. Yet it stands as the greatest free system of Government in the history of mankind. And it is our duty to strive for that perfection called the American dream. Never forget that if we are complacent and fail to practice and defend the ways of democracy, we can lose its priceless benefits.

The Constitution of the United States, a living thing, susceptible of growth, was not for any particular generation, but as Henry Clay said in the Senate "for posterity—unlimited, undefined, endless, perpetual, posterity." That means our children, and their children, and on and on. That is why all we can do for them in the way of sound education that teaches the privileges, rights, duties and responsibilities of the good citizen, comprise a major contribution to the preservation of the Republic. A loyalty to Americanism is the best bulwark against communism.

Let us see to it that no brand of left wingism, domestic or imported, undermine the ideals that gave meaning to the spirit that conquered a wilderness and developed the rich and powerful America where an immigrant coal miner's son may become a judge. Yes, rich and powerful, but are we not assisting countries throughout the earth with staggering sums of money and goods? That bespeaks a great country with a great soul wherein dwell high ideals and democratic principles. And since democracy is only the sum total of its individuals, as the individuals move toward higher ideals so moves the Nation.

Let us be loyal to pure Americanism; let us keep faith in the beliefs of the founders. As Carl Schurz said: "Ideals are like stars. You will not succeed in touching them with your hands, but, like the seafaring man, you choose them as your guides, and following them, you will reach your destiny."

My friends, this country, the leader of the free world, has a glorious destiny. It is the protection of that precious thing called freedom. That we will achieve if we pursue with all our hearts the time proved democratic ideals of free men in a free state. And with God's help we cannot fail.

There Is a Bottom in the Barrel

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. HOFFMAN of Michigan. Mr. Speaker, rich and powerful as we are, is there a logical reason why we should

assume the burden of contributing to the support of the rest of the world? Endeavor through education and force—and don't forget the force—to maintain peace throughout the world?

There are other lands greater in area than the United States. Other nations with far more people. Yet some people assume that we should, and insist that we must, wherever on earth there are those who have less than we, divide with them. That whenever, wherever, nations quarrel, we should step in and, figuratively speaking, knock their heads together, insist they cease fighting. We would be as successful doing that as is the individual who ventures into a neighbor's home to settle a family argument.

Since World War I, we have given other nations more than $51 billion. If all the babies, the helpless, those who for some reason or other do not pay an income or other tax, pay their full share, you and I owe on that contribution around $300 each.

Some nations used 3 billion of the dollars we gave them to decrease their national debt. As we borrowed that $3 billion, we are paying $90 million a year interest on that $3 billion while our debt piles up.

While our national debt in 1916 was but $971,562,590, we have jumped it as of March 20, 1956, to $277,249, 684, 429. You figure how much you owe of that. I'm tired.

Now the Congress is being asked for an additional $4,858,975,000 for foreign aid for the fiscal year ending July 1, 1957.

We can ruin ourselves by imposing an ever-increasing tax burden on ourselves. We can, and eventually we will, if we continue our give-away program, destroy our prosperity, impoverish ourselves, be forced to repudiate our national debt, or find ourselves working, yes, perhaps fighting, for other nations.

There is a bottom to the barrel and, in my judgment, we have reached it.

It would be all very well to borrow money to help others or to furnish our allies munitions of war, if we could be sure that they would in time of need stand with us, oppose our enemies, fight Communism. But experience tells us that when their own interests are involved, other nations forget all about us, each does what it thinks will best preserve its own sovereignty.

Today, while we are sending aid and munitions of war to other countries, hoping to stop communism, those countries are doing business as usual with the Communist-block countries. They have been shipping more than 250 separate items, machines and machine tools, to Communist governments for the past 2 years. That is the report of a Senate committee of which JOHN L. MCCLELLAN is chairman.

Is it not about time we quit pouring our money down a rathole, wasting our substance and munitions in other lands, where eventually they reach the Communists? There are plenty of things which need doing here at home, not the least of which is the perfecting of our own national defense.

Resolution of Flood and Hurricane Protection

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following resolution.

Extensive Federal programs are required and urgent to rehabilitate stricken areas and prevent future floods. Accordingly, Congress should endeavor to enact effective remedial measures:

RESOLUTION ON FLOOD AND HURRICANE PROTECTION AND OTHER PURLIC WORKS PROJECTS, NEW ENGLAND REGION NATIONAL RIVERS AND HARBORS CONGRESS, BOSTON, MASS., APRIL 2, 1956

Whereas hurricanes have caused great damages in the thickly settled areas, industrial centers and cities of New England, as a result of heavy rainfall and floods on the rivers and from tidal inundation along the coast; and

Whereas torrential rainfall accompanying hurricanes throughout southern New England during 1955 caused great floods leaving over 200 dead, inundating homes and personal properties, businesses and industries, highways and communities and disrupting all orderly activities in the area, with total damages of over $500 million; and

Whereas hurricanes of 1938 and 1954 struck without warning in the coastal areas of New England leaving over 500 dead and causing total damages of $500 million; and

Whereas floods are a recognized threat to New England lying in the pathway of tropical hurricanes which may strike on rivers and coasts bringing rainfall which causes floods greater than ever before experienced; and

Whereas completion of construction of authorized flood control projects already initiated is urgently needed together with the earliest possible planning of additional projects for areas which are threatened by future floods; and

Whereas the enormous growth of small boating creates a need for improving harbors, which are a major attraction and economic resource in the New England area; and

Whereas the New England States have already appropriated large sums to combat shore erosion which is already far advanced; and

Whereas the trend in economical ship design is toward deeper draft vessels which require the deepening of major commercial ports and channels: Now, therefore, be it

Resolved, That the New England delegation to the National Rivers and Harbors Congress here assembled recognize the service they may render to the people of the New England States by working together as one unit to obtain the full amount of the funds needed for flood-control projects; and be it further

Resolved, That funds be requested immediately for accomplishment of the New England flood-control program for fiscal year 1957 in an amount not less than $12 million; and be it further

Resolved, That funds in the amount of $1 million be requested for the study of hurricane protection in the New England coastal area in fiscal yera 1957; and be it further

Resolved, That the projects committee, recognizing the projects for Narragansett Bay area, Rhode Island, and Massachusetts; and the New Bedford-Fairhaven area, Massachusetts; as essential to local and national welfare and that the applications for these projects be reclassified and endorsed classification I, as soon as construction costs are available. If the projects committee is not sitting at conference on projects in New England, that the member of the projects committee of the National Rivers and Harbors Congress, New England, be authorized to reclassify these projects and place in classification I; and be it further.

Resolved, That funds in the amount of $3 million be requested for the orderly construction for navigation and beach erosion projects and $100,000 be requested for studies and special investigations in fiscal year 1957; and be it further

Resolved, That funds in the amount of $4 million be requested to meet the requirements for maintenance of existing flood control reservoirs and channel and harbor projects in fiscal year 1957; and be it further

Resolved, That the bill sponsored by Senator PRESCOTT BUSH and entitled Senate bill 3272 is urgently required to advance needed protection from floods in the New England region.

Attest:

LARRY M. HESS,
Regional Director.

A Plea for United States Action on Israel

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. CRETELLA. Mr. Speaker, in connection with the burning issue of Arab-Israel relations in the Mideast, I submit for the RECORD a letter written by New York State Attorney General Jacob K. Javits, as published in the March 30 New York Herald Tribune.

No one can question the ability and energy of former United States Representative Javits in his endeavors while a Member of Congress to help resolve the tension in this area. He speaks with authority and wisdom, and I must agree that the time is now for our leadership to spring into action which will strongly assert our alliance with the Democratic State of Israel, by making provisions for aiding her with arms for her legitimate self-defense.

The letter follows:

A PLEA FOR UNITED STATES ACTION ON ISRAEL

To the New York Herald Tribune:

Time is short for us in the Near East. The armistice border between Israel and the Arab States has become not only the newest but the most active Communist front in the world. The Communists have made their overt move by arms sales to Egypt and through Egypt to other Arab States near Israel.

The Communists are exploiting the intransigence of the Arabs for their own purposes, in an effort to use it as a reason for, and the basis of, their infiltration and ultimate penetration of the whole Near East area. They are exploiting also what must be a certain hopelessness among much of the Arab leadership at the moment when so much in real advances for the Arab peoples

could be hoped for, but which, instead, offers them hatred of Israel. The Communists are arming the Arabs and proffering them economic and technical assistance apparently for the sake of fomenting and bringing on an Arab-Israeli struggle, which they wish to regard as inevitable. They must believe that in this struggle, no matter who wins or who loses, communism can gain the most.

The United States faces a situation where Israeli-Arab tension is not merely an isolated factor within an isolated area of the world, but creates the danger of a conflict of the utmost moment to our policy in its most vital aspects. The President himself has recognized the danger by noting the highest priority for the maintenance of peace to be in the Near East area.

Our country's policy is clear. The Secretary of State said in his testimony before the Committee on Foreign Relations of the Senate, as recently as February 24, 1956: "I consider that it is one of the basic elements of the United States foreign policy to seek the preservation of the State of Israel."

What we need to know is how our country intends to implement this policy. Thus far, implied threats of unfriendliness by the Arab States, jeopardy of airbase leases, the British attitude and similar developments have induced the State Department not alone to stay its hand but even to allow shipment of tanks to Saudi Arabia, one of the principal Arab powers threatening Israel.

Our country has apparently even allowed itself to be humbled by restrictions on the admission of United States citizens on governmental missions including military service into Arab States by virtue of their religious faith in the effort to influence what it hoped would be a reasonable attitude.

United States policy, if it continues to be based on these considerations, can give the Communists a dangerous success in the Near East. If we fail to help to secure Israel's national integrity, then we have failed one of our closest friends, a member of the U. N., a center of freedom in the Near East, an indispensable refuge against persecution, and the embodiment of a whole people's aspiration.

Such default would endanger reliance upon us by other States similarly situated; and would have allowed the Arabs to gain a success beyond their fondest dreams through their new association with the Soviet Union which would tend to deliver their peoples ever more into the hands of the Communists. On the other hand, by helping to secure Israel we maintain our great reputation for standing by the friends of peace and liberty and we demonstrate that Communist alliances do not pay.

For the American people, there is a great practical issue involved as well as a great moral issue. Practically, Egypt, with jets and other new arms supplied by the Communists, might overrun Israel in weeks. The estimate of time when Egypt and other Arab States may be able to use effectively their newly acquired Communist arms against Israel is considered to be very much shorter than in the United States. Israel circles call it this summer.

It is stated that the jet aircraft, submarines, and other weapons which are being obtained by Egypt from the Communists are so greatly superior to conventional weapons with which the Israel armed forces are supplied that even if badly operated, their superiority will be manifest.

Morally, the issue before the American people is this: Israel is a nation created to meet a world need under the auspices of the U. N. and with the strong support of the United States. It is an expression of our deep concern as a people over the rights of long-suffering minorities.

The great American tradition is to decide questions of foreign policy on moral grounds when they get really complex. Efforts nicely calculated to appease the Arab States, which stand so intransigently against negotiations for peace with Israel—as Israel has offered time and time again—could only cause the whole Near East to be engulfed in a "Red Sea."

The impending mission of Mr. Dag Hammarskjold, Secretary General of the U. N.; the current discussions of the United States, United Kingdom, and France looking toward the means for implementing the tripartite declaration of May 1950, assuring Israel and the Arabs against aggression; and the undoubted diplomatic offensive led by President Eisenhower to maintain Near East peace are certainly to be welcomed.

But even they are not enough to assure that the shock of aggression against Israel—which has by full governmental action pledged to the world its renunciation of any such action against the Arabs—will be met without dire consequences in destruction to Israel or world conflagration. Nor does Israel seek any defenders but its own brave people—given the means. For the same reason, therefore, that NATO was established in Western Europe in 1949 Israel needs and should be allowed by us to get arms for legitimate self-defense now.

We cannot jeopardize Israel's survival and so our Government needs to make a decision, and make it promptly. Perhaps the most urgent matter in American policy today—based on my observation of the situation in Israel—is the need for prompt decision. I can see no real alternative to a decision that would reassure Israel regarding the independence and security by arms, strictly limited to legitimate self-defense—in the first instance. Only in this way under present conditions may the path to Arab-Israeli peace across the bridge of regional economic and social interest—including resettlement of the Palestine Arab refugees and the Jordan River water project—again be opened.

The alternative is either surrender to the Communists or appeasement. Should we allow the Communists to show the Arab states how to liquidate Israel, we will have guaranteed a vast increase in Communist prestige in the Middle East, and perhaps even the creation of new Communist satellites there. And yield we never will; appeasement, as we have learned since Munich, is only the first step before admitting defeat or undertaking some mortal struggle.

J. K. JAVITS,
Attorney General, State of New York.
NEW YORK, *March 27, 2956.*

Congress Declares War on Imperial Germany

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks I wish to include the following editorial from the Washington Daily News, of recent date. The editorial is terse and to the point, and needs no elaboration by me:

"THE WORLD MUST BE MADE SAFE"—CONGRESS MADE ITS FATEFUL DECISION 39 YEARS AGO

(By Fraser Edwards)

Stark drama packed the historic hours before Congress declared war on Imperial Germany 39 years ago today.

From the moment President Woodrow Wilson told a grim Congress in joint session "the world must be made safe for democracy," the fateful decision never was in doubt.

But the small, stubborn opposition from Senator and Representatives with large constituencies of German blood made it a bitter battle.

Emotional tension mounted almost to a frenzy before the final, formal action which sent 2 million American fighting men to France—and Germany.

Many moving scenes have occurred in Congress since but they all are anticlimactic compared with what this reporter witnessed and experienced between 8:35 p. m. April 2, and 3:12 a. m., April 6, 1917.

No director could have more skillfully set the stage for President Wilson's appearance at the Capitol, less than a month after his inauguration for a second term, to which he had been elected on a "He kept us out of war" platform.

PACIFISTS MOVED IN

Congress was on edge. For days truculent pacifists had besieged congressional offices, forcing their way in to see Vice President Tom Marshall and Speaker Champ Clark among all the others.

When a pacifist called Massachusetts' Senator Henry Cabot Lodge a coward, the scholarly 68-year-old statesman knocked him down. The man was beaten severely by a crowd before he could be rescued by police.

Night sessions of Congress always lend dramatic effect. The signal light shone on the great gray dome as President Wilson rode to the Capitol on the night of April 2, surrounded by a cordon of clanking cavalry.

Vice President Marshall already had led the Senate to the House chamber, nearly every Senator wearing or carrying a small American flag. They ranged themselves behind the black-robed justices of the Supreme Court, the Cabinet, and envoys of foreign nations, many in brilliant uniforms.

A FEW WERE SILENT

When the President mounted the Speaker's dais at 8:35 p. m., Congress stood and gave him a 5-minute ovation, the warmest reception he ever received at the Capitol. Only members of the small, die-hard, anti-war faction sat on their hands.

Congress listened intently as Mr. Wilson cataloged the crimes of German submarines against humanity. Hundreds of Americans, including women and children, had been murdered on the high seas in the Kaiser's unrestricted U-boat warfare.

He recited his efforts to avoid war, including armed neutrality. Even that, he said, was not enough to cope with the outlaw subs.

ONE CHOICE

"There is one choice we cannot make, we are incapable of making," the President's voice rang as he neared his request for a resolution recognizing that Germany was making war on the United States. "We will not choose the path of submission."

At the word "submission," an old Confederate soldier in the front row on the House floor dropped the hat he was holding and led the applause and cheers. He was the Chief Justice of the United States, Edward Douglass White, one-time Senator from Louisiana.

Mr. Wilson got a different reaction when he said it was "a fearful thing to lead this great peaceful people into war."

The arch foe of the war, Wisconsin's Senator "Old Bob" La Follette, underscored that by loudly clearing his throat twice.

President Wilson didn't even pause on his punchline: "The world must be made safe for democracy."

WILLIAMS RESPONDED

Mississippi's Senator John Sharp Williams was the first to catch the significance and started the roar of approval.

Many men who had made history and others who were to make it were on the floor that day. The last of the old Rebels were there—North Carolina's Representative Charles M. Stedman and Alabama's Senator John Hollis Bankhead, the only man ever to wear the Confederate gray on the Senate floor.

The GAR was represented by Minnesota's bearded old Viking, Senator Knute Nelson and Ohio's Representatives David A. Hollingsworth and Isaac R. Sherwood. Hollingsworth voted for war, Sherwood against it.

In the Chamber were three future Vice Presidents—Texas' Jack Garner, Kansas' Charlie Curtis and Kentucky's Alben Barkley. And six future Speakers—Garner, Illinois' Henry T. Rainey, Alabama's Will Bankhead, Tennessee's Joe Byrns, Massachusetts' Frederick H. Gillette and Ohio's Nick Longworth.

THREE ARE STILL THERE

Only three of the men present still are in Congress—Senator BARKLEY and West Virginia's MATT NEELY in the Senate and Georgia's CARL VINSON in the House.

The most dramatic moment in the House debate came when the Democratic leader, North Carolina's Claude Kitchen bolted the President.

But none doubted Mr. Kitchen's sincerity when he told the House:

"My conscience and judgment, after mature thought and fervent prayer for right guidance, have marked clearly the path of my duty, and I have made up my mind to walk it if I go barefooted and alone. I must vote against the resolution."

HEFLIN WAS HISSED

Alabama's Tawm Heflin was hissed by some Democrats when he challenged Representative Kitchen to resign both his leadership and his seat in the House. Alabama's John Burnett, half Senator Heflin's size, and 17 years his senior, lunged for Tawm but the Sergeant at Arms intervened.

Montana's Jeannette Rankin, the first woman ever elected to the House, cast her first important vote on the war resolution. She voted "no" and burst into tears.

Action in the Senate was delayed by the objection of Senator La Follette to immediate consideration of the resolution. Then he launched into a 3-hour speech against it. John Sharp Williams denounced the speech as "pro-German, pro-Goth, pro-Vandal, and anti-American."

Nebraska's Senator George Norris aroused the Senate by charging that Congress was about "to put the dollar sign on the American flag." Senator Williams branded that utterance as "grazing the edge of treason."

It was only after 13 hours of bitter debate at 11 p. m. April 4, that the Senate voted 82 to 6 for war. The House adopted the war resolution, 373 to 50, at 3:12 a. m. on April 6.

President Wilson signed the United States into the great conflict the same day.

TWELVE WILLFUL MEN

The "no" votes in the Senate were cast by 6 of the 12 willful men Mr. Wilson denounced after they had scuttled his armed merchantmen proposal. They became better known as the Dirty Dozen.

They were North Dakota's Alse Gronna, Wisconsin's Old Bob La Follette, Nebraska's George Norris, Oregon's Harry Lane, Missouri's "Gumshoe Bill" Stone, and Mississippi's long-haired James K. Vardaman.

Three of the twelve protested long and loud but in the end voted for war. They were Iowa's Senators Albert B. Cummins and William S. Kenyon, and Arkansas' Senator William F. Kirby.

The other three: New York's James A. O'Gorman, Minnesota's Moses Clapp, and California's John D. "Mother" Works, already had been retired to private life.

It was appropriate that Utah's Senator Reed Smoot, a Mormon apostle, should close the Senate debate with this prayer:

"God, hasten the day when liberty will be enjoyed by all the people of the earth."

Seventy-Fifth Anniversary of Tuskegee Institute

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, April 11, 1956

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Across a Perilous Terrain," prepared for delivery at the 75th anniversary celebration of the founding of Tuskegee Institute, on March 25, 1956, by Buell G. Gallagher, president of the City College of New York.

I am advised by the Public Printer that the cost of printing this article is estimated to be $200. It is estimated to require two and a half pages of the RECORD. I ask unanimous consent that the article be printed in the RECORD notwithstanding that fact.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ACROSS A PERILOUS TERRAIN

Words do not come easily on this day. All the good and noble and true sentiments which have been uttered and written about Booker T. Washington in the 75 years since his feet first trudged the Alabama dust have memorialized him and his achievements far beyond our poor powers to imitate or improve. To embellish would be gratuitous, to praise is unnecessary. The living monument of his labors speaks for the founder far more eloquently than fullest oratory or rich encomium. To return after an absence of 15 years and once again to walk the gracious paths of Tuskegee among its quiet trees and noble buildings is to renew one's faith in Washington's great heart and fighting spirit. The act appropriate to this moment is not much speaking, but the bared head bowed in silent reverence to Almighty God for this His child. As a lad of 9, he had been listed among the chattel assets of his master as worth $400. As a man of faith, he placed the whole world in his debt.

Yet there are words which must be spoken in this hour of national crisis. If these words are true to the spirit and intent of him we honor, they will be winging words of hope soberly informed by desperate facts which do not dismay.

The happy phrase which titles this address is given me by Basil Mathews in his biography of Tuskegee's founder:

"The moving and truly astonishing drama of Booker T. Washington's life exercises its spell upon our imagination as we see him moving with his strange blend of wary shrewdness, unswerving courage, 'pawky' humor, and cool fortitude, across a perilous terrain toward a clearly envisaged, although distant goal."[1]

[1] Basil Mathews, Booker T. Washington, p. 30.

The year was 1881. Less than 20 years had passed since presidential fiat had started a social revolution midway in the dreariest, weariest, and bloodiest war mankind had known. As Washington came to Tuskegee, the scars of war and the fresh wounds of reconstruction lay across the land red in anger. The army of occupation had been followed by the freedmen's bureau, and both had been supplemented by an army in petticoats—the northern schoolteachers who came as missionaries to teach and live with the freedmen and to demonstrate to a skeptical and hostile region the meaning of human kindness and brotherhood. The hopes which emancipation had quickened were by 1881 like tender plants choked in a garden of fast-growing weeds; and there were not wanting those who preferred the weeds to the flowers and were ready to say so.

The legacy of conflict into which Washington came was not new. It reached well back into antebellum days. Forty-six years before Tuskegee was founded, North Carolina had abolished its school for free persons of color, in the same year that abolitionist literature had been banned from the United States mails and burned in the streets of Charleston, S. C. Raging in the North, as well as the South, the controversy had split Lane Seminary, resulting in the founding of Oberlin College in the wilds of Ohio to admit students "irrespective of color," to be followed by its sister of like purpose in Berea, Ky.

When Washington came to Tuskegee, it had been 40 years since John Quincy Adams, "old man eloquent," had stood before the United States Supreme Court and successfully convinced the court that the rights guaranteed under the Constitution inhere in each individual, regardless of his color. The Amistad case of 1840 was to be followed by the Dred Scott decision of 1857, in which the same court qualified its earlier stand, declaring that a slave was not a citizen. Booker Washington was a lad of 11 when Lincoln was shot. He grew up in a world where "Carpetbagger" was a term of contempt matched only by "Scalawag," where long chimneys marked the sites of former mansions, where terror stalked the highways and the number of Negroes lynched in a single year sometimes ran into four figures. It was a perilous terrain to walk, in this Alabama village in 1881.

Fear stalked the land. Looking back many years later, Booker Washington recalled the stories of slave insurrections he had heard as a child. From the perspective of maturity he spoke:

"No matter how good the relations between the individual master and his slaves, each race lived in constant fear of the other * * * It is fatally true that no community can live without fear in which one portion of the people seeks to govern the other portion through terror."[2]

As he began his work at Tuskegee, the tragic days of Reconstruction were coming to a close; the equally tragic days of Restoration were already begun. The hooded nightriders frightened out the carpetbaggers and terrorized the freedmen. Indefensible though these things may be, they are understandable. An intolerable sense of injustice spurred the poverty-stricken white South. Unreconciled in defeat and unreconstructed by force of arms, the dominant group set grimly about the business of restoring the old order through new devices. Slavery was gone: in its place came racial caste.

Emancipation had freed the slaves; the 14th and 15th amendments had sought to give freedmen citizenship. But social revolution calls for something more than external change if it is to succeed, and the hearts and minds of men in power rejected the new order of freedom. The whole of

[2] Op. cit., p. 11.

economic, political, social and civic life was to be patterned not along the lines of democracy, but according to ideas of racial domination and subordination. So well entrenched did racial caste become that it was the universal practice throughout the South and much of the North long before the Supreme Court in *Plessy* v. *Ferguson* in 1896 admitted the doctrine of "separate but equal" to judicial tolerance.

The amazing thing about human nature is its wide distribution among mankind. The problems of racial caste were not—and are not now—limited to either racial group or to any geographical section of the Nation. With varying degrees of intensity, and with various devices of custom and law and convenience, caste was established throughout the Nation, leaving here and there little islands of democracy. It is not for us to pass judgment upon history; history will judge us. It is enough for us to recall the words of that great Southerner and slave holder, Thomas Jefferson, who said, "I tremble for my country when I think of the Negro and remember that God is just."

There is no cure for blank despair and utter skepticism except through historical perspective. Thus, it can be argued—and I think rightly argued—that slavery was a great step forward in human history when it first was introduced. Previous to the instituting of human slavery, warriors killed their captives. But when a defeated enemy was enslaved instead of killed, he acquired some value. He was worth more as chattel than as a corpse. To place even limited value on human life was to make a step forward. Slavery was better than annihilation.

Similarly, it can be argued that a system of racial caste is better than slavery. Certainly the phenomenal progress of the 90 years since emancipation would not have been possible had slavery continued. The material and spiritual progress symbolized and epitomized in Tuskegee Institute is an enrichment of American life within the confines of caste. It would not have been possible under slavery.

But today's crisis presents us with another choice. Everybody knows that racial caste and democracy are in irrepressible conflict. The only differences are between those who want democracy and those who prefer caste. Once again history moves toward another phrase of the irrepressible conflict, with acceleration and crescendo. Once again we walk a perilous terrain.

The more recalcitrant opponents of democracy, those whom history has dragged screaming and kicking into the 20th century, by their vehemence betray their fears. Did you ever notice that the preacher pounds the Bible hardest precisely when he is least sure of what he is saying? Deep down within themselves, the defenders of white supremacy know they are wrong. Carried on the wave of the future, they struggle against the inevitable. In so doing, they misrepresent the true opinions of most of the people, while at the same time they contribute to the atmosephere of fear and terror which makes difficult the work of men of good will.

Here, for example, is a classic statement in defense the slavery. The Honorable Alexander Stephens is speaking on the constitution of the Confederate States of America:

"Many governments have been founded upon the principle of enslavement of classes, but the classes thus enslaved were of the same race in violation of the laws of nature. * * * The Negro by nature or by the curse of Canaan is fitted for that condition which he occupies in our system. * * * The substratum of our society is made up of material fitted by nature for it, and by experience we know that it is best not only for the superior race but for the inferior race that it should be so. It is indeed in conformity with the ordinance of the Creator." [3]

So spoke the rearguard, defending slavery at the very moment that it was on its way out.

So, too, with the defenders of caste. Midway in the 90 years that caste has been upon us, in 1910, the superintendent of schools of Memphis, Thomas P. Bailey by name, addressed the National Education Association:

"Public peace and the safety of the state demand that the less developed race be subordinated to the more developed, under conditions as they exist in the South today. The caste of kin is the practice of the theory that blood is thicker than water; and the Sermon on the Mount cannot invalidate God's own law of the survival of the fittest. If these widely different races cannot blend their blood—and instinct and science say nay—the only real foundation for democracy, equality, actual or potential, does not exist and cannot be created. * * * Southerners understand the apparent cruelty imputed to the God of Israel, who is represented as commanding the extermination of nonassimilable peoples. But the more refined killing of today in the South is not the taking of a Negro's life but the impassive and relentless murder of a people's hopes. But better this than worse that might be. * * * Sometimes we must be cruel would we be kind." [4]

Reminiscent of the theological and sociological arguments with which slavery had been defended, these words were spoken in defense of caste. This sort of defense has been given often since emancipation. It continues. The more caste is exposed for what it is, the more do its defenders defy the course of history. Senator JAMES O. EASTLAND, of Mississippi, rose on the floor of the Senate of the United States on June 20, 1944, and declared:

"I have no prejudice in my heart; but the white race is a superior race and the Negro is an inferior race, and the races must be kept separate by law." [5]

So speaks the voice of rear guard reaction, defending a caste system which is on its way out just as surely as slavery was once on its way out of American life. We can understand this voice for what it is, but it need excite in us neither fear nor condemnation. There are always men who shout their defiance of the onward movement of events. We hear them but are unmoved. We listen rather to the quiet voice of human understanding, leading us forward, undismayed and undeterred.

Just 10 years after Senator EASTLAND made his defense and declared his defiance decision day of May 17, 1954, brought the quiet words of the unanimous High Court for our guidance. "We conclude that in the field of public education the doctrine of 'separate but equal' has no place." The death knell of a dying order had struck. Caste, like slavery, was doomed. As the Court said a year later, nothing can be permitted to vitiate that principle—the days of "separate but equal" are gone. We stand on the threshold of democracy.

The question is not whether we shall cross that threshold. The question is only how and when. And if we can disregard the shrill shouts of the terrorists, if we can listen to men of moderation and conviction, we shall step with confidence and quiet fortitude into a brighter future. The issues today are much the same as they were in 1865 or 1881, even though the controversy is on a more advanced level. And today, as in former times, these are years of testing which will separate the men from the boys. We walk a perilous terrain.

II

It was Booker T. Washington's great contribution to American history that he blazed a trail across the ground we now must travel again. How did he make his journey?

No speech in the history of American race relations has had an effect so immediate and electrifying, nor led to so much subsequent controversy, as his Atlanta Exposition speech in 1895. It may be that we can learn something from a fresh examination of that speech, keeping it in the context of its times. What did he say, and under what circumstances?

Facing representatives of all factions in a country which had torn itself asunder over slavery and which was sharply divided over the new institutions of racial control, Washington took his position. To the members of his own race he said, "Cast down your bucket where you are. Cast it down in making friends, in every manly way, of the people of all races by whom you are surrounded." Neither servility nor bitterness, but friendship—friendships to be deliberately sought and affirmatively made.

He threaded a dextrous path between the patterns of the past and the hopes of the future. Accepting as a fact the presence of a system of caste, he said, "In all things that are purely social we can be as separate as the fingers."

But even as he admitted the presence of caste, he rejected its major premises and sowed the seeds of its undoing, for he added: "Yet one as the hand in all things essential to mutual progress."

And if anyone doubts where his true intent lay, let him read again the words which followed immediately on these others:

"There is no defense or security for any of us except in the highest intelligence and development of all. If anywhere there are efforts tending to curtail the fullest growth of the Negro, let these efforts be turned into stimulating, encouraging, and making him the most useful and intelligent citizen. * * * There is no escape through law of man or God from the inevitable:

" 'The laws of changeless justice bind
Oppressor with oppressed;
And close as sin and suffering joined
We march to fate abreast.' "

In the face of the newly established patterns of racial caste, and in the presence of both races and all sections of the Nation, he spoke the sentiments which James Weldon Johnson was later to put in poetic form:

"TO AMERICA

"How will you have us? As we are
Or struggling 'neath the load we bear?
Our eyes fixed forward on a star
Or staring empty in despair?
Rising or falling? Men or things?
With lagging pace or footsteps fleet?
Strong, willing sinews in your wings
Or tight'ning chains about your feet?"

This is the sober truth to which Washington brought his listeners in 1895. From that insistent question he never turned, and never let others turn. "There is no escape through law of man or God from the inevitable," he said, no way to avoid a common destiny toward which we march abreast—together.

Turning again to the members of his own group, he advised the most thorough preparation possible for full participation in and contribution to American life. He insisted that lack of preparation would always stand in the way of full acceptance. For these commonsense statements he has been widely criticized; but it is probable that the perspectives of history give us today a somewhat more serene vantage from which to judge the merits of his utterance. Especially should we note that in the very moment that he

[3] Quoted in B. G. Gallagher, American Caste and the Negro College, p. 10.

[4] Quoted in Odum, Social and Mental Traits of the Negro.

[5] CONGRESSIONAL RECORD, June 20, 1944.

urged Negroes to prepare themselves diligently for enlarged opportunities, he stressed the things for which all should struggle, saying, "It is important and right that all privileges of the law be ours." Put that sentence into the context of fear and timidity at the moment in which he spoke, remember that he was speaking where racial caste was already an accepted fact, and then realize that he was, in fact, arguing 60 years ahead of his time for the opportunities which at long last are becoming ours.

In his decisive hour, Booker T. Washington found a pathway and pointed it out—a path which enabled him and his fellow citizens of both races to face the future together. And in that moment, he showed that this path was one which meant that all compromises were temporary, and that the common destiny which claims us all places us under moral obligation to each other.

No matter what tack his course took, from that moment forward Washington knew his port of destination. A few months later, accepting an honorary degree from Harvard University, he spoke before the alumni dinner:

"Often through oppression, unjust discrimination, and prejudice, but through them all, we are coming up; and with proper habits, intelligence, and property, there is no power on earth that can permanently stay our progress."

He knew whereof he spoke. In his final days he looked back over the crowded years and said with simple conviction, "I do not recall that I ever became discouraged over anything I set out to accomplish."

Oh! Indomitable faith which calmly recognized that nothing can escape the inevitable.

III

Today, we stand in the opening stages of the third great phase of American racial patterns. Slavery has gone, giving way to caste; now caste is doomed, and the glimmerings of democracy are before us. Once again comes the moment in which men of good will and high conviction must refuse to heed the siren calls of political opportunists and parlor demagogs, when we must be undeterred by the threats of the extremists and undaunted in our expectation of the inevitable.

Now, there is a gradualism which is born of fear, fed by terror, and exploited by prejudice. This is not the gradualism of which we speak with approval. There is another kind of gradualism which is best seen in the actual timetable of American history. Surely the believers in democracy have worked through gradual processes.

Were not 2½ centuries of slavery sufficient as a preliminary to caste? And is not a century of caste a long enough period during which to hesitate on the doorstep of democracy? What more gradual process could be wished except by those who would turn the clock of history backward? What more gradual steps could have been taken than are shown in the patient waiting of the millions through the generations of disappointment?

And who is moderate in this present hour? Surely the quiet, clear language of the Supreme Court is given in tones of moderation. Everywhere throughout the Nation, not in a single State or section, the verdict applies. We are enjoined to leave behind the transition stage of separate but equal which has served its day, and to move toward a fuller realization of democracy. Varied local problems must be solved. All that is required is that a prompt and reasonable start toward full compliance be made, and that there be progress with all deliberate speed. Surely this is the course of moderation. The extremists are those who challenge it, call the Court subversive, defy its jurisdiction, and demand that the Constitution itself be revised. The extremists are those who talk irresponsibly of resort to armed force in defiance of the law of the land. They, too, will tire of their role.

For the moderates are already prevailing. Let us not be fooled by the loud words of riotous actions coming from a few places. The moderates are already winning the day. In 12 of the former segregating States, compliance has already been completed or is underway. In 43 of the 48 States, the State supported institutions of higher education admit applicants without reference to race and solely on the basis of personal merit. In more than half of the privately supported colleges and universities of the former segregating States, the doors have been voluntarily opened to all. More than two thousand Negroes are now studying side by side with whites in what were formerly all-white institutions; and this has been accomplished without overt incident and with amazingly satisfactory results. Here are no threats, no intimidations, no wildly circulated rumors and suspicions—no immoderation. Here, instead, is the quiet courage to welcome the inevitable and to step into the future without fear. This is moderation.

And near the top of the list of those who work gradually, and without the tools of terror and excess, we must put the National Association for the Advancement of Colored People. The NAACP is accused of extremist action and dubious alliance. There is no word of truth in such accusations. Let the record speak.

The association waited a quarter century before bringing its first suit to open up a single graduate school to one Negro. From the Gaines case to the school segregation cases was another 20 years of quiet, painstaking gradualism in the bending of the color bar. By the time the Court spoke in 1954, that bar was bent so far that it could scarcely be called a bar any longer, except in those islands of resistance were extremists are seeking to defy the inevitable.

In the much publicized case of mob violence at the University of Alabama, you have a perfect illustration of the gradualism with which the NAACP works. Miss Lucy's application at Tuscaloosa roots not in the recently rendered Court verdicts of 1954 and 1955. It goes back to the Heman Sweatt case of 1950. Miss Lucy waited 2½ years after that case before even filing an application; and she waited another 2½ years before pressing he suit for admission. Name one other person, qualified for entrance to the University of the State of Alabama, who has exhibited the patience and gradualism here shown by one who waited 5 years for action.

The NAACP asks for nothing not guaranteed to all citizens by the Constitution of the United States. Is this immoderation? The NAACP has 60 percent of its membership in the former segregating States. Is this rightly to be called agitation by professionals and outsiders? And for that matter, your speaker today has lived longer in Alabama than in any other State. He knows race relations in the Deep South from long study and full experience. He concedes the right of an outsider like Senator EASTLAND to come over to Alabama, and insists on the same right, in discussing a national problem. The National Association for the Advancement of Colored People, is a moderating influence in American life, made of persons in both races and all sections, working through lawful means to bring closer that day for which all men pray—the day of dignity and decency for every child of God.

Take just one more example of patience and moderation. Look at the record of Federal funds distributed to the States for land-grant colleges and universities. There are two channels through which these funds flow to the States. The first derives from the Morrill Act of 1890 and its subsequent amendments in the Bankhead-Jones and other amending acts. These funds are administered through the United States Offices of Education. For 65 years these funds have come to the 17 segregating States and have been applied with scrupulous honesty in accordance with racial safeguards written into the law. Within each State, the funds have been divided strictly in accordance with population ratios. At present, the Negro institutions receive 30 percent of these funds, as Negroes make up 30 percent of the population. Even in the States where resistance to desegregation is strongest, there has never been any deviation from the honest administration of funds appropriated by Congress under racial safeguards for the land-grant institutions.

But there is another source—and a much larger one—from which funds also come to the States for land-grant institutions. These funds flow through the Department of Agriculture, and Congress did not write racial safeguards into the legislation. Result? When these funds reach the States, they go to the institutions for whites only. If equitable distribution under the old separate but equal doctrine were to have been made, Negroes would have received their fair share of these funds also. Their fair share would have amounted to a little over $7 million, in the most recent year for which reports are available. This is 16 times as much as they actually received under the laws where racial safeguards were observed. Nothing has ever been done about this. Not by the Department of Agriculture to which protests have gone time after time in successive administrations under both political parties. And not by any Chief Executive either. Nothing is being done today, and nothing is promised. Meantime, the Federal funds flow to the States, there to be divided so that Negroes are cheated at the rate of 16 to 1.

Has there been any change in this practice since May 17, 1954? There has not. Despite the full moral authority of the decision of the Supreme Court which could have informed Executive action, the Federal Government continues to send out its funds to be wrongly spent at the rate of 16 to 1. This has been going on for decades. How gradual, how moderate, how silent should we be? Surely we cannot be accused of immoderation or of being extremists if at long last we call for action to correct this evil?

The footnote to this matter is informative. There is now under discussion in the Nation's Capital legislation which proposes to bring Federal aid to the States for schools. In the light of experience with the land-grant colleges and universities, can it be said with any assurance that, where racial safeguards are not included in the legislation, equity results? Let those who feel otherwise assume the burden of proving their contention. I see but one thing which would make racial safeguards in the Federal aid bill unnecessary. Let the voices of moderates, those who believe in complying with the law, in all the States to which these funds will flow—let those who are prepared to welcome Federal funds to do the job justly and wisely and well—say so. And let the voice of moderation respond from the floor of Congress with the quiet assurance that the funds are on the way.

True moderation does not connive to evade the law. True moderation does not accept the Court in the Dred Scott decision and then reject the Court in a later decision. True moderation stands for the rights of all men under the Constitution. True moderation believes in the inevitable.

On this founder's day at Tuskegee Institute, let us recall the faith of the Nation's Founding Fathers.

"We hold these truths to be self evident, that all men are created equal; that they are endowed by the Creator with certain unalienable rights. * * * To secure these rights, governments are formed among men."

It was Tuskegee's founder who held that there is no power on earth which can permanently stay our progress.

As we set out, like him, across a perilous terrain, one sentence of Washington's becomes our compass, our immovable point of reference:

"I will let no man drag me down so low as to make me hate him."

May God richly bless the memory and further the work of the great founder of a great institute.

The Middle of the Road—Where It Leads

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, April 11, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an unusually pertinent article entitled "The Middle of the Road—Where It Leads," which, I feel, deserves the attention of every Senator and every other person in America.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Human Events of March 24, 1956]

THE MIDDLE OF THE ROAD—WHERE IT LEADS

(By Richard M. Weaver)

When you drive your car, do you drive in the middle of the road? This seems a silly question to ask because you don't, of course, if you want to stay alive and get somewhere.

But a lot of people have been sold on the idea that the middle of the road is the safest place in politics and on all sorts of controversial questions. They have been led to believe that in the middle position you are out of harm's way and you are more likely to be right than those who are on either side of a question. A little thought will show that this idea is borne not of wisdom but of confusion or fear or both.

Properly speaking, middle-of-the-roadism is not a political philosophy at all. It is rather the absence of a philosophy or an attempt to evade having a philosophy. All great movements in the past have grown out of and have depended upon some self-consistent view of man and society. They have presented a program embodying clear principles, and people have gotten behind the movements because they wanted the principles to triumph. In no case did they labor and fight to see the principles bartered away for a few concessions by the opposition. If they felt they were right, they were not willing to settle by splitting the difference between themselves and the enemy. The great sacrifices of history have not been inspired by political trimming and unmanly compromise. Try imagining the figure that Washington would cut in history today if he had decided on a compromise settlement with the British.

Middle-of-the-road policies have a false attraction for some people because they keep they from having to think a position through. All they have to do is borrow a little from the parties on either side of them, add this us, and tell themselves that this is the "sound" position. But a position half way between right and wrong is not a sound position. It only postpones and makes more difficult the eventual decision. And there are different views of man's destiny which can never be made compatible.

Middle-of-the-roadism is seldom anything more than short-sightedness. It is not an insight into political matters because it is wholly dependent upon what other parties say, or stand for. It takes its bearing from them. And far from being safe, it is just the spot to catch brickbats from both sides.

When you ask people why they have adopted a middle-of-the-road position, you nearly always discover that they fall into these two groups. The first group has been deceived into believing, as we have just noted, that you find the right by averaging right and wrong. If this were true, there would never be any use for intelligence and moral conviction.

The second group is usually fearful of taking a position which an enemy might characterize as "extreme" in spite of the fact that many ideas are attacked as extreme for no other reason than that they express clear-cut principles. Nearly all advocates of principles have been attacked at one time or another as "extremists." But if the principles were sound, the leaders generally prevailed. It does take some intestinal fortitude to champion an idea that has powerful enemies. But people who are frightened by this kind of criticism are usually afraid to stand up for any principle.

There is a third group of middle-of-the-roaders which is even less admirable than these two. These are the opportunists, the believers in pure expediency, who think that the best chance is to take a middle position and play off both sides against each other. Then while the parties on either side are fighting they try to run off with the bacon. These are the ones who believe that you cannot really stand for something and win an election. They are generally afraid of all ideas because their sole object is to get into office. They are politicians in the worst sense of the word. Everybody recognizes this type of political leader.

History, however, shows that they are dead wrong even about the matter of winning. Occasionally dodging about in the middle of the road does lead to a temporary victory. But these are fleeting successes for the simple reason that you can't fool all of the people all the time. In their hearts people despise a trimmer and, as soon as they find him out, they leave him. The great causes which have triumphed and the leaders which have led them have never been found in the middle of the road. They have set their course by some ideal and have resisted all temptations, which have sometimes been many, to come halfway to the other side. And the parties which have played the game of compromise on vital issues have seen their glory and their power vanish. For proof of this, let's go to history.

A century ago this country had an important and powerful party called the Whigs. Its leader was the attractive Henry Clay and he had support from the best elements in all parts of the country. But his party made the fatal mistake of trying the straddle the fence on major issues. As a result, it was not Clay, "the Great Compromiser," who went to the White House, but the hard-hitting Andrew Jackson. By 1856 the Whig Party was dead. Stephen A. Douglas tried the same trick, looking for the middle of the road between issues that were in direct conflict. He lost to Abraham Lincoln, who had taken a definite stand on one side. Even when the Democratic Party has won, on issues that many do not approve of, it has done so in taking a decisive stand for something. Better an opponent whose position you are certain of than a supposed friend whose only interest is in dodging the crucial issues. Such has generally been the judgment of the American voters on those who were merely looking for the line of least resistance.

We find that the story has been the same if we look at British politics. Two generations ago there was a powerful party in England called the Liberal Party. It was able to win elections at times and name the Prime Minister. Today it is little more than a ghost, a negligible element in British political life. The explanation of its demise is the same as that of the American Whigs. It tried to be a middle-of-the-road party, a party of compromise. But as always, the more pressing issues became, the more impatient people became with temporizing and half solutions. The result was that the Liberal Party was squeezed to death between the Conservative Party and the rising Labor Party. These represent with considerable distinctness a right and a left. That is to say, they offer the people reasonably clear alternatives. The poor Liberal Party, interested solely in being tepid on all matters, has virtually ceased to exist.

So much for the claim that the middle of of the road is the path to success. Dodging issues and watering down solutions is not merely the way to failure; it is the way to extinction.

All great political parties owe their vitality to the importance of the things they stand for. And this is never truer than in periods of defeat which, in the normal alteration of political circumstances, must sometimes occur. A beaten party with a real issue has an excellent chance of coming back. A beaten party without an issue is a dead duck. And those parties which have tied their fortunes to some personality who happens to excite the masses are only setting a term to their effectiveness. When he goes, as he must, the wind is out of their sails. A party which has abandoned issues for personalities cannot overnight make itself a party of principles again.

These considerations have a melancholy bearing upon the situation in our country today. There is one group, not clearly distinguished by a party name, but quite definite about what it wants and expects to bring about in this Nation. Most accurately speaking, it is the party of collectivism. It works on various fronts and under various labels, but there need be no confusion about its objectives. It wants an America, new-modeled according to the Soviet Union.

There are two ideas in the philosophy of collectivism of which every American ought to be aware. One of them is a thoroughgoing materialism, which insists that man is merely a natural animal, which repudiates religion and all belief in the Divine Providence, and which maintains that happiness is purely a matter of gratifying this animal's appetites. The other idea is that the state is supreme and the individual nothing; that society should be managed down to the smallest details by a centralized authority, and that there is no higher power—no human tradition, no conscience, no precept of religion—by which this control can be criticized. An all-powerful state, designed along engineering lines to satisfy the physical wants of the masses, is their aim and goal, although often it is their method to admit only part of it at a time. In the writings of their prophets, Marx, Engels, Lenin, and Stalin, however, it is revealed without any squeamishness.

You would think that in this country of ours, with its heritage and its achievements, there would be a tremendous outcry and opposition to anything so one-sided in its interpretation of history and man's nature and so chilling to human instincts.

There is a great segment of our population to the right of collectivism and morally committed to fight it. Strange as it may sound, however, a good many of its leaders have adopted the policy of appeasement. Instead of issuing a direct challenge, in terms of principle, they have tried to see how many concessions they could make without being

accused of surrender. They have tried to see how closely they could approach the position of collectivism while still paying lipservice to what they are supposed to be defending.

Logic and duty call for them to stand up for their side, not to fight the battle by retreating from it. They have sought a middle-of-the-road position between a militant collectivism and our tradition of freedom and individualism. Historical examples show that the next step is capitulation, or liquidation of the party which is so cowardly.

If this should come about, it will certainly be recorded by history that no people ever gave up so much for so little. We possess a great, beautiful, inspiring country. In our comparatively brief history we have created some traditions that any people would be proud to sustain; we have borne leaders and heroes to match those out of Plutarch; we have accomplished many things which by previous standards were thought impossible. We have combined equality with a method of rewarding success and distinction which has no parallel in history in its ability to produce social satisfaction and incentive to achievement.

Best of all, we have created a spirit of kindness and helpfulness which mitigates the lot of life's failures without trying absurdly to place them in the driver's seat. Every candid foreign observer is struck by this, and we feel intuitively that it is a very American thing. "Nowhere is cruelty more abhorred," Lord Bryce wrote admiringly of the America he saw. Now it is proposed to exchange this for the regimentation, the directives, the penalties, perhaps even the forced labor camps and executions of an alien and inhuman philosophy.

There is little doubt that the middle of the road today leads in this direction. The radicals know what they want; too many of the rest of us only temporize and hope. Already a good many people are behaving as if their conscience hurt them over being American, so they give a little here and a little there in the hope of not being too offensive to the truculent enemy.

This is the reason that even the election of 1952 did not halt creeping socialism. Because no influential leader drew the line in terms of clear principle, the immence bureaucracy of the New Deal was allowed to consolidate itself further. This and that clamorous group has been able to extort state aid according to New Deal methods. All candid observers realize that the trend toward statism has not yet been reversed.

The need of the time is for a leadership willing to face the facts. Complacency toward what is happening is a betrayal of the America we have inherited. The kind of leader that people are willing to stay with, and to sacrifice personally for, is the kind that says, "I'm going to fight it out on this line if it takes all summer." Wavering and self-defeat through compromise where vital points are at stake never yet held a following. To win this struggle we have got to get on the right side of the road and keep it with resolution.

Small Business Loan Program

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 11, 1956

Mr. EVINS. Mr. Speaker, I ask unanimous consent to have included in the RECORD an article appearing in Facts magazine of March 1956, with reference to the loan and assistance program of the Small Business Administration.

The article follows:

Small business can be the corner grocer or a medium-size bottling factory. Definitions are as infinite as the size and scope of small business.

Congress defines a small business concern in this general framework: one which is independently owned and operated and not dominant in its field of operation.

HOW MANY SMALL BUSINESSES?

Under this and certain other criteria used in determining whether a firm is eligible for Federal assistance, 4,000,000 of the Nation's estimated 4,200,000 business establishments are considered to be small business.

WITHOUT A NAY

Small business is important business.

Public Law 268 passed without a nay vote last summer. It extended for 2 more years the Small Business Administration, brought into being July 30, 1953. The lawmakers, apparently, believed in the bill's preamble which declared that Congress and the Government "should aid, counsel, assist and protect * * * the interests of small business concerns."

HOW?

In carrying out this program, the SBA offers three major services:

Contracts assistance: It aids small firms in obtaining a fair share of Government contracts, military and civilian. Big producers and contractors are also urged to place more orders with small firms.

Management and technical aid: SBA assists owners of small businesses with their problems through counseling, publications, and cooperating with educational institutions in furnishing administrative management courses for owners.

Loans: It grants business and disaster loans when necessary financial aid is not available from private sources.

WANT A LOAN?

There may be some redtape involved in applying for an SBA loan, but pull is not a factor. A small-business man in distress should first apply to his own bank. If he is turned down, the bank may be willing later to make the loan if SBA will share it. The original application can go through any one of SBA's 37 field offices.

Some basic credit requirements: Good character, evidence of ability to operate the business successfully, sufficient capital to assure that (with the loan) the applicant can operate on a sound basis, and reasonable assurance of repayment of the loan.

CAUTIONS AND LIMITATIONS

SBA money is taxpayers' money. Loans must conform to the law—no shenanigans allowed. Requests for some types of loans will never qualify.

SBA can lend up to $250,000 to a single borrower. The terms: (1) maturity period may range from several months to 10 years; (2) interest is usually 6 percent per year on direct loans. In loans in which the SBA participates with a bank, the rate may be lower. Collateral may consist of: mortgage on plant and equipment; assignment of warehouse receipts for marketable merchandise; assignment of certain types of contracts; a mortgage on chattels; or, in some instances, assignment of current receivables.

CEILING EXCEPTION

The $250,000 loan ceiling does not apply to corporations formed by smallbusiness concerns for pool production or purchase of raw materials or supplies. Here the ceiling may be $250,000 multiplied by the number of firms in the pool.

SCORECARD

Breakdown on loans through December 31, 1955:

Business loans: Approved 2,270 business loans totaling $114,045,903. About two-thirds of these were made in participation with banks and other lending institutions. Further breakdown: Direct loans: 767 for $32,340,426. Participation loans: 1,503 for $81,705,477.

Disaster loans: Approved 3,299 for $37,904,978. The disaster loan ceiling, $25 million set by law, was reached during the New England floods. SBA continued to make loans on a business-loan basis (interest ceiling of 6 percent). The disaster-loan rate is 3 percent.

FURTHER REPORT

Contracts assistance: Proposed Government purchases totaling $778,681,486 earmarked for small business through November 25. Small concerns had received 7,915 contract awards amounting to $418,905,426.

Referral program: Field offices of the SBA have made more than 289,000 notifications of prime contract opportunities, and small firms have received contracts in substantial amounts in the period from July 1, 1954 to November 1, 1955.

The SBA moved recently to help small merchants modernize their businesses. The new program: SBA will lend up to $15,000 for as long as 5 years to those who rent space and have little except fixtures and inventory to show for collateral. Normally, such small merchants could get bank loans for only 60 to 120 days. A backstop for the Government in the program requires the local banks to underwrite 25 percent of the loan.

PUSHED AROUND?

There has been talk of small-business men in distress being pushed around because of the law itself and an overly stringent administration. The arguments: A loan is available only if it can't be obtained from private sources. This (it is charged) means you can't be eligible for SBA help unless you are a bad credit risk.

Other charges: SBA demands too much security. Loan investigations take too long. There are too many instances in which the law forbids loans, and there is too much redtape in applying for a loan.

BANK'S ATTITUDE

The banks are generally cooperative with SBA's activities and small business. In addition to participating in two-thirds of loans granted to date, the banks have loaned personnel and set up offices on the scene in times of disaster. (William Kelly, spokesman for the American Bankers' Association, expressed some hostility last year in testimony on Capitol Hill; he said there were instances in which SBA interferes with banks' activities.)

SBA is aware of the complaints against it and feels they are unjustified. The agency points out: It must follow the law as it was passed. It wasn't set up to compete with banks. It endeavors to make only sound loans. A bank many times has prior knowledge of an applicant's background. Uncle Sam is starting from scratch in each instance. Yet, SBA says the average time of a loan investigation is a month.

RULES, RULES, RULES

Some rules are SBA's own, such as the criteria (allowed by law) used in determining in specific cases whether a concern is small business. Here they are:

A manufacturing firm employing more than 250 and less than 1,000 may qualify, depending on the size standard set for its particular industry.

Distribution trades: Net sales of $5 million per year is the ceiling in the wholesale field; it is $1 million in the retail field.

Service trades: Small if receipts are $1 million or less annually.

Government work: Where the SBA is giving contract assistance, a firm employing less than 500 qualifies.

THE OTHER EYE

At year's end the Nation's economy still was booming, and small business was helping to make some of the noise. But small-business men, even in this optimistic atmosphere, have one eye on business indices, the other on Washington, in this election year.

COMMITTEE DOORS

Rarely does Congress make small business an open target. But some pot-shots are taken behind closed committee doors. When the SBA extension bill was stalled in the Rules Committee, an emergency 1-month extension was pushed through to save the law from dying July 30. Finally, on the night of adjournment, the 2-year measure was passed.

LOOKING AHEAD

Congress has been passing laws for more than 60 years aimed at helping small business. Most have been controversial; none has been universally welcomed. During the current session of Congress, small business will be watching to try to prevent the loss of any of its gains of past years. Of particular interest: proposed amendments to the wage and hour laws, and the study of NLRB jurisdictional criteria.

SBA PROPOSALS

Congress has been asked to lift the disaster loan ceiling of $25 million by several millions of dollars in order that New England flood loans of last year may be converted to the disaster-type (3 percent interest category). This has bipartisan backing.

There are only a few millions of dollars left in the $105 million revolving fund for business loans. (The first substantial repayment of loans is just beginning to come in.) The total fund is often estimated as too small to do real good. Should the repayment procedure bog down, the SBA would be in the same distressed fix as many of the small businesses it has helped. The present law authorizes a revolving fund of $175 million, but the full total has never been appropriated. If more funds are needed because of heavy disaster loans this year, Congress would have to authorize more money.

SBA could also use, but probably won't get, a hike in its own budget, which now totals about $5,500,000, covering 750 permanent employees.

FAILURES

Why this concern over small business? The answer: The farmer and other segments of society have long been given special attention. Proof of the need: Business failures in 1954, 11,086; failures in 1955 also exceeded 11,000. Such failures, say SBA experts, are traceable to a lack of technical know-how, merchandising and management, or both.

It is usually a new, rather than an established business, which fails. Many times it is one which was started with insufficient capital to weather the rough spots of the early years. The old saw, "It takes money to make money," still holds true.

Petition Regarding the Siler Bill, H. R. 6427, and the Langer Bill, S. 923

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. METCALF. Mr. Speaker, I have received the following letter on behalf of legislation to prohibit the transportation of alcoholic beverage advertising in interstate commerce and its broadcasting over the air:

BUTTE, MONT.

Hon. LEE METCALF,
House Office Building,
Washington, D. C.

DEAR Mr. METCALF: I am sending you a petition about the Siler and Langer bills. Will you kindly include the number of signers in the CONGRESSIONAL RECORD? Thank you.

Sincerely,

THURE JOHNSON.

Enclosed with this letter was the following petition, signed by 24 residents of Butte:

We, the undersigned, respectfully petition you to exercise the proper discretion vested in you by passing legislation to prohibit the transportation of alcoholic beverage advertising in interstate commerce and its broadcasting over the air, a practice which nullifies the rights of the State under the 21st amendment to control the sale of such beverages.

At a time when 1 out of 10 drinkers is becoming an alcoholic there should be no encouragement to increasing the use of such beverages. Children and youth are being misled to consider them harmless, especially by the audio and visual suggestion of radio and television.

Mrs. Thure Johnson, Mrs. Arne Adsem, Mrs. Lulu Boggs, Mrs. Elmer Carlson, William C. Dockins, Art Johnson, Ruth Hanson, Mrs. Audrey Stoughton, Mrs. James Cadigan, Mrs. Jo Ann McKindau, Rhynold C. Arich, Mrs. Mary J. McLeod, Mrs. Margaret Wirtz, Mrs. Fern Gregerson, Mrs. O. J. Wenger, Mrs. R. C. Arich, Mr. Clarence R. Foster, Mrs. Clarence R. Foster, Thure Johnson, Mrs. Elmer Wilson, Elmer Wilson, Mrs. Lillian L. Comer, Mrs. William Boggs, Mary Shaffer, Butte, Mont.

International Paper Co.

EXTENSION OF REMARKS
OF
HON. W. F. NORRELL
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. NORRELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

NEWS RELEASE ISSUED BY INTERNATIONAL PAPER CO.

NEW YORK, N. Y., April 10.—The International Paper Co. plans for immediate construction of a newsprint and bleached kraftboard mill were announced today by John H. Hinman, chairman of the board of directors of International Paper Co.

Mr. Hinman said that the new $57 million mill will be located near Pine Bluff, Ark. It will have an annual capacity of 130,000 tons of newsprint and 165,000 tons of bleached kraft board.

International Paper Co. is presently completing a 115,000-ton newsprint mill at Mobile, Ala. This mill, which is scheduled to start up in September of this year, will be the first newsprint mill ever operated by the company in the South.

The chemical pulp mill and bleached kraft machine in the Pine Bluff mill are expected to be in operation by the third quarter of 1957, followed about the end of the year by the ground-wood mill and the newsprint machine. The mill will employ about 1,450 men and women when it is in full operation.

Arkansas is third in the Nation in the number of tree farms, and timber harvest is an important cash crop to most farmers. For many years International Paper Co. has purchased about 85 percent of the wood consumed by its mill at Camden, Ark., from farmers and small landowners, and in recent years the company has opened six mechanized pulpwood concentration yards in the State to provide convenient local markets where pulpwood may be sold directly to the company.

"The rapid industrial and agricultural expansion in the South in recent years has made it one of the fastest growing markets in the world for newsprint," Mr. Hinman said today. "Completion of the projected Arkansas mill will make it possible for our company to make a substantial addition to the South's newsprint resources and will help us to meet the expanding demand in the Southern States for locally produced newsprint."

Last year, International Paper's Canadian subsidiaries produced a total of 864,469 tons of newsprint. Announced additions to the company's Canadian capacity were delayed to some extent primarily because of difficulties experienced in obtaining prompt delivery of equipment, but will reach an annual rate of 920,000 tons later this year.

The company was one of the pioneers in the production of bleached kraft fourdrinier board during the late 1930's. This is the strong, white paperboard used in food packaging, particularly frozen foods and the foods sold by the supermarkets in individual prepackaged units.

In 1925, the company was the first major paper company to move South. Today their southern kraft division operates 9 pulp, paper, and board mills in 6 Southern States, and employs approximately 18,000 men and women. Backing up its manufacturing operation is a staff of 450 trained foresters who manage the company's acreage and work with the thousands of farmers and small landowners throughout the South who supply pulpwood to the mills.

Peter D. Vroom

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. O'HARA of Illinois. Mr. Speaker, there was waiting for me on my return from a few days in my district in Chicago a letter telling of the death of Peter D. Vroom. For half a century he was my close friend. For a number of years illness had confined him to his home, but the bonds of a long and dear friendship were kept freshly vibrant by frequent exchange of letters. I shall miss those messages from my friend who now has passed to another and a higher sphere.

Peter D. Vroom was one of the finest newspapermen that I have ever known. He was reporter on the Chicago Tribune during the colorful era of James Keeley. Oldtimers in Chicago will recall Jim Keeley as a powerful and dynamic newspaper editor. Pete Vroom was so close to Jim Keeley that when the latter left the service of the Chicago Tribune to take over the public relations of the Pullman Co., Pete Vroom went with him.

The world in which he was such a vibrant personality has gone. He was past

80 when the hand of death was laid upon him, and most if not all of his associates in the journalism of the period of his prime had preceded him to the grave. I should not want his passing to go unnoticed. He was in every sense of the world a great American, and he lived up to a great and a proud name.

I am happy that that name of Peter D. Vroom will be continued in the generation of the present by his son, also named Peter D. Vroom. Back in colonial days, in the early years of the Republic and in the developing years that followed there has always been a Peter D. Vroom. How many of that name and of that blood served as governors, as judges in the courts and in other high public offices I cannot say with exactness, but the number was large.

One of that family, whose name erroneously is spelled Broom in some published lists of the makers and signers of the Constitution of the United States, was but 35 years of age when he served with Washington, Madison, Hamilton, and the other immortals in the writing of the Constitution of our country. Maj. William Pierce, a fellow delegate to the Constitutional Convention, spells the name correctly "Vroom," in his pen sketches of his fellow delegates.

If my colleagues will turn to page 1959 of the biographical directory of the American Congress they will find that another of the family blood and name, Peter V. Vroom, was elected as a Democrat to the 26th Congress, convening on March 4, 1839. This Peter D. Vroom was electer Governor of New Jersey as a Jackson Democrat in 1829, 1830, 1831, 1833, 1834, 1835, and 1836. He was a presidential elector on the Democratic ticket of Pierce and King in 1852 and also a presidential elector on the Democratic ticket of Seymour and Blair in 1868. He at all times carried proudly the name of Peter D. Vroom. My friend whose death has brought to me a load of grief carried proudly and well in his day and generation that name. To the son, to whom is left the rich heritage of a good and famous name, is presented a challenge that I know he will meet in the spirit of his father and his forebears.

To the widow, Hope, and to the son I extend my deepest sympathy.

Civil-Rights Legislation

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. KEATING. Mr. Speaker, today I have introduced two more legislative proposals prepared in collaboration with the Department of Justice to supplement the measures introduced Monday as part of the administration's civil-rights program. The gentleman from Pennsylvania [Mr. SCOTT] and the gentleman from New York [Mr. MILLER], who joined in proposing to establish a bipartisan Commission on Civil Rights and a Civil Rights Division of the Justice Department on Monday, are likewise sponsoring this legislation.

One of these bills is designed to, first, prevent anyone from threatening, intimidating, or coercing a voter in any election; second, authorize the Attorney General to institute civil action in such cases; and, third, eliminate the requirement that all other remedies must be exhausted before cases can reach the Federal courts. The second proposal would give the Attorney General authority to bring civil suits against civil-rights conspiracies, such as groups attempting to deprive a citizen of equal treatment. In the past, such suits could be filed only by the injured individual.

Enactment of these 2 measures and the 2 introduced Monday will be an important step forward in guaranteeing the civil rights of all citizens regardless of race, creed, color, or political affiliation. At an appropriate time during the deliberations of the Judiciary Committee next week I shall offer these four proposals in a single bill as a substitute for the omnibus measure which we are now considering.

I trust that serious and open-minded consideration will be given these proposals. If we try to bite off more than we can chew, Congress will get exactly nowhere—as in the past. On the other hand, if we follow the administration's moderate and constructive suggestions on civil rights I am confident we can reach agreement and get favorable action. Solid accomplishment is now possible. Let us not ruin the chances of success by an unrealistic approach to this serious national problem.

Discharge Petition on H. R. 11 Unnecessary

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. CELLER. Mr. Speaker, a most unusual petition has been filed to discharge the House Committee on the Judiciary from further consideration of Mr. PATMAN'S bill, H. R. 11. This petition seeks to force a vote on this bill on the House floor without the benefit of committee hearings.

Members of the House, and particularly those who have signed or indicated an interest in signing this petition, should be apprised of all the facts. They should know that the House Judiciary Committee scheduled hearings on this bill well prior to the filing of the discharge petition. Specifically, on February 24, 1956, I advised Representative PATMAN by letter that the House Judiciary Antitrust Subcommittee would hold hearings on his bill April 18, 19, and 20, and would afford all interested parties an opportunity to testify. Some 2 weeks later, on March 12, the discharge petition was filed.

It is not only unusual, I think it is unprecedented, for a discharge petition to be filed after the chairman of a standing committee of this body announces that he is scheduling hearings on a bill.

Members should also understand the complexity and far-reaching effect of H. R. 11. Without prejudging this bill in any respect, it should be noted that it seek sto overturn a 1951 decision of the Supreme Court in the Standard Oil of Indiana case. If ever there has been a bill pending before Congress which requires careful deliberation, this is such a bill. Manifestly, it should not be voted upon by the membership of the House without benefit of committee hearings, including cross examination of witnesses, and committee recommendations.

This bill, H. R. 11, is designed to amend the antitrust laws. I think the record of the House Judiciary Antitrust Subcommittee shows beyond question extreme vigilance in support of the competitive principles embodied in the antitrust laws. Never before, to my knowledge, has a discharge petition been filed on an antitrust bill.

In light of these considreations, together with the fact that intensive hearings will be held on H. R. 11 starting next week, those who have already signed the discharge petition may well wish to reconsider and withdraw their signatures.

Report on Southern Italy

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Wednesday, April 11, 1956

Mr. JACKSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Southern Italy: Land Reborn." This interesting report was writen by John J. Navone, S. J., and appeared in the January 14 issue of America magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Europe and all the world are today watching the regeneration of southern Italy. There the political battle for men's loyalties has reached a climax. The south is the cockpit of Italy, and it is there that the future of the Italian Republic may well be decided.

For centuries the barren, teeming southern two-fifths of Italy, which is home to 37 percent of the nation's people, has been a vast poorhouse. World War II, which destroyed 28 percent of the south's already lagging industrial capacity, seemed the final blow. Hundreds of men, young and old, unable to work because there were no jobs, lounged in scores of squalid town squares. Of every 1,000 southern Italians, only 308 were employed. Better-off southern Italians lived 4 and 5 in a room; the destitute inhabited caves, for in many villages there had been no new building for a hundred years.

Since the war, the Italian Government has poured millions of lire into the south in an all-out effort to bring economic health to the land and people of this backward area. New plows broke 3 feet of earth where for

centuries the surface had been barely scratched by the ancient ox-drawn implements. New land was cleared, fertilized, and irrigated at Government expense. New peasant proprietors for the first time tilled their own fields, which they had bought from the wealthy landholders.

NEW FACE OF THE SOUTH

Should nostalgia ever call the former Calabrian or Apulian emigrant back to his home, he will find little to remind him of former days. Soon it will be beyond recognition. In the Tuscan Maremma, in sun-hammered Lucania, trails have become roads; roads have been transformed into highways. The wilderness has been cleared.

If the former emigrant goes to Rome, he can examine the blueprints of farmhouses, resembling Swiss chalets, that are now beginning to scatter life over the desert. The great Sila Plateau and the Caulonian Plains of Calabria are typical of the seven official zones of the land reform. Here the land has been divided and planted and has begun to pay under the new small peasant proprietors.

With the whole face of southern Italy changing, the north will not be long in feeling the effects. Since the days of Italy's unification of 1870, the taxes of the north have been drained off into the economically deficient south. Now industrial towns and cities will rise up in the south too. But growth will be slow and gradual. New markets will create new industries. People with money to spend will create a demand for commodities, but the people do not yet have the money. The March 1955 issue of Esteri reported that Italy's per capita annual income was only $385 in 1954.

FINANCIAL BLOOD TRANSFUSION

In June 1955 hopes soared high in the south. A $70-million World Bank loan, the largest European development credit granted by the Bank to date, went to Italy's Cassa per il Mezzogiorno (Southern Development Fund), the special Government agency set up in 1950 to push a 12-year $2-billion southern economic revival program. Hampered by petty politics and insufficient funds ($180 million yearly), the Cassa moved slowly, but results are already apparent. Under the stimulation of this new prosperity, private investors have poured $329 million into the region. The Cassa has built 18,000 new farmhouses and 1,800 miles of road, and has increased electrical consumption by 43 percent. It has created about 200,000 full-time jobs and added 2 percent to the national income.

As of October 1954 it had redistributed 1.16 million acres of land, making proud landowners (of 10–15-acre farms) out of 90,000 peasants. Other detailed projects are still to come: safe drinking water for 1,200 towns, irrigation projects, construction of 1,300 miles of new roads and rehabilitation of 6,400 miles of old ones, new hotels to attract tourists.

Last June's World Bank loan, in which the Bank of America has a $5-million share, will finance a $20-million irrigation project to triple the annual value of the Catania Plain's agricultural production by 1967 and create 10,000 new farm jobs in the immediate area. Another $20 million will help private investors finance seven new factories (fertilizer, fruit processing, cement, chemicals, and medicine, pulp and paper, woolens). The remaining $30 million will build eight power projects to increase southern Italy's electric generating capacity by one-sixth. Through such loans Italian dreams become a reality.

MORAL REPERCUSSIONS

The implications of an economic revival for southern Italian morality will be tremendous. The July issue of Italian Affairs revealed the discrepancy in morals between north and south when it stated that thrice as many crimes had been reported in Naples as in Milan during 1953, though these two cities have populations of about the same size. The hitherto wretched economic state of the south has spawned begging, disease, and prostitution on a grand scale. Hundreds of thousands of peasants used to present themselves a few hours before dawn in the squares of the big communes to offer their services for work. When the contractor arrived, only a portion of these were taken on. Those left without work cursed the society that proved incapable of insuring everyone a loaf of bread and a hopeful future.

But what if the peasant were fortunate enough to be employed? The daily wage in southern Italy is about $1.25 for men and 80 cents for women. Furthermore, the average farmworker in the south works only 78 days a year. In Campania he can find work for only 43 days and in Sicily for only 77. This points to another factor differentiating north and south. In Lucania, in the south, for example, 65 percent of the income comes from the land, whereas in Lombardy, in the north, only 17 percent comes from that source. Industrialized Lombardy, with only one-eighth of the national population, produces nearly one-third the national income.

The Italian Government realized that the problem is not only economic but moral. The Cassa agency was created to provide homes for the poor, because Italians have always realized that a proper home environment is essential to rebuilding the family and the nation. The organization builds communities of attractive redtiled homes with gardens in localities where the inhabitants can find opportunities for work. By October 1954, it had completed over 111,000 such dwellings. This figure does not include a far greater number built by various cooperatives and private firms. By rebuilding homes, Italy is also rebuilding its family life.

NEW LIFE ON THE LAND

The new proprietor pays $3,000 for his farm over a 30-year period. Each farm costs the Government approximately $6,000. The yield from these farms is already twice that of farms in the same area not sharing in the benefits of the reconstruction program. Within walking distance of each set of farmhouses, a community center is either reconstructed or built anew. Every community is provided with a church and resident priest. A nursery run by sisters, a first-aid station, a clubhouse, a large meeting room where movies can be shown and a cooperative grocery store are found in every center. The farmers are instructed in the latest methods of scientific farming and husbandry and given fertilizers, seeds, vines, and young fruit trees. The Government gives tractors and other equipment to the community cooperative.

Santa Maria di Respeccia, Gaudiano, Borgo Appio and scores of other new rural villages mean far more than the increased production of foodstuffs. They mean that many former cave and tenement dwellers are being given a sense of personal dignity and encouragement to participate in the social life of their communities.

A new life has begun for the former victims of poverty, who are now buying dress and suit material, shoes, bicycles, kitchen implements, even toys.

AMERICA AND ITALY

Now that the period of Italy's postwar tutelage is almost over, America's task becomes that of helping Italy to grow stronger in her own right. It is doubtful whether the United States can ever become an adequate market for Italy's agricultural exports. American tourism, even on a grand scale, can hardly serve as a deciding factor in the difficult national economy. What we can do, through more humane immigration policies, is to open our doors wider to Italy's surplus population. For despite every remedial measure, unemployment in Italy cannot be brought below the 2 million mark. America should also take the lead in establishing a long-range international resettlement program of adequate proportions.

Italy simply cannot go ahead fast enough to satisfy some Americans. They fail to appreciate the stubborn practical difficulties confronting the Italian Government. Many, for example, were disappointed with the outcome of the Sicilian elections of June, 1955, in which the Communists polled 30.6 percent of the vote. (It was 30.2 in 1953.) Why, they wonder, cannot the government win public confidence faster?

Government surveys help to explain why middle-of-the-road parties in Italy, as elsewhere, find the going hard. They show that nearly 2 percent of Italians live in cellars, garrets, or warehouses. Nearly 90,000 families live in caves. All in all, nearly one-fifth of the entire population lives in subnormal housing conditions. More than 7 percent never have meat, sugar or wine, or another 8 percent have these items only infrequently. With the exception of the Portuguese and Greeks, the Italians have the lowest daily calorie-consumption rate in Europe. Some 2.7 million families are still in the "impoverished" bracket.

The Abbé Pierre has observed that every society has a law that can be called the law of life or death. It is this: a society becomes decadent when it orientates its activities toward bettering the lot of those who are already comfortable, leaving the surplus, if any, for the poor. Conversely, a society finds harmony and prosperity when an essential aim of its activity and production is to satisfy the needs of those who are in want. If the Abbé Pierre's observation is correct—and "I believe that, at least in the case of countries like France, Spain, and Italy it is—then Italy seems to be on the right track.

Statement of Edward L. Torbert, Vice President, Onondaga Pottery Co., in Behalf of Vitrified China Tableware Industry, Before the Ways and Means Committee on H. R. 5550, March 13, 1956

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 11, 1956

Mr. DORN of South Carolina. Mr. Speaker, Mr. Edward L. Torbert made an excellent statement before the Ways and Means Committee on March 13 against H. R. 5550. This bill would provide for United States participation in the Organization for Trade Cooperation which would mean an American endorsement of the General Agreement on Tariffs and Trade recently formulated at Geneva.

If Congress continues to surrender its powers to regulate the tariff and commerce, it will have adverse effects on many of our domestic industries. The Onondaga Pottery Co., manufacturers of vitrified china tableware, of Syracuse, N. Y., has already suffered from unfair foreign competition. Many other industries in every section of our country will likewise suffer unless we here in Congress unite and protect the economy of the United States.

I commend the statement of Mr. Torbert to the attention of this Congress and the American people:

Mr. Chairman, my name is Edward L. Torbert. I am vice president of Onondaga Pottery Co., manufacturers of vitrified china tableware.

At every opportunity afforded by public hearings since inception of the Trade Agreements Act I have spoken on behalf of the vitrified china industry of the United States. Today I represent the same industry interests as well as the company with which I am presently employed.

May I make plain at the outset of my remarks that I am not opposed to international trade and United States participation in it. Exchange of goods between nations is a desirable practice when this can be carried on to the mutual advantage of participating countries.

We are considering here the proposal, H. R. 5550, which would authorize a procedure in implementation of section 350 of the Tariff Act of 1930 and our Trade Agreements Extension Act of 1955 through United States participation in the Organization for Trade Cooperation and subscription to the General Agreement on Tariffs and Trade.

To the extent that this trade legislation, enacted and proposed, stimulates trade between nations that is mutually advantageous, I favor it. However, when the intentions of the proposers and administrators of such legislation are clearly dedicated to expanding international trade on the theory that greater trade is a desirable objective in itself, then I am unalterably opposed to it.

While I shall speak with respect to H. R. 5550, it is impossible for me to contemplate this proposed legislation except in the light of bitter firsthand experience in seeking relief from fateful decisions of committees and negotiators whom you have, to date, entrusted with the responsibility of entering into equitable trade agreements with other nations.

We have in this country many long-established industries using native raw materials, employing American workers efficiently at United States labor rates and supplying products for the United States markets they helped to create.

It is an indisputable fact that our Government has assisted and encouraged the production and imports of displacing foreign products as a means of making available the dollars needed by foreign countries to pay for needed United States exports.

This reckless sacrifice of American job security and capital investment is the work of individuals to whom Congress has turned over the power to negotiate trade agreements. Under their handling, the burden of foreign aid, which should be shouldered equally by all citizens, is being forced upon a helpless segment of our industrial economy.

Aside from the injustice of this inexcusable hurt to individuals and industries, we have, in my opinion, clear warnings of danger to our general economy and standards of living.

Just a word about our vitrified china household tableware industry. At each hearing to which reference has already been made, I reported the progress of imported china tableware. Today I have the letest available information. In 1955 the total imports of household china tableware, including Japan, United Kingdom and Germany, reached the amazing total of 6,872,000 dozens. This is more than 90 percent of all the household china purchased in the United States in 1955. Our United States producers of china tableware shared among themselves less than 10 percent of our United States market. What percentage of our market must any industry give up to the foreign low-wage producers before it can be assured by our negotiators at GATT of any part of our market?

The ascendancy of foreign producers in world markets is a matter of record. American manufacturers, who were at first concerned with retention of their foreign business, now find their domestic trade threatened by imports. A growing number of such firms is being obliged to transfer operations to low-wage areas abroad in an attempt to cope with this situation.

I can report that, within my limited acquaintanceship, there are men in three industries who have swung from a public position of freer trade to a private admission that American business must be protected—this in a 2-year period. Each has felt or foresees the pinch of foreign competition. Each, for reasons of expediency, must be silent at this time.

I do not feel that I exaggerate this situation. I am also concerned over dependence on the Escape Clause section of the Trade Agreements Act of 1955 and provisions of Section 336 of the Tariff Act of 1930 to relieve these problems. Both are cumbersome procedures even if there were a disposition to make the best possible use of them.

With the economic effects of rising foreign competition making themselves felt in all parts of our land, a further divorcing of foreign trade regulation from congressional control could have grave consequences indeed.

I share the opinion of many, and I hope you gentlemen are included, that this is no time, if there ever is a right time, to surrender any right to control our industrial and agricultural destiny to an international body of economics whose interests and ideologies differ greatly from our own.

There can be no doubt that, in matters of trade, the GATT has served certain nations well and that representatives of the United States in that body have yielded much in pursuit of their goal of an international trade organization with teeth in it.

United States delegates are on record as opposing our use of quotas, tariffs and other regulatory devices; the need for which the Congress of the United States, on the other hand, clearly recognizes. Yet our United States delegates to the GATT approve the use of trade controls by other GATT members.

Presumably, the United States would have to be reduced to a relative position of economic and trade disadvantage before our delegates would ask other nations to permit the Congress of the United States to employ trade controls as a means of raising the level of American industrial and agricultural activity to that of GATT members in general.

This giveaway attitude evidenced by our delegates may explain, in part, the mockery which is made of peril-point hearings and other procedures legislated by Congress to provide just treatment of domestic interests.

In conclusion, I should like to borrow two paragraphs from the letter of a businessman which, I understand, each of you has received recently:

"In this day, when much of United States industry is still adjusting to the postwar effects of international trade revival and when we hear increasing talk of commercial exchange with countries behind the Iron Curtain, I wonder if we are moving in the right direction with GATT and OTC.

"Would it not be more prudent for us, instead, to bring a little closer to Congress the control of our imports and exports to make sure that industry and agriculture in this country are kept strong in our fight to save democracy from communism?"

I appreciate this opportunity to appear before you again.

Communism Still Wars on Religion

EXTENSION OF REMARKS
OF
HON. BOURKE B. HICKENLOOPER
OF IOWA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 11, 1956

Mr. HICKENLOOPER. Mr. President, in a recent issue of the U. S. News & World Report there appears an article entitled "Communism Still Wars on Religion," written by Msgr. Maurice S. Sheehy, a Catholic clergyman and a member of the Naval Reserve Forces of the United States. The article is a very penetrating one, and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COMMUNISM STILL WARS ON RELIGION

(By Msgr. Maurice S. Sheehy)

The Communist strategy of divide and conquer is nowhere more apparent than in the field of religion. Since religion, of whatsoever form, is the only power that the Communist leadership fears, it must be destroyed. A tolerance is shown only to those political sycophants who wear ecclesiastical clothing.

Last January, I heard rumors in Europe that a large group of American churchmen were to be taken on a guided tour of Russia. I knew that no Ctaholic priest would be invited, since—despite the guaranty given when diplomatic relations were resumed between Russia and the United States—members of the American diplomatic colony have been deprived the past year of the services of any Catholic priest.

The news reports, inadequate indeed, would indicate that in taking nine prominent Protestant clergymen to Moscow, the Communist strategy may have backfired. It is not impossible that the next step in Moscow, dramatic and misleading, will be to suggest that Russia establish diplomatic relations with the Vatican. It is not within my competency to suggest the answer such an offer will receive. One condition even for discussion—a condition Communists would not meet—would be freedom of the church to carry out its mission.

The only consistency in Communist policy has been in its antireligious program. From Marx—who in 1843 declared: "Religion is the opium of the people; our duty is to deliver the people from this opiate"—to Khrushchev, there has been no change. Recently, Khrushchev declared: "We remain atheists. We will do all we can to liberate a certain portion of the people from the charm of the religious opium that still exists. We are doing everything we can to eliminate the bewitching power of religion."

In my visit to Europe in January of this year I contacted as many sources as possible. The mention of some would expose them to immediate imprisonment and possibly to death. The Vatican issued in Osservatore Romano this cryptic warning: "Do not be taken in by communism and its coexistence. There will be no baptism of communism."

It was my privilege to have a private audience with Pope Pius XII who, more than any living person, has time and again warned the world of the nature of communism. I am not permitted to quote His Holiness directly, but his voice, nearly stilled in death 15 months ago, has never been more vigorous than today in warning of our great peril. The antipathy toward His Holiness in Moscow is reflected in the large Soviet Encyclo-

pedia, which describes the Holy Father as "a true guardian of capitalist interests and one of the centers of international reaction * * * the fierce enemy of peace and democracy * * * an ally and instrument of the most aggressive imperialist powers."

Cardinal Fumisoni Biondi, who has often wept over the casualty lists of murdered missionaries during his service as head of the propagation of the faith, in discussing with me the situation in satellite countries, used the word found in Pope Pius XI's encyclical on communism. The word is "diabolical," as is to be noted in the excerpt from the encyclical printed in the chart on page 146.

Briefly condensed here are some of the facts reported of the Communist war on God behind the Iron Curtain.

1. POLAND

Poland is a nation with historic Catholic tradition on which the Communist anti-God campaign centered most of its forces. The reason is obvious, religion must be destroyed in Poland in order to eliminate it from other Slavic countries.

What are the facts? MVD General Ivan Serov was commissioned to carry out plans already drawn up in 1944–45 to eliminate Catholicism. He works through the Polish Ministry of Public Security. The Communists were fearful of revolt within Poland if a direct frontal attack was made in 1945. Serov therefore sought to make the Catholic Church an instrument of Communist policy, such as is the Orthodox Church in Russia today.

Imprisonment of Polish church leaders and a campaign of terror for priests and faithful moved too slowly. In 1949, the Communists confiscated Polish church property, nationalized hospitals and schools, and even abolished the famed charity organization of the Polish hierarchy, "Caritas."

In 1950, Polish bishops were forced to accept a church-state pact in order to continue a minimum of spiritual ministration. In return for a promise not to support anti-Communist activities, the hierarchy was pledged a certain amount of freedom of religion and education. Like most Communist pledges, it was broken. When the Polish bishops refused to sign the infamous Stockholm peace appeal, Serov let loose a ruthless persecution, imprisoning priests and sisters and closing schools. Through the prewar Polish Fascist, Boleslaw Piasecki, he sought to organize a "progressive" Catholic movement to infiltrate the Catholic Church with Soviet puppets.

Of over 10,000 priests, only 60 could be coerced, and most of them had been broken in health in prison. In furious resentment, the Communists then imprisoned the beloved Polish primate, Stefan Cardinal Wyszynski. This was an egregious blunder in strategy. The reaction of the Catholic faithful was to unite behind the cardinal. Parishioners stood guard over their priests to protect them.

Fifty-nine seminaries have been closed in Poland since 1952. The theological faculties of Cracow and Warsaw were liquidated. The University of Lublin had theology and canon law stricken from its curriculum.

Yet something has gone wrong with the Communist war on religion in Poland. The campaign to reeducate youth and to destroy belief in faith through instruction, delegated to a committee of clergymen and secular Catholic activists, confused some but it did not accomplish the planned schism.

The Catholic Church in Poland is still an indigestible morsel in the gullet of communism. Why? Largely, in my opinion, because the Communists, directing their blows toward the head, ignored the heart of Poland.

The most stupid blunder, worse even than imprisonment of the Polish primate, was to ridicule the devotion of the Polish people to the Mother of Christ. Our Lady of Czestochowa has always been saluted as Queen of Poland. In 1955, 10,000 pilgrims participated on foot in an act of worship at the famous shrine. In Rome I heard that soldiers—sent to intercept the pilgrims—turned back before an apparition which some identified with the Virgin Mary.

While I was in Rome in 1951 a Vatican official also told me he found Pope Pius XII weeping after a conference with 2 Polish prelates. His Holiness has been the strength and support of Cardinal Wyszynski and his priests. Only a few months ago Pope Pius XII, in a letter to the cardinal, urged "the strongest possible resistance to the perfidious acts of the godless."

2. HUNGARY

Hungary is now the base of operations for attacks upon religion in East Germany. A Roman Catholic Review From Hungary, printed in German on expensive paper, is distributed throughout Austria as well as Germany. The main purpose of the review is to suggest that Catholics in Hungary enjoy freedom.

The Communist press in Hungary constantly attacks the head of the Catholic Church. Its youth organ, Szabad Ifjusag, recently railed: "Pope Pius XII, father of conspirators, is said to have 'warm feelings' toward the Hungarian people; at least this is what the traitor Archbishop Josef Groesz stated, 'The holy father is heart and soul near his beloved Hungarian people.' "

Communists are doing everything possible to prevent parents from sending their children to religion classes. In Hungary, the peace priests' committe was set up to divide Catholics. Yet the Communist paper Zala attacked "the so-called peace priests." "Priests," Zala declared, "remain propagators of religion, regardless of their political creed; we Communists propagate the dialectical, the scientific materialism, of which both ideologies compare like fire and water."

What about the life of a Catholic in Hungary today? From the Catholic News Service in Vienna comes this description:

"If someone enters the house of the parish priest, the local Communist Party knows it the next day, and a few days later, the competent office in Budapest enters the case in its files. * * * People also know that going to church entails more or less severe reprisals."

Again, in Kathpress, we read:

"Fathers who let their children attend religious classes are subjected on their work site to an interrogation by party officials on why and how long they intend to have their children attend religious classes. The consequence is that, in the towns, only about 30 percent—or, at best, 50 percent—of all children attend religion classes."

There are only five seminaries functioning in Hungary, but some students are being educated elsewhere to a service that may expose them to death. Many of the Hungarian priests are literally living underground; others have "disappeared."

3. COMMUNIST TRIUMPH IN THE BALKANS

There are two reasons why the Communist persecution of religion in the Balkans has achieved desired results. First, the Communists did not seek to appease religious feelings, but set upon a program of destroying the church immediately; secondly, Catholics were a minority, ranking in numbers behind both Moslems and members of the Orthodox Church.

The Communists in Rumania also had as a scapegoat a courageous and vigorous American prelate, Archbishop Gerald O'Hara, now apostolic delegate to England. In the satellite countries, hatred of the Catholic Church and of the United States of America seems to be synonymous.

When the deportation of Archbishop O'Hara was ordered, he was escorted to the station in the early hours of the morning. However, all members of the non-Communist diplomatic set were at the station to see him off.

Next, the Reds struck at the oriental rite. This was accomplished by a puppet, the Patriarch Justinian, an active Communist. Schools were nationalized in 1948 and students were instructed to salute the teacher with the greeting: "There is no God!" to which the teacher would reply: "And there never has been."

In 1948, all bishops and 700 Uniate priests, subjects of the Pope, were arrested. Decree No. 358 formally liquidated the physical body of the oriental rite. It was against this abuse of Communist power Archbishop O'Hara stood adamant until his expulsion in 1950. At least 700 priests were executed in Rumania.

Bulgaria was a pushover for Communist strategy. The 60,000 Catholics, divided between Latin and oriental rites once had considerable influence, largely because of excellent schools. In 1949, a bishop and 47 priests were arrested. Catholic churches in Bulgaria have all been closed.

In Albania, approximately 100,000 Roman Catholics were ruthlessly persecuted, and of the 120 priests in that country in 1945, only 20 may be found today. No Catholic bishop remains. In August 1951, the Communist leaders in Albania issued a decree, ludicrous in the light of antecedent activities, that no ties existed between Albanian Catholicism and the Vatican.

4. CZECHOSLOVAKIA

In 1929, when Catholics were in the majority in Czechoslovakia and practicing the tolerance imposed upon them by their religion, a young Communist deputy, Klement Gottwald, shouted at the majority party: "You ask what we Communists want. We want to break your necks."

Gottwald is, of course, now dead, but his spirit lives on in his Communist successors. Here, as in Poland, the antireligious campaign had to be slanted toward the people. Apologetically, the ruling party committee known as BRNO in a 1955 directive states:

"We are deeply sorry that we are forced to acknowledge our failure to smash the religious sentiments of the masses. We underestimated the strength of religion. * * * In spite of severe restrictions placed upon the church, in spite of fierce antireligious propaganda waged by the party and the state, relatively few people have been induced to leave their religion. * * * We were forced to change our tactics because the party was steadily losing influence, while religion was at the same time constantly gaining strength among the people. We made too many martyrs.

Czechoslovakia bore heroically the cross of martyrdom. Of its 7,000 priests of 1945, over 3,000 were jailed. "Concentration monasteries" reeked with the odor of Dachau. Many religious were shipped to slave-labor camps.

Today, nearly 70 percent of the Catholic parishes in Czechoslovakia are without resident pastors. The heroic Archbishop Beran, who fought valiantly against the Communist tide, has disappeared.

Here, too, the Communists centered their efforts upon schools. A pseudo-"Catholic Action" program was announced, but only 20 priests joined it. Seminary courses were compelled to include Marxism. Teaching orders of religious were simple and brutally eliminated. All church property was nationalized. The religious press was throttled. A few apostate priests and Catholic laymen tried to set up a "subservient" Catholic Church.

When priests could not be subverted, the Communists announced that women were being ordained to the priesthood. When Red "priests" took over parishes, the congregations remained at home.

The Czechs stanchly resisted the effort to take religious from hospitals. A grapevine

communication has also kept them informed of the lot of countless priests in Red prison camps.

On July 17, 1955, the Communist-controlled Nova Svoboda admitted that it was not winning its war. "There has been no substantial improvement in the struggle against religious obscurantism," it stated, "as may be seen from the fact that 63 percent of all children are still attending classes of religious instruction." On February 29 of this year, the same paper warns: "Atheistic propaganda must be carried out * * * consistently * * * otherwise idealistic (?) ideas might afflict the minds of the people."

CONCLUSION

What is the master plan of communism in its attack upon religion? Previously the attack was carried out in four steps: terror and violence toward the clergy; destruction of the religious press; suppression of worship by official decree; indoctrination of youth in Communist-controlled schools.

More recently, at least since the Geneva Conference and its great psychological victory in portraying Russian leaders as wanting peace, the Soviets seem inclined in a few areas to relax the tensions of persecution. China, North Korea, and Asiatic territories are still in the throes of martyrdom. The current rumblings from Russia may have a religious bias; or, as a Vatican official informed me, "the Communists will find, if they read history, that no power has been able to stifle man's hunger for God."

Communists have sought to give Protestants behind the Iron Curtain the impression that the Soviet is opposed only to Catholicism; yet, particularly in East Germany, Catholics and Protestants have been brought closer together by Communist opposition than ever before, even sharing houses of worship.

Since the memorable address of Khrushchev, it might appear that the Soviet high command has enough on its hands in internal dissension to monopolize its attention for a while. Prior to this development, Communist propaganda agents had mapped out a divide-and-conquer program, using Israelis as a wedge, between Christians and Jews. Here, too, Russia is playing a clever game, playing both ends against the middle in its efforts to stir up Arab against Jew and representing Christian elements as against Israel.

The devout Jew in the satellite countries is in as much danger today as he was in under the Hitler regime. Loyalty to his religion stamps the Jews there as a dangerous character. A Vatican official who was active in the underground through which many Jews escaped in Italy during the Fascist regime pleaded with me in January to make sure that some avenue of escape was open, particularly in Rumania, Hungary, and Czechoslovakia, when another effort might be made toward mass extermination of Jews.

Surprising though it may be to some, the influence of the Catholic Church has been used in the satellite countries, and in the Ukraine particularly, toward discouraging abortive revolutions which might end, as the Katyn massacre, in wholesale slaughter. The church believes that at death the redemptive work of the incarnation of Jesus Christ ends for the dying soul. It does not believe it can turn toward God those who are dead. On the other hand, placing confidence in Him who said, "Have courage, I have overcome the world," it is confident of ultimate victory for those who place their trust in God.

The following incident, related by Eddy Gilmore—who spent several years in the Soviet Republic of Georgia—in 1953, is quite significant:

"Halfway up Mount David, where Stalin's mother, Catherine, is buried, a groundskeeper pointed to her grave and sighed. 'Look at it,' he said, 'it's falling to pieces. He never visited it. He never cared. God of mine, what a man to have for a son.' Then he crossed himself."

Where Do Moderates Meet?

EXTENSION OF REMARKS

OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 11, 1956

Mr. ABBITT. Mr. Speaker, Virginians, since May 17, 1954, have been trying to work out a plan whereby public education can be continued on a segregated basis in the future as in the past. We are not willing to accept integration of our public schools, at least I am convinced that the vast majority of our people feel this way. I am afraid that some confusion has arisen in the minds of a large number of Virginians over the so-called assignment plan. They failed to realize that the adoption of the assignment plan will mean integration of the pupils of the public schools in Virginia. I trust that this will never be done. Once integration is recognized anywhere in Virginia on a State level we will have lost the fight for segregation.

Fortunately for Virginia, the editor of the Richmond News Leader has made exhaustive and extensive study of this problem. He has, in his forceful editorials, presented the facts to the people in their true light and has done much to clear up the issue. Tuesday, April 3, 1956, there appeared in the News Leader a splendid editorial answering the question of "Where do moderates meet" and on Monday, April 9, 1956, there appeared a splendid editorial pointing out the dangers of the pupil assignment plan and the effect its adoption would have upon the fight we are making to preserve the inherent rights of the State to regulate its own affairs.

Under leave to extend my remarks, I include these two editorials:

WHERE DO MODERATES MEET?

The past 4 or 5 months have witnessed a subtle and possibly significant shifting of public attitudes toward the South's grave problem of school segregation. For the first time since the Supreme Court's decision nearly 2 years ago, influential voices are being heard to say that the South's position is not wholly without justification.

Northern newspapers, which had been scolding the South and reading us sermons, are conceding now and then that the North has failed to solve its own problems of race. Even Time and Life magazines, which hate the white South and pass up no opportunity to hold us up to ridicule and contempt, have slightly eased their torrent of abuse and misrepresentation. Time, for example, permitted a brief hint to creep into its columns last week that integration of schools in the District of Columbia is not an unqualified success. Some highly respected newspapers, for example, the Wall Street Journal and the Indianapolis Star, have taken the view—without supporting segregation as such—that the South's constitutional objections are soundly based.

This more thoughtful consideration of the South's case is clear gain. So, too, there is much to be said for the good motives of the many persons in public life who are urging moderation.

But at the risk of being misunderstood (which is a high risk when so many publications are still determined deliberately to "misunderstand" the South), we would urge that the counsel of "moderation" be carefully examined. It will be found, we submit, that when the polite and well-intentioned overtures are acknowledged, moderation is still spelled "integration" in the North, and moderation still means "continued segregation" in the South.

What is the common meeting ground of public figures so far apart as Senator EASTLAND and Adlai Stevenson? Where do Mr. Eisenhower and Senator Thurmond agree? It is on this alone: That violence is to be deplored and must be prevented. But everyone, or almost everyone, deplores violence and believes it must be prevented. When we have agreed that violence is bad, where else can agreement be found?

Northern moderates, in final analysis say the Supreme Court's opinion was sound at law and must be obeyed. Southern moderates contend that the Constitution alone is the supreme law of the land, and urge that the Court acted beyond its powers. Northern moderates say a start should be made toward compulsory integration; southern moderates say that no start is acceptable that would in their view, lead inevitably to the destruction of their most cherished institutions. Northern moderates hold that public education is a proper concern of the Federal Government; southern moderates insist that it is among the clearly reserved powers of the States.

Moderation may be, as Euripides termed it, "the noblest gift of heaven." Considered abstractly, it is doubtless, like majority rule, a good thing. But there are times when naked majority rule works a monstrous injustice, and there are times when compromise can be fatal. We recall the comment of Warren Pollard some years ago, when as president of the transit company he declined to submit a labor dispute to arbitration. "They could," he said grimly, "arbitrate us right out of business."

The South can be moderated right into chaos, too. Let us keep in mind.

NORTH CAROLINA SPEAKS PLAINLY

The editorial section offers the full text today of a plain-spoken report to the Governor and General Assembly of North Carolina, released last week by a seven-man advisory group headed by Thomas J. Pearsall.

Virginians will recognize in the North Carolina report many of the same convictions and recommendations expressed by the Gray Commission in its report to Governor Stanley last November. The Pearsall Committee proposes a form of pupil assignment in accordance with what the assigning unit (or officer) considers to be for the best interest of the child assigned, and also recommends—in order that North Carolinans may be assured of escape possibilities from intolerable situations—a program of tuition grants. This second recommendation will require amendment of the North Carolina constitution; and among the amendments suggested is a provision by which any local unit, by popular vote, could suspend the operation of public schools in that unit.

The North Carolina report is notable in several respects. It contains none of that softly liberal sentiment that is so often reflected by the North Carolina press. There is not one line in the report suggesting any affirmative support for the Supreme Court's school decree. In hard and bitterly resentful terms, the report describes a very dangerous situation that could become a dreadful situation quickly. The committee feels unanimously that the people of North Carolina will not support mixed schools. The

report recalls the heavy burden that the white people of North Carolina have carried almost wholly, in order that Negro children could be educated. In accepting this burden, the people of North Carolina erected a school system on the foundation of racial separation. The decisions of the Court have destroyed that foundation, and hence have destroyed the school system which we had developed. The problem now is to build a new system out of the Supreme Court's wreckage of the old. Recommendations follow, toward achieving that end.

With much that is contained in the Pearsall report, many Virginians will agree. But it may be that nearly 5 months of considering the quite similar Gray report in the Old Dominion have provided a perspective for Virginia observers that merits study by our friends in North Carolina.

Members of the Pearsall committee regard the Court's opinion as "erroneous." They believe "it could cause more harm within the United States than anything which has happened in 50 years." They denounce what they view as "constitutional amendment by judicial fiat." Yet they are ready to concede that "we must live and act now under the decision." It is "binding upon us."

This newspaper would agree that we must act now under the decision, but our hope is that no action will be taken, either in Virginia or in North Carolina, that would lead to creeping integration of public schools. Once a pupil assignment law is passed, and once local school boards assign pupils of different races to the same school, we will have confessed officially that our State constitutional prohibitions against integration have been voided by valid mandate of the Supreme Court. We do not believe the time has come when such capitulation must be made. Rather, we believe the situation calls for continued resistance by every legal, honorable, and constitutional means that can be devised.

The tuition-grant plan, drastic as it may be, is a form of such resistance. Amendment of compulsory school attendance laws offers another form of resistance. Appeal to sister States to protect the reserved powers of all States is another avenue. Refusal of local governing bodies to appropriate funds for mixed schools is an approach that must give the courts serious concern, for southern judges, we may be assured, are by no means eager to accept the onus for closing southern schools and depriving thousands of children of public-school education. And simply by continuing to operate segregated schools in every county and district, until the courts come to such schools with specific orders, we can place an enormous burden of litigation upon the enemies of the South. All of this, and much more, is embodied in a plan of firm resistance.

But pupil assignment is not based upon resistance. It is based upon acceptance. It reflects, however reluctantly, a willingness to comply. It acknowledges the Court's power and surrenders to it piecemeal.

We are not ready to surrender. The South's case is daily gaining support across the Union, as our sister States reflect upon the evident trend of Supreme Court opinions. Many isolated incidents, reflecting increasing resentment by school patrons, cumulatively take on new significance. The South is far less prepared to integrate this year than it was last year.

If we continue to fight, inch by inch, never recognizing the Court's mandate as morally right, giving in only where we are compelled by superior force to give in, we may yet stave off the catastrophe of massive integration of our schools.

State Guards and Civil Defense: Specific Recommendations

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. GATHINGS. Mr. Speaker, during the recent national conference of the State Guard Association of the United States, the Honorable William L. McGill, State coordinator of defense and disaster relief for the State of Texas, gave an address that should have the thoughtful and studious attention of all Americans seeking to keep this Nation fully prepared to defend its freedom and liberty.

Mr. McGill, who has served in various responsible offices of the State government of Texas, is well qualified to discuss this important subject, and I commend his statement to all Members of the Congress:

STATE GUARDS AND CIVIL DEFENSE: SPECIFIC RECOMMENDATIONS

(By William L. McGill)

There is no experience more invigorating and satisfying than to be the member of a team—a team seeking cooperatively and in harmony and unison to achieve a desired goal for a common cause.

You and I come together today in such a relationship, and I am grateful for the opportunity which this occasion offers to express most genuine gratitude for the consistent cooperation and helpfulness of the Texas State Guard in every phase of the civil defense and disaster preparedness plans of this State.

In the State disaster districts which we have organized to bring the program closer to the people and to expedite the dispatching of State and mutual aid assistance to communities in distress, the Adjutant General of Texas has designated leaders of your organization as the representatives of his department.

You have worked diligently in the inauguration of the Ground Observer Corps in Texas, as an important phase of our Nation-wide air defense system, and I am sure you will continue to give this very essential service your leadership and your support.

Under the inspiration of General Rooke and through the close cooperation of Colonel Cooper, important progress has been made in the field of communications, and I am quite sure that, before too long, we shall have in Texas a State-wide emergency communications system that will serve us exceedingly well as we face the tests which the future will bring.

We joined with enthusiasm in the support of the recently passed Public Law 364 and we are gratified over the additional means it offers the State in strengthening the State Guard. At the same time, we share the disappointment, generally felt, over the fact that the Congress did not include provisions for Federal equipment and support.

It was my opportunity recently in Washington to hear a discussion of these matters by the Honorable Carter L. Burgess, Assistant Secretary of Defense for Manpower, Personnel, and Reserve, and I found in him a firm friend of the entire State Guard program. He expressed the opinion that the Federal Government should lend direct assistance to any such militia program.

It is my thought and hope that, supplementing the assistance which can be given by full-time staff members and divisions of State departments and by neighboring communities through the mutual aid system, we might have, sponsored by the Texas State Guard, mobile support units which could be moved to the scene of major calamity when the need arose for well-organized, thoroughly trained disaster relief leaders. The personnel of such units would of necessity possess a thorough understanding and knowledge of essential techniques of survival—would be skilled in first aid, rescue, radiological monitoring, emergency police duty, and in the basic principles of fire fighting.

Such units, sponsored by the State Guard, could be formed, I think, without doing violence to the established mission and function of the guard as an element of the State militia should the National Guard be federalized. We understand, of course, that we cannot build the basic civil defense organization around units or potential units of the military forces, such as the National Guard and the State Guard. As we understand it, the thinking behind this national policy is that the military forces will have most serious and essential functions in connection with actual contact with the enemy, the protection of vital plants and installations, and the combating of sabotage and other enemy action, and that the civil populace must rely upon its own volunteer effort and the help of the regular governmental services—such as fire, police, health, and welfare—for the relief and rehabilitation work contemplated in the program of civil defense.

However, the type of warfare which we can expect in this nuclear age would not necessarily require the immediate deployment of ground troops to distant points, and, in all likelihood, it would be some time before the National Guard was entirely federalized. Units of the State guard, could, therefore, serve effectively in those early days as the mobile support units we have mentioned and could, all the while, be training other citizens to take their place in civil defense activity should the State guard personenl itself be assigned special duty as a part of the State militia.

We would hope, therefore, that the State guard could at this time give favorable consideration to steps such as these:

1. Take a poll of State guard personnel to determine how many have Red Cross certificates as graduates in basic first aid and encourage those not so trained to enroll at once for instruction which local Red Cross chapters are prepared to give;

2. Encourage State guard personnel to take the advanced courses qualifying them as first-aid instructors and take leadership in teaching courses in this most essential skill. I think every civil-defense worker should, by all means, be trained in first aid. Indeed, our present campaign is also to have one member of every family possess this knowledge which just may be the difference between life and death for the individual so trained and for those about him.

3. State guard personnel will want to know the basic techniques of rescue and be prepared in time of crisis to direct the removal of victims who are trapped in demolished buildings, under cars, and elsewhere in the stricken area. A State rescue school is now provided where in a period of 5 days the essential phases of this skill can be learned. This school is located on the campus of Texas A. and M. College. With the cooperation of the Federal Civil Defense Administration, the State has built there a "street

of ruins," containing buildings in varying states of demolition. The latest rescue equipment and highly trained instructors are provided and upon completion of the 60-hour practical course, the graduate is qualified to instruct classes in rescue in his own organization, industry, institution, and community. There is no tuition fee. Room and board at minimum rates is available.

As quickly as possible, State guard personnel should be given specialized training in radiological monitoring. We can take steps to provide the equipment and the necessary personnel for this training when a sufficiently large group requests it.

At the last session of the Congress we secured passage by a unanimous vote in the House of Representatives of property declared surplus to the needs of Federal agencies. The bill will be before the United States Senate in January, and we are very hopeful that it will be approved by that body. If this bill passes, it is just possible that State guard units establishing civil-defense organization could obtain Federal property appropriate to their needs.

How many and how varied, and how vitally important, are the things which the State guard can do to advance the common goal of providing maximum security for our Nation and its people and protection for all those things which make men free.

And how anxious we are to have your continued leadership and your fine help.

Speaking to a group such as this, I need not go into detail as to the well-nigh incredible results of an enemy attack with nuclear weapons, supplemented by chemical and biological warfare, acts of sabotage, and all the other devices which our chief foe in the world is capable of employing. You know these facts as well as I.

Nor, I trust, do I need to remind you of the words of Ovid—written a long, long time ago—when he said: "When the sea is calm, the careless sailor takes his ease."

The United States Government is now spending between 35 and 40 billion dollars a year for the maintenance of this country's Military Establishment—holding it in readiness against the possible threat of foreign attack.

If world dangers are so real as to make necessary the outlay of $35 billion a year for our military forces alone, is it too much to suggest that a minute fraction of that amount be appropriated also for a realistic home-defense program to enable our people to prepare for the very real prospect that the next war—if, God forbid, it does come—will be fought in our own town squares?

So, in all realism, we are met here today to counsel together, to determine how best we can cooperate in the development of a team, with integrated and coordinated and capable effort, equal to the need which could come upon us all too soon.

Just as it is a fact that no community of people we know, no town or countryside is exempt from the perils of natural disaster, it must also now be faced that the destructive power of the new weapons which are stockpiled today is such that no part or parcel of our land would be free of danger in the event of a nuclear war.

The latest explosion of a hydrogen device dug a crater in the surface of the earth 175 feet deep and a mile in diameter. A bomb of this size—our scientists tell us—will give dangerous heat damage to a distance of 25 miles under suitable weather conditions. The area affected by blast is about 300 square miles, and fires will be started, and skin burned, over an area of 2,000 square miles.

The military and atomic energy authorities of the Nation warn that our chief enemy in the world now has the weapons of which we speak, the same kind of weapons we possess, has the weapons and the planes to transport them, and that probably 10 and certainly not more than 25 percent of those planes could be intercepted before they dropped their deadly load.

As if we did not have enough to challenge our powers of comprehension, the Eniwetok explosion made it clear that a groundburst could conceivably bring about a radioactive fallout over an area of 7,000 square miles and at least 190 miles downwind from the center of the burst.

All civil-defense concepts have of necessity been revised.

We do have answers. We can cope with even this incredible force of destruction, but they are somewhat different answers from those we evolved several years ago. (And I suggest that the revision of plans as new conditions develop and new situations emerge is in no sense an evidence of indecision but rather af alertness and awareness and readiness to face the ever-changing dangers of the new day.)

That brings us to the newest safeguard against the nuclear weapons—and that is the concept of evacuation. When the bomb hits, it's a very good idea simply not to be there.

With the 2- to 4-hour warning which we could conceivably get there is reasonable hope of moving people away from the place where the bomb may most likely drop. The immensity of the task, the complications involved in traffic control, medical care, emergency feeding, clothing, and housing, and all the other problems inherent in moving great numbers of people in a time of stress and strain—all of these things might frighten and frustrate less hardy people than those constituting the governmental forces, the relief agencies, and the citizenship generally of a community, a state, and a nation like ours. With those who say that evacuation just can't be put into effect, I respectfully disagree. America is greater than we think. Its government on every level, its public servants, its people of the rank and file, have again and again risen in times of danger to superb heights of organizational skill and personal resourcefulness and valor. I submit that no problem has yet been too great for them to solve, no calamity too vast for them to survive, no test too grueling for them to pass.

A meeting like this—of people like you—can be the answer to the problem which is set before us. I have not the shadow of a doubt but that the combined competence and capacity and courage of a group such as this and of similar groups like yours throughout the length and breadth of the land will see us through.

We are a chain of many links, each indispensable to the strength of the whole. I think it is a good chain, a strong chain, a chain sufficient unto our present great need.

If we have been skilled enough to build the civilization we now know, we should, with God's help, be wise enough to save it.

To that end I know we shall all dedicate our finest thought and our best effort.

I shall look forward with much anticipation to the opportunity of working very closely with you in the days which lie ahead.

Address by Justice Anthony J. DiGiovanna

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 9, 1956

Mr. ANFUSO. Mr. Speaker, during all the time that I have been privileged to be a Member of this greatest of all legislative bodies, nothing has afforded me greater joy than the recognition that a close and warm friend of mine, Mr. Justice Anthony J. DiGiovanna, of the Supreme Court of the State of New York, has achieved honorable distinction in an equally important branch of our system of government; that is, in the judiciary.

Because of his profound learning, his background, and his highly commendable public service in past years, Justice DiGiovanna was recently invited by the highest judicial tribunal in the city of New York to address the newly admitted members of the New York bar.

I am certain that my colleagues will find this address most interesting because the learned jurist speaks of the law not merely as an art or a profession, but as offering the opportunity for great public service, of which Mr. Justice DiGiovanna himself is a notable example.

Mr. Speaker, Justice DiGiovanna's address is published in the New York Law Journal, April 6, 1956, and reads as follows:

SUPREME COURT JUSTICE DIGIOVANNA ADDRESSES NEWLY ADMITTED MEMBERS OF THE BAR

Two hundred and forty-six men and eighteen women were admitted Wednesday to the New York Bar by the appellate division of the supreme court, second judicial department. The court consisted of Presiding Justice Gerald Nolan and Associate Justices George J. Beldock, Henry L. Ughetta, James T. Hallinan, and Philip M. Kleinfeld.

On this occasion Supreme Court Justice Anthony J. DiGiovanna, at the invitation of the justices of the appellate division, addressed the newly admitted attorneys as follows:

"Mr. Presiding Justice, associate justices of the appellate division, and newly admitted members of the bar, the great privilege of addressing a group of attorneys just admitted to the bar is indeed a high honor because it affords to the speaker a wonderful opportunity of welcoming an already distinguished group into a great profession. I say 'already distinguished' because I appreciate the fact that you have achieved a milestone in your lives in having graduated from an accredited law school, and in having passed the strict legal requirements of the bar examination and the exacting standards of the committee on character and fitness.

"Mr. Justice Holmes keenly observed that 'the business of a law school is not sufficiently described when you merely say that it is to teach law or make lawyers.' The duty of the law school, he explained, is "to teach law in the grand manner, and to make good lawyers.' Since I know that you have had the kind of law school training designed to teach you the law of the land and to inspire you to cherish our American traditions, I have a most definite feeling that I am addressing a group of lawyers who are educated and dedicated to uphold the brilliant traditions of the law. It is, therefore, with that awareness of my responsibility that I accept the privilege and opportunity of saying a few words to you on this felicitous occasion.

"I will speak to you, as briefly as I can, about the practice of law, but only of the practice of law as a great profession dedicated to public service in the achievement of justice. I stress this because I share with Justice Holmes the earnest belief that, regardless of the uncomplimentary remarks which are made by unfair critics about law and lawyers, it is universally recognized that,

of all secular professions, ours has the highest standards of ethics and integrity.

"Our profession has a history that is ancient and noble. Although it achieved greatness in the Roman civilization, it antedates Rome. And with every succeeding generation it becomes clearer that the practice of law is an honorable profession limited to men of the highest integrity, who by virtue of the excellence of their character and thoroughness of learning are willing to serve the community in the administration of justice.

"Dean Roscoe Pound points out in his book The Lawyer From Antiquity to Modern Times that in a profession three ideas are essential—organization, learning, and the spirit of public service. He adds very significantly that, although the idea of gaining a livelihood is involved in all callings, and, indeed, may be the only purpose of certain callings, 'in a profession it is incidental.' Surely, I do not mean to tell you today that the question of earning a livelihood is of little import, nor do I want to minimize the importance of that objective, but since the question of earning a livelihood is often so uppermost in our minds, you need no reminder concerning such matters, and no discussion is consequently necessary. Such an observation, however, can never overshadow the essential elements of our profession, and hence a reminder of these essentials is always in order, particularly when addressing the future leaders of our profession into whose hands we place the sacred trust of the future of our profession and our Government itself.

"The element of organization is necessary if we are to pool our training and knowledge for the good of our Nation. This implies that, through the bar associations, and by reason of your active participation in their programs, the legal profession can actually improve the law of the land and better the administration of justice. It also implies that, through organization, the profession can help mold public opinion so as to make our Nation aware of dangers that may exist from sources that would threaten to destroy our form of government and our cherished institutions. Organization also implies that the legal profession is a self-disciplined one because it voluntarily assumes the important duty of insisting that all of its members adhere to its traditionally high standards, and that the profession itself will penalize anyone who does not maintain those high standards and who, by his conduct, detracts from its prestige or otherwise injures its good name.

"The second essential ingredient of your profession is learning. No one can dispute that ours is a learned profession. From the very beginning it was constituted of a class of learned men pursuing a learned art. Learning is one of the important attributes which distinguishes a profession from other callings, vocations, and occupations, however important or valuable they may be in their contribution to our society. This does not minimize the importance of the contributions of other callings in our society, but rather highlights the nature of the art that the lawyer practices. The law historically possesses a cultural ideal which furthers the exercise of that art. This thought is expressed by Dean Pound in the following words: 'Problems of human relations in society, problems of disease, problems of the upright life, guided by religion are to be dealt with by the resources of cultivated intelligence, by lawyer, physician, and clergyman.' He instructs us that, to carry on their task most effectively, these men must be more than resourceful craftsmen: 'They must be learned men.'

"The third essential idea which is descriptive of any profession, and ours in particular, is the fact that it is descriptive of any profession, and ours in particular, is the fact that it is practiced in a spirit of public service. The fundamental difference between a trade and a profession is that a trade aims primarily at personal gain, whereas a profession is interested in the exercise of its powers in a way beneficial to mankind. This distinction in no way should detract from the dignity of their trades and callings. Surely there is no one among us who does not appreciate the contributions made by all men in a complex society. I would not be so callous or ungrateful as to detract from the calling of your parents, whose efforts and hard labors made possible your realization of your hopes and ambitions in becoming members of the legal profession. Yet it is important that you realize, as practicing lawyers, that ours continues to be the professions dedicated to public service. These ideas are the qualities which have given our profession its special dignity and eminence.

"I am sure that Mr. Justice Benjamin Cardozo, in an inspiring address entitled 'Our Lady of the Common Law,' had reference to these qualities when he spoke of the profession of the law and referred to its 'capacities, realized and unrealized, for service to mankind.' These capacities are best realized if each and every one of you stands fast to all of those personal qualities collectively described by the word 'character.' The learned jurist explained that character, the key to behavior and the social order, includes, among other things, 'industry, fidelity, as well as conscience and honor.' These are the traits that you lawyers must possess in order to enhance and exalt the prestige and influence of the legal profession.

"From this moment forward never forget in your daily lives the nobility and glory of the profession you have chosen to practice. With resolute determination and with the necessary spiritual insight and ideals you will not fail.

"I congratulate you and wish you many happy and fruitful years of successful practice."

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Role of Government in the Field of Labor-Management Relations

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES

Thursday, April 12, 1956

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interesting address delivered by the Honorable Joseph F. Finnegan, Director of the Federal Mediation and Conciliation Service, on April 10, 1956, on the role of Government in the field of labor-management relations, before the Alabama Chapter of the Society for the Advancement of Management.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE ROLE OF GOVERNMENT IN THE FIELD OF LABOR-MANAGEMENT RELATIONS

(Address by Joseph F. Finnegan, Director, Federal Mediation and Conciliation Service, to the Alabama Chapter, the Society for the Advancement of Management, Birmingham, Ala., April 10, 1956)

The phenomenal advance of the American economy, directly traceable to increased efficiency and the expansion of our country's productive capacity, is a story with which you are all familiar. It has not occurred in a vacuum. Organized labor has undergone equally startling growth, and the role of the Government as a moderating influence between these two expanding segments of our economic society has had to keep pace.

Bill Pierce, my Regional Director for this area, has warned me I would be talking to a group of skilled, mature, and sophisticated management representatives when I meet with you, so it may be a little like carrying coals to Newcastle to refer to the high plateau that American industry has achieved. At the end of World War II we were wishfully talking about the possible industrial expansion that would offer employment to as many as 60 million people; yet today we find the level of employment reaching 63 million and projecting upward. Last year our gross national product was crowding toward $400 billion and this year it looks as though it will reach that pinnacle. Inventiveness, ingenuity, skill and research are opening new vistas of products, processes, and production through atomic power, automation, electronics, new chemicals and synthetics.

Many of you are probably not as familiar with the growth picture of labor as you are with that of industry, so I am going to try to furnish a brief survey as a further backdrop for my remarks concerning the role of Government in relation to the collective bargaining scene.

Some 18 million people in the United States, comprising almost one-third of our employed nonagricultural work-force, are union members. These people are organized into more than 195 unions, which are either national or international in scope, and have more than 75,000 local charters scattered all over the United States. These union members work under about 125,000 collective bargaining agreements. Thirteen unions account for almost half of the previously mentioned union membership figure of 18 million; and out of that 13, 6 unions have a combined membership of nearly 6 million members. The newly merged AFL-CIO accounts for approximately 16 million members out of the aforementioned total organized work-force of 18 million members.

The numerical strength of organized labor is only the beginning. The annual income from dues of labor unions is estimated at nearly a half billion dollars per year, with some $150 million of this going to the international unions to support their functions. Recent reports indicate that unions also control, either directly or indirectly an added $26 billion in pension and similar trust funds, which are being augmented at the rate of between 2 and 3 billion dollars per year. In addition to this, many unions have additional income from the investment of their substantial assets.

I mention these figures not as a viewer with alarm, because I am not alarmed at these figures. They are merely indicative of the extent to which our philosophy of free, voluntary, collective bargaining enacted by our duly elected congressional representatives has been accepted and implemented by the working people of the United States, as well as by industry.

So, if we take an objective look at the American industrial scene of today, it brings into focus the picture of management and labor as they appear today on opposite sides of the collective-bargaining table. Industry comes to the bargaining table financially strong and dynamically progressive, with a record of industrial progress unparalleled in the history of the world. Organized labor comes to the bargaining table financially and numerically strong, and militant in its demands.

Many economists and students insist that labor and management, as they approach the area of collective bargaining, are seeking goals which are not dissimilar. In a very general sense I agree with this proposition. Enlightened management today realizes that higher profits depend upon greater productivity, and that higher productivity depends upon the welfare of the worker; upon his wages, hours, and working conditions and, more importantly, upon respect for his dignity as an individual in a free society. The worker, on the other hand, realizes that his welfare is secure only when his employer can make an adequate profit.

Nevertheless, there remain certain fundamental elements, inherent in the relationship between the parties, which indicate inevitable disputes in resolving basic conflicts of interest. It would be asking too much of employers and employees to expect their desires, and the answers to their desires, to fully coincide. Wages can never be as high as the worker wants them to be, nor profits as high as the management representatives desire them to be. Someone must manage, and some must be managed, and certainly a difference of opinion as to the nature and extent of such management rights and limitations should astonish no one. Among the many descriptive terms applied to mediation is that of peacemaking and the chief function of the Federal Mediation and Conciliation Service is to prevent or minimize industrial conflict, but it would be unrealistic and the worst kind of Pollyannaism to believe that strikes are going to become obsolete as our booming economy continues to expand.

We all decry, and rightly so, the losses arising out of work stoppages, losses to the worker, losses to the employer, losses to society in general; but the end result of strikes is not all on the negative side. Strikes can, and often do, have a salutary effect on the thinking of labor and management representatives. Long-standing tensions are often removed by strikes, and mutual respect created for the opposing party. Recognition of merit as to the validity of contested positions is often substituted, out of the ordeal by battle, for suspicion and distrust.

In the wake of public clamor growing out of highly publicized strikes, it is also easy to get a warped impression as to the aggregate effect of strikes upon our economy. I grant you that there is a chain reaction in some strikes, but that is true of almost anything that affects the free flow of commerce. If you are inclined to shudder at the statistics which show 20 million, 22 million, or 23 million man-days lost during a calendar year by strikes, consider for a moment that during that same year avoidable industrial accidents claimed about 38 million man-days of productive time, and that avoidable absenteeism was responsible for approximately 20 times as many man-days lost to production as were all of the strikes. What I am trying to emphasize is that while strikes are probably an inevitable expense, under our democratic system of free collective bargaining, in resolving the conflict of interest between the parties, those strikes are first of all a small price to pay for the freedom inherent in our system. Second, they have some actual benefits in both the immediate and future relationships between the parties; and last, they actually affect our economic structure much less than other factors which we consider to be of almost no moment, and take in our everyday stride.

Lest you gain the impression from these comments that the Federal Government, or the Federal Mediation and Conciliation Service, believes that strikes are necessary or desirable, or underwrites the thesis that it is willing to let the parties slug it out without care or consideration for the public interest, let me assure you that this is not true. When I talk about a governmental policy of hands-off in certain phases of labor disputes, it does not mean that Government is going to ignore these disputes nor take a passive attitude toward them. Mediation is not merely a passive or persuasive approach to industrial disputes. Strikes, as well as disputes that may lead to strikes, call at times for very positive and aggressive steps. Thus you will find this Service, in addition to normal mediation procedures, at times (as in the recent Westinghouse strike) urging arbitration, fact-finding, or other means of resolving difficulties so long as the means employed conform to the basic principle of leaving to the parties the ultimate choice of how their destinies are to be determined, without compulsion from the Government.

Let's consider my earlier statement that a certain amount of conflict between labor

and management is bound to occur. Granted this to be true, where then should the parties look for solution of their difficulties when they are confronted by a breakdown in the collective bargaining process? Before attempting to answer this affirmatively, let me give you a negative answer. The solution to the collective bargaining problem does not lie in the hands of government, either Federal, State, or local. It is fundamental to our American doctrine of free collective bargaining, working within the framework of a free economy, that the parties be directly charged with responsibility for working out their own problems and that they discharge their joint responsibility without governmental interference. As free men, employers and employees should not, under normal, peacetime circumstances, be required to submit to Government decisions as to conditions governing their day-to-day relationships. Any other answer would be in derogation of man's inherent dignity, be he worker or employer.

Now, if government is not to assume the primary responsibility for making collective bargaining work, is not to provide the detailed solutions to collective bargaining problems, and is not to have the determining voice at the bargaining table—what, then, is its role to be?

A proper and constructive role for the Government, it seems to me, involves two aspects or functions.

Government should first provide a minimum legal framewark within which the parties will enjoy the best possible climate and opportunity to develop a constructive and productive relationship, and to avoid strife. Government should then encourage the parties to earnestly endeavor to work out their differences within this legal framework, without the government directly having a determinative voice in the substantive bargaining processes.

The basic part of the minimum legal framework provided by the Federal Government is, of course, the Labor Management Relations Act, 1947—the Taft-Hartley Act. All of us, at times, find various aspects of this ligislation which we consider to be less than perfect. Whatever its defects it does appear to establish, with a minimum of interference of compulsion, legal rules that encourage the peaceful coexistence of labor and management.

The second important phase of the Government's role in collective bargaining is making available to the parties, when they are unable to resolve their own problems, the optimum of assistance, without control, determination or meddling. As developed over the years, the mechanism to achieve this has evolved into the functions of the Federal Mediation and Conciliation Service, which I have the honor of directing.

Mediation, as you know, is the process of interceding between individuals, groups of individuals or even nations, to assist the parties to amicably compose their differences—with not element of compulsion. The most effective tool of the mediator is persuasion. It is not his function to tell the parties what they must do or must not do. His function is that of helping them to work out their own solutions; not to make up their minds for them.

Mediation is reason and persuasion; and, curiously enough, therein lies the vitality and strength of the process. If a difference of opinion is composed by the parties themselves, either with or without the intervention of a mediator, it has a much better chance of establishing a healthy, lasting relationship than any solution imposed upon the parties by government fiat or otherwise.

One of the best means of implementing this philosophy is for the Government to make it clear, not only by words but by its acts, that it is not going to be the servant of labor, nor the servant of management, but will only provide qualified administrative facilities and personnel to actively assist the parties in working out their own destinies.

With all of the popular ballyhoo and bellyaching about too much Government interference, it is a little strange that the refusal of government to intervene in collective bargaining situations should be the subject of complaint or criticism. Yet all too often, parties who decry Government interference in the abstract will actively solicit Government intervention in a situation affecting their immediate personal interest. It seems to me there are two principal reasons why this has been true. Some bad habits and some bad tactics.

The worst bad habit I have in mind is the tendency of both parties to bargain only up to a certain point, and then turn to the Government to bridge the gap of their differences.

During the war years when, of necessity under a war economy, free collective bargaining was practically suspended, the normal give and take of collective bargaining and the free play of respective economic forces were relegated to the sidelines. In a great many instances, the parties (during the war years) approached the bargaining table for the primary purpose of making a record to justify an application to the Government to intervene and decide the labor dispute. Little real, genuine collective bargaining took place in this setting where the parties had some place to go other than the bargaining table.

You would have thought that when the wartime, regimented economy disappeared, the bad habits of this sort would, likewise, have evaporated; but they did not. There are still people on both the labor and the management sides of the fence who can't resist the temptation to demand special, exceptional, or emergency governmental intervention in an attempt to secure for themselves by intervention, bargains which they have been unable to secure around the table.

These requests for intervention by the executive branch of the Government have been denied by the present administration, and events have shown the wisdom of this course. The national emergencies have vanished, agreements have been reached, collective bargaining is still in good repute, and sound relations have, in most instances, been established.

The worst of the bad tactics I have in mind is the tendency on the part of some elements—unthinking elements—of both management and labor to try to get the Government to take a pro-them attitude with respect to their collective bargaining position. With little or no thought or consideration for the ultimate effect which such demands for Government intervention would have on the fundamental principles under which our progress and prosperity have been built, they behave as though Government exists only to further their own short-term objectives. They are perfectly willing to sell the hour to serve the minute. A sharper, two-edged sword is hard to imagine. Temporary gains are of little comfort if the institutions under which we prosper are destroyed in achieving such gains.

I am profoundly convinced that governmental partisanship in the field of labor relations is a fatal philosophy and should be avoided like the plague. Necessarily, there will be government policy and procedure changes in this fluid and dynamic field of labor relations; but whatever changes are made must not be undertaken on the basis of political pressure from either labor or management, for appeasement or for temporary expediency.

The thoughts I have expressed today are neither new nor original with me, but it seemed to me that there was a need for a restatement of them at this time.

We are all familiar with that old saw which runs that government is best which governs least. That is still true. I submit that the ends of both labor and management are best served by a government which insists upon the parties making their own settlements and is neither prolabor nor promanagement, but simply pro-American. Those representatives of labor and management who seek to enlist the aid of Government on a partisan basis and who criticize it because it has refused to take sides, do a serious disservice to our American concept of industrial democracy. They are blind to the fact that the true friend of labor and the true friend of management is that government which carries out its role in labor-management affairs in an impartial and even-handed manner.

If shortsighted representatives of labor or management should ever succeed in causing government agencies dealing with any aspect of labor matters to take on a partisan color, those agencies will have lost their utility as peace-making instrumentalities in the collective bargaining process. When political expediency, prompted by either labor or management pressures, takes over and we find Government injecting itself into bargaining problems in a partisan role, then indeed should the warning signal be sounded—because, at that point, the underlying tenet of voluntary, free collective bargaining will have been sold down the river, and a totalitarian type of thinking substituted which is foreign to the basic philosophy of our country.

Foreign Arms Aid Again

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1956

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the APPENDIX of the RECORD, I wish to insert the following article from the April 16 issue of Newsweek magazine by Henry Hazlitt entitled "Foreign Arms Aid Again":

FOREIGN ARMS AID AGAIN

(By Henry Hazlitt)

Many Members of Congress are becoming increasingly skeptical about either the need or wisdom of further foreign "economic" aid. But most of them continue unhesitatingly to endorse further "military" aid. Is the difference very real?

The truth is that one kind of aid can easily act as a substitute for the other. When we relieve another nation of the need to pay for its own defense, we in effect give it just that much more funds to spend, say, on economic "welfare" schemes. Failure to recognize this substitutability of foreign aid has led to much mental confusion. "Military" aid is not in fact solely a military question. It is primarily an economic question. The chief question is not. How much defense does Ruritania need? but, Why can't Ruritania afford to pay for its own defense? Why must that burden fall on the American taxpayer?

I present below a table showing the latest fiscal year's armament expenditures of 15 of our aid beneficiaries stated as a percentage of (1) their total central governmental expenditures, and (2) of their gross national product. The record of these countries is compared with our own.

While such international comparisons cannot be precise, they are accurate enough to furnish much instruction. Comparing the overall dollar figures, for example, the United States alone is spending on national defense three times as much absolutely as these 15 nations combined. (Some $39.7 billion against a total of $13.4 billion.) We are also spending much more relatively—10.2 percent of our gross national product against an average of 6.6 percent for these 15 beneficiaries.

The United States, which is giving the defense aid, is spending some 62 percent of its total budget on defense, whereas these 13 countries receiving aid (if we omit for the moment Formosa and Yugoslavia) are spending on the average only some 26 percent of their total central government budget on defense. This is another way of saying that while we in the United States can afford to spend only some 38 percent of our total budget on nondefense items, these 13 beneficiaries of arms aid are spending some 74 percent of their total budgets on nondefense items.

This relationship can hardly be excused on the plea of poverty. Among the countries that are spending relatively most on defense are Greece, Turkey, and Formosa. (It is only fair to add that they are doing this partly because of our defense aid.) The outstanding exception of Yugoslavia is not reassuring. It is frankly a Communist country. We are unlikely to find it on our side when the chips are down.

Is it a good idea for us to rob our own defense, in order to pay for part of the defense of countries that are comparatively indifferent about their defense or do not take the Communist military threat very seriously? Instead of our contributing nearly $3 billion to these countries for their defense, why wouldn't it be a good idea simply to suggest to most of them that they transfer part of the total of $36.1 billion they now spend on nondefense items to their present modest $13.4 billion for defense?

Defense expenditures

Country	Percent of total Government expenditures	Percent of gross national product
Belgium-Luxembourg	18.3	4.1
China (Formosa)	59.0	12.0
Denmark	20.4	3.3
France	27.6	7.3
Germany	23.9	4.1
Greece	33.2	6.5
Italy	22.0	4.1
Japan	12.0	2.0
Netherlands	22.6	6.0
Norway	26.8	4.5
Portugal	33.6	4.5
Spain	31.6	4.5
Turkey	35.2	5.7
United Kingdom	31.2	8.9
Yugoslavia	77.5	11.6
United States	61.7	10.2

The Role of the Independent in the Automotive Parts Industry

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Wednesday, April 11, 1956

Mr. O'MAHONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an analysis of the role of the independent manufacturer of automotive parts in industry, as set forth in an address delivered by Mr. Joseph W. Burns, chief counsel of the Antitrust and Monopoly Subcommittee of the Committee on the Judiciary.

Mr. Burns was appointed chief counsel of the subcommittee by the late Senator Harley W. Kilgore, and has been in charge of the study made by the subcommittee since it was authorized early in the first session of this Congress. His address was delivered at San Francisco before the convention of the National Standard Parts Association on February 22, 1956. It outlines in clear and understandable language some of the problems which have developed in the automotive industry in this period of economic concentration.

Mr. Burns has served with distinction in the Tax Division of the Department of Justice and was a special assistant to the Attorney General before entering the private practice of law in New York in 1945.

I recommend the address to the attention of all Members of the Senate.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE ROLE OF THE INDEPENDENT IN THE AUTOMOTIVE PARTS INDUSTRY

(Address by Joseph W. Burns, chief counsel, Antitrust and Monopoly Subcommittee of the Senate Committee on the Judiciary Before the National Standard Parts Association, San Francisco, February 22, 1956)

Although the antitrust laws affect most people in one way or another, the public knows very little about them and probably cares less. The Antitrust and Monopoly Subcommittee of the Senate Judiciary Committee recently held public hearings with respect to General Motors Corp. as a case study of bigness and concentration of economic power. As a result of our public hearings, various segments of the automobile industry, including dealers, independent parts manufacturers and distributors, at all levels, have realized that they personally are vitally concerned with the antitrust laws.

Representatives of your association and other members of your industry appeared before our subcommittee. They told of their problems in competing with the three major automobile manufactures in the production and distribution of automotive replacement parts and services. They raised the question whether the antitrust laws are adequate to preserve competition in your industry. Witnesses described the difficulty in selling parts and accessories to dealers in competition with the car manufacturers who had advantages which were difficult to overcome. They related their fears of the expansion of the car manufacturers into the replacement parts market, which may eliminate many independents. I am happy to come here to discuss these problems with you.

There is a great deal of misunderstanding about these laws, and a great deal of uncertainty and confusion. I believe it might be helpful to you for me to explain some of the terms used, in order that you may better understand the problems. Since your association has appeared on your behalf before our subcommittee, you should know just what part it plays in the legislative process.

The problems upon which Congress must act are so complex and time-consuming that it is necessary to have committees to do the basic work, and the other Members rely very heavily on the committees' conclusions. The work of each committee is divided among several subcommittees. Every Senator is a member of 2 full committees and usually at least 4 subcommittees. Generally the work carried on by a subcommittee is based upon a program planned and developed by its professional staff. At this point, probably I should make it clear that although I serve as chief counsel and staff director, my comments today represent my personal views and should not be attributed to any member of the subcommittee.

The problem of regulating competition in a dynamic economy is both difficult and complex. Where to draw the line between healthy competition and undesirable competition is the problem which perplexes Congress, the courts, and the Commission.

The Sherman Act has been referred to as a charter of economic freedom. In a very broad sense, it stands as a statement of a basic policy that our economy thrives best where there is freedom of competition. This basic policy has generally been accepted throughout the country. But the Sherman Act itself, as a statute, has not proven adequate to achieve this objective completely.

Today there is considerable concern about the increasing concentration of economic power. In order to try to understand this problem, our subcommittee has been studying the automobile industry. The history of this industry shows that as the automobile gradually developed from the original horseless carriage, thousands of separate businesses were created. It is one of the outstanding examples of a new product becoming the basis for a whole new industry. It afforded unlimited opportunity to individual initiative and enterprise.

Hundreds of individual businessmen built up substantial businesses as manufacturers, wholesalers, jobbers, and retailers. Some of these manufacturers are themselves of substantial size, with assets in the millions of dollars. Since the beginning of this industry there have been dozens of car manufacturers purchasing parts, assembling cars, and marketing them under brand names. Today, many parts manufacturers and distributors are concerned about the future of their businesses. At present there are only six automobile producers, with 95 percent of the market concentrated in the three largest. The concentration at the level of the automobile manufacturer is causing concern not only to the automotive parts industry, but to the Government enforcement agencies as well.

THE BIG ISSUE

The big issue presented by the concentration in the automobile industry is not whether the Big Three are competing, but whether they should have such economic control over the entire industry. We must assume that to obtain the advantages of mass production and nationwide distribution and servicing, a car manufacturer must be big. Since bigness carries with it economic power, the relationship between the automobile producers and other segments of the industry presents a difficult problem.

Of course, one company may be better than the others and achieve a dominating position solely through skill and efficiency. At the present time, the antitrust laws distinguish between internal and external growth. The law imposes certain limitations on growth by merger or acquisition where the effect may be substantially to lessen competition or tend to create a monopoly. But there is no limit to the size of a company, or the number of different fields or industries in which it may operate. However, success in the competitive contest should not be assured to a big corporation solely on the basis of its size and power. The problem is to have rules of the game which will permit competition on a fair basis. In sports, competitors are divided into classes in order to endeavor to have equality. In boxing we do not put a flyweight in the ring with a heavyweight. In some sports, like golf, we provide handicaps to equalize the positions of the competitors.

The big question is: should a limit be placed upon the size of a company, or the number of fields in which it may operate?

The objection to any limitation is based upon the fundamental policy of freedom. Big companies argue that they should be as free as small companies to move in any direction.

Those who believe that limitations may be necessary point out that the fundamental constitutional guaranty of liberty and freedom applies to individual human persons, not to the artificial person of a corporation. Before the corporate form was evolved our laws dealt with persons. When the corporate form was developed the law treated corporations as persons for some purposes, and not for others.

The corporate form has proven an excellent vehicle for permitting individuals to combine their resources in order to develop enterprises which could not be developed by individuals or small groups. Since the privilege of operating through the corporate form is one granted by government, it should follow that government may properly control the use of the privilege. It would seem that a corporation might be permitted to grow and expand until it reaches the point where its activities are detrimental to the public interest.

Some people believe that in the automobile industry and with the General Motors Corp. in particular, this point may have been reached. The enormous size of that corporation, with over 500,000 stockholders, over 600,000 employees, plants in 119 cities of the United States and in many foreign countries, has caused many to pause and ponder whether it is in the public interest to allow it the same freedom of action as is permitted to small businesses.

There are two factors involved in this problem. One is that General Motors' advantage over you manufacturers and distributors is due to its size and financial power. If all of you chose to combine your resources you might become big enough to balance your power against General Motors. But even if you all wanted to combine, the antitrust laws would not permit you to. It is considered undersirable public policy to permit such a combination. If the effect of your combining is undesirable, because of the power it would give the combination to affect competition, should General Motors have the privilege of enjoying power which you cannot? If we are concerned with effects, rather than form, should we not have laws which consider the effects?

The other factor is that in large corporations such as General Motors, a tremendous amount of economic power is placed in the hands of a few corporate managers. Is it wise public policy to have a few persons in a position to control so large and important a segment of the economy?

The problem is whether our changed industrial economy has reached the point where the public interest requires that some limitation be placed upon the use of the economic power of a corporation which in and of itself makes competition so one-sided. To those who object to regulation, it is well to take note that regulation has already been with us for a long time, and it is simply a question of what kind, how much, and by whom.

The problems of the manufacturer of parts and accessories are in some respects different from those of distributors. A parts manufacturer who sells to a car manufacturer usually sells both for original equipment and replacement. We have found that in some instances a single price is given the car manufacturer regardless of the use made of the parts. The price to independent wholesalers was much higher than the replacement parts price to car manufacturers. The Robinson-Patman Act prohibits a parts manufacturer from selling replacement parts to a car manufacturer at a different price from that given to other distributors, unless there is cost justification. These price differences give the car manufacturer a great competitive advantage over independent wholesalers. If the car manufacturer is to compete with the independent wholesaler in the distribution of replacement parts made by independent parts producers, he should be required to compete on equal terms.

The parts and accessory manufacturers who do not sell any original equipment are the ones who feel the full impact of the concentration of the car manufacturers. They have the psychological problem of convincing the public that their products are as good as similar products used as original equipment. They have to overcome the great advantage the car manufacturer obtains from widespread advertising, particularly the type relating to genuine parts. They have the practical problem of competing with the car manufacturers for the replacement business of the dealers.

The distributors have succeeded in the past in obtaining a substantial part of the replacement business of the dealers. However, they have always had a problem in selling to dealers, as long as the factory was competing for the dealers' business. The distributors had a little help from the antitrust laws in this respect, since the factory cannot legally force dealers to buy parts. In fact, the Federal Trade Commission issued an order against General Motors in 1941 requiring it to cease and desist from forcing dealers to purchase unwanted parts and accessories.

Here is a specific case where practices of General Motors were held to violate the antitrust laws. But has the law been effective to help you? As early as 1934 parts and accessory manufacturers complained to the Federal Trade Commission that General Motors was coercing its dealers to buy only from GM. In 1937 the Commission issued a complaint. After a full hearing the Commission issued an order against General Motors in 1941. Now, what is the situation today, over 20 years since you started complaining?

COERCION AND RETALIATION

Witnesses testified that in spite of this prohibition, General Motors zone and district managers have continued to put pressure on dealers to purchase replacement parts and accessories from General Motors. This is an example of the lack of effectiveness of the law. One witness testified that he made heaters for Chevrolets, and had been able to make sales to dealers. Then he found that the dealers were unable to obtain Chevrolets without factory-equipped heaters, and they canceled their orders. At Detroit, General Motors insisted it did not require dealers to take factory-installed heaters, yet the dealers told the manufacturer the zone and district managers insisted they take them. After the manufacturers complained to the Federal Trade Commission its investigators interviewed the dealers. Now here is the most disturbing thing about the power of the factory over the dealers. They denied to the FTC investigators that the factory had coerced them. Yet when a member of my staff interviewed one of these dealers he stated he had been coerced, but pleaded that he not be called as a witness because of fear of retaliation from General Motors.

As long as the power of General Motors over its dealers is so great that they fear to tell the truth to Government officials, no laws can be effective. The dealers who are a principal market for distributors are becoming more and more a captive market for the factory. Regardless of what Detroit said General Motors policy is, the testimony of the dealers revealed that they were compelled to purchase parts and accessories from General Motors for fear of losing their franchises. The problem of the independent distributor is closely related to the problems of the dealers. They have forcefully presented their problems to Congress. Any relief which the dealers obtain from the pressure of the car manufacturers will, to a certain extent, benefit you.

But there is another problem which would not be solved immediately. That involves General Motors' plan to induce its dealers to act as wholesalers in direct competition with independent jobbers. Another part of the plan is to have independent wholesalers sell General Motors parts made in the car divisions.

The antitrust laws do not prevent the institution of either of these plans. The distributors claim they are harmed in two ways. First, they have to meet additional direct competition from the dealers. Second, the wholesalers are required to carry a greatly increased inventory in order to have the same full line as their competitors.

What does this GM wholesale parts plan mean to the independent manufacturer and distributor? A spokesman for General Motors, in announcing the purpose and objectives of the new plan, stated that since GM manufactured approximately 50 percent of all cars and trucks, it felt it should make effective a plan to penetrate the replacement parts market it is rightfully entitled to. If the profits in the replacement-parts market are so attractive to GM, then Ford and Chrysler might decide to adopt similar plans. This would immediately eliminate over one-half the market of the independent distributors.

INDEPENDENT INDUSTRY

What would this mean to the independent manufacturer of competitive parts? How many could survive if most of the car dealers purchase parts through factory outlets? What would it mean to independent manufacturers of parts for original equipment? If the independent distributors vanish from the scene, the parts manufacturer will be at the mercy of the car manufacturers. As long as there is an independent distribution system, the parts manufacturer can exercise a choice whether to accept the terms of car manufacturers, or sell only for replacement.

From the standpoint of the public, what difference does it make whether parts of similar quality reach their cars through independent wholesalers or by way of the car manufacturer and his franchise dealer? Considering the consumer, it is speculative what the effect would be. No one can tell whether the consumer would pay more or less than he now does. If such a development resulted in economies of distribution, it is conceivable that the saving might be passed on to the public. Lowering costs to the consumer is definitely in the public interest. But concentrating all distribution in the hands of the car manufacturer would eliminate much of the existing competition in this industry. And we have accepted as a premise that lower prices are more likely when there is competition.

Considering the general public interest, the effect of such a plan is not so speculative. Eliminating thousands of independent businessmen would definitely be a great social loss to the country. Economic considerations are not the sole test of benefit to the public. Congress has definitely adopted a policy of protecting independent business enterprises. The objection is to maintain a system of free competitive enterprise where the door of opportunity is always kept open to individual initiative and incentive.

What you want, and what the country wants, are the advantages and benefits that flow from the combination of resources which provide economic and technological benefits, but not coercion or stifling of incentive which may result from great concentration of economic power. The problem today is how to maintain an industrial structure which achieves these objectives. If the rules for regulating competition treat giant corporations and pigmies alike in all respects, there is no doubt what the outcome will be. Only the giant can survive.

This problem is not easy to solve. Enacting new laws may not be the best way to solve economic problems. It might be better if a strong sense of public responsibility on the part of corporate managers would make them realize that grasping every opportunity for profit, may not be the best policy when the result is to injure or destroy thousands of small enterprises. But, today all businessmen should recognize that some rules there must be, if fairness and equality of opportunity are to be maintained.

Independent parts manufacturers, distributors, and representatives of their trade associations have expressed to our subcommittee their concern regarding this GM wholesale parts plan. It is apparently too early to determine how serious it may be to your interests. However, the experiences of the locomotive and bus industries are a justification for your giving the problem your immediate attention rather than waiting until it is too late. General Motors went into the locomotive industry in 1934, and now controls over 75 percent of the production, practically eliminating from the market some of its major competitors. In the bus industry General Motors has obtained over 80 percent of the production, and has eliminated such formidable competitors as White Motor Co., ACF-Brill, and Twin Coach. If General Motors could eliminate a competitor which was big enough to have over $50 million of sales annually, what can it do to you?

While I have discussed the automobile industry and General Motors, the same conditions exist in other industries where the economic power of big manufacturers creates an imbalance with respect to both competitors and distributors. Our study of this problem will continue in an endeavor to reach a solution.

Organizations such as yours, made up of independent businessmen, who day in and out are faced with the practical realities of the competitive world, can be of great help to your representatives in Washington who are trying to find legislative answers to the difficult problems involved in attempting to revise the antitrust laws. You have appointed a committee to study the problems of your industry and to express your views to Congress. I hope that you will continue to support this committee and its program wholeheartedly. You may be sure that the Subcommittee on Antitrust and Monopoly will welcome and give careful consideration to your suggestions and ideas.

The Economy Pattern of American Policy on the Philippines

EXTENSION OF REMARKS
OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1956

Mr. UTT. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following article that appeared in the Manila Chronicle on March 16, 1956:

THE ECONOMY PATTERN OF AMERICAN POLICY ON THE PHILIPPINES

(By A. Montelibano)

I wish to thank the faculty and student body of the Francisco College, particularly the Commerce Club, for the opportunity given me to address you this afternoon. At a time when there is a raging controversy on the proper approach to the solution of our economic problems. I welcome this chance to air my views before a gathering of young men and women whose minds are open, and above all, whose future is at stake in this controversy.

I have chosen to speak on an aspect of our economic development program, the so-called American aid.

It is wrong to believe that the American policy towards the Philippines is dictated primarily by considerations of friendship. American policy in the Philippines is dictated by expediency and convenience. This conclusion is reflected in the distribution of American foreign grants and credits.

AID PATTERN

Let us analyze the pattern of American foreign aid distribution.

From the post-war year up to 1953, the United States foreign grants and credits totaled $44,326,000,000. Of this amount $33,234,000,000 represented net grants and $11,093,000,000 represented net credits. Who were the recipients of these grants and to what extent? Among the beneficiaries of these grants and credits, in the order of the magnitude of the amounts received are the following:

[In millions of dollars]

	Grants	Credits	Total
1. United Kingdom	2,989	3,805	6,794
2. France	3,233	1,712	4,945
3. Germany	3,586	203	3,789
4. Italy	2,291	300	2,591
5. Japan	2,400	44	2,444
6. Greece	1,114	85	1,199
7. Netherlands	827	241	1,068
8. China	994	57	1,051
9. Austria	982	13	995
10. Korea	874	21	895
11. American Republics	190	689	879
12. Philippines	717	86	803

I invite your attention to the fact that Germany received $3,789,000,000; Italy, $2,591,000,000; and Japan, $2,444,000,000 in American grants and credits. Altogether, these countries who were former enemies of America have received $8,824,000,000, or almost 20 percent of the total and thus were able to occupy the third, fourth, and fifth positions, respectively.

Soviet Russia was extended grants and credits amounting to $426 million; Poland, $434 million; Czechoslovakia, $188 million; and other Communist countries $44 million. All these countries are within the Iron Curtain which are now engaged in a cold war with the United States. Their total foreign aid is $1,092,000,000, or more than 2 percent of the total.

OTHER UNITED STATES AID

Even the neutralist countries in the cold war betwen the democracies and the Communists were also given liberal aid by the United States. Yugoslavia received $633 million; India, $255 million; Indonesia, $215 million; or a total of $1,103,000,000, or more than 2 percent of the total.

The Philippines who fought side by side with America and who sacrificed numerous lives and properties received grants and credits in the insignificant amount of $803 million, or only 1.8 percent of the total.

With respect to American aid in the form of credits, the total extended by the United States amounted to $11 billion. Of this the Philippines received only $86 million, or less than 1 percent of the total credits.

From the figures I have mentioned we can conclude that American aid in the form of grants and credits is based on a pure and simple policy of expediency. If the American policy was dictated primarily by friendship why has not the United States given the Philippines a bigger allocation of her foreign-aid grants in proportion to the love and friendship that the two countries profess for each other?

LEGAL CLAIMS

The Philippines has legal claims against the United States which have been pending settlement for many years. For example, we have a legal claim for the gold devaluation of the United States in 1933 in the amount of $24 million. The balance of our war damage claim has not yet been paid, amounting to $155 million. The United States has obligations to our veterans that are still unsettled. The total claims of the Philippines against the United States amount to $860,-211,458 as documented by the Laurel Trade Mission. If friendship is the criteria of American action in the Philippines, why has the United States not settled these claims and instead forced the Philippines to resort to borrowing, sometimes under onerous conditions that prevent the Filipinos from taking full advantage of such loans? The answer can only be because expediency does not indicate the settlement of these accounts by the United States.

Sadly, while America has followed a policy of expediency toward the Philippines, we on our part have consistently adhered to a policy dictated primarily by friendship, loyalty, and gratitude. We have clung to this attitude toward the United States in the expectation that she will reciprocate and recompense us in the form of aid greater than those to countries who claim no closer ties.

NO ADVANTAGE

We have not gotten any positive advantage in pursuing a policy based primarily on friendship and loyalty. America is taking the Philippines for granted. Because America knows that we sincerely subscribe to democratic principles and we have definitely alined ourselves with the democracies against the Communists, she has paid us less attention and used her foreign aid to attract those who may veer toward the Communist camp.

It is time that we revise our foreign policy and pattern it on a more realistic basis so that we can be placed at par with the United States in our relations with her. It is best for us that we adopt a foreign policy that shall look more toward the best interests of our country rather than depend purely on friendship with the United States or any other country. After all, the United States and all other countries adopt this policy of expediency in their relations with the Philippines.

Let us look at another phase of American foreign aid in the Philippines. The American commitment in the joint aid program under the Quirino-Foster agreement of November 1950 is $250 million. The United States has failed to comply with her commitment. In this agreement the American Government made us understand that $250 million will be made available for social, economic, and technical assistance. However, under the FOA (now ICA) program, the Philippines received only $91,261,000 as of December 1954, to which other grants were added in 1955 and 1956, making a total of only $137,946,000 allocated up to fiscal year 1956, or just about one-half of the amount committed to us.

JOINT PROGRAM

The total cost of administration of the joint program amounts to ₱63.9 million, ₱16.3 million of which was used by Filipinos and ₱47.6 million by Americans. The Filipino participation consists of 2 groups, namely, 1 representing the Philcusa (now NEC) employees with a total appropriation of ₱4,191,000 for 896 persons in 5 years, giving an average salary of ₱4,670 per person per year. The balance of ₱12,169,000 was used for Filipino participants in type A programs or to cover the expenses of those sent abroad for training, totaling 1,245 persons at an average cost of ₱9,780 per person per year. Three-fourths of these expenses are in dollars.

The total cost of American advisers in the joint program for the fiscal years 1952 to 1956 amounts to ₱47.6 million for the 727 persons involved or at an average of ₱65,500

per person per year. This expenditure for American advisers is divided into 2 categories: (1) the so-called type B technical assistance composing the personnel of the International Cooperation Administration, and (2) the type C covering the contract advisers in different government offices and agencies. The ICA advisers are costing us ₱24,492,000 annually and the technical assistants under contract are costing us ₱14,321,000. Of the first type we have in total since 1952, 520 persons, and of the second since 1952 to 1956, we have 207. Besides these, the ICA is using ₱8,808,000 representing 5 percent of the total peso counterpart in the joint program for their own expenses.

TECHNICAL PERSONNEL

At ₱65,500 cost per head per year, positively without any doubt or discussion, we will have much more and far better technical personnel than what we have. At this cost we can have the best not only of American advisers but the best of the whole world.

I am sure that among Filipinos there would be many who would have far better capabilities than most of these American advisers who come to the Philippines virtually as vacationers. Some are political proteges while others are fresh college graduates with neither the experience nor the knowledge about Philippine conditions. We can find more capable men among the Filipinos.

It would be the height of imprudence to entrust the future of our beloved country in the hands of foreigners whose interest in the Philippines cannot go beyond their self-advancement.

And while these American advisers around us are receiving such huge amounts, the Monetary Board, in view of the dwindling reserves, had to drastically cut the allowances of students abroad. Considering that the dollar expenses of these American advisers for the fiscal years 1952 to 1956 amount to $13,600,000 for the 727 persons involved during that period, or at an average of $19,000 annually per person, and the fact that the Monetary Board reduced the individual allowance of each of our Filipino students by $50 per month, it is only evident that if we eliminate only one American adviser, the dollars saved will be sufficient to avoid cutting the allowance of over 300 of our students abroad. Why not, therefore, cut the useless dollars that are spent for ICA advisers instead of cutting the allowances of our students abroad who are being trained as future leaders of our country?

My friends, let us reexamine our position. Our foreign policy must be revised to advance our national self-interest, first and foremost. Any foreign aid should be and must be administered by Filipinos for the Filipinos, with the minimum of foreign interference.

Address by Hon. Alexander Wiley, of Wisconsin, Before La Crosse, Wis., Shrine Club

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, April 12, 1956

Mr. WILEY. Mr. President, it was my privilege recently to deliver an address before the Shrine Club of La Crosse, Wis. I ask unanimous consent to have printed in the RECORD certain excerpts from that address.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

SENATOR WILEY URGES 10-POINT PROGRAM FOR WISCONSIN DEVELOPMENT

(Excerpts of address by Hon. ALEXANDER WILEY, Republican, of Wisconsin, at Shrine Club, La Crosse, Wis., April 6, 1956)

COMPETITIVE RACE WILL BE INTENSIFYING IN 48 STATES

These days, we hear a great deal about competitive coexistence between the United States and the Soviet Union.

I need not comment in detail to you, the members of the Shrine (who know the great patriotic record of our own Shrine organization), how significant is this coexistence race. We of this country must make sure in this jet-atomic age that we stay ahead in the race for national survival. We must make sure that we are well prepared—on the home and foreign fronts—against any danger that may arise.

PATRIOTIC RECORD OF THE SHRINE

The Shrine, as we all know, is the playground of Masonry.

But the Shrine has its serious moments too. And throughout all Shrine activity, there runs the undertone and overtone of patriotic service, of promoting civic welfare and human betterment whether it be on behalf of crippled children or any other worthy cause.

And, of course, there is no cause more worthy, more essential than national survival—the greatest single obligations of this Republic—which is the great beacon to mankind.

THE RACE AMONG THE 48 STATES

I would like to point out, however, to my brother Shriners, that there is another type of competitive race—over and above our race with the Soviet Union. It occurs right in our own country. It is the race among the 48 States for progress and prosperity.

Every day, new developments are occurring in this competitive race. Factories move from one State to another. Companies start new plants or subsidiaries in one State or another.

We of the Badger State are anxious to keep our State to the fore. We want to move up—not to fall back—in the competitive race.

We want more contracts for Wisconsin, more and steadier jobs, fuller pay envelopes, more jingling tunes in the cash registers, more tourist income, more farm sales.

To achieve this, we'll require action, planning, teamwork, cooperation.

WE ARE INTERESTED IN QUALITY

Of course, we are definitely not trying to get the largest population, we are not trying to attract any type of plant, just for the sake of piling up big statistics of new business.

We are interested in quality. We want the best type of industry in Wisconsin. We want our own existing population to enjoy ever higher income. We don't want to sacrifice living standards but rather to raise them.

For these purposes, I am in continuous contact with the officials of our State government, with our governor, our State planning commission, and with other State officials.

I would like to spell out now a 10-point program for making sure that Wisconsin keeps moving forward in 1956 and in the years to come.

This is by no means a complete list, but it will indicate to you the sort of things which must be done.

CAPITALIZE ON MISSISSIPPI AND THE LAKES

1. Further use the great natural arteries available to us. That means the mighty Mississippi. It means the Great Lakes.

It means roads along the Mississippi and river traffic on the Mississippi, roads alongside the lakes and commerce on the lakes.

We must capitalize on these assets to the fullest. We must get all the possible traffic we can out of them—out of barge traffic and along the lakes, out of deepwater traffic.

2. For full lake benefits, we must secure the prompt deepening of the Great Lakes connecting channels. This means we must make all possible speed in securing congressional approval of the initial $5 million (out of the overall $110 million authorized) to deepen and improve the Great Lakes connecting channels west of Lake Erie.

EXPAND CREDIT FOR SMALL BUSINESS

3. Utilize the splendid facility of the Wisconsin Credit Development Corp. This is the organization designed at Madison, by our State officials with the cooperation of our State's banking profession, to provide needed capital wherever necessary, and otherwise unavailable, so as to expand industry or bring in new industry.

4. Further develop our Wisconsin highway system, which is so vital to our tourist industry, as well as to inexpensive transportation of our farm and business products.

Under Federal aid, the highway legislation now before the House, Wisconsin will get an estimated $345 million in the coming 13-year period for road improvement.

5. Strengthen Wisconsin aviation—meaning improve our airport system, our navigational aids. Facilitate the work of North Central Airlines, Northwest Airlines, and other fine airline companies serving our State. Expand the number of our pilots and civilian planes, as may be necessary.

MORE CONTRACTS FOR BADGERS

6. Bring in more Federal contracts wherever possible to utilize the skills and abilities of Wisconsin industry and workers for defense purposes.

7. Utilize Wisconsin camp facilities—like Camp McCoy—to the fullest. This has been my constant aim in Washington.

WISCONSIN WANTS FAIR-PRICED NATURAL GAS

8. Increase the amount of the fuel at good prices available to our citizens.

Right now, there are, as you know, numerous applications pending before the Federal Power Commission for bringing in more natural gas pipelines to Wisconsin. I, for one, want every additional cubic foot of natural gas we can get and use—for our homes, offices, stores, and factories. And I want it at good, competitive prices.

Thanks to President Eisenhower's wise veto of the Harris-Fulbright bill, we can feel reasonably assured that we are going to get fuel at a fair price. Had that bill not been vetoed, Wisconsin would have paid through the nose to the gas monopoly.

Fuel is a mighty important factor that is considered when a company weighs moving a plant to a particular State. We don't want Wisconsin companies moving to the South or anywhere else, so as to get cheaper fuel, subsidized by the Federal Government.

We want adequate fuel and/or fair private enterprise prices, for our State.

9. Keep Wisconsin ahead in scientific research, both through our great private laboratory teams, as well as through the marvelous research conducted by the University of Wisconsin and other splendid educational institutions.

This is a scientific age, and the State with scientific and technical know-how will forge ahead of other States which lag in scientific development.

KEEP WISCONSIN INDUSTRIAL PEACE

10. Last but not least, let's keep Wisconsin as a model of cooperation between labor and management, industry and agriculture, farm and city.

As we look elsewhere, we see first right now, as you know, the South is paying a bitter price because of racial tension.

Here in our own State, let's make sure of cooperation between all groups. Let's try to avoid the type of industrial warfare which crippled the great Westinghouse Corp. for 156 days, the kind of heated labor-manage-

ment bickering which causes losses to all, particularly the public, as a whole.

These then, are but 10 points in our "Forward, Wisconsin" program. You and I can and will add many more points as we seek to assure rising and lasting prosperity for the Badger State.

Address by Judge Morgan C. Harris at Naturalization Ceremony

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, April 12, 1956

Mr. BEALL. Mr. President, I recently had the great honor of sitting next to Associate Judge Morgan C. Harris, of the Fourth Judicial Circuit of Maryland, during naturalization ceremonies for seven foreign-born residents of my State's Allegany and Garrett Counties. Judge Harris delivered an exceptionally stirring address to our new citizens; and, as I sat there listening to it, I felt that the words were just as appropriate for all those persons who were born a part of this Nation as they were for the seven women who were joining it by their own choice. Consequently, I ask unanimous consent that the remarks of Judge Harris be printed in the Appendix of today's CONGRESSIONAL RECORD. It is interesting to note that 3 of the women who took their naturalization oath before the judge were natives of Germany, 2 were from Italy, 1 was from England, and 1 was from Czechoslovakia. All except one had married United States servicemen.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In this jurisdiction it is customary for the court to address you with a few remarks before considering your respective petitions.

The magnitude of the action anticipated by each of you cannot be overestimated. When a person severs his or her relationship to the country to which he or she avers allegiance, and pledges fidelity to another, everyone realizes the greatness of the consequences that may result. This never should be done for selfish reasons or ulterior motives. Frequently one is required to make great sacrifices therefor, and at times it is necessary for wives and mothers to give their loved ones in defense of the country of adoption. Next to your love of God should come the love of your country.

It should be undertaken only after a thorough understanding of our form of government and what it stands for. We have a country "conceived in liberty and dedicated to the proposition that all men are created equal." This does not mean that everyone is born with the same amount of physical or mental ability; it means that in relationship to Government every person here stands on an equal footing. Unlike a great many other countries, we believe that all Government is for the benefit of the individuals composing it, and that it derives its power from the governed. Widespread happiness would result if the remainder of the world should arrive at the same conclusion.

We have in this country two documents that are cherished and revered by all true and loyal citizens. They are the Declaration of Independence and the Constitution of the United States. By the first we informed the world why we were severing our ties with the mother country, and declared ourselves a free and independent Nation. The latter conspicuous for its brevity, is the supreme law of this land; and has guided a very large country territorially, with probably 160 million souls since its beginning.

In times like these when the whole world is in a constant state of anxiety, when the rights of millions of human beings, as we view those rights, are being trampled under foot, we thoughtfully examine the institutions of our own country to find what we can and should do to preserve their benefits. Our Republic has existed for 169 years. It is the oldest of all living republics. It is well for us to remember that other republics, different from ours it is true, lived long lives. The Republic of Venice endured for 1,100 years; that of Athens, with some interruptions, for 900 years; Carthage for 700 years; Rome for 500 years; and other republics, such as those of Genoa and Florence, lived long lives. They all failed because of the natural inclination of men granted great powers to seize more power.

It should be recalled that Caesar, who undertook to protect the rights of the Roman people against the Roman Senate, himself ultimately became the master both of the people and of the Senate. Cromwell, who undertook to secure to Englishmen rights that had been seriously infringed, himself became the dictator of England. Napoleon, who undertook to secure for Frenchmen the liberty won through their revolution, himself became the Emperor of France and sought to become the Emperor of all Europe. All of these republics finally became despotisms or monarchies.

What is there in our Republic that promises to insure its continuity? Our forms are somewhat complicated. This will first occur to some. Our theory is the practice of checks and balances; the division of powers between the Federal Government and the State government; the division between the three departments of Government—the legislative, the executive, and the judicial; making the head of the executive department the Commander in Chief of the Army and the Navy, but placing the power to declare war and the pursestrings within the control of Congress; the bicameral legislature; the necessity that all bills for raising revenue must originate in the House of Representatives; the requirement that all laws must pass both Houses and by a majority vote, but placing a check upon this through the veto power of the President, and preventing this power from becoming arbitrary by providing that by a two-thirds vote the Congress may pass a bill over the President's veto; and above all of these, placing the Supreme Court as the keystone in the arch of our liberties—a court that may declare void any act of the executive department or of the legislative department—a power which it must exercise in accordance with our fundamental law as found in the Constitution.

Mazinni said: "Democracy is the progress of all through all, under the leadership of the best and wisest." True democracy will carry on an insistent search for these wisest and best, and will elevate them to posts of leadership and command. Under the operation of the law of liberty, it will provide itself with real leaders, not limited by rank, or birth, or wealth or circumstance, but opening the way for each individual, to rise to the place of honor and influence by the expression of his own best and highest self. It exactly reverses the communistic formula, "From each according to his abilities. To each according to his needs," and upholds the principle, "From each according to his needs, To each according to his abilities." Democracy takes care to provide such a ladder of education and opportunity that the humblest may rise to the very top if he is capable and worthy. The most precious thing in the world is the individual human mind and soul, with its capacity for growth and service. To bind it fast to a formula, to hold it in check to serve the selfish ends of mediocrity, to deny it utterance and expression, political, economic and moral, is to make democracy impossible as a permanent social and governmental form. The United States is in sore need today of an aristrocracy of intellect and service.

National socialism would substitute corporate or collective responsibility for individual initiative. Therefore, socialism is primarily an attempt to overcome man's individual imperfections by adding them together in the hope that they cancel each other. This is not only bad mathematics, but worse psychology.

It will behoove those who become citizens of this great Nation to help in every proper way to see these salutary principles of government perpetuated.

This country is honest and sincere in its thoughts concerning, and its actions and relatioships with, the other peoples of the world and their governments. Its emissaries and ambassadors are taught to deal with truth and candor; and to abhor deceit and intrigue. If all other nations could see their way clear to have the same aims and desires, we would actually see the Christian maxim, "On earth peace, good will toward men" fulfilled; and the world would head into many years of peace, security and happiness.

The Cowardly Attack Against Columnist Victor Riesel

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, April 12, 1956

Mr. WILEY. Mr. President, the Nation has been appalled and disgusted at the cowardly attack perpetrated on Victor Riesel, the nationally syndicated columnist, when sulfuric acid was hurled into his eyes.

It is our hope and prayer that his eyesight will be fully restored.

It is our further hope and prayer that this vicious assault may serve to spark, once and for all, a crackdown on the part of public officials—Federal, State, and local—a crackdown on the part of the great mass of responsible union leaders, and rank and file members against the vicious thugs who have infiltrated into some unions and who are misusing the bona fide trade-union movement as a cloak for plundering and thieving.

I commend the hard-hitting statement of A. F. of L. president, George Meany, who promptly denounced this outrage.

However, as we all realistically know, there has been a tendency in times past for labor, for the public, and for public officials to become only temporarily aroused when a crime of this sort is committed.

I hope that this merely temporary reaction will not prove to be the case in this instance. I hope that this time organized gangsterdom will be hit hard

and hit continuously and lastingly so that its backbone will be broken once and for all in the trade-union movement or anywhere else in our country.

That will, of course, take a lot of doing. Past reform movements, such as those at the time of our Senate Crime Investigating Committee, have tended to die down after but a brief flurry of activity. That must not happen this time. As Vic Riesel himself said, from his hospital bed, "keep the heat on."

The best type of tribute that we can pay to Vic Riesel, lying swathed in bandages today, is to clean out the hoodlums and Reds who have been his implacable enemies since he began his column.

Newspapers in my own State, like newspapers all over the country, particularly the 193 which carry his column through the Hall Syndicate, have reflected our universal sense of shock at this murderous assault.

I send to the desk now the text of an editorial and column from the Wisconsin State Journal, a paper which has done an outstanding job in focusing public attention on this outrage.

May I note that, in times past, Mr. Riesel had kindly written up a great many of my own efforts, and efforts of my staff, against both racketeers and subversives. But if he had never mentioned a word concerning me or my staff or praising any other Member of the Congress, I would feel that he had rendered outstanding service to the American community. And I would feel a personal obligation to do everything i could to speak out as I am now doing.

I have been in contact with the Honorable Paul Williams, United States attorney for the area where the crime was committed, as well as with State and local officials, and it is my earnest hope that they will be completely successful in their crackdown efforts.

Lastly, may I say that perhaps the most eloquent tribute to Vic Riesel is the fact that he has been praised for his courage by every single writer and commentator with whom I am familiar. Tributes were, for example, paid by Ray Henle of the NBC Three Star Extra program, which has featured his analyses. Tribute was paid by Walter Winchell on his Mutual Broadcasting System program last Sunday night, by the New York Times, by editorials in the Hearst newspapers, by the noted columnists George E. Sokolsky and M. S. Rukeyser, both of whom, for example, differ widely with many of Mr. Riesel's views, but who nonetheless warmly admire his frankness, vigor, and pluck.

I ask unanimous consent that two editorials from the Wisconsin State Journal on this subject be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Wisconsin State Journal of April 6, 1956]

A CHALLENGE TO LABOR'S LEADERS

George Meany, president of the newly affiliated AFL-CIO, has called the attack on labor columnist Victor Riesel "a challenge to all decent elements in our society and specifically a challenge to those entrusted with the task of law enforcement."

That it is. But it is more.

It is a grim challenge—though not the first—to Mr. Meany and the 15-million-member labor organization he heads. It is a clear call for a crackdown by organized labor itself on the slimy elements within its ranks that shoot and kill and sabotage to gain members, to shake protection money from employers, and to gouge American consumers out of millions of dollars.

The Riesel case is a dramatic one, involving as it does a syndicated writer whose dispatches for years have named names and specified dates and places on labor's lawbreakers. But it is no more deserving of punishment for the guilty parties than the case of the union rank-and-filer denied his rights, or that of the little shopkeeper whose place is smashed for refusing to "cooperate."

Acid was thrown into Riesel's face early Thursday, shortly after he completed a New York radio interview with two young members of the operating engineers who are trying to clean up their Long Island local.

It was about the same time that Thursday's Wisconsin State Journal was going to press with a Riesel column on the Federal Government's latest plans for smashing shakedown rackets in the food, trucking, and garment industries. The column, as it happens, mentioned acid and stink bombs, common weapons in the mobsters' fight against hold-out merchants.

The State Journal has been and is proud to be one of the 193 daily newspapers carrying Vic Riesel's column. It has admired his talent for getting the facts, but, more, it has admired the little guy's courage; he has been threatened repeatedly and told to "lay off." Riesel and the brave union men who have dared talk to him and to grand juries are fighting for the rights of every honest wage earner in the country.

It is a fight, now more than ever, that must go on until it is won.

Mr. Meany and his lieutenants know the men running these crooked locals. They are largely AFL unions in the construction trades and the teamsters. Violence is nothing new to either group—and the men responsible for the violence have stayed in control of powerful locals for years.

The cowardly attack on Mr. Riesel is a challenge all right.

A big part of that challenge must be accepted by labor's own top leaders who permit crooked union heads and men from the mobs to operate.

[From the Wisconsin State Journal of April 8, 1956]

"DON'T STOP THE COLUMN NOW," RIESEL SAID; SO HERE IT IS

(EDITOR'S NOTE.—This column is being written by Victor Riesel's staff after a dramatic bedside conference almost immediately after the injured columnist recovered from heavy sedation administered to ease the pain of the acid burns on his face and eyes.)

Victor Riesel, face scarred by acid burns, eyes puffed and painful, awoke from a merciful drugged sleep only an hour ago.

His first coherent conversation was with his two staff members who have been at his bedside from the moment they were first notified of the sneak attack which may cost Riesel his sight.

This measure of this brave newspaperman is in the words he first spoke: "How are Bill Wilkens and Pete Batalias (the two leaders of the reform group fighting against Labor Czar Bill DeKoning, of the Operating Engineers' Union)? Are they O. K.? Did anything happen to them? Tell them to take care."

His first thought, in his first moment of rational consciousness, was for the safety of these two "working Joes" whose fight for decency he supported so brilliantly in his columns for the past year.

His next words were the measure of a newsman's newsman. "Don't stop the column now. We'll discuss it each day when I'm awake. Then you two write it. Don't stop it and don't use guest columns. I can't see now, but I can still talk."

Typed or dictated, the exposures of corruption and indecency will go on, Riesel has vowed.

At least three law-enforcement agencies have called for all of the columns written by Victor Riesel in the last year. Their experts are pouring over the many exposures contained in them—paying particular attention to situations and names pinpointed in the past 6 months.

A spokesman for one of these law groups told Riesel's staff that "We are pretty much convinced that the attack had to stem from something relatively recent that the column exposed."

In addition to the columns, the texts of Riesel's recent broadcasts, in which he swung heavily at racketeering, in general, and racketeering inside labor, in particular, were also under close scrutiny for possible clues.

There is no question in the minds either of Riesel's staff members or the many law-enforcement officials to whom they have spoken that the brutal attack is linked to some phase of labor racketeering laid bare by Riesel. Most of these officials have also ruled out speculation that the attack was the work of some crank or amateur working on his own.

They point out that Riesel and his escorts were carefully followed from the scene of the broadcast to the site of the actual attask. His car was carefully noted. The assailant was spotted at the precise point where the car was parked. And the acid-tosser had been briefed to recognize Riesel on sight.

The preparation of the acid was a professional job, too. Most amateurs use lye or some lye solution. More often than not they toss it from the original can. This solution was highly concentrated sulphuric acid carefully carried in a special jar with a wide, open mouth. That the acid was tossed directly into Riesel's eyes in a practiced upward motion is also the mark of the pro, they added.

Many of the columns under close scrutiny discuss mob activities with national ramifications. Others deal with lush underworld operations centered primarily in the New York area. All involve men with long police records or with associates who are known criminals.

Nor are the law agencies overlooking some of the hard-hitting columns that exposed recent Communist directives to its cadres across the country. Or the exposures of the cooperation between pro-Soviet agents and underworld representatives on the New York waterfront.

One Federal official told Riesel's staff that everyone found to be involved in any way with the activities exposed by Riesel or connected with persons involved will be carefully investigated and perhaps questioned. Special attention will be paid to alibis for the time of the attack on Riesel.

Among the columns under scrutiny, this official indicated, are those dealing with the garment and trucking rackets, waterfront, and narcotics rackets, Communist activities, CP-mob tieups, perishable food industry extortion, sale of charters, sale of members of one union hood to another for a fee and terrorization of small-business men whose employees are primarily Puerto Rican.

Somewhere in the these fighting columns, they believe, lies the significant clue to those behind the attack on Riesel. Who are they? Only time, wide publicity, and effective policy work will tell.

The Other Face of Coexistence

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, April 12, 1956

Mr. JENNER. Mr. President, last summer, at the time of the Geneva Conference, which was to put an end to tensions, the Communist leaders were carrying on a vigorous campaign among escapees in the West to persuade them to return home.

Now we learn that, 3 or 4 months after the summit meeting, the Communist rulers of Rumania murdered hundreds of their political opponents and left their bodies unburied in the streets as a warning to their suffering people.

What makes more horrible this example of murder as an instrument of government policy is the seductive advertisements published by the Communist Government of Rumania, in the press of Western Europe and the United States, urging political refugees to return because a new era had begun.

Rumanian Communists had issued a decree of amnesty to refugee political opponents in July 1955. At home political prisoners were freed from the jails. Advertisements in our papers promised complete restoration of citizenship to refugees who would return, immediately upon their entering the country. Rumanians in Washington were invited to return, by an advertisement in the Washington Post of July 20, 1955. They were to call at 1601 23d Street NW. It was all very relaxed.

The murders took place in late November and December of 1955. Victims were apparently shot behind the ear by the security police.

The corpses were seen by eyewitnesses in the gutters of Bucharest and several other Rumanian cities. Reports have come from travelers, from returning refugees, and from various unimpeachable sources.

Published reports in the foreign press estimate the totals as high 2,800 victims.

Even Communists would not resort to leaving the dead in the gutters like dogs, unless their purpose were political. It is believed the men released from jail may have spoken too freely, in the innocent belief that the political climate had really changed. Communist officials acted promptly to dispose of the offenders, and to intimidate their desperate people.

I call the attention of the Senate to the fact that the Communist leaders of Rumania were thus disposing of political opposition in November and December of 1955, the very time when the U. N. Assembly was debating admission of the Soviet satellites to membership, in accordance with the infamous package deal which our Government sponsored.

I ask unanimous consent to have reprinted in the Appendix of the RECORD some of the supporting documents.

There being no objection, the documents were ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald of July 20, 1955]

RUMANIAN CITIZENS

To offer the possibility of returning home to citizens and former Rumanian citizens, who are abroad and who wish to return to their country in order to integrate themselves in the constructive work of the Rumanian people, the Presidium of the Grand National Assembly of the Rumanian People's Republic has issued a decree of amnesty. By virtue of this decree amnesty is granted to all infractions dealt with by the Penal Code or by special laws—with the exception of the crime of homicide dealt with and punished by articles 463 and 464 of the Penal Code—committed by citizens and former Rumanian citizens, who, on the day of publication of this decree, are abroad, if they obtain authorization to return and if they return to the Rumanian People's Republic before August 23, 1956.

Former Rumanian citizens who are abroad and who take advantage of the amnesty, in accordance with the conditions of the present decree, regain citizenship of the Rumanian People's Republic upon entrance into the country. The decree provides also that persons who had lost their Rumanian citizenship, and who wish to return to the country and who return before August 23, 1956, by virtue of the obtained authorization regain citizenship of the Rumanian People's Republic upon entrance into the country.

The spouse and minor children who return to the country benefit equally from the action of regaining citizenship of the Rumanian People's Republic in accordance with the conditions of the present decree.

Citizens and former Rumanian citizens, who live in the United States of America and who wish to return to the country, may submit such request daily from 9 a. m. to 4 p. m.—to the consular section of the Legation of the Rumanian People's Republic, 1601 23d Street NW., Washington, D. C.

[Translation from Rumanian of item in Cronica Romaneasca of March 15, 1956]

A RUMANIAN REFUGEE STATES THAT HE HAS SEEN THE CORPSES OF 14 PERSONS EXPOSED IN THE STREET

A former steelworker from Timisoara who fled the country on January 14, 1956, has told Free Europe Press that in November 1955 he saw the bodies of 14 persons exposed on several streets of Timisoara. The bodies were guarded by the militia and by Soviet soldiers and nobody dared approach in order to identify them for fear of being arrested. It is believed that the victims were arrested during the night and executed in prison or in the woods. It is evident that the purpose was intimidation since the bodies of those executed were exposed in various districts of the city. The Romanian refugee states that on November 28, 1955, four students from the Polytechnic Institute who lived in the same neighborhood, namely: Gheorghe Lazi, Petru Gheletariu, Ionel Bob, and Ionel Stoicanescu, were arrested. Up to the departure of our informant they had not returned to their domicile and their families had not received any information regarding their fate. The Rumanian refugee believes that this wave of executions is due to the desperation which makes people talk openly against the regime.

In regard to the campaign for repatriation the same refugee gave Free Europe Press information regarding persons from the Timisoara area. A worker in a factory of that city was compelled by officials of the party and of the union to encourage his son, who had sought refuge in Belgium, to return home. The son yielded and upon his arrival in R. P. R. he telephoned his father. He has not yet shown up. His father found out that all repatriates are held by the Russians at their military headquarters in Arad for questioning. The same thing happened to three families of the German minority who returned from France in December 1955. While the men were detained at Arad their families were sent to work in kolkhozes. The men's names are: Hans Scheir, Frank Krepts, and Miklos Schulz.

[Translation from Rumanian of item in Cronica Romaneasca of March 8, 1956]

THE ARM OF JUSTICE IN R. P. R. IS LONG

Under this title we published in a previous number of this Bulletin information which had arrived from the radio station Free Europe in Munich regarding the bodies of certain persons shot and left in the streets of Bucharest. The radio station Voice of America transmitted on March 6, 1956, that, from the reports received, approximately 100 persons were shot and their corpses left in the streets as a reminder to the population as to who holds the power in Rumania. It is believed that the persons involved were political personalities and persons who were freed on the occasion of the amnesty of last summer. The reports added that similar incidents had also taken place in other towns of that country, on a smaller scale, also in the month of December.

Invocation Offered by the Honorable Wilber M. Brucker, Secretary of the Army, at the Easter Sunrise Service at the Arlington Amphitheater on Sunday, April 1

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. REES of Kansas. Mr. Speaker, under permission granted by the House, I am including a copy of the invocation delivered at the Easter sunrise service at the Arlington Amphitheater on Sunday, April 1, by the Honorable Wilber M. Brucker, Secretary of the Army:

Our Heavenly Father, we are grateful to Thee for the privilege of this Easter morning with its quickening hope—the glory and joy of it—that Thou who didst give us life with its many blessings gave us also Thine only begotten Son—whose resurrection on that glorious Easter morn wiped away the darkness of Calvary and gave us the promise of immortality and eternal life—we pray for understanding of Thy ways—for the wisdom and courage that will give purpose to our lives.

We thank Thee for the opportunity of worshiping at this shrine—the Tomb of the Unknown Soldier which stands as a memorial to the memory of all those who through the years—at Valley Forge, at Gettysburg, at Santiago, at Flanders Field, the South Pacific, the beaches of Normandy, the hills of Korea—all who made the supreme sacrifice to keep this great land of ours free and a Christian nation—we thank Thee for the memory of those heroic lives; we pray for strength that we may rededicate our lives to Thy service. We thank Thee for those who in life are serving Thee through service to our country, are giving of themselves to keep us strong in Thy sight.

As these Knights Templar, symbolic descendants of the Christian crusaders of the Middle Ages, have unfurled their banner upon which appears the cross with the motto "In Hoc Signo Vinces" (in this sign we will conquer), we pray that men of good will may join in applying its meaning to the con-

quering of death by the Christian promise of immortality.

We ask these things in the name of Him who died more than 19 centuries ago and rose on Easter morn that we might have everlasting life, Thy Son, Our Lord Jesus Christ. Amen.

Death Be Not Proud

EXTENSION OF REMARKS
OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1956

Mr. REES of Kansas. Mr. Speaker, under permission granted by the House, I am including a sermon delivered by the Reverend Thomas Sherrard Roy, D. D., Worcester, Mass., at the Easter sunrise memorial service in the Amphitheater, Arlington National Cemetery, at the service conducted by the grand encampment of Knights Templar. I am sure Members of the House and others will be interested in this timely message:

DEATH BE NOT PROUD

My subject is Death Be Not Proud. John Donne an English clergyman and poet of over 300 years ago wrote the words of the subject:

"Death be not proud, though some have called thee
Mighty and dreadful, for thou art not so:
For those whom thou thinkest thou dost overthrow
Die not, poor Death, nor yet canst thou kill me.
One short sleep past, we wake eternally,
And Death shall be no more. Death, thou shalt die."

This is the message of Easter. From the hid battlements of heaven on this morning, a host no man can number sings out the message of triumph that death is conquered. "Death, thou shalt die," for as Peter shouted forth a few weeks later at Pentecost, it was impossible for death to hold Jesus.

I. TRANSFORMATION

The first evidence that we have that death was conquered on that first Easter is in the lives of the disciples of Jesus. The greatest transformation in the thinking of men in a comparable period took place in the thinking of the followers of Jesus on that first Easter morning. If you think of what they had been through you will see them there as those who sit among the ashes of broken dreams, and thwarted ambitions and dead hopes. Then the news of the resurrection broke upon them. It was startling in its suddenness, bewildering in its mystery, and astounding in its apparent impossibility. There can be nothing surer than the fact that in spite of all that Jesus had said to them about rising from the dead they did not take Him literally. They saw Him crucified. They saw His limp form taken down from the cross and laid away in the tomb. To them He was dead. They felt the finality of death expressed by Gray in his Churchyard Elegy when he wrote:

"Can storied urn or animated bust
Back to its mansion call the fleeting breath?
Can honour's voice provoke the silent dust?
Or flattery soothe the dull cold ear of death?

If we could multiply all of the pessimisms of men throughout the centuries on the matter of death, the sum would be no greater than the pessimism of the disciples as they thought of the finality of the death of the Master. Through the long hours between the day of the crucifixion and Easter morning, their thought was upon death. When on this morning of the first day of the week the women came to the tomb to prepare the body for permanent burial their thought was upon death. The spices in their boxes to anoint the body, and the cerements over their arms in which to enfold it all spoke of death. The question on their lips, "who shall roll away the stone from the door," was its own testimony to their thought of death.

In spite of all that men have thought and written to the contrary, namely, that this was something they wanted to believe, it was not easy for them to believe in the resurrection. When the women, first at the tomb, came back to the Apostles and told them that Jesus was alive their words were received with derisive incredulity. "Their words were to them as idle tales," or as the translator Moffat puts it, "their words were nonsense." There is nothing more certain than that the disciples did not expect Jesus to rise from the dead.

It was just as certain that without exception the disciples believed that Jesus rose from the dead, so complete was the transformation in their thinking. Apparently there was no argument as to the possibility of the resurrection, they accepted it when they saw Jesus. They did not keep Him waiting in another room while they appointed a committee of their number to investigate the metaphysical implications of His presence, and present a detailed account of the procedure that brought Him from the tomb to them. He was alive to see, to hear, to talk, to listen. Here was a renewal of an enjoyable fellowship. They were not interested in arguments about the resurrection in the presence of a living Christ. They had a certainty which could not be questioned. It was not in a church, for there was no church; it was not in an authoritative creed, for there was no creed; it was not in an inspired and infallible New Testament for there was no New Testament. They had seen Jesus alive and had shared a new and intimate fellowship with Him.

It is still true that after all of the hypothetical questions about the resurrection have been asked, and all of the arguments for and against have been advanced, its certainty rests upon the certainty of a personal experience of the living Christ in which one affirms, "I know Him, and the power of His resurrection."

II. REVELATION

"Death, thou shalt die." The conquest of death by the resurrection is seen in the new revelation of God that the resurrection brought to men.

In this new revelation of God there is removed the last vestige of doubt concerning the perfection of God's plan for man. If life ends at the grave, as so many believe, then in spite of all that can be said otherwise, there will always be as there always has been a sense of injustice and frustration on the part of man. The frustration is an inevitable consequence of the recognition of incompleteness. When we see a man cut off in the midst of unfinished work and partially developed character we cannot avoid a feeling of unfairness if that is the end of it all. And we either apologize for God, or try to rationalize as divine the wisdom that has so ordered things. We cannot escape a feeling of the fragmentation of life, for which we pity ourselves, instead of being inspired with the thought that God reveals His perfection in the completeness of his plan for us.

That men will not accept the idea of death as the end is seen in such a man as Victor Hugo. Towards the end of his life he wrote these words: "For half a century I have been writing my thoughts in prose and verse, history and philosophy, drama and romance, tradition, satire, ode and song. I have tried all. But I feel that I have not said the thousandth part of what is in me. When I go down to the grave I can say like many others, "I have finished the day's work", but I cannot say, "I have finished my life." In the thinking of Hugo simple justice demanded that he be able to say, "My day's work will begin again the next morning. The tomb is not a blind alley, it is a thoroughfare. It closes on the twilight, but opens on the dawn."

Think of what a travesty of justice it would have been if Jesus had ended his life on the cross. All done at 33. We think of Him as a man who walked the earth among His fellows, carrying on the ministry that brought the blessings of a new life wherever He went. We stultify all that we call thinking, or reflection upon life if we conclude the cross ended His life. It would be an irrational world in which such a thing could happen. As a man named Snowden has put it: "If that great soul and white spirit vanished in the night of death, and left only a handful of dust under the Syrian stars, then we feel that we live in an irrational world which devours its noblest children and betrays all its promises. That any personalities, the highest and costliest embodiments of worth should be produced through the travail of divine birth only to be flung as rubbish to the void, puts to confusion all of our ideas of reason and right. Is God blowing soap bubbles? Did He dip the pipe of His power in the suds of matter and blow the character of Jesus, that it might entertain Him with its irridescence, burst to His satisfaction and be gone? The human mind and heart will ever refuse to believe in such a wreck or reason and hope." But when Jesus rose from the dead, and as Paul said, "brought life and immortality to light," He revealed a God who has a perfect plan for the development and completion of the life of His children, for it is a plan that cannot be circumverted by death. Paul was right when he said, "If in this life only we have hope in Christ we are of all men most miserable," for he knew that Christ inspired that which could never be realized here. God reveals His justice in this indication that man has eternity in which to work for completion.

There is a new revelation of life as well as a new revelation of God in the Resurrection.

Suppose that some one came to you and said: "Apart from its revelation of God what is the significant thing about the persistence of life after that which we call death?" What would you answer? You might say that it means endless life. But the fact that I am going to continue to live in spite of death may not bring me any great measure of satisfaction. Just continued existence makes no appeal to many a person. Think of all the things we do to kill time, to make the hours endurable; and think of those who find life so unendurable that they refuse to continue to live, and you will conclude that just continued existence is no prize, and cannot be considered the significant thing in this revelation.

Is it then sharing the joys of heaven? In the book of Revelation we have heaven described in terms of incomparable beauty and ineffable joy. But even that might pall on one after a time.

The significant revelation of life brought by the Resurrection is that now, this day, this moment you are living an endless life. The endless life is not something that is going to begin at some future point in your experience. It has already begun. As Peabody of Harvard has written: "The less one thinks of the future life as set apart by a grim wall from this life, the better for one's present duties and one's future peace. Life is not made of 2 detached existences, but is 1

continuous whole. Eternal life is not a problem of the future but a gift of this present world." That is, you will never be more eternally alive than you are now.

Preachers used to say to their hearers, "Prepare for death." What should have been said then as it should be said now is, "Prepare for life." For you are not going to die, you are going to live, and death is just an episode in that continuous life. And religion is not something that you acquire during your life so that you can have it as a passport to use at death to get you into heaven. Religion is that which will help you invest your life with that which is of eternal significance, for it will create the quality and determine the direction of an endless life. Thus and thus only do we conquer death. This is the message of Easter.

"He died!
And with Him perished all that men held dear;
Hope lay beside Him in the sepulchre,
Love grew death cold, and all things beautiful beside
Died when He died.

"He rose!
And with Him hope rose, and life and light.
Men said, not Christ, but death died yesternight.
And joy, and truth, and all things virtuous
Rose when He rose."

Lenten Reflections by William C. Doherty

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, April 12, 1956

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "A Thought for Today," appearing in the Washington Evening Star on March 31, 1956.

This article was written by my very good friend, Bill Doherty, president of the National Association of Letter Carriers, and to me reflects very adequately the true Christian character of this renowned labor leader.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LENTEN REFLECTIONS ON FAVORITE STORIES FROM THE BIBLE BY PEOPLE YOU KNOW

(By William C. Doherty)

My favorite story from the Bible is the story of the good Samaritan.

As schoolchildren we learned the story of the traveler who fell among thieves as he journeyed from Jerusalem to Jericho. St. Luke tells us that first "a certain priest, when he saw him, passed by on the other side." Next came a Levite who "came and looked on him, and passed by on the other side." But the good neighbor, the Samaritan, "when he saw him, he had compassion on him, and went to him and bound up his wounds, pouring in oil and wine, and set him on his own beast, and brought him to an inn, and took care of him."

There is, in the parable of the good Samaritan, a lesson for all. Unless we first learn how to give, how to help those less fortunate than ourselves, there is little likelihood that we will get assistance and comfort in our own times of need.

For those in a position of representing others in a free-trade labor union, the opportunities are ample to help others. It is one of the most satisfying features of any elective office in an organization.

There are similar opportunities to extend a helping hand, to lend guidance afforded to those in a position of authority. Unfortunately, the concept of the good Samaritan is too often forgotten. It is easier to follow the priest and Levite by passing up the chance to show mercy and compassion.

If it was neighborly in Christ's time to help those who could not help themselves, nothing has happened in our world in the interim to cause anyone to depart from that philosophy. Like the good Samaritan, we should make a positive effort to become our brother's keeper in his times of trial.

Agriculture Surpluses

EXTENSION OF REMARKS
OF
HON. GEORGE S. LONG
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 12, 1956

Mr. LONG. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include a letter from Mr. Robert M. Harriss, 11 Station Square, Forest Hills, N. Y.

I believe that the Members of the House should have the benefit of this information. Letter and telegram follow:

FOREST HILLS, N. Y., *April 6, 1956.*

Hon. GEORGE S. LONG,
House Office Building, Washington, D. C.

DEAR MR. LONG: You may be interested in enclosed copy of telegram which I sent the Senate and House Agricultural Conference Committees.

For the reasons stated, I believe these agricultural surpluses are not a liability, but one of our greatest blessings and assets, if a constructive program is adopted and properly administered.

There is no over production of basic commodities, but under consumption, due to maldistribution. If half of these surpluses were stockpiled for national security, and not sold without the approval of Congress, and the remaining half sold equally monthly, over a period of years on long-term credit to the hungry and need of friendly foreign anticommunistic nations, these surpluses would soon disappear, and it would be a knockout blow to communism.

The selling of these surplus commodities should not be left in Government discretionary hands, because this would be a most depressing factor on prices.

Therefore it is urgent that a definite, constructive program be adopted and carried out.

With best wishes.

Sincerely yours,

ROBERT M. HARRISS.

FOREST HILLS, N. Y., *March 27, 1956.*

Senator ELLENDER.
Senator OLIN JOHNSTON,
Senator MILTON YOUNG,
Senator GEORGE AIKEN,
Senator SPESSARD HOLLAND,
Senate Office Building,
Washington, D. C.:

Hon. HAROLD COOLEY,
Hon. W. R. POAGE,
Hon. E. C. GATHINGS,
Hon. CLIFFORD HOPE,
Hon. AUGUST ANDRESEN,
House Office Building,
Washington, D. C.:

For the past 45 years I have been engaged in various branches of agriculture in Oklahoma, Texas, Louisiana, Florida, and New York in the production, ginning, milling, merchandising, exporting, etc., and in reference to the farm bill may I suggest the following for your good consideration:

First. The farmers and rural communities immediately dependent upon the farmers represent about 40 million people.

Second. Agriculture is our fundamental and greatest industry upon which the existence of the Nation depends.

Third. During recent years the farmers' income has declined about 20 percent. Therefore, agriculture is in a serious economic situation whereas the rest of the country has generally prospered.

Fourth. Parity prices which have been promised to the farmers represent his wages and unless the farmers receive fair parity prices and an equitable share of the national income we cannot have a sound prosperous economy.

Fifth. Drastic acreage reduction is not the solution and will seriously affect our national economy.

Sixth. There is no world overproduction of basic commodities but underconsumption due to maldistribution; in fact, hundreds of millions of hungry, starving people are in dire need of food and fiber.

Seventh. To leave the disposal of our surplus commodities in discretionary administrative hands is and will continue to be one of the most depressing effects on the market.

Eighth. Our God-given surplus commodities are not a liability but one of our greatest assets for national security and for combating communism provided a definite program is adopted and properly administered.

Ninth. Therefore, may I suggest that one-half of our basic surplus commodities be stockpiled for national security and not sold without the approval of the Congress and that the other one-half be sold equally monthly over a period of 7 years in long-term low-interest bearing loans to friendly foreign anti-Communist countries.

Tenth. If this definite constructive program is adopted and carried out it will quickly restore parity prices and be a knockout blow to communism.

Best wishes,

ROBERT M. HARRISS.

Trade Mission to Japan

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 12, 1956

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to call the attention of my colleagues to certain practices being used by the Department of Commerce. I refer specifically to their sending representatives of the Commerce Department on a trade mission to Japan.

In this connection, I would like to read a dispatch from Nagoya, Japan, under date of March 29:

Japanese businessmen asked the visiting United States trade mission to use its influence to prevent any increase in American tariff or other restrictions against Japanese pottery, plywood, and sewing machines. The mission in turn said, "There is plenty of room to increase American imports of these products." The mission is headed by Mr. Eugene Braderman, United States Department of Commerce.

I am today writing the Department of Commerce demanding to know what is the purpose of this mission, who appointed them, why American businessmen who must compete with foreign imports are not officially notified by the Department of Commerce when such trade missions were sent abroad, and the purpose for which they are being sent.

This, Mr. Speaker, is just another instance of the "high-handed" bureaucratic methods being used by some of our executive departments.

Cardinal Mindszenty Today

EXTENSION OF REMARKS
OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1956

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following article from the April 13 issue of Collier's magazine by the Reverend Dr. Joseph Vecsey entitled "Cardinal Mindszenty Today":

MUNICH, GERMANY.—On the eve of the Big Four summit conference at Geneva last summer, as though to symbolize the new Communist spirit of sweet reasonableness, Hungary's Red Government announced that it had freed Joseph Cardinal Mindszenty. The announcement gave two reasons for the release of the Roman Catholic primate: His advanced age and his poor health.

Those of us familiar with the cardinal's condition knew that he was neither sick nor aged; he had recovered completely from the frightful effects of the brain washing that preceded his trial for treason in 1949, and he was only 63 years old. His release, moreover, was not based on court procedure or official amnesty. It was just another arbitrary pronouncement by Hungary's Communist rulers.

Instead of clearing up the mystery surrounding Cardinal Mindszenty, the statement merely deepened it. The Government did not specify where or under what circumstances he was living, and it refused to permit anyone to visit him. In fact, there has been no trustworthy news about this prince of the church since his trial ended in a sentence of life imprisonment on February 8, 1949. Such information as has been leaked to the western press has been unreliable, when not completely false.

I am now in a position to tell the truth—the whole truth—about what has happened to Cardinal Mindszenty during the last 7 years. I can disclose not only the tragic facts of his arrest, interrogation, trial, and years of close imprisonment, but his present whereabouts, his state of mind, his health, and the reasons why the Communist regime felt obliged to stage—I use the word advisedly—his "release." I can also reveal how not long ago he refused to make a deal with the Reds for his complete freedom—and instead boldly laid down his own demands for full restoration of the rights of the church.

I am not a writer, nor a politician. I am a priest. My duty was and is to protect the interests of the cardinal, to whom I owe more than filial devotion. I have known him since I was a child; after my parents died, I was often taken into his home by his mother and treated as her own son. Cardinal Mindszenty helped me to become a priest. I taught religion in the same high school at Zalaegerszeg where he had previously taught; I served as his chaplain in the parish church there; I stepped into his chair as professor of theology at the seminary at Szombathely.

Right up to the day of his arrest—December 26, 1948—I was in close contact with him. And for three years after that I accompanied his elderly mother from her native village of Csehmindszent to Budapest on the few occasions when she received permission to visit her son in prison. To escape arrest myself, I was obliged to leave Hungary in 1952, but through sources inside the country I have still been able to keep in touch with the fate of the cardinal.

It has not been easy to collect and assemble this information. The task has taken me more than a year, and even now I cannot disclose my numerous sources. I began collecting the data for my own use, and that of my church. But when I learned that Dr. George Shuster, president of Hunter College and former United States Land Commissioner in Bavaria, Germany, was going to write a book about Communist Hungary and the Mindszenty case (due to be published in August by Farrar, Straus and Cudahy), I decided to tell him all I knew about the prelate. Then, to bring the real facts to a still larger segment of the American public, I agreed to prepare this article.

As this is written, Cardinal Mindszenty—far from free—is under arrest and confinement in southern Hungary, close to the Yugoslav border, in a place called Puespoekszentlaszlo. The name means "The Bishop's Saint Ladislaus"—that is, a locality dedicated to St. Ladislaus, a Hungarian king of the 11th century, and given to the Bishop of Pecs as a summer residence. The estate was seized by the Communists several years ago.

The main building is a castle built at the end of the 17th century. It has a park of about 300 acres surrounded by the Mecsek Forests on the slopes of the mountains of the same name. Around the castle itself are acacia shrubs and trees, and in normal times its rooms were used by priests and seminarians at the invitation of the Bishop of Pecs.

The Communists have set aside three large rooms on the ground floor for Cardinal Mindszenty's confinement—a bedroom, living room and dining room. The living room faces a wide lawn lined with rosebushes, beyond which the par starts with small strawberry bushes and a dense mass of spruce trees.

The cardinal is not alone at Puespoekszentlaszlo. During the day, there is always a plainclothes guard on duty in the house. (The guard is changed daily, presumably to prevent any one man from becoming too friendly with the cardinal.) Sometimes he and the prelate talk together, but the policeman does not sit with the cardinal at meals. At night the castle is surrounded by 25 Communist police armed with submachineguns.

The Reds have also given the cardinal a companion in the person of a priest of his own age, a pastor politically uninvolved, a rather jovial and calm man. Then there are an elderly woman cook, a maid and a butler. One must assume that they were selected by the political police and forced to report on the cardinal's every move.

Cardinal Mindszenty has almost everything he needs—materially. His little apartment is provided with beautiful china, new linen, an array of towels. The Reds even filled his bureau drawers—before his arrival—with winter and summer underwear, new shirts, two new everyday tunics and a third one for festive occasions with the red buttons of a cardinal.

The castle, of course, has an ancient chapel, and there the cardinal celebrates mass every day. The village is nearby but no altar boy is called; instead the priest-companion serves at the cardinal's masses, and sometimes accompanies them by playing Gregorian music on a harmonium. There is even a library in the castle, a purged library.

The cardinal's day is simple. He rises at 6 a. m., says mass at 7, and breakfasts at 8 with his companion. The breakfast menu is milk or tea, sometimes light coffee, and slices of Hungarian bread (two-thirds wheat flour and one-third potatoes). Butter, jelly, and honey are also on the table. Before lunch the cardinal walks for about one-half hour, then reads and talks with his companion.

Luncheon in central Europe is the principal meal of the day, and the dishes served are more substantial than at dinner. After luncheon the cardinal rests, then takes a walk, reads, again, has his dinner, and goes to bed around 10 p. m. Of course, the day is filled out with prayers. The cardinal recites the entire rosary every day, and, like every priest, he prays the divine office from his breviary. In addition, he visits the chapel before and after each meal and before going to bed.

He is not allowed to leave the park, nor is he permitted any visitors except—at long intervals—his mother. He is not allowed to write or receive letters. No newspaper is given to him. He has no radio set.

The cardinal is still a prisoner. Though his prison is more bearable, his life sentence has not been revoked. He cannot exercise his office as archbishop and as head of the Catholic Church in Hungary. He can be taken back to jail or the penitentiary at anytime. In fact, by the time this appears in print, he may have been moved to some new secret place. At the beginning, after he was taken to the castle, a doctor came to check his health every day; now the doctor comes once a week. Why he comes at all is strange, for the cardinal is not sick. Yet Cardinal Mindszenty cannot protest, just as he cannot express any desires. He is at the mercy of the Communists just as he has been since his arrest in 1948.

The cardinal's story is still full of mysteries for those who do not know the full truth. Why did the Communists bother to release him? What are their intentions? Is he sane? Was he really drugged at his trial? What happened to him after he was convicted and sentenced to life imprisonment?

The answers to these questions can be extremely important, not only to Hungarian Catholics but to the whole free world, to every man in good faith, because they throw light upon the real aims of world communism.

To understand the Mindszenty story, it is necesary to follow, step by step, what happened to the cardinal from the moment of his arrest on the day after Christmas in 1948. On that fateful morning he was taken in a black limousine with drawn curtains from his residence in the suburb of Esztergom to the Budapest headquarters of the political police, at 60 Stalin Avenue. There he was placed in a cell and left for 2 days to ruminate on his fate. He was given little, if any, food.

It was on the third day that his real ordeal began. Relays of interrogators started questioning him. Day and night for an entire week the inquisition went on. He was allowed no more than an average of 2 hours of sleep out of every 24.

But the questioning was only part of the softening-up process. The Communists showed the cardinal his young secretary, reduced by torture to almost animal-like dumbness. They brought in other priests and laymen, mercilessly beaten, to beg him to confess. They confronted him with

former friends, also priests, who told him the Pope and the entire Catholic Church had condemned his intransigent behavior. Other people whom he had known and trusted were paraded before him to assure him that the United States had abandoned Hungary and was indifferent to his fate.

The Communists' aim was to give the cardinal the impression that his fight for Hungary's freedom was totally hopeless, to convince him that he had been abandoned by his church and his flock. Every move the Communists made, every word that was spoken to him, was designed to create a sickening feeling of guilt within him that his fight was only causing hardship for the people and church he had sworn to serve.

Even after the initial nonstop interrogation, the Red inquisitors gave the cardinal little rest. No human being can endure such a strain indefinitely; some are tougher than others, but in time all break down.

The cardinal's breaking point came after nearly 6 weeks of this intensive brainwashing. Let me say right now that he was not drugged. All the tales that were circulated about various drugs being administered to the cardinal to prepare him for the trial are false. None was used.

To the Communists, the trial which began before a people's tribunal on February 3, 1949, was an anticlimax—merely the staging for the record of a well-rehearsed play. The cardinal, broken in mind and spirit, faithfully parroted the words that had been drilled into him, and 5 days later was convicted of treason, disloyalty to the Government, and 4 currency-law violations.

From the courtroom Cardinal Mindszenty was taken to the Budapest Collecting Prison, distribution point for Hungary's prison system. The prison is located in the heavily built-up Koebanya area in the eastern part of Budapest, close to factories and breweries. There a group of young men, whose identities I cannot disclose for obvious reasons, organized an intelligence service to keep watch on the cardinal. With the help of workers living in the district, they kept an around-the-clock vigil on top of a building overlooking the prison courtyard. They saw when the cardinal was brought in; they observed in what direction he was taken inside the prison; they noted the arrivals and departures of officials and interrogators.

The prelate was a broken man who needed rest and medical care. Yet he was placed in solitary confinement in a cell on the second floor and given only the usual prison food. He was not permitted to say mass, and he spent his days in mental prayer, reading his breviary. He continued to lose weight, his heart weakened, and he was suffering from insomnia.

One week after Cardinal Mindszenty entered the collecting prison, his mother began a concerted campaign to visit him. She had first tried to get permission to see him before his trial, but her letters to the Ministry of Justice and the chief prosecutor got no response. This time she was determined to get the necessary permission.

Mrs. Borbala Pehm, for that is her family name, is a remarkable woman. She is in her eighties and suffers from heart trouble and asthma, yet still helps care for the daughter, son-in-law, and grandchildren with whom she lives in Csehmindszent, a village in western Hungary some 200 miles from Budapest.

She always dresses in black, and true to her peasant origin she covers her head with a black scarf fastened with a knot beneath her chin. I have never met a person who lives so entirely on faith. This may sound commonplace coming from a priest, but I have watched her for many, many years. She never leaves a stone unturned when she sets out to achieve an objective. She works, she walks, she behaves as though everything depends upon her own activity. But she does so with an inward conviction that God will come to her aid.

I was not surprised, therefore, when she insisted upon going to Budapest to plead personally for permission to visit the collecting prison. I accompanied her to the capital, and she went on alone to see the chief of the prison affairs division in the Ministry of Justice. Her plea was denied.

She proposed to go next direct to Deputy Premier Matyas Rakosi, since 1945 Hungary's undisputed Communist boss. We begged her not to, but one day she sneaked out of the convent where she was staying and went straight to Rakosi's office in the government palace. The police, of course, did not allow her to enter, but she was prepared for this rebuff. She handed over a prepared letter in her own handwriting—the handwriting of a peasant woman that showed all the fatigues and strains of her life.

The letter did not beg; it asked only what was due her even in a Communist country—the right to see her imprisoned son. Never, in the more than 300 letters, memorandums, applications and other documents which she has submitted to the government in the last 7 years has she asked more than that. She knew she had the right to ask clemency, but she also knew that such a request might be misinterpreted and attributed to the cardinal.

Rakosi did not answer her appeal, so next morning she decided on another course of action. She said she felt the chief of police would receive her. We do not know why, but her intuition was right.

Accompanied by an elderly woman, a friend of the family, she walked directly into the headquarters of the Communist secret police and asked to see the man most feared in all Hungary, Gen. Gabor Peter, the terrorist boss who had masterminded the breaking and imprisonment of her son. A former tailor's apprentice who became a Communist as a young man during the 1930's, Peter was a man of boundless ambition and had been trained in the schools of the Russian secret police. He had learned his lessons well.

The two women were led into Peter's office. There the little peasant woman in black stood resolutely before the man who had shattered her son's mind and health and demanded the right to visit her son. Peter firmly told her that he couldn't do a thing; the case was out of his jurisdiction.

Mrs. Pehm stood silent for a moment. Then she looked into the eyes of the chief of police and said to him: "I wish you would imagine that, instead of my son, you were in prison and your mother was asking the favor to see her son. Can't you imagine your mother in my place?"

Peter, whose mother did not live in Hungary at the time, turned and left the room. For 10 minutes the two women stood as though rooted to the spot. Then Gabor Peter returned. He was smiling. "All right," he said, "you may see your son." Then he paused. The two women couldn't believe that he meant it. "And," continued Peter, "you can see him immediately, right now. My car will take you to the prison. Of course, however, you"—pointing to the mother—"must go alone."

Mrs. Pehm now understood, and she said almost automatically the next thought that entered her mind: "But, sir, I must go back to the convent to pick up the apples that I brought for my son. I can't go without the apples."

"I'm afraid that is impossible," Peter said. "It will take too long; there is no time."

"But I can't go without the apples," she repeated.

Gabor Peter looked at her in silence. Suddenly he pushed a buzzer and said, "I will send my secretary to a shop for some apples. Go down to my car."

A detective accompanied Mrs. Pehm on her visit to the collecting prison. There she was led into an office and left alone. There were two chairs in the room, and a table. Soon the cardinal was brought into the room by a guard, who promptly sat in one of the chairs. With Mrs. Pehm already seated in the other, there was nothing for the cardinal to do but stand.

It was the first time the mother had seen her son since his arrest nearly 2 months earlier. She was stunned. His face was pale and drawn, his eyes dull and he had lost much weight. The mother and son talked for 15 minutes of family affairs. Nothing was said of the trial or of political matters. Mrs. Pehm handed over the apples that Peter's secretary had bought, and the cardinal accepted them gratefully. Then it was all over.

Back at the convent, Mrs. Pehm sat down and once and composed a letter to the Ministry of Justice asking for medical care for her son. And she confided to one of the sisters: "I gave the apples to my son, but I didn't dare tell him whose apples they were."

Two months later, the cardinal's mother again asked permission to visit her son at the collecting prison, but was refused. She was not to see him again in Budapest, for in October 1949 the little group of watchers on the building across the street from the prison were appalled to see the cardinal helped into a black limousine and driven away. They felt helpless as the car disappeared toward the north. But they did not give up. They organized a new search, and finally found the cardinal in the penitentiary of Vac, on the Danube, 65 miles north of Budapest.

On his arrival at Vac, the cardinal registered like any other convicted criminal. His clothes and his body were searched for weapons and, although he had no lice, he was deloused by steam. His head was washed with kerosene as a further precautionary measure, and he was dressed in prison apparel.

Although again in solitary confinement, he was permitted some conversation with the special guard outside his cell. He was also allowed to say mass in prison chapel every morning that it was empty. Moreover, the food was adequate, and he was permitted to walk alone for about an hour. His health began to improve and his spirits rose. Sometimes he joked in conversation with the guards. But otherwise his daily routine remained the same: Prayer, reading, rosary, meditation, and expectation of food.

Then, 2 months after his transfer to Vac, the group that had been following the cardinal's whereabouts learned that their beloved bishop had been moved once again. All their efforts to find his new destination were in vain. From that moment, in late 1949, the wildest rumors began to circulate about the cardinal's whereabouts. He was reported everywhere, from a Communist-confiscated villa in Budapest's residential suburb of Huevoesvoelgy to a sanitarium near Moscow. All proved untrue.

For the first time, the Reds had succeeded in destroying all traces that led to the cardinal. Only one person, his aged and nearly helpless mother, by sheer force of character and unshakable faith in God, maintained a tenuous link with the prelate.

Every third month, from the time of her son's conviction, she applied for permission to visit him. When her pleas by letter went unanswered or were turned down, she would insist on visiting Budapest and appealing in person. Often these appeals also were unavailing, but she never gave up hope.

When permission did come through, she had to travel not only 200 miles from her home to Budapest, but another 65 miles to Vac, for even after the cardinal was transferred to a secret prison he was brought back to Vac to receive his mother. Altogether, during the 5 years from October 1949 through 1954, she saw him there some 13 times.

During 8 of those times—or up until the time I was forced to leave the country—I accompanied her to Budapest. Almost always the routine was the same. Since the village of Csehmindszent has no railway station, we had to get up at 4 a. m. in order to travel by bus to the nearest railway line. Then we had to change trains once before reaching Budapest.

Mrs. Pehm preferred to travel third class to save money. The family vineyard, main source of her income, formerly brought in sufficient funds, but after 1950, in order to save it from confiscation, the family had to deliver the grapes and wine to the government for ridiculously low prices.

Times have been hard for the 50 close relatives of the cardinal who live in Hungary. Because of their relationship to the imprisoned prelate, the men have found it difficult to get work under the Communist regime. Catholics contribute some funds for Mrs. Pehm, but for the family as a whole the main support—in the form of food, clothing and money—comes from a well-to-do American woman in New York, whose name I cannot disclose.

During our trips to Budapest, Mrs. Pehm and I were always watched by undercover agents—often by a whole swarm of them. One 1 ride, I detected 5 agents; 1 was disguised as a mechanic, 2 as passengers, the fourth as a hobo, and the fifth as a conductor. All tried to get into the conversation with us.

In Budapest I stayed with friends. At first, the cardinal's mother stayed in convents; after these were dissolved by the Communists in 1950, many nuns took apartments together, and for a while Mrs. Pehm stayed with some of them. Later on, she used the guest room of Budapest Theological Seminary, 1 of 5 the Communists permitted to remain open.

One night we decided we would go to the house of a religious community, the members of which were devoted to the cardinal. We arrived around midnight, and suddenly found ourselves homeless. The superior of this house, who was not a nun but a lay sister, became pale when she saw us. She hurried me into a waiting room and pleaded with me to take the mother away. "We can't afford—I can't afford to shelter the old lady at this time. I'm sorry."

Later I learned that the superior a few days earlier had been arrested by the political police and forced to sign a paper promising that she would report on the movements of certain people, presumably including the cardinal's mother. To have refused would have meant death or imprisonment.

When permission did come through to visit her son, Mrs. Pehm would go to the Ministry of Justice alone and, almost always accompanied by the same detective, be driven in an official car to the prison at Vac. There she would visit the cardinal in a small, bare room in the presence of another detective. Usually there would be no chair on which the cardinal could sit, and he never requested one. However, on one occasion, his mother asked the detective to move his coat from an extra chair so that her son could sit down, and the man obliged.

The mother always brought with her a gift of food wrapped in brown paper or an old newspaper. Most often it was bread or cookies she had baked, and some fruit; occasionally she even brought a roast chicken. The cardinal told here he ate sparingly of these gifts in an attempt to make them last until her next visit. As her visits became fewer, he took to saving bits of the dry bread just as a reminder of her physical presence and to bridge the gap until she next would be allowed to visit him.

The visits lasted anywhere from 15 minutes to a half hour, and the conservation dealt almost exclusively with family affairs. Other subjects were taboo, but occasionally some clues to the cardinal's treatment would slip out. Once Mrs. Pehm noted that her son was wearing a new cassock and commented upon it. He answered wryly that children are always dressed up when company is coming.

Moreover, Mrs. Pehm had become such a sharp observer that, by putting bits of new information from her together with data gleaned on previous visits, we could get a clear picture of the cardinal's health, behavior, and days, even of his Communist visitors.

From 1951 on, the Communists put more and more pressure on the cardinal. First they sent Monsignor Miklos Beresztoczy, head of the so-called peace priests, to him. The peace priests are an organization of clergymen who have been tortured or otherwise forced into advocating a progressive attitude toward the Communist regime, from which they receive a salary. The monsignor tried to persuade the cardinal to resign as Primate of Hungary, to promise to leave the country if he was set free. Cardinal Mindszenty refused.

Then the Reds sent another bishop to him, but the cleric merely delivered the Communists' message without putting any pressure on the cardinal. Other priests and Catholic laymen also were sent to talk sense to the cardinal, but all to no avail.

Why were the Communists so anxious to free the cardinal if he would agree to resign and leave Hungary? For them Cardinal Mindszenty had become a national skeleton, an uncomfortable burden for the Red government, one more reason for the people to hate them. Even high officials of the Communist government, heads of the Office of Religious Affairs, visited him. They were polite and they were eloquent, but they couldn't extort a single promise from the cardinal. He refused to donate his title of Primate of Hungary to the temporal power of the state.

Then, on March 5, 1953, Stalin died. Budapest reacted as though a national holiday of liberation had been declared. People began to talk freely. Members of the Communist Party—even officials—visited non-Communist friends and assured them that they had become Reds only in the interest of the community. Radio broadcasts of western stations were listened to openly.

Rakosi in his shrewd way saw how the wind was blowing and was prepared to release the cardinal. But as soon as the situation consolidated in the Soviet Union, the Communists in Hungary recovered and tightened their hold on the country. A big purge began. Gabor Peter, the man who maneuvered Cardinal Mindszenty's breakdown, and former Justice Minister Jyula Decsi, who supervised the trial, were themselves sentenced to life imprisonment as traitors.

But Rakosi and his surviving colleagues had learned something else from the flurry of excitement over Stalin's death. They started to ease some of the relentless pressure that they had been applying to the country. Writers were allowed to publish some short stories without censorship. Bibles and missals printed in the West were permitted to enter the country by the tens of thousands.

The Reds hoped to use Cardinal Mindszenty in a key role in this peace offensive. At the climax of their propaganda campaign, they wanted to release him in a dramatic way. Again Communist officials visited him and made offers; they promised the cardinal that he could stay in the country, though he would be confined to one place. All they asked was that he sign a paper renouncing his position as archbishop of Esztergom and primate of Hungary.

The cardinal refused.

In a new offer, toward the end of 1954, they told him he could go back to Esztergom to live in seclusion in his diocese, but that he would not be allowed to celebrate mass in the cathedral nor to give sermons.

Again the cardinal refused. And this time he went further. Once again in full command of his faculties, he courageously stated his demands for justice and an end to the church's persecution. First, he said, all priests should be released and given amnesty, and complete freedom should be accorded them. Second, he, the cardinal, should be released without conditions—that is, he would go back to Esztergom, resume administration of his diocese, and act as primate of Hungary. He would celebrate mass whenever he wanted, and he would preach. The Communists made no reply.

But the outside world knew nothing of his defiance of his Red jailers, of his refusal to make a deal with them. Therefore, the Reds continued their scheming for his spectacular release. Maybe, since he refused to cooperate, a fraudulent, fake release would be enough, they reasoned. They decided to try it.

Toward the end of 1954, although Cardinal Mindszenty was still in prison at an undetermined place, the Communists planted a news item through an Austrian news agency to the effect that he had been released. They wanted to evaluate the reaction of the Western World.

It was all that they had anticipated. The item was picked up by the press and radio and spread around the world. We in close touch with the Hungarian situation realized that the Western people believed the hoax. Few people asked for details.

Hearing the news through Western broadcasts, the cardinal's mother immediately applied for a permit to visit her son during the Christmas season. Although the cardinal, in fact, was moved to the summer palace of the Bishop of Pecs before the holiday the request was refused.

Meanwhile the Hungarian government decided to hold up confirmation of the cardinal's "release' 'until it would have maximum propaganda vale. That time came when the Big Four prepared to meet in Geneva.

As this is written, I cannot say how often Cardinal Mindszenty's mother has been permitted to visit her son in his new place of confinement, but she has been there at least once.

The summer palace of the Bishop of Pecs is a beautiful place. Perhaps as Cardinal Mindszenty looks out the huge windows at the rosebushes and the strawberry bushes in the garden, he is reminded, by their color, of the words which Pope Pius XII said to him in Rome, in February 1946, when he placed the red hat of a cardinal on his head:

"Receive the red hat, the special sign of a cardinal's dignity. By this is signified that even to death and to the shedding of blood you will show your courage for the exaltation of the Holy faith, and for the peace and tranquillity of Christian peoples."

The cardinal is still a prisoner, but by God's grace and his own courage he is still the shepherd of his flock, the Primate of Hungary. Not all the power of Caesar has been able to take this from him.

Free Government Behind the Iron Curtain

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 12, 1956

Mr. ZELENKO. Mr. Speaker, today I recorded a speech for Radio Liberation, a democratic, anti-Communist radio sta-

tion broadcasting to the peoples of the Soviet Union in 17 languages.

I gave my talk on the occasion of the 50th anniversary of Russia's first parliament, the State Duma. I took that opportunity to point out that now more than ever Russia needs a freely elected government, a government which will heed the needs and aspirations of the people. Only such a government can respect the dignity of the individual, the right to dissent without fear of punishment, and the right to worship as one pleases. My listeners behind the Iron Curtain were told that not being a military man, I did not understand fully all the implications of an open inspection of one another's military installations, but as a legislator I know for sure that an open inspection of each other's election procedures by all the nations of the world would be the best guaranty for peace and freedom in the world.

We in this country, of course, do not fear the examination of our election procedures. As a matter of fact, we encourage the world to follow them. I believe the Soviet Union and the Iron Curtain countries would be more apt to accept an open inspection of their military installations than of their voting procedures, for such an inspection would shake to the very foundations the fundamental principles of a totalitarian Communist government. However, if they would consent to it, I am sure that by the next election we would have free governments behind the Iron Curtain truly representing the people.

How the Government Can Save

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, April 12, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "How To Save $7.5 Billion a Year," written by Frank C. Hanighen.

Mr. Hanighen is editor of the Washington newsletter Human Events.

The section at the end on "What You Can Do" is from the Committee for Constitutional Government of New York City.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Americans present a curious paradox toward the service of government. It is the biggest single class of service they buy. Its magnitude exceeds the output of several major industries combined.

Yet Government appears to be about the only service for which the American people seem willing to pay substantially more than a fair price. And they pay it with hardly a whimper.

Just how overpriced is the Federal Government, in particular, has been indicated in the voluminous studies of the Hoover Commission, officially styled "Commission on Organization of the Executive Branch of the Government." The waste that could be eliminated amounts to a minimum of $7.5 billion a year.

The reports, the result of a collection of 1 million facts, expose the never-ending power-grabbing empire-building expansion of the executive branch of the Government—far beyond the intent of Congress.

The waste and duplication described will baffle your imagination, unless you have been an on-the-scene observer of the bureaucratic octopus.

The official Commission and Task Force Reports—38 volumes containing 3 million words—are jampacked with examples of reckless expenditure.

Just a few can be listed here:

The Army has a 10.6-year supply of women's wool serge taupe uniforms. The Navy has an 8.1 years' supply of blue trousers and enough blue (not dress) jumpers to last for 9.3 years.

The Navy has enough canned beef and gravy and canned ham chunks to last 6 years and 7 months, some of it bought in 1948; enough canned hamburger—some bought in 1950—to last 60 years.

Random checks of "supply items in common use and easily obtainable from manufacturers" showed that military depots stock many such items sufficient for a 20- and 30-year supply and even in 1 case 128-year supply.

The total inventory of 10 "standard items with multiple uses and easy to manufacture," selected for study at Raritan Army Stock Control Point in New Jersey, represented an average 32.6 year supply.

WAREHOUSELAND

The warehouse problem is so stupendous and the inefficiency so great that the Government doesn't know what it has in storage or where it is. Often one agency is selling at a few cents on the dollar something which another agency is buying—perhaps at a premium to obtain instant delivery.

The Government owns or rents warehousing and storage space equal to 31,000 acres—a ground area twice the size of Manhattan Island. The operational cost amounts to $3.5 billion a year. Office space owned equals the space in 1,250 Empire State Buildings.

The task force discovered more than 100 million square feet of space not even listed on the operating records.

The Government owns 838 million acres of which 472 million acres is in the continental United States. The latter portion equals one-fourth the area of the 48 States. Real-estate holdings, exclusive of the public domain cost more than $40 billion.

SURPLUS SALES

For years to come the Government will be selling some $2 billion worth of surpluses annually for 5 to 7 cents on the dollar unless businesslike selling methods are adopted. These sales go on all the time because material is continuously becoming obsolescent or the supply periodically exceeds the need. The pool of material, estimated to be worth $155 billion, is scattered all over the world.

The task force on paperwork management found that Government redtape is forcing private business to produce more than a trillion words and figures annually and is costing executive agencies as well as industry hundreds of millions of dollars in expense that would be unnecessary under an efficient and simplified paperwork system.

Heavy as is the cost of paperwork to big business, it is well nigh unbearable to little business. Four million small-business men, said the Commission, must spend from 5 to 29 percent of their time compiling reports for the Government.

A sample of bureaucratic stupidity is a questionnaire asking for the answers to 106 highly detailed questions from firms making but one product in the apparel field.

A large number of the 4,700 reports demanded from business firms duplicate information that has already been furnished to "another bureau down the hall."

Great quantities of records are called for which are not used and sometimes are not even filed by the Government.

Some business firms refuse to answer questionnaires and the Commission found that often the refusals were never even noticed.

Financial agencies of the Federal Government—that investigate, guarantee or insure—have a capital of $16.9 million. These agencies under given circumstances can further draw upon the Treasury for an additional $14 billion. Their legal and moral liabilities aggregate $244 billion, only about $34 billion less than the legally admitted public debt.

When, many decades ago, people frightened of banks used to put their money in socks or mattresses, Congress created the Postal Savings System to induce them to put this money into the credit stream. Now the Federal Deposit Insurance Corporation guarantees more than 98 percent of all bank accounts—100 percent of all individual accounts up to $10,000—and the Postal Savings System continues to function.

Borrowing on long term by the Rural Electrification Administration costs the so-called local cooperatives only 2 percent interest. This is 1 percentage point less—an interest subsidy of one-third—than it costs the Government to borrow on the same terms to lend to REA—without anything added for administrative expense.

Under the Federal administration the Government has backed $18 billion of mortgage loans disbursed by banks and other lenders. Savings banks, said the Hoover Commission, keep a reserve for losses of 6 percent; the FHA, 2 percent.

Perhaps of even greater importance than the Commission's sugegstions for bureaucratic efficiency are its recommendations to reduce Government competition with private enterprise.

The Department of Defense alone has an investment exceeding $15 billion in commercial-industrial facilities ranging from shoe repair shops to clothing factories, from cement mixing plants to sawmills, from chain stores to tree and garden nurseries.

Post exchanges and commissaries are cited by the Commission as typical of Government operation. The stores sell goods and services at or near the cost to the Government, often underselling even wholesalers because they often buy at low prices direct from the manufacturers. They pay no rent for either warehousing or selling space; the salaries of military personnel whose services are often utilized are not charged; no account is taken of wastage, spoilage, theft, or depreciation. No interest is paid on the Government investment. The enterprise pays no Federal or State income taxes.

The Commission calls the right to buy at these substantial savings a "fringe benefit" to Government employees and recommends that where such benefits ought to be given, it should be paid in the form of additional salaries. Except in isolated areas, post exchanges and commissaries should be liquidated.

The Commission says 1,000 of the business facilities operated by the Defense Department could be eliminated without injury to the national defense.

Most of the Government enterprises were begun in wartime; nearly all of the others were created as temporary agencies to meet the depression; but in virtually every case, when the time for liquidation came, the bureaucracy supported by the benefited individuals, pressure groups, and communities found excuses to continue the enterprise. Sometimes the extension was brought about in direct violation of the law, condoned by an administration lukewarm toward private enterprise.

MEDICAL EMPIRE

The Hoover Commission found that the Federal Government already has assumed partial or total responsibility for the medical care of 30 million persons. Hospital facilities costing $1 billion are used for the care of veterans with non-service-connected illnesses. The annual expense for nonservice cases is half a billion dollars.

In spite of this, some veterans' hospitals, because of unwise locations, still lack patients, cannot be operated efficiently, and should be closed. Others are overcrowded.

Now, what would the saving of $7½ billion mean to you?

The Hoover Commission, of course, takes no stand on how the savings should be applied. But here are possibilities being discussed in Congress. The $7½ billion could be applied, in whole or in part, to an urgently needed debt reduction.

Or it could be applied to reduction of taxes. The simplest tax cut for Congress to make would be a straight across-the-board cut to all individual taxpayers. Since the Federal revenue from individual income taxes is $30 billion a year, a $7.5-billion cut would mean a reduction of 25 percent in the personal income tax of every taxpayer.

Several States have made such cuts—across the board. The State of New York for several years legislated a straight reduction to every taxpayer of 25 percent. Later the cut was reduced to 10 percent. (After Harriman became Governor, expenditures of the State government jumped $100 million a year and the tax cut disappeared.)

Among alternative tax cuts, several of which can be combined to equal $7.5 billion, are the following:

If the married person deduction should be raised from $600 to $1,000 ($2,000 for a couple) the cost would be $6 billion.

An increase to $700 in the present $600 personal exemption (as a substitute for the married person's raise mentioned above) would cost $2.3 billion.

If the $600 exemption should be raised to $800 (instead of $700), the cost would be $4.5 billion.

Let's look at a different type of reduction.

If the top income tax rate for all individuals should be set at 35 percent, the cut would cost $2.4 billion a year.

If the top rate were set at 40 percent (instead of 35 percent), the cut would cost $1.9 billion.

If the top rate were set at 50 percent, the cut would cost $1.1 billion.

If at 60 percent, the cut would cost only $600 million.

When we realize that the total Federal tax collections from all sources in 1954 were $70 billion, it is amazing to learn that the total amount collected from individual rates above 35 percent was only $2.4 billion—a mere 3.4 percent of the grand total.

The shock is due to the extraordinary success of the Communist propaganda—repeated so often that millions now believe it—that 1 percent (or 3 or 5 percent) of the people own 90 (or 95) percent of the Nation's wealth.

The conclusion follows—if you believe the Communist-inspired propaganda—that with a sharply ascending progressive income tax, all little people should favor every Federal expenditure; they don't pay for it anyway. Government spending would not be at the expense of the little fellows, but only of the big boys.

But the conclusion is built upon a false premise. The truth is this: The Federal Reserve Board's Survey of Consumer Finances shows that in 1954 the families with incomes of $10,000 or over received about 20 percent of the total money income of all families. If all of the taxable income in excess of $10,000 could be totally confiscated by the Government, it would pay the costs of Government for only 4 weeks; and of course, the income to be confiscated would quickly vanish, once taxpayers were convinced that there would be no benefit to them from the production of income.

The present top personal income-tax rate is 91 percent. The small portion of the revenues obtained by the rates above the 35 percent figure makes it clear that the higher rates have a punitive rather than a productive purpose. Moreover, since the excessive rates sharply diminish the incentive to take risks, they punish all of the people, not merely the rich. In fact, they probably punish the poor much more than the rich (who can still live well) because the poor gain the most proportionately from the higher scale of living and the better-paying jobs created by costly modern production facilities.

The National Association of Manufacturers has sent to Congress a proposal under which the corporation rates, as well as the individual rates, would be gradually reduced over a 5-year period to a top rate of 35 percent. The association proposes a uniform cut in the progressive rates so that lower-income taxpayers would share in the reduction. The NAM plan is not premised upon any savings from the Hoover recommendations; it is based exclusively upon the increased tax revenues expected to flow automatically from the growth of the economy. Assuming a continuation of the normal 3 percent a year growth, NAM says that annual tax revenues from sources other than the rates above 35 percent will grow by $12 billion in 5 years, while the cut in Federal revenue from a 35 percent top rate would be $10 billion.

If the NAM plan should be adopted, the Hoover savings can be applied elsewhere.

"WHAT YOU CAN DO

"(From the Committee for Constitutional Government, New York City.)

"Now, what can you, Mr. and Mrs. America, do to persuade the President and the Congress to adopt the Hoover recommendations?

"Remember—the bureaucrats have a vested interest in creeping socialism. They will put up a fierce struggle supported by the ADA, CIO–AFL, and those business interests who sell to the Government and can be bribed into exchanging their belief in private enterprise for the profit they make on Government orders.

"Frank Hanighen's book, a condensation of Hoover Reports, gives you the weapons—the facts—with which to combat the bureaucracy.

"Build grassroots sentiment by sending copies of the book to influential leaders of your community.

"Send copies to strategically placed individuals and organizations. Among them:

"Libraries, city, high school, college.

"All principals and social science teachers in your shools.

"All social science professors in your local college or alma mater.

"The publisher, editors, and editorial writers of your local newspaper. (Deliver the books personally and ask for editorial support.)

"All members of the chamber of commerce and the junior chamber of commerce. (The national junior chamber of commerce organization made the earlier Hoover reorganization program its national project.)

"All members of your own service club and the leaders of other service clubs in your community.

"The leaders of civic-minded women's clubs.

"Trade union leaders.

"Your business friends throughout the Nation.

"Ask local organizations to pass resolutions addressed to your Congressman, Senators, and the White House. Promote active discussion in your clubs. Schedule panel discussions on your local radio station.

"Doing your part toward achieving the adoption of the Hoover program should be one of your personal objectives during the next 12 months. Do your part and you will be a good American citizen."

Dateline Washington

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1956

Mr. BOGGS. Mr. Speaker, my Louisiana colleagues and I have the pleasure of participating regularly in a filmed television program, Dateline Washington, presented every other week as a public service to our constituencies by station WDSU-TV of New Orleans.

This is a half hour, unrehearsed discussion program, produced and moderated by Miss Ann Corrick, Washington correspondent for WDSU. It alternates weekly with a local program, Dateline New Orleans, in which WDSU–TV presents local personalities in discussions of civic and other matters of interest to the citizens of the New Orleans area.

Dateline Washington concentrates on national and international issues which affect—directly or indirectly—the lives of all Americans, with particular emphasis on matters under consideration in Congress.

We invite as our guest a personality expert in his field, and devote the half hour program to an informal discussion and exchange of ideas. In this way, we are able to present to the people of south Louisiana all sides of an issue, so they may form their own opinions on the vital issues of our times.

In the past 2 years, on this program, we have presented the up-to-date facts on such vital issues as the peacetime uses of atomic energy; the state of our national defenses; the problems and needs of American education; the development of the Salk antipolio vaccine program; the operation of our foreign policy; the extent of narcotic addiction and its causes, and timely reviews of the ever-changing political situation. Dateline Washington has presented interviews with such topnotch authorities as U. N. Ambassador Henry Cabot Lodge; Administrator Theodore Streibert, of the United States Information Agency; Maj. Gen. Samuel Sturgis, Chief of the Army Engineers; Selective Service Director Lewis Hershey; Treasury Secretary Humphrey; Sir Roger Makins, the British Ambassador; House Speaker Rayburn; CBS Overseas Correspondent Howard K. Smith; and, of course, many of our able and informed Democratic and Republican Members of House and Senate. In order to present an unbiased picture of the political situation, we have had as our guests both Leonard Hall, Republican National Committee chairman, and Paul Butler, Democratic National Committee chairman. Many of these programs have made front-page news throughout the country.

In recognition of the consistently factual, timely, and public interest offerings of the Dateline Washington series over the last 2 years, the Sylvania television award panel last November awarded Dateline Washington and WDSU–TV a special citation for local public service.

In consonance with the high standards maintained by this program, on Sunday, April 8, Dateline Washington presented a guest and topic of such importance and inspiration that I herewith submit the transcript of this discussion so others may benefit from its content.

Our guest was Maj. Gen. Melvin Maas, former Member of the House from Minnesota, whose brilliant career with the United States Marine Corps was cut short a few years ago when he lost his eyesight. General Maas' account of his work as Chairman of the President's Committee on Employment of the Physically Handicapped should give heart and hope to other disabled persons who have every right to work and live with the dignity we in this country accord to all our citizens.

The discussion with General Maas follows:

Miss CORRICK. Good afternoon. This is WDSU's Washington correspondent, Ann Corrick.

Thirty million American citizens are physically disabled in one way or another. Most are completely helpless. But an estimated 2 million disabled persons, if they knew how, or if they had the proper training, could be gainfully and usefully employed. Congress recognized this possibility in 1945, and, 2 years later, established the President's Committee on Employment of the Physically Handicapped. Through the efforts of this committee many thousands of disabled persons each year are restored to gainful employment. Dateline Washington's guest today is the Chairman of the President's Committee, retired Marine Corps Maj. Gen. Melvin J. Maas. He fully understands the problems of disabled persons, for, in 1951, 1 year before he retired from the Marines, General Maas was overtaken with total blindness. Although this dropped the curtain on three separate careers, for General Maas it opened up a new and rewarding challenge for his tremendous and unselfish energies. He became Chairman of the President's Committee on Employment of the Physically Handicapped in 1954.

Last year he was elected national commander of the Disabled American Veterans.

General Maas' first career was in business back in his native State of Minnesota, where he organized his own insurance firm. He spent 16 years in Congress as a Republican Member of the House from Minnesota, from 1927 to 1943. However, during that period he took time out to pursue another, overlapping career in the Marine Corps, where he specialized in marine aviation. He served as a private in World War I; as the youngest Marine Corps colonel in uniform in World War II, and he put on his uniform again in the Korean war to help revise the entire Reserve program.

The general made many friends while he was here in Congress, and here with us today are two who served with him—New Orleans Congressman F. EDWARD HÉBERT, chairman of the House Armed Services Investigating Committee, and HALE BOGGS, member of the House Ways and Means Committee.

Now, the general has been decorated many times for his services, and among his medals is the Carnegie Silver Medal for heroism, and there is quite a story behind that medal. It is legend, especially here in Capitol Hill, because the battlefield on which that medal was earned was the House of Representatives. It was in 1933, was it not, General——

General MAAS. No; 1932.

Miss CORRICK. That a man appeared in the House gallery with a loaded revolver and he threatened to shoot up the Congressmen. What did you do?

General MAAS. Ann, you mentioned an incident that has always been embarrassing to me, getting this Carnegie medal for it. I think I will reveal to you now the truth of what actually happened that day.

Miss CORRICK. I wish you would.

General MAAS. This nut in Congress—I mean the one up in the gallery—was waving this gun around. I did not see him to begin with. We were having a teller vote and I was one of the tellers. All of a sudden there was a great deal of confusion and everybody left suddenly.

Then Fiorello LaGuardia grabbed me by the arm and said, "Come on, Mel, let's get him," and with that he pointed up in the gallery. That is the first time I saw this bird waving this pistol around.

To get to him, you had to run up the aisle, out some swinging doors, around the halls and up some marble steps.

Just as we got to the door, LaGuardia went on out and I took one last look over there and I saw that this bird put his foot up on the rail. I was sure he was going to jump, and probably break a leg, so I had nothing more heroic in mind that running over and jumping on the guy when he was down—but when I got under him, the darn fool had not jumped. Here I was standing looking up at him, and he spotted me and waved the gun at me, and he said, "Will you give me 20 minutes to make a speech?"

Give him 20 minutes, I would have given him the shirt off my back. I said, "Yes, yes, yes, but it is against the rules to speak with a gun in the House. Give me the gun and you can make your speech."

He said, "I will give it to you," and with that he cocked it. It looked like a .75 millimeter cannot about that time.

The newspapers commented afterward how remarkable it was that I disarmed him with a smile. It was not a smile—it was a darn silly grin.

Congressman HÉBERT. What would have happened if he had not thrown you the gun?

General MAAS. Instead of running for Congress as I used to, I think I would have run from Congress.

Suddenly he changed his mind and did drop the gun to me. As soon as he dropped the gun, the cops all jumped out from behind the seats and grabbed him.

Congressman BOGGS. Mel, that is quite an interesting and very great career you have had. Why don't you tell us a little bit about the work you are doing now.

General MAAS. Well, Hale, I am actually in the most rewarding work that I have ever done. I do not mean financially because all of us on the President's Committee serve without any compensation of any sort. However, I am receiving more compensation in the way of gratification, feeling that I am making a contribution, more so than I have ever felt by doing anything else.

The work of the President's Committee is educational and informational. We are not a Government agency. We have a small Federal staff, but the Commitee is made up of about 300 organizations representing the heart of America. All of the great labor unions are members, all of the great employer groups like the Association of Manufacturers, and the United States Chamber of Commerce, are members, all of the veterans' groups, the Federation of Women's Clubs, the medical profession, social workers, and just dedicated men and women.

What we are doing is trying to educate employers and the labor unions and the general public as to the employability of handicapped men and women.

There are so many people who think that just because some of us have a personal physical inconvenience we cannot work. This is not true at all. We have to overcome centuries of prejudice and intolerance and discrimination against men and women who have a physical handicap.

It is tremendously heartwarming to see the growing increase in interest and awareness and desire to help in this campaign.

Congressman HÉBERT. The work which you are doing with this committee is very interesting and, of course, very constructive; but what is your feeling about a program which would educate people to prevent the accidents which cause disability?

General MAAS. Eddie, of course that is one of the disgraces in this country. However, the vast majority of those for whom we have to find jobs, strangely enough, are not handicapped by way of industrial accidents. Of course, these accidents are deplorable, but the vast majority of these handicapped people have become so handicapped by reason of illness and disease.

Congressman HÉBERT. That is exactly what I was hoping you were going to say, Mel. I think the work of the President's Committee is quite creditable and laudable and you are indeed doing a splendid job with respect to rehabilitating these people.

I think the big problem is, however—and I would like your comment on this—is educating through research and prevention. As I put it the other day in New Orleans when I was down there to dedicate the Lighthouse for the Blind, we all run to the man who has a white stick in his hand, but our greatest efforts should be given to preventing him from getting the white stick.

General MAAS. Of course, that is true, and we are tremendously interested in these research programs and their development. If the proper job is done in preventive campaigns—the biggest single number that we have are cardiac cases—if we can lick them at the beginning, then you would not have any need for the President's Committee on Employment of the Physically Handicapped.

Congressman HÉBERT. What suggestions do you have? What program do you have for prevention?

General MAAS. I believe a great deal more intensified research must be done. Once you know how to prevent a disease or cure it, then the matter becomes routine. But the greatest mass of people who are physically handicapped are continuing—actually it is about 275,000 a year added to these rolls of the seriously physically handicapped. We need more research.

Congressman BOGGS. It seems to me in your work you have two basic problems: One is to convince an employer that a handicapped person can be a satisfactory employee, and the other, it would seem to me, would be the psychological problem with the handicapped person himself to convince him that he is still a useful member of society and can perform gainful employment of some kind or another.

How do you approach those two separate problems, the individual problem and then the employer problem?

General MAAS. You have identified them. They are the big problems. There is a third one, too, and that is educating those who are nonhandicapped workers to accepting a handicapped worker beside them.

Today there is considerable resistance among workers who just do not want handicapped workers working near them for fear that the handicapped person will cause an accident that will involve the nonhandicapped. Just to dispose of that, we have checked all of the records, and as far as we could determine throughout the country, we have yet to find one single case where a handicapped worker has involved a fellow

worker, so the non-handicapped do not have to worry about that.

The problem of educating the employer is our major problem, of course. The other problem is a social one, getting the handicapped to find out that there is such a thing as opportunity for rehabilitation; that they can be given vocational training so that they can become self-supporting. Some work is being done along those lines, but what the Congress has charged our committee with is primarily in the field of educating employers and labor unions, because there are problems involving labor contracts in this matter—educating them as to the desirability of giving the handicapped an opportunity to work and then convincing them that a well-trained, properly placed handicapped worker is not only as good as the average but, in most cases, they become superior. Being trained in a specialty, they become very expert in that specialty. The handicapped man or woman who is given a job is grateful for it, for one thing, and there is much less tendency to switch jobs.

Miss CORRICK. In what fields of endeavor are the handicapped people finding places today?

General MAAS. Actually, everywhere. There isn't any kind of a job today in this country that is not being performed by some kind of a handicapped person.

Miss CORRICK. Mostly in industry?

General MAAS. I would say the preponderance of the absorption of the physically handicapped has been so far in industry. In fact, we are quite concerned at the failure of the professions to accept them. I am thinking particularly now of the blind. With the critical teacher shortage in this country, there are hundreds of blind men and women who are qualified educationally and by temperament to teach—and yet through prejudice they cannot get jobs as teachers. Yet, there are many very fine blind teachers, not only in the colleges but in the secondary schools and even in the primary schools.

Congressman HÉBERT. I think the figures show in this country today there are some 314,000 blind people. In referring to the blind, Mel—and I know you are not sensitive about your affliction at all, and I think you and I both know that—I think it would be most interesting and most informative and certainly most inspirational if you would take a moment to tell us exactly what your reaction was when you went blind. I knew you and served with you when you had good eyesight, and I have known you for the years that you have been blind. It intrigued me as I am sure it intrigued those of the audience who watched you light that cigar just now; and what you told us before the program about the book you're writing called "How to Eat Soup With a Fork." To me, it is an inspiration. Just what did you do after you went blind and how did you rehabilitate yourself?

General MAAS. I was in the hospital at the time it happened for an entirely different thing. I had developed violent stomach pains which turned out to be an ulcer, and it was while I was being treated for the ulcer that my eyesight failed. Failed in one eye within a week and in the left eye within a couple of months, but it failed quite rapidly.

When the doctors gave me the verdict that I was going to be blind and it was going to be permanent blindness, actually for the first couple of days I wanted to die. I conceived of myself as just a blind, helpless old man. About the second morning I was lying in bed in a cold sweat. I could still see. I got up and went into the bathroom, took my shower, shaved, and dressed, keeping my eyes closed the entire time, and I suddenly realized that it was not going to be as bad as I thought. I could do normal things.

Then actually, Eddie, from then on, I was so busy that I never had time to think of it again. I was handling liaison with the Congress at the time and handling this Reserve legislation that we had up and they were sending people out from the Pentagon to see me, and you Congressmen were calling me and sending your secretaries up, so I had them put in a telephone next to my bed, and from then on I continued to carry on on the telephone 8 or 9 hours a day. Then I was sent to rehabilitation. I think learning about rehabilitation very early, before I was totally blind, was a tremendous lift. I learned that I could go to Hines, Ill.——

Congressman HÉBERT. I would like for you to develop that point just a bit because I think that must be one of the secrets of this whole program—your own rehabilitation and how you apply it to other people in your work today.

General MAAS. When I learned that I was going to be able to be trained to get about pretty much normally, and that I would learn to substitute a cane for eyesight for traveling, that I was going to learn typing so that I could communicate written messages to other people, and I would learn Braille, it was a tremendous lift to me.

When I got to the rehabilitation center I found how practical all of these solutions were—in fact, they had a slogan to the effect that when you finished this course you could do anything that you did before except drive a car. I made suckers out of them on that, because I drove a car.

Congressman HÉBERT. A lot of people are driving now who think they can see.

General MAAS. In fact, it was a whole new challenge to me.

You mentioned how I lit a cigar. I was getting quite frustrated. You know, being an old Congressman, I have to smoke my cigars. I was so frustrated that I was about to quit smoking. I took a match and just drove it up into the bottom of the cigar and struck it. It lit, but I had to laugh at myself because I had to smoke the wood. Then I got to experimenting and found that by holding a match underneath I could make it work every time.

In developing those things like dialing a telephone, I learned that if I put a little adhesive tape on the fifth dial of the telephone, then I could count very fast because I had four places to count from. I will bet you that I can dial a telephone faster than you can or anybody else with eyesight, because I do not have to waste time looking at the numbers.

Congressman HÉBERT. With my eyesight, I cannot dial a phone at all, as you well know. I am in the same position.

The reason I had a personal interest in asking you about these things was that I hope when the day comes when I am in the same position, I will have the courage to be as brave as you.

General MAAS. EDDIE, it isn't that. You have great vitality and you will carry on.

I found, in fact, that I am able to travel more extensively now than when I had good eyesight. Last year, I traveled 150,000 miles and I do all of my traveling alone.

Congressman HÉBERT. You went to New Orleans alone last year to make the November 11th address.

General MAAS. I have no difficulty getting around. With radio and the wonderful "talking books" that Congress provides for the blind, I am doing more reading now and better reading than I did when I had sight.

For instance, I get the Reader's Digest each month on these "talking books."

Congressman HÉBERT. Is that a Braille book?

General MAAS. No, a "talking book" consists of long-playing records. They have marvelous voices. They get the best actors and actresses and radio personalities, and they read books. Right now, I am reading The Robe on "talking books." The Government, through the Library of Congress, will furnish any of these "talking books" to a blind person. They do not have to be a veteran. They will also furnish the recording machine for playing these records. They lend it to them for life and then these long-playing records are put in fiber cases and they are mailed to the blind person, the regular catalog, without cost. When the blind person has read the book, he gives it back to the Post Office Department and the books are mailed back to the Library of Congress. It is like a circulating library.

Congressman HÉBERT. Exactly what is the procedure for receiving those "talking books," Mel? I think that is most interesting to blind people. Of course, they can write to their Congressmen, I know, but let us tell them how to get the books themselves.

General MAAS. All they have to do is get a doctor's certificate that they are totally blind or unable to read. With just that certificate they can write to the Library of Congress or, in fact, they can get the information through their local library in most cases. Otherwise, they can write directly to the Library of Congress, Washington 25, D. C.

Congressman BOGGS. What do you do at these meetings you attend all of the time?

General MAAS. Talk about the problems of hiring the handicapped and cite to them cases of employers who have hired the handicapped and what good employees they are. The most enthusiastic supporters of this program are the employers who have hired some handicapped people. They are good workers and they are not troublemakers. They have fewer accidents and their safety record is high. Their absenteeism is perhaps even a little less than the average worker.

Congressman BOGGS. I am certain that you must have the figures, but it seems to me that there must be a tremendous gap in the situation where you have a handicapped person who can earn a gainful living or a handicapped person who is dependent either upon his family or the State or the Government in some capacity. What is the difference?

General MAAS. I am awfully glad you asked that, because it is quite dramatic.

The average throughout the Nation—and this will vary in different States and different cities—for maintaining a person on welfare is about $1,500 a year. That goes on forever as long as you are maintaining that person. The average cost for rehabilitation, however, is about $600, and that is a one-shot expenditure. So take a $1,500 welfare person, give him rehabilitation and get him on the job, and you have not only saved the $1,500 but you have started receiving taxes from such an individual because these rehabilitated persons, both men and women who are on the job, very soon become themselves taxpayers.

Last year alone the men and women who became rehabilitated and were placed on jobs in the aggregate earned $115 million and paid somewhere between $9 million to $15 million in taxes. Whereas, the year before they had been costing the country nearly $50 million.

Congressman BOGGS. That is remarkable.

Congressman HÉBERT. Mel, in your program to educate people, it has been called to my attention that you hold annual essay contests. I have here the list of youngsters in Louisiana who won this year's contests:

First place: Sally Bett Grace, 304 South Holly Street, Hammond, La.: Southeastern High School.

Second place: Caroline Gayle Morgan, route 4, Joor Road, Baton Rouge, La., Central High.

Third place: Marie Massimini, 2130 Jena Street, New Orleans, Fortier Senior High.

Fourth place: Urline Andoni, 8335 Birch Street, New Orleans, Redemptorist High.

Fifth place: A tie by Juanita Matherne, 1508 Riviera Drive, New Orleans, Holy Angels Academy, and Charles Earry Hillebrandt,

1920 Second Street, Lake Charles, La., Lake Charles High School.

What were those essays?

General MAAS. It is a wonderful program, EDDIE. We sponsor nationally—and, incidentally, the DAV, which Ann mentioned, of which I am national commander, has put up the money for the essay winners. The first prize is $1,000, and they pay the expenses of the five winners to Washington to have their prizes presented to them at our annual meeting. It is a wonderful project because these youngsters write on some phase of the handicapped. We set the subject each year. Of course, it is the first time they have thought much about it, and they take it home and discuss it with their parents. Well, it is the first time that most of the parents have even thought about the problem or knew that there was such a problem. It also gives these kids a lot more confidence in knowing that if anything should happen to them, they can be taken care of. They have now learned that life will not be a blank for them. They have learned that the blind, the crippled, the amputees, can lead a perfectly normal life. As each generation comes along, they are learning more and more about it. They are going to be the employers and the employees of the future, so we feel that it is a most wonderful project.

Congressman BOGGS. Mel, is there some coordination in your work with the other programs like the program for retarded children, and that sort of thing?

General MAAS. We are not in the mental deficiency side of it, because we are chartered only for the physically handicapped.

I think that will come along in time. We are paving the way.

As we open up opportunities for the physically handicapped and educate the country to the acceptance of the physically handicapped, we feel it will open the path for the rehabilitated and retarded person.

Congressman BOGGS. In conjunction with the rehabilitation of the physically handicapped, the Lousiana State Unemployment Service has a special division for the employment of the physically handicapped.

Congressman HÉBERT. I think they all do.

General MAAS. Every State now does; in fact, in every local employment office there will be a specialist on the problems of placing the handicapped.

Congressman HÉBERT. In New Orleans, they go one step further, Hale, and I am sure you are familiar with this. I think they call it the Good Will Industries.

Stella Hanlon is the head of it down there.

Congressman BOGGS. They have that in all the States?

General MAAS. That is international.

Congressman BOGGS. And then they give the physically handicapped employment and very gainful employment.

Congressman HÉBERT. That is a fine thing; it is operated everywhere. That is a private operation.

Miss CORRICK. The general was conored recently by the Good Will Industries.

General MAAS. Yes, I was very proud to receive their international achievement award.

Congressman HÉBERT. That is another deserved honor.

Miss CORRICK. General, in your travels, you go overseas quite frequently, and I wondered if you could tell us what countries overseas are doing for their handicapped people.

General MAAS. There are some programs, but they are nowhere near what we do. We are beginning to stimulate them and it is giving them quite a lift and quite a challenge.

I have been particularly interested in Asian and African couutries where traditionally nothing was ever done for handicapped people. They were ashamed of handicapped people, and yet they have great numbers of them because of malnutrition, disease, and illness. Our program is giving them a tremendous lift.

Incidentally, an entirely new and different concept of America has been brought to their attention which is quite the contrary to the concept they were getting from Communist propaganda.

I attended these international conferences on rehabilitation of the World Veterans Federation. We now have 30 nations in it. I talked with delegates from Thailand, Ceylon, Pakistan, Indonesia, India, Nigeria, Israel, and Egypt, and they are tremendously impressed with what we are doing for our handicapped. When they learn that these great volunteer teams like the President's Committee and Governors' Committee take the cripples, as they call them, and give them medical restoration, vocational rehabilitation, and then actually get them jobs—to them, that is almost unbelievable. It is having a tremendous impact upon them.

I have had so many of them tell me, "Well, General, if your people think so much of the dignity of the individual that you take your cripples and restore them so that they can have dignity, then we believe that you are decent people and the Communists have been lying to us. The Communists have said that you are nothing but money-mad dollar-grabbing people. But those kinds of people do not worry about the dignity of individuals. So, if they have been lying to us about that, maybe they are lying to us about a lot of other things." So you see this program is having a very wonderful impact on the rest of the world.

Miss CORRICK. In helping to combat Communist propaganda against us?

General MAAS. Yes.

The one thing that these Asians and Africans want after centuries of suppression and colonization is not the Communist thinking of just more money and better clothing and more housing.

Miss CORRICK. I am awfully sorry, General Maas, but the clock is running out on us, and we must stop.

Thank you so much for being here on Dateline Washington, General Melvin Maas, with Congressman HALE BOGGS and F. EDWARD HÉBERT.

This is Ann Corrick.

Fluoridation of Drinking Water—I

EXTENSION OF REMARKS

OF

HON. JAMES J. DELANEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1956

Mr. DELANEY. Mr. Speaker, fluoridation of public drinking water is one of the most controversial issues now before the public. Various official groups, such as the United States Public Health Service and the American Dental Association, advocate fluoridation. On the other hand, a large and increasing number of doctors, dentists, biochemists, nutritionists, and city water commissioners strongly oppose it.

Testimony before the House Committee to Investigate the Use of Chemicals in Foods and Cosmetics, of which I was chairman during the 81st and 82d Congresses, first alerted public attention to the possible dangers of flouridation. Interest has continued to grow and today, some 4 years after the conclusion of the investigation, I still constantly receive requests from people all over the country for material on the subject.

New York City is now considering the possibility of fluoridation. As a public service, in order to fully inform its readers of all sides of the question, the Long Island Star-Journal recently published a series of articles entitled, "Fluoridation: Menace or Blessing?" I believe that Lois Benjamin, the author of the series, has done an excellent job of reporting. The articles are objective, dispassionate, and informative.

Mr. Speaker, because of the country-wide interest in this, under leave to extend my remarks in the RECORD, I include the first of Miss Benjamin's reports:

[From the Long Island Star-Journal of February 27, 1956]

FLUORIDATION: MENACE OR BLESSING?—WAR ON TOOTH DECAY MEETS HEAVY OPPOSITION

(By Lois Benjamin)

With all the stops pulled out on the water fluoridation issue, the public uproar may break all of New York's existing records for sheer volume.

The hullabaloo has swelled in recent weeks with daily outbursts by religious groups, civic associations, and individuals condemning the idea of mass medication through municipal water supply.

And the program's supporters, once confident of its ready acceptance, now must face the possibility that fluoridation will be put to the test of a referendum—and that it may be rejected.

The fluoridationists are dazed by the turn of events. They entered the arena armed with an impressive set of scientific data, and accompanied by an impressive roster of revered medical and dental allies. They all had endorsed fluoridation as a major step toward the conquest of tooth decay.

The still-pending resolution before the city council, introduced in August 1954 urges that all community water supplies in New York City be treated with a fluoride-containing compound in the proportion of 1 part of fluoride to every 1 million parts of water.

Since 1951, New York's Board of Health has made 3 exhaustive studies of the history of fluorides, and submitted 3 lengthy reports to the mayor. Each time, its recommendation to fluoridate was wholehearted.

The latest report, submitted to Mayor Wagner last October, declared unequivocally that "the overwhelming weight of competent scientific opinion * * * is that water fluoridation is an effective, safe, practical, and much-needed public health measure."

All four of these claims have been challenged, and each has been defended. The swords continue to cross.

What floridation promises is a startling statistic: If the water supply is treated in the recommended proposition, children will suffer nearly two-thirds less tooth decay. The promise has been made by such groups as the United States Public Health Service, the American Dental Association, and the National Research Council.

To prove it to the skeptics, a 10-year experiment was set up in 1945 in the neighboring upstate towns of Kingston and Newburgh, as well as similar tests in Michigan and Ontario, Canada.

In the New York experiment, Newburgh's water supply was fluoridated; Kingston's was fluorine-free. After the decade of clinical examinations and dental studies of 100 children in each town, it was found that:

Newburgh's 6- to 10-year-olds have 60.3 percent fewer decayed permanent teeth than the same group in Kingston.

Not one first permanent molar was lost among the Newburgh children. In Kingston, 6.5 percent of the 9- and 10-year-olds had to have these teeth pulled because of decay.

Almost four times as many Newburgh children had no cavities at all in their baby teeth.

Newburgh also provided the fluoridationists with an answer to the widespread charge that fluoridated water causes "mottled enamel"—disfiguring scars on the teeth. The verdict of the Newburgh research staff was that no mottled enamel could be observed on the teeth of any child in the group.

Fluoridation's foes have held that even if the procedure helps cut cavities in children's teeth, the adult population would be forced to drink and pay for medicated water which holds no benefits for them.

But fluoridation's champions point to the study in Colorado Springs and Boulder City, Colo., where adults up to the age of 45 were observed. Boulder City's water is almost free of fluoride; Colorado Springs' water has a natural level of 2.6 parts per million.

Scientists found 60 percent less adult tooth decay in Colorado Springs. Boulder City's residents had lost 3 to 4 times as many teeth due to decay.

The safety of fluoridated water has been assured by the same respected medical groups. That fluorine in pure form is poisonous is true. That it is harmless in a compound at the recommended level is equally true. Fluoride, say the board of health, the city's, and the Nation's medical societies, is a normal substance in the body, and is contained in many of the foods eaten daily, notably fish and seafood. In general, excesses of fluorides consumed will be stored in bones and teeth and not in the organs or soft tissues.

The fluoride found naturally in food and the fluoride added to water in the experimental towns are identical in their chemical action and in their effects on human beings, the experts maintain.

The term "rat poison" has been used by antifluoridationists as scare propaganda, because sodium fluoride is used as an insecticide base.

The fact is that it would take a single dose of 400 gallons of 1 part per million fluoridated water to kill a person. The board of health calls the margin of safety enormous.

The Newburgh-Kingston project revealed no physical effects, good or bad, except for the dental benefits traceable to the fluoridated water. Populations which have drunk fluoridated waters over long periods have shown no increase in diabetes, kidney ailments, heart trouble, or any other malady.

As for the practicality of the project, estimates have been made in New York which indicate that the means of fluoridation would cost only $450,000 to install. Yearly maintenance would involve about 9 cents per capita.

The automatic action of fluoridated water has been termed a far more dependable weapon against decay than the unpredictable controls of diet, toothbrushing, or expensive individual fluoride treatments.

Whether fluoridation is a necessary step can only be answered by the fact that dental decay is 1 of the Nation's 2 most prevalent diseases. (The second is the common cold.) New Yorkers develop 7 million cavities a year, and pay $100 million in dental bills to repair the damages.

Fluoridation of Drinking Water—II

EXTENSION OF REMARKS

OF

HON. JAMES J. DELANEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1956

Mr. DELANEY. Mr. Speaker, proponents of fluoridation of public drinking water often claim that opposition comes only from crackpots. This is not true, as Lois Benjamin points out in the following article, which I include under leave to extend my remarks:

[From the Long Island Star-Journal of February 28, 1956]

FLUORIDATIONS MENACE OR BLESSING?—EXTREMISTS' HYSTERIA HAMPERS CAMPAIGN BY SERIOUS OPPONENTS

(By Lois Benjamin)

An unusual trio of voices today is combined in a single, urgent chorus against fluoridation.

These are the three: A reputable band of doctors and biochemists who question the experimental records; the Government ethics group, which warns against playing doctor to unwilling patients, and the hard core of fanatics, who see it all as a vicious conspiracy to poison the population.

Unfortunately, the strident din of the scaremongers, some of whom have called the measure a "Communist plot to brainwash the country by doctoring the water," has drowned out the serious dissenters.

As a result, most opposition to fluoridation has been dismissed as misinformed hysteria.

There is much more to the story.

Seven days of public hearings before a congressional committee in 1952 brought 18 professional witnesses to Washington to give the pros and cons of water fluoridation. The committee, headed by Congressman JAMES J. DELANEY, of Astoria, compiled a report after all the evidence was in. That report urged caution.

The views recorded at the hearings were those of highly trained biochemists, nutritionists, denists, and health officials, all of whom had worked with and studied the effects of fluoridation.

Several questions were raised then which have not yet been answered in all the pamphlets, reports, and circulars that have been published on the subject.

One of the most important of these was posed by Dr. Robert S. Harris, a biochemist at the Massachusetts Institute of Technology. He pointed out that since fluorine only reduces the incidence of tooth decay, and does not prevent it entirely, fluorine may not be the answer to the decay problem.

As for fluorine deficiency being the cause of the problem, as has been claimed, Dr. Harris cited evidence that cavities have been both produced and prevented by many chemical and biochemical methods other than the addition of subtraction of fluorine from the diet.

All fluoridation experts, including the witnesses who appeared before the Delaney committee, concede that fluorine is poisonous if taken in large amounts.

The controversy, therefore, concerns the physical effects of fluorides in water at the recommended level of one part per million.

The profluoridationists say these effects are negligible. The antis take exception to this claim.

For one thing, it was asked, have the 10-year experiments in Newburgh-Kingston, Brantford, Ontario, and Grand Rapids, Mich., given us any information about the long-range effects of drinking fluoridated water? The children observed in these pilot groups, it was cited, make up only a small part of the population, and even they have not been observed long enough to prove the treatment harmless.

One of the dangers of fluoridation, admitted even by its strongest supporters, is that of "mottled enamel," which has been observed even where fluorides in the water are at relatively low levels.

The testimony of Dr. Margaret Cammack Smith, head of the nutrition department of the University of Arizona, involved her experimental research with fluoridated water and mottling.

Dr. Smith, who praised the United States Public Health Service findings as to the reduction of cavities through water fluoridation, nevertheless, declared herself opposed to the procedure.

Dental fluorosis, the technical term for disfiguring scars on tooth enamel, was found on the teeth of people in Arizona where the fluorine content is only .9 parts per million—lower than the recommended level for New York.

A partial explanation can be found in the fact that more water is consumed in Arizona's desert climate than in temperate New York, but even so, the margin is far from comfortable.

Even so-called mild mottling changes the smooth, glossy, creamy whiteness of normal teeth to a dull, unglazed surface with irregular chalky white patches.

In so-called moderate cases, the patches may absorb brown stain. In severe cases, the surface of the enamel is pitted and corroded. It was predicted that some mottling would occur on the teeth of the 10 to 12 percent of those who used fluoridated water.

There is no known method of treating or disguising mottled teeth.

Only partial protection against tooth decay, therefore, has been assured by fluoridation, "at the possible risk of damage of the teeth which is irreparable," Dr. Smith advised.

Other issues raised were: What are the effects of fluorides on persons with kidney disorders, who may store more than a safe quantity of fluoride?

What about people who have abnormally low tolerance to fluorine?

What are the differences in amount of water consumed, and what effect would greater consumption have on the safety ceiling of fluoride absorption?

The Delaney report stated that "a sufficient number of unanswered questions concerning the safety" of the program exists as to call for "a conservative attitude."

If a mistake is to be made concerning water fluoridation, the committee advised, "it is preferable to err on the side of caution."

Councilman Eric J. Treulich, of Richmond Hill, who introduced the original fluoridation resolution in the city council, withdrew it after reading the Delaney records. Treulich is one of those who question the ethics of fluoridating public water. He asks: "Is any city government justified in forcing people to drink it if they don't want it?"

Treulich declares he does not consider all the objections to fluoridation valid objections, but even if they are invalid, he feels they cannot be blithely overruled.

It has been countered that smallpox vaccinations, pasteurized milk, and chlorinated water are tolerated by many whose vehement criticisms were overruled for the sake of public welfare.

Treulich maintains that in the case of water fluoridation, there is no such danger of epidemic, contraction of fatal disease, or spread of germs.

"Fluorides are not necessary to make the water safe," he declared, and therefore there is a moral question involved, which must be answered.

Another active voice raised against fluoridation is that of the religious groups, among them the Christian Scientists, who object to medicine in any form.

Some food purist cults also belong in this category, as they also oppose altering any natural substance. They have called fluoridation "unconstitutional," but have had no success in courtroom attempts to defeat it on this ground.

Ironically, the work of the fanatics, most of which is based on bald fiction and frightening slogans, has been the most successful weapon against fluoridation in every community where the measure has met defeat.

Typical was the pamphlets put out by a Seattle, Wash., antifluoridation faction, de-

picting a skull-and-crossbones symbol, labeled "poison," and underlined by the question, "Do you want to drink this?"

Similarly, in Northampton, Mass., newspaper advertisements shouted that "fluoridation could play into the hands of our enemies. America is too big to be conquered by invasion, but with fluoridation machines at the reservoirs, the population * * * could easily be wiped out or made nonresistant.

But despite the meaningless catchwords of the fear faction, a good case against fluoridation can be built up by its responsible opponents. Whether experimental data answers that case beyond a reasonable doubt is the decision New York must make. The jury is still out.

Fluoridation of Drinking Water—III

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 12, 1956

Mr. DELANEY. Mr. Speaker, the engineering difficulties involved in setting up a safe system for fluoridating drinking water are not generally realized. The following article, which I include under leave to extend, outlines the hazards and difficulties which would be faced by New York City in such an operation:

[From the Long Island Star-Journal of February 29, 1956]

SAFE FLUORIDATION OF DRINKING WATER JUST IMPOSSIBLE HERE, ENGINEERS SAY

(By Lois Benjamin)

Whether fluoridation of drinking water gives children stronger teeth, or whether it constitutes a grave risk to public health may be an academic question after all, as far as New York City is concerned.

Behind all the medical argument pro and con, lies a stubborn question of whether the thing can be done at all in a water supply system as large and as complex as New York's.

Through all the tumult and shouting, the Department of Water Supply, Gas and Electricity has remained staunchly opposed to the idea. Through two city administrations, it has warned that the project is impracticable.

New York City's water originates at points up to 125 miles away from the city. In the city, there are more than 6,000 miles of streets. In every street, there is a water main, and in addition to the more than 6,000 miles of pipeline in the streets, there are the lines running into every building to literally millions of water taps.

The recommended amount of fluoride is one part in a million. More than that is definitely dangerous. Engineers insist that to attempt to maintain so delicate a balance throughout a water system so far extended and so complex is virtually impossible.

Water Commissioner Arthur Ford of Jamaica Estates, who succeeded Dominick Paduano of South Ozone Park in the post, has refrained from stating his views since Mayor Wagner declared several weeks ago that he favored the fluoridation project.

But Ford's position, along with that of ex-Commissioner Paduano, was made abundantly clear long ago in several reports to the mayor.

Paduano still maintains a vital interest in the smooth flow of New York City's water. He spoke today of the peculiar problem which makes fluoridation in New York so cumbersome and unpredictable.

The point closest to New York where the feeding equipment would be installed, Paduano said, is Hillview Reservoir in Yonkers, just north of the Bronx. Hillview is the last of three stops made by the water after it leaves Schoharie Reservoir, which is 125 miles to the north. The middle stations are Ashokan and Kensico.

No other city handles a volume of water equal to that which rushes through that 125-mile journey, Paduano stated. New York disposes of 1,135,000,000 gallons a day.

The possibility of mechanical or human failure somewhere along that route, with such a volume, is unavoidable. With a potentially toxic chemical compound involved, Paduano said, the possibility becomes a dangerous risk.

It would be virtually impossible to prevent concentration of fluoride in some spots, and a consequent deficiency in others, Paduano said.

This can be vividly illustrated by the action of chlorinated water, Paduano pointed out. After the chlorine is fed into the water at Hillview the first group of homes to be supplied is in the Bronx. There have been frequent complaints by Bronx residents that concentrated amounts of chlorine can be detected in their water. The chemical, at these times, has not settled thoroughly in the system during the brief trip from Hillview to the Bronx outlets.

If chlorine can thus be tasted and smelled by Bronx water drinkers, what would happen with fluoride where the danger of mottled teeth occur at a level not much higher than the allegedly "safe" proportion?"

As for the engineering task, the "simple and economical" installation of fluoridating equipment pointed to proudly by the program's advocates is "not as simple as it looks," according to Paduano.

Delicate adjustments must apparently be made in the system to cope with even slight fluctuations in the supply of water. Sample tests and checks must be made constantly to protect the consumers against any possible surplus of the chemical. When dealing with so precise ratio as 1 ppm, no mistakes can be made.

With all due respect to New York's capable body of engineers, Paduano said "it would be quite an undertaking."

The former commissioner, who served 25 years with the department, added his voice to those who question the safety of the 1 ppm fluoride level.

The rate of consumption among water drinkers of various ages, occupations, and states of health in various seasons, is so markedly different, he emphasized, that a single "safety" level is impossible to determine.

"Considerable medical evidence," he added "contradicts the claim that one part per million of fluoride is a safe proportion in any case." Even if the solution could be guaranteed constant, and even if everyone's water intake could be guaranteed identical, the susceptibility to fluorosis varies widely, and there would be no way of forewarning a person with low fluorine tolerance."

Fluoridation of Drinking Water—IV

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 12, 1956

Mr. DELANEY. Mr. Speaker, proponents of fluoridation of public drinking water often claim that the process is inexpensive. That may be true in some instances, but costs vary according to the size of the community and the engineering problems involved. The following article, which I include, points out certain expenses which many residents of New York City would have to absorb if their drinking water were fluoridated.

[From the Long Island Star-Journal of March 1, 1956]

WATER COMPANIES SEE RATE RISE IF CITY INSISTS ON FLUORIDATION

(By Lois Benjamin)

Apart from the thorny engineering problems New York must tackle—if the city decides to fluoridate its water—a separate set of difficulties exists in Queens, where there are two private water companies.

The two companies are the Jamaica Water Supply Co. and the New York Water Service Corp. Between them they serve half a million Queens residents. The 58 million gallons of water which they distribute daily is no part of the city's water distribution system. They bill their customers directly at rates fixed by the public service commission.

On the public health aspect of fluoridation neither company takes any stand.

"That is not a question for us to decide," Cyril B. Myers, administrative vice president, of New York Water Service, said today.

But both companies want their customers to know the special hazards and expenses involved in any plan to fluoridate the water.

If the city orders them to fluoridate, Myers explained, the city must expect to shoulder the responsibility for any injuries claimed by their 130,000 customers.

Since neither the New York Water Service nor the Jamaica Water Supply Co. would fluoridate voluntarily, the city also would have to make up the cost of the process by granting them a raise in rates.

This would mean a substantial bite on their customers, because fluoridating these private water systems is far more costly than treating a municipal supply.

Jamaica Water Supply, the larger of the two firms, pumps water out of 70 wells, and would require fluoride "feeding" equipment at each station. There is no central point where all the water for its customers could be treated at once.

According to Mrs. Helen G. Fooner, a spokesman for the company, both the cost and the method present great problems.

In 1954, the company had a preliminary study made at the city's request. The cost to fluoridate their system, which encompasses 40 square miles in eastern Queens and western Nassau, was estimated for two types of fluoride compound—the liquid (hydrofluosilicic acid) and the powder (sodium fluoride).

According to Mrs. Fooner, the cost of equipment for the liquid compound would be lower—about $100,000 for the initial investment, and $100,000 a year for operation. The company would have to add personnel to conduct minute and frequent sampling tests at each well, to insure the safety of the solution. All the wells connect directly into the distribution system at points very close to the consumers' homes.

If the sodium fluoride compound is decided upon by the city, the Jamaica Water Supply Co. would have to invest about $546,000—more than the estimated price of equipment for all of New York.

Mrs. Fooner explained that the feeders for sodium fluoride were larger and more expensive than those used for the liquid compound. She also said that these feeders could not be installed in the company's existing well stations.

This would necessitate the construction of special dust-proof buildings and protective equipment for the employees who mixed the solution. The annual maintenance for

this equipment would come to about $100,000.

Mrs. Fooner emphasizes the fact that these estimates were rough, and that the amount might be greater or less. The unchangeable fact, however, was that the customers would have to foot the bill, regardless of how staggering it might become, because it would be met by an increase in their quarterly rates.

Families supplied by the New York Water Service might have an easier financial burden, as that firm maintains only 13 well stations. On the other hand, the cost would be shared by fewer customers than in the case of the Jamaica Co.

The New York Water Service has not yet undertaken an engineering estimate. Myers indicated it would not do so unless the city reached a decision to fluoridate, and then issued a direct order to the company.

The position of the department of water supply has been that these private firms would be saddled with an even more difficult problem with several stations than the city has with only one or two.

Furthermore, it is argued, when the points of treatment are so close to the homes of consumers, the dangers of mechanical failure and human error are also increased. There would be no way of stopping any mistakes before the water reached the drinking glass, with the possible ill effects of too much fluoride compound.

Fluoridation of Drinking Water—V

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 12, 1956

Mr. DELANEY. Mr. Speaker, the question properly may be raised as to whether fluoridating public drinking water is the best way to make available the tooth-decay-resistant action of fluorine. The following article, which I include under leave to extend my remarks, shows how it can be given in six other ways:

[From the Long Island Star-Journal of March 2, 1956]

DRINKING WATER IS NOT THE ONLY MEANS—FLUORIDE CAN BE GIVEN SIX DIFFERENT WAYS

(By Lois Benjamin)

If New Yorkers don't want—or can't have—fluoridated water, how else can they put fluoride to work for children's teeth?

There are at least half a dozen ways, say the experts, in which the controversial "wonder" chemical can be made available without putting it in the drinking water.

Despite the claim that fluoridating public water supplies is the cheaper, best, and easiest method of cutting down dental decay, fluoride has been successfully rubbed on teeth, put in toothpaste, pills, and milk, and mixed with bottled water.

The cost and convenience of these methods vary, but any of them can be employed with assurance that tooth decay will be substantially reduced.

The process of swabbing children's teeth with a 2-percent fluoride solution is practiced by many dentists. Decay can be cut about 40 percent by this method, and it could be done on a citywide basis by dental hygienists on regular visits to schools.

The board of health calls this procedure expensive and impractical. It is true that the cost per child, estimated at $5 per year, would be much higher than the theoretical 9 cents per capita annual cost for fluoridated public water.

On the other hand, with swabbing, no fluorides would be consumed by the patient, no danger of mottled enamel would exist, and all of the caution necessary in dealing with a potent chemical would be eliminated without sacrificing the dental benefits.

The results of combining fluoride compounds with toothpaste have not yet been conclusive enough for any authoritative judgment to be made, but several manufacturers have begun to distribute fluoride-containing dentrifices, with the promise that they will produce a reduction in tooth decay.

The fluoride tablet has thus far provided the best alternate route to dental health. Pills are already on the market which produce the desired results.

The department of water supply calls the use of tablets the most rational method of distributing fluorides, and their reasons for the statement are carefully outlined in a report by their chemical laboratory.

The necessity of exact dosage has been stressed both by advocates and foes of flouridation. Water intake cannot be limited, estimated, or prescribed for anyone in any community. When water contains a chemical compounds whose consumption should be limited, there is no way of protecting the community against overdosage.

But tablets, in prescribed quantities, are one of the safest known methods of giving medicine.

Profluoridationists have again contended that this procedure is expensive. But according to the department of water supply, the city could buy fluoride tablets for about 20 cents per thousand.

The department report stated that 1,500,000 children up to 12 years of age could have fluoride pills for about 8 cents a year each—less than the price of one tube of toothpaste.

Even if the city did not undertake a public health program, the pills can now be bought at $2.75 per hundred in retail drugstores, and pharmaceutical firms say the price may come down.

It has been pointed out that once the water supply was fluoridated, there would be no way for a person to avoid taking fluorides if he suffered ill effects. He could not eliminate water from his diet.

But with a tablet system, it would be a simple matter to discontinue the treatment if there were undesirable effects.

As for the claim that storing fluoride tablets in the home is inviting trouble, this argument could be applied to any other bottle in the family medicine cabinet.

A child would have to swallow 230 fluoride tablets in order to receive a fatal dose. If this unlikely possibility is still considered dangerous, the tablet content could be cut in half for home supplies.

As for milk as a fluoride medium, some experts claim this solution would be ideal, since most children drink more milk than water, and their intake could be controlled.

Technically, it has been cited, measuring and mixing processes in milk production are more accurate than those in water distribution.

Some proposal to add fluoride to salt, sugar, flour, or other foods have been made. But the supervision arguments apply to these household items as well as they do to water. Intake could not be carefully regulated.

Although all the facts about these alternatives are not known, considerable research is being conducted to weigh their advantages and drawbacks.

Should the water fluoridation plan prove unsuitable for New York's vast system, or if its critics defeat it here, it is still safe to say that children need not be deprived of stronger, healthier teeth through the benefits of fluoride.

Conditions In Indonesia

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, April 12, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Arnold C. Brackman from the Christian Science Monitor of November 24, 1954.

Though this dispatch is over a year old, it exactly describes the situation in Indonesia today.

It seems to me there has been ample time for our foreign policy makers to understand what is going on.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRESIDENT OF INDONESIA HELPS COMMUNISTS

(By Arnold C. Brackman)

JAKARTA, INDONESIA.—President Sukarno of the Republic of Indonesia apparently has identified himself openly with the Communists in the continued polarization here into Islamic and Communist camps.

The president, the most powerful figure in the country, thus has taken a step of great and grave importance for the future.

Let Mr. Sukarno speak for himself. These are paraphrases of three important speeches he has made in the course of the past several weeks:

At Medan, the capital of North Sumatra: I favor a "progressive" government; the present cabinet of Premier Ali Sastroamidjojo is "progressive," and I believe, in the national interest, that this cabinet should receive continued support.

CAPITALISM ASSAILED

At Palembang, the capital of South Sumatra: There are those who seek to bring about a Cabinet crisis. These opposition groups are traitors who wish to sell out their country to foreigners. We, in Indonesia, do not want to see capitalism prevail, neither foreign nor domestic. Although our achievements are few, we shall continue to be progressive.

At Surabaya, the capital of East Java: In building a new Indonesia, we must remain "progressive," and we must look to the masses. The Soviet Union and the People's Republic of China are model examples of countries where great construction is in evidence, based upon "progressive" mass appeal. These remarks do not necessarily mean that Mr. Sukarno is pro-Communist. Nor that the Communists, who wildly support him, are pro-Sukarno.

It is simply that they have been driven together in facing what they regard as the common foe, principally Islam.

An Islamic victory at the polls next year in the country's first general elections, providing free elections are held, would mean the curtailment of Mr. Sukarno's mixed power as a nationalist leader and as a constitutional President, an inkling of the sort of double existence which the President has maintaned skillfully and successfully for the past 10 years as chief of state.

PLAYS MAJOR ROLE

It is Mr. Sukarno's conviction that the only way to maintain unity at home among the divergent races and religions which make up this sprawling archipelago is by maintaining the present unitarian, secular Indonesian Republic. He believes a markedly

Islamic state would lead to the republic's disintegration.

As a consequence, the President and the Nationalist left-wing cabinet of Premier Ali, which he largely influences, has permitted the Communists here a free hand in building up their mass organizations.

For example, Perbebpsi, a Communist-controlled para-military front of ex-guerrillas, which commanded fewer than 50,000 members a year or so ago, today boasts a membership of upward of 200,000.

The Indonesian Communist Party (PKI), once broken and disjointed, still branded with responsibility for the Communist revolt against the republic in 1948, has developed now into an organization which claims 500,000 members.

At a PKI plenary session, held in early November, D. N. Aidit, party secretary-general, was able to say, "The PKI has become an important and great national power. * * * The PKI is playing a very important role in today's events."

Ominously, he added that in view of the present international situation "it is all the more important that we speed up our peace work in this country."

LACK OF FRICTION NOTED

In overseeing the Communist buildup in Indonesia, President Sukarno and the Cabinet seem to have become the victims of the balance-of-power theory. They created the Communist power here, with its hydraheaded fronts, in an effort to neutralize and counteract the influence of the Moslem Party opposition, whose largely undisciplined organization runs into millions of members.

As a result of this policy, a cold war between Islam and communism today exists in Indonesia. Its duration is its principal unknown factor.

Yet, free elections would give Indonesia's 80 millions, the majority of them adherents of Islam, an opportunity to peacefully determine their future.

In the eyes of many, an Islamic-dominated government would not necessarily spell the end to Republican unity. There is relatively little friction between Islam and either Christianity or Hinduism or Buddhism here. Indeed, the first formal opposition to Premier Ali's Government stemmed from a union in Parliament between the cross and crescent, between the Moslem and Roman Catholic factions. Since then they have been joined in the opposition by the Protestant Party.

The President's recent declarations have drawn expected support from Nationalist-Communist circles. The opposition, on the other hand, has questioned why Mr. Sukarno does not deem the election of Soviet Prime Minister Georgi M. Malenkov and Communist Chinese chieftain Mao Tse-tung as honorary chairmen of the PKI as an example of foreign intrigue inside an Indonesian domestic political party. They also may wonder why the President may refer to the United States in a lecture to Surabaya students as "liberal imperialist" while not even vaguely referring to the march of the new-style imperialism of the Communist world.

On the Other Foot

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Thursday, April 12, 1956

Mr. POTTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "On the Other Foot," published in the Zeeland Record for March 8, 1956. The Zeeland Record is one of Michigan's outstanding newspapers.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ON THE OTHER FOOT

There are a number of sayings which are widely known and which apply very well today to the antics of the Democratic high command in regard to President Eisenhower's announcement of last week that he will be willing to run for a second term if the Republican Party wishes him to do so.

One of these sayings is: "It makes a difference whose ox is being gored," and another, perhaps more widely known, is: "The shoe is on the other foot."

Aware of the great popularity of Mr. Eisenhower, the Democrats have been ardently hoping for months that his announcement would be negative. In fact, many of their public utterances have been obviously designed to try to influence that decision.

While Mr. Eisenhower held his own counsel, the Democrats have confined their attacks to what might be termed "sniping." But now that their worst fears are realized and they know that they have quite a job in defeating such a popular President, the wraps are coming off and the attacks are getting more personal.

It used to be that political ethics, already considered low enough by many, dictated that the opposition refrain from attacking a candidate because of his health or physical deformity. It was a matter of, shall we say, reciprocal courtesy.

But now the Democrats, with the presidential campaign not yet underway officially, are throwing away the rules and, if the current action is any indication, no holds will be barred.

Such a deliberate campaign to undermine confidence in the President's ability to serve comes in particularly bad taste from the Democrats, who themselves, just a very few short years ago, were knowingly perpetrating a great deceit of the American public in regard to President Roosevelt's health.

It is an open secret that Mr. Roosevelt's health had begun to fail even before he sought his third term in 1940. But the Democrats were very careful to keep that a secret.

When Mr. Roosevelt ran for his 4th term in 1944 he was indeed a very sick man, and the top brass of the party knew it well. News photographers were barred from taking any pictures that might catch the haggard expression Mr. Roosevelt carried when his guard was down. To use a blunt description, Mr. Roosevelt literally had to be carried into the White House for his fourth term.

But despite the fact that this was also well known to the Republican high command, it is to their credit that they refused to trade on it. Nor did they point to Mr. Roosevelt's polio crippled legs as being a drawback to his doing the duties of his office.

In contrast to the Democrat pattern of personal sniping, it is most refreshing the way President Eisenhower frankly and completely took the American public into his confidence and put the entire matter of a second term squarely in their hands.

Never in our memory has a high public official been so straightforward with the people.

Although Democrats are trying to instill fear in the public mind that Mr. Eisenhower will not be able to finish out another term, the President's frank statement and the testimony of the country's most eminent heart doctors should allay that fear.

Admitting that there is always some element of chance that Mr. Eisenhower may suffer another attack, his medical report places the President's health on a par with probably any one of the candidates in the Democrat Party who are seeking to replace him. Are they suggesting that the doctors are falsifying?

We believe the American public recognizes the truth and appreciates the complete frankness with which President Eisenhower discussed his condition with them. And we think they will believe the President when he says that he is able to fully perform the duties of the office.

Democrat attempts to infer that he cannot do the job are the same as saying that Mr. Eisenhower's message to the American people last Friday night was a complete fraud.

It wasn't—and the people know it.

Address by New York Secretary of State Carmine G. De Sapio at a Dinner Before the Hapoel Hamizrachi Council of Greater New York, New York City, Sunday Evening, March 18, 1956

EXTENSION OF REMARKS
OF
HON. JAMES C. HEALEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 12, 1956

Mr. HEALEY. Mr. Speaker, under unanimous consent, I include the following address of the Honorable Carmine G. De Sapio, secretary of state, State of New York, delivered before the dinner of the Hapoel Hamizrachi Council of Greater New York, in New York City, on March 18, 1956:

My good friends, it is a very great pleasure for me to join with you this evening in paying tribute to a great Zionist leader and to a man whose piousness and dedication have set him before the world as a symbol of character, integrity, and leadership.

I am very grateful for this opportunity to meet with you, and to give expression to those sentiments and to those emotions which shock and horrify all decent people. It is easier for me, as a Christian, to articulate the nausea and the shame of recent events in the Middle East, because it is understandably difficult for Jews—who have such deep spiritual and traditional ties with Israel—to take the position which cries out to be taken; to say the things which beg to be said and to do what humanity impells be done.

It is time for the Dr. Bernard Bergmans of America, and for his and your conterparts throughout the world, to have the responsibility of Israel shared by your Christian brothers, and to have the challenge for preserving democracy in the Middle East shared by all freedom-loving people.

It is time to declare that Israel is not a problem for Jews, but that Israel is a bastion for world survival. It is time to call opportunism by its correct name and to give the lie to the diplomatic double-talk which seeks to place upon the alter of expediency the dreams and the prayers of generations and the lives of millions. It is time to end political bigotry. It is time to build the kind of policies and the kind of philosophy upon which freedom can be sustained and only upon which justice can survive.

It is not enough that Jews for thousands of years have dreamed of the promised homeland. It is not enough that Jews in countless numbers have had their blood spilled by ruthless despots. It is not enough that Jews all over the world have contributed to

the growth and development of civilization against enormous odds and in the face of violent social and moral shackles. And it is not even enough that a tiny Republic opened its arms and its heart and its limited bounty to the refugees of the world and gave them not only haven, but hope; not only peace, but promise.

None of this is enough. None of the past suffering and the agony and the toil and the terror of years and years of bigotry and godlessness is enough. Now, again, the dream must be shattered, the hope crushed, the resolution, the determination, and the peace destroyed. And in what interest? In the interest of oil? Partly. In the interest of airbases? Partly. In the interest of poor judgment? Partly. In the interest of callousness? Partly.

The tragic fact is that in the combined, agonizing interest of all of these, together with bungling stupidity, Israel today stands on the verge of annihilation.

On February 24, 1956, Secretary of State John Foster Dulles—this Nation's official spokesman before the world—told the Senate Foreign Relations Committee: "Saudi-Arabia practices very rigorously certain religious doctrines, and they have felt for a long time—it goes back centures—a very particular animosity toward the Jews, because they credited the assassination of Mohammed to a Jew."

This was said by the Secretary of State of the United States of America—a statement which he later withdrew, after, as he admitted, his advisers had told him he was wrong about Mohammed.

Does this statement by the Secretary of State sound familiar to you? For how many years now have the Jews been accused of the kinds of sins which encourage religious wars, unholy crusades and wholesale plunder on the pretext of religious revenge? What do you imagine Adolf Hitler would have said under similar circumstances? And what do you imagine Khrushchev says in support of his position? Indeed, what have the tyrants and terrorists said through the ages—to excuse their ruthless destruction—that our Secretary of State didn't say just 3 weeks ago?

Was it a slip of the tongue? Was it perhaps a sly attempt to condition the American people to an indifferent attitude toward the Middle East by characterizing the unrest there as religious rebellion? Or if, as he said, he was merely mistaken in his statement, how many such mistakes can we expect from a man who brings us one day to the brink of war, and the next day to the brink of spiritual and moral bankruptcy?

How many mistakes, and how many misstatements, and how many misrepresentations must we be expected to accept from the architect of America's foreign policy?

How many contradictions, and how many retractions, and how many apologies must we tolerate?

America represents herself to the world as the arsenal for democracy; the bulwark of liberty and the guardian of peace. And so one day we tell the world that we will remain neutral in the Middle East and the next day we proceed to send tanks to Saudi-Arabia.

The following day we tell the world that we will halt the shipment of these tanks, and then we send them anyway. One day America tells the world that it will not help Israel and then the next day it tells Israel that it has an open mind.

One day, one thing; the next, another. And while all this is going on, the Secretary of State expresses the judgment that all that the Arabs are doing are practicing religious doctrines which are based upon their belief that the Jews killed Mohammed. This statement—both in terms of historic accuracy and in purporting to represent the thinking of the Arabs—is as false and vicious as the nefarious lies in the counterfeit Protocols of Zion.

But the Secretary of State blandly declares that his advisers had told him he was wrong, as he gallantly withdraws the statement. And while it is true that remarks can be expunged from a record, you can never erase the philosophy; the meaning; the drive which such a remark represents. For here is a profound illustration of the great danger, not only which Israel faces, but which all of us face, as justice stands on the brink of destruction.

This diplomacy of doubletalk and double-dealing just has to be stopped. This diplomacy of dedication to private profit at the expense of international morality has to be stopped. This diplomacy of talking tough to Russia, and helping her to destroy Israel, has to be stopped.

My good friends, bigotry must be stopped.

But Israel, ladies and gentlemen, is neither the beginning nor the end. It is part of a pattern. It is the same pattern which allowed India to be wooed into the Communist orbit. It is the pattern which made possible a new understanding between Yugoslavia and the Soviet. It is the pattern of the delivery of a large portion of Indochina to Red totalitarianism. And it is the pattern for Russia's success in penetrating the Middle East.

And that is why Israel is not a problem for Jews, but a problem rather, for all the free world. That is why it is equally the duty of every Christian who cherishes freedom and justice to protect, to strengthen, and to build that gallant little bulwark for democracy and peace.

I am proud—prouder than I can say—to be able to participate with you in this dinner tonight, a dinner which honors a great leader at the same time that it provides the funds to build shelters along Israel's troubled borders.

Rabbi Bergman's life and work represent an inspiration not only to those of his religion, but to all those who respect truth and who love God. And your great Zionist organization, which Dr. Bergman heads, acts not only as a militant vigilante of faith and a teacher of truth, but has also established 72 agricultural settlements; 30 housing developments; 80 children's institutions and a network of schools in the promised land.

To Dr. Bergman and to you, my friends, I extend my warm congratulations as a Catholic and my deep gratitude as an American.

You have never—nor will you ever—be alone. For your work is just, your cause is noble, and you are possessed of the blessings of God.

Thank you very much.

Death of Gen. Dro Drastamat Kanayan, Armenian Patriot

EXTENSION OF REMARKS

OF

HON. CHARLES E. POTTER

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Thursday, April 12, 1956

Mr. POTTER. Mr. President, unfortunately those who fight for the liberty and freedom from oppression of their peoples are not always rewarded with victory during their lifetime. It is all the more significant, then, that we take cognizance of those who have fought so hard and yet are called from this life while their work is yet incomplete.

Gen. Dro Kanayan, a leader loved by all his fellow Armenians and by others throughout the world, is such a man.

Even though he knew that the objectives for which he fought might never be reached while he lived, he never ceased to fight because he believed in those basic principles of freedom and liberty for his people.

His life can serve as an inspiring example to all. In recognition of his work, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Hairenik Weekly of March 15, 1956, which covers the life of this great man.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DRO DRASTAMAT KANAYAN

Dro, baptismal name Drastamat Kanayan, the hero of Bash Abaran and one of the Armenian Revolution's the last of the Mohicans, closed his eyes forever in New England Deaconess Hospital, Boston, last Thursday, March 8, at 8:45 p. m., leaving his family, his beloved organization, the Armenian Revolutionary Federation, and a host of freedom-loving Armenians prostrate with grief.

The list of Dro's heroic exploits in the fight for Armenia's liberation from Turkish and czarist tyrannies is legion, but he is best known for his victory at Bash Abaran, 1 of the 3 crucial battles of 1918—Sardarapat and Karakilisseh—whose victory saved the remnants of the Armenian people from certain extinction and set the stage for the proclamation of the independent Republic of Armenia. At that time Dro's division guarded the very gates of Erivan, the capital of Armenia, and his decisive victory, combined with the victory on the two other fronts, forced the Turk to recognize the Armenian right to independence.

Although the son of an affluent family, he renounced wealth, comfort, and a secure future, and chose the thorny path of the revolution for the liberation of his beloved people. He did not even finish his education, but from early youth he took up a life which was full of adventure and peril, and in that life he forged a record which has become a legend among the Armenians.

He was a dedicated soldier of the revolution, resolute, proud, and fearless. He never knew defeat, and he came out of all his battles unscathed. Early in his youth he went after the tormentors of the Armenian people. It was he who rid the Armenian people of two of its worst executioners, Nagashitze, the military commander of Baku, and General Alikhanov, the governor of Alexandropol, who had incited the Tartar hordes to massacre the Armenian populace.

During the Armeno-Tartar bloody encounters of 1905 he was the right arm of the Armenian Revolutionary Federation, which organized the defense stands under the leadership of the incomparable revolutionary leader, Nicol Duman.

Later, in 1916, as commander of the Second Armenian Volunteer Brigade, and in the ensuing unequal fights preparatory to the independence of Armenia, as commander of the Bash Abaran front, he was invincible and led his soldiers from victory to victory.

During World War II, having for his supreme concern the fate of the thousands of stranded Armenians within the battle zone, he carried out an extremely sensitive and perilous mission which he completed successfully and was instrumental in saving thousands of Armenian lives from massacre and the rigors of deportation.

He continued his sacred work during the peace years, relentlessly pursuing the merits of the Armenian cause before the nations,

with a clarity, sincerity, and a devotion which compelled the respect of all. His presence in the dispersion, from the Middle East to the United States, inspired the multitudes and kept alive the fire of patriotism, the love of the fatherland, and the eternal struggle for freedom.

He was one of the last of the heroes of the Armenian Revolution, Andranik, Keri, Hamazasp, Prince Arghutyan, Nicol Duman, Murad of Sebastia, Sepouh, whose sacrifices wrote a glorious page in the history of the Armenians. All homage and glory to the memory of a great Armenian.

Those Biased Polls

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 21, 1956

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Reading (Pa.) New Era:

THOSE BIASED POLLS

So-called public opinion polls are going to be used more than ever this year in an attempt to influence the election outcome.

Although they pretend to be scientific, the opinion polls as applied to the thoughts and actions of voters at some future date are little more than the opinion of those who pay for the poll—taking invariably organizations and businesses sympathetic to the Republican cause.

Congressman GEORGE M. RHODES, during a House Post Office and Civil Service Committee hearing on Republic plans for higher postal rates, remarked that polls were being used to influence opinion rather than to record opinion.

From past experiences we are inclined to agree that this is true. The Literary Digest debacle back in 1936 and the distortions of politakers in the Truman victory of 1948 are outstanding examples of inaccuracies in polls.

Only recently, in Minnesota's Democratic presidential primary, the Minneapolis Tribune predicted in a statewide poll that Stevenson would receive 52 percent of the vote, KEFAUVER 39 percent, and 9 percent undecided. Actually, KEFAUVER got 57 percent and Stevenson 43 percent.

Pollster George Gallup said on November 14, 1948, after the Truman repudiation of all polls, that election polls serve no possible social good.

Maybe Gallup learned his lesson but we seriously doubt it. In fact, a new kind of popularity poll is conducted regularly to determine the degree with which President Eisenhower, and Democratic challengers such as Kefauver, Stevenson, and Harriman are liked by the people.

One such poll permits individuals to rate popularity on a scale that ranges from plus 5 to minus 5. Obviously, an individual who goes all the way in registering popularity with a plus 5 still will have only 1 vote on election day. Yet, the plus 5 popularity opinion gives undue weight to the candidate.

Natually, if a poll can be rigged to give President Eisenhower a popularity factor of 68 or 69 percent, it might convey the impression that 68 or 69 percent of the voters are going to cast ballots for him next November. Here is definitely a poll being used to influence, rather than measure, public opinion.

Most polls are hit-or-miss at best. Few people have ever been interviewed by a major poll, or know someone who was. Furthermore, the average citizen keeps his politics to himself until he gets into the voting booth.

Voters would do well to remember that big business money and big publishers like Henry Luce of Time magazine use their polls to sway public opinion, if they can.

The only reliable poll is a record of candidates' votes on important issues. If you stick to that kind of information the chances are you will vote for your own economic interest without the aid of distorted popularity gauge that bears little or no relationship to the bread and butter issues affecting workers' lives.

H. R. 12

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. AVERY. Mr. Speaker, like nearly every other Member of the House who represents a substantial agricultural district, I have followed the developments on H. R. 12 through this House in the 1st session of the 84th Congress, and more recently the deliberation by the other body of Congress, both in the Agriculture Committee and when it was on the floor for amendment and debate. Also through the members of the conference committee I have kept abreast of the deliberations of the House and the Senate conferees in formulating the conference report now before the House.

I do not take the position that it is by any means a perfect bill, nor that it is a complete answer to the many agricultural problems existing in northeast Kansas. I do feel, however, that it offers the best possible opportunity for improving the agricultural economy in my district, and I am going to vote for the adoption of the conference report.

On the matter of parity, my colleagues from the Middle Western States are familiar with the provisions of H. R. 9861, which I recently introduced providing for what is known as a graduated parity on the basic agricultural commodities. I firmly believe that legislation providing for graduated parity as proposed in H. R. 9861, or others similar to it, would be for the best interests of the overall agricultural economy. I also believe that such provision is economically sound and I will continue to support such legislation. I further feel that such parity provision carries more of the benefit to the individual farmer than does rigid 90-percent parity, and at the same time incorporates the advantages of flexible parity now in effect by reducing the incentive on high production. I do feel, however, that supplemental income is mandatory for agriculture in 1956, and the provisions of the conference report now before us appears to be the only alternative.

I further feel that the conference report is remiss in not taking into account the voluntary reduction of basic crops that has taken place, especially on the smaller farms. This has had the effect of lower basic allotments than would normally have occurred, and which have been further reduced in view of our recent surpluses. On the small farms the resulting allotments have become so low that it is becoming increasingly difficult to maintain a sound economic farm unit. Continuing on this basis of allotments, we are penalizing the farmers who have adopted good farming practices and favoring the operator who continued to keep every acre possible planted to a cereal crop.

On the matter of domestic parity for wheat, I am willing to present the matter to the farmers for their approval as provided in this conference report, but I seriously question that it will work to the advantage of the First District of Kansas if it is approved by referendum.

Although the $100,000 limitation placed in the bill by the Senate on the amount of a commodity credit loan available to any one operator was not realistic, at least it was a step in the right direction. I regret this deletion was made by the conference committee, as it appears evident to me the program over the years has been most favorable to the big operator at the expense of the family-size farm. In my opinion the maximum commodity credit loan should not have exceeded $50,000, and more probably $25,000 would have been a realistic limitation.

As stated before, however, I am going to vote for the passage of the bill.

Inter-American Solidarity

EXTENSION OF REMARKS
OF
HON. EDMUND P. RADWAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 12, 1956

Mr. RADWAN. Mr. Speaker, in celebrating this Pan American Day, we are celebrating the 66th anniversary of that day in 1890 when the American Republics united to form an association now known as the Organization of American States—an organization which constitutes the oldest international association of the world. In commemorating this event symbolic in the history of the Western Hemisphere—and indeed the whole world—Americans throughout the 21 American Republics may well take pride in the significance and importance of their continuous efforts in achieving the inter-American solidarity which exists today. For this deep-seated solidarity has many roots and has survived many difficulties.

Even before the end of the colonial period, during the last quarter of the 18th and first quarter of the 19th centuries, certain concepts were evolving throughout the Western Hemisphere which have provided a unique framework for the special relationship characteristic of inter-American relations from 1826

through modern times. This unique framework was compounded, first, from a feeling of distinctness from the Europeans, Asians, Africans, and others; second, from a heritage common to all peoples who have shared in chiseling out of a formidable wilderness a new way of life built upon courage, self-reliance, and determination; and, finally, from the mutual respect and understanding common to peoples who have freed themselves from colonial domination.

The history of inter-American relations which began in the early 19th century, falls essentially into three eras. The first, 1810–95, was highlighted by the evolvement in 1823 of the Monroe Doctrine—a doctrine designed primarily to protect the Western Hemisphere from European interference. However, during this period each of the republics was concerned with its internal affairs. In the United States attention was concentrated during the middle of the century on its Civil War and subsequently upon the mighty western movement. In Latin America in the early part of the 19th century, upheaval was rampant. Until 1825 when the last of the republics had freed themselves from European political domination, waves of revolution swept from the Isthmus of Panama to the Straits of Magellan. Following that great convulsion, the nations of the new free world were still concerned that European powers would return and reconquer their hard-won lands. To offset such a threat, Simon Bolivar, the great liberator of northern Latin America, convened a congress in Panama in 1826 to discuss measures for hemispheric defense. And out of this congress, came a treaty of perpetual union, league and confederation. The treaty related to means for common defense, peaceful settlement of disputes and the maintenance of the territorial integrity of the members of the confederation—a theme which in essence has permeated all subsequent conferences. However, the hopes envisioned in the purpose of that significant congress and its subsequent treaty were not quickly realized. As in the United States, the new republics were busy with their internal affairs, and the period from 1826 was punctuated with civil wars and intrahemispheric clashes. Nonetheless, still faced with the possibility of reconquest by Spain, the various republics continued to meet from time to time to consider defense measures, the peaceful settlement of disputes, cooperation in commerce and navigation, and, later, questions of law and the control of contagious diseases. Thus, the dream of inter-American cooperation was far from lost.

The second major era in inter-American relations began in 1889 when the United States invited the American Republics to the first International Conference of American States here in Washington. This conference—the first of the series of modern conferences—was called to consider peaceful means of settling disputes and means of improving commercial relations among the American countries. From this conference came a multilateral treaty for the arbitration of disputes and the establishment of that momentous "international Union of American Republics" which we commemorate today. This international union was not a political union, but, rather, a commercial one. A permanent bureau which constituted its secretariat was located in Washington. In 1910 this bureau was renamed the Pan American Union, and its terms of reference were expanded in keeping with the broadened scope of the cooperative plans of the international union which as the years passed had moved into the realm of economic, social, and cultural affairs as well as the purely commercial. All of these factors contributed to and were indicative of closer understanding and hemispheric solidarity.

However, the real high tide of inter-American relations was during the period 1933–1956, which constitutes the third era of these relations. Before this time, though there had been a steady development in the direction of inter-American solidarity along cultural and economic lines, there had been political difficulties which at times had been serious enough to threaten the International Union. But with the shift of position by the United States at the Montevideo Conference in 1933 concerning the question of intervention and with the conclusion there of a Convention on the rights and duties of states more in accord with th eviews of the Latin American states than had been our stand in the past, the good-neighbor policy was launched. In the subsequent period from 1933 to 1946 numerous conferences were held, each resulting in stronger declarations of solidarity than before. With the outbreak of World War II all but one of the Latin American nations contributed its full cooperation to the war effort. The Chapultepec Conference held in 1945 provided for continued joint defense of all the states of the hemisphere in case of aggression against any one of them, for steps to strengthen the inter-American system by increasing the authority of the Pan American Union, and for the establishment of an Inter-American Economic and Social Council. But the meetings in 1947 and 1948 not only put the cooperation which had existed during the war years on a permanent basis, but also reaffirmed the principles of inter-American solidarity which had been developing over the entire century. At the conference in Brazil in 1947, the American states adopted the Inter-American Treaty of Reciprocal Assistance which provided for permanent collective self-defense in the event of an armed attack or threat against the peace and security of any one of the signatories, from within or from outside the hemisphere. At the Conference in Columbia in 1948, they adopted the Bogotá pact which consolidated and coordinated the many earlier agreements on arbitration and other peaceful means for settling disputes among member states. It was also at this conference that the Inter-American system was given its new name—the Organization of American States. The new charter, in addition to tightening the administrative organization, reaffirmed the Organization's concern with cultural, social, and intellectual matters. The Organization of American States has already effectively proved its strength in times of crisis as exemplified by its swift action and dramatic success in connection with various controversies and threatening situations which have arisen since 1948.

But aside from the happy example to the world of a group of 21 nations living side by side, not always agreeing, but still managing to work our differences within the framework of an effective inter-American system, the influence of this remarkable system reaches far beyond the confines of its hemispheric borders in still other ways. It was upon the insistence of the Latin American countries that adequate provision was included in the United Nations Charter for the continued existence and operation of the regional organization system upon which so much emphasis has been placed in recent years. In fact, the Inter-American Treaty of Reciprocal Assistance was the first regional agreement signed under the provision of article 51 of the United Nations Charter. Moreover, it was upon this regional agreement that the North Atlantic Treaty Organization itself was later modeled.

In the area of technical assistance and economic cooperation, the inter-American system has also proved of particular significance. For the United States sponsored program of extensive cultural and technical interchange with Latin American countries under the aegis of the good-neighbor policy in which in effect served as a proving ground for the many successful technical-assistance programs which have since been launched throughout the world.

The impressive spectacle of 21 independent and individualistic republics quietly, steadily, and persistently working together in an atmosphere of dignity and harmony for the cause of peace and democracy, has always been a source of pride in the Western Hemisphere and a source of admiration in hemispheres other than our own. But today, with the threat of communism as great if not greater throughout the world than it has ever been in the past, we dare not rest on our laurels. We must, at every level of our international relations—the political, the economic, the cultural, and the social—rededicate ourselves to the service of that solidarity on which our splendid inter-American system stands, and in so doing rededicate ourselves to the service of the cause of world peace and progress.

Another Communist Victory

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 12, 1956

Mr. PILLION. Mr. Speaker, I am pleased to call to the attention of the Members of Congres a most praiseworthy editorial.

The nullification of the sedition statutes of 42 sovereign States, in a recent decision of the United States Supreme Court, is a glaring example of devious legalistic quibbling.

The tortuous reasoning of the Supreme Court comes close to abolishing the sovereign power of the 48 States in the field of sedition. The will of the Supreme Court is imposed and substituted for the will of the people of the States and for the will of the Nation as represented by the United States Congress.

This decision deprives this Nation of the benefit of the investigations of communism, the enforcement of anti-Communist laws, and the cooperation of State and local police with the Federal Government in this most serious criminal field.

The implications of this decision are not baffling. Like many other recent decisions of the court, it clearly and unquestionably gives aid and comfort to Communists throughout the world. It's results are clear to everyone, including the members of the Supreme Court.

I commend the editorial department of the Buffalo Evening News for their editorial of April 4, 1956, which follows:

THE COURT LEGISLATES

We find it hard to follow the Supreme Court's reasoning in holding that the sedition statutes of 42 States are null and void because they conflict with the Federal laws on internal security.

The court concedes that Congress did not specifically assert exclusive Federal jurisdiction in the Smith Act or any other Federal law on the subject. In fact, as the 3 dissenters point out, the whole body of Federal internal security legislation is codified under a general provision that says the exact opposite: "Nothing in this title shall be held to take away or impair the jurisdiction of the courts of the several States under the laws thereof." The dissenting justices further note that throughout the period since the Smith Act was passed, many States have had their own sedition acts on the books, many others have passed such laws, and Congress, while voting many amendments and additions to the Federal laws, has made no move to discourage parallel State legislation.

Yet the majority of the Court, speaking through Chief Justice Warren, finds in the overall fabric of Federal antisubversion legislation a clear intent by Congress to occupy the whole field. So the States are told, in effect, to forget about trying to unearth subversive conspiracies and leave that to the Federal security agencies. Such conspiracies cannot be prosecuted any longer under State sedition laws.

In support of this position, the Warren opinion notes that the various State laws are in no sense uniform, that some are studiously drawn, while others are vague and almost wholly without proper safeguards. But the court wasn't ruling on the general validity of a multitude of statutes. It was considering specifically the Pennsylvania statutes. If that one was weak on due process it could be stricken down on that account, and other legislatures, with laws exhibiting similar frailties, would have to take heed. But this is far from justifying a finding that all State laws on the subject are in conflict with the Federal plan, especially in the absence of any clear congressional mandate to that effect.

What the court seems to be saying is that many State sedition laws are objectionable, so it might be better to leave the whole subject of internal security to the Federal Government. But if that is what the court had in mind, it was declaring what the policy should be, not what the law is. It is not the Supreme Court's function to make the laws, but to interpret them. And in reading the Federal laws which were cited in this case, we find it hard to see in them anything other than the three dissenters (Justices Reed, Burton, and Minton) did: that Congress has declared no intent to preempt the sedition field, and that until and unless it does, the various States should have the right to use their own police powers, under constitutionally valid statutes, to punish subversive conspiracies.

Reflections After the Washington Conference

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 12, 1956

Mr. DODD. Mr. Speaker, because I believe the thoughts contained in the following article are worthy of the attention of the Members of this House, I am inserting an item from the Bulletin of the Slovak National Council Abroad, written by Dr. Joseph A. Mikus, director of the Slovak League Press Bureau, Washington, D. C.

REFLECTIONS AFTER THE WASHINGTON CONFERENCE

(By Dr. Joseph A. Mikus, director of the Slovak League Press Bureau, Washington, D. C.)

The cold war has reached a new phase. As long as it had concerned itself with the ideological conflict between democracy and communism, and with religious persecutions and the imprisonment of ecclesiastics and of patriots somewhere beyond the Iron Curtain or in China, the average Englishman and the average American did not seem to be overly disturbed by it. "God's in His heaven, and China's far away," apparently summed up the attitude of the common man as he went about his daily rounds with quiet detachment.

Now, however, the world of the Soviets has its political position so strongly intrenched that it ventures to contemplate not only the psychological facets of war with the West, but certain practical expressions of its hostile attitude, too. It can indulge aspirations to economic rivalry; it can study access to Western markets and their control; it can attempt the export of arms and munitions to those areas where such armaments can endanger the points of opposition or of defense now maintained by the West. It can even manage loans at usurious rates negotiable by political notes. We awaken to a realization that this is no longer a mere abstruse metaphysical disputation as to whether man was created by God or whether he is just a biological accident of matter. This newest mode of encounter doubtless engages but little of the Western World's intellectual capacities but it strikes a superlatively more telling blow upon its very skin and bone.

Britain's position in the world is intrinsically dependent upon the freedom of the seas and on world trade. Once the ports and the free lanes now open to her merchant ships are throttled, there will be no more validity to the hypothesis that Piccadilly Circus in London is the umbillicus of the world. And it is possible that those lanes can be closed by the very weapons now being produced for Egypt by Communist-controlled Czechoslovakia.

This is the essence of the appalling realization which companioned the British Prime Minister on his recent trip to Washington. The President of the United States and the Prime Minister of Great Britain, however, could hardly restrict their study of conditions posed by these new developments of the cold war without surveying them in relationship to the growth of world communism as a whole; for, as matters stand, it happens that since 1917 bolshevism has created in the midst of the free world one mammoth concentration and labor camp. This preserve where communistic will dominates absolutely is not only an area sealed to the world and isolated for its own interests, but it is communism's politico-military platform by which it plots to overpower those nations which still remain free. Once they, too, are under the dictatorship of Moscow, it hopes to achieve its aim of a world proletarian state.

As long as the Red world is economically overshadowed by other nations, however, it stands to reason that it cannot engage in open warfare against the democracies; until it attains that hoped-for economic supremacy, it has no satisfying assurance of victory. For this reason, it is still content with organizing preliminary circumscribed or local strifes (China, Korea, Indochina) in the hope that in one or another country it may fall to the lot of communistic leaders there to succeed in gaining the ascendancy and in seizing the local government. In other countries where it has at least some foothold or some rooted operative agencies, it parcels out advice to its party members forecasting how, by means of the magic national front, they will in time be in a position to take over the entire machinery of government even with little or no resistance from within as this was remarkably demonstrated in central and in Eastern Europe after 1945.

And so we note that, as a consequence of these tactics, the world of concentration camps shows a steadily progressive growth. Its sentry posts, its lookouts, and its observation towers penetrate into more and more free territory. At the same time, speaking more or less figuratively, the reflectors and machineguns of the Communist police force keep all the inhabitants of this barbed wire-bounded world under nerve-debilitating control. For its subjected people to undertake any sizable movement in protest, apart from acts of individual despair, is an unthinkable venture. Let us try to understand why.

While this concentration empire is unable by dint of its slave exactions to balance its own economic needs and to furnish supplies necessary for even the bare sustenance of its dependents, it does manage to provide for basic necessitites by a peaceful exchange of commodities with the world of democracy. While internal order is enforced in this earthly purgatory-land by the machinegunners of the omnipotent MVD or, in the enslaved states, by officers of "national safety," the masters of Janus-like double-facedness and Soviet charm—Bulganin, Krushchev, Molotov, Zorin, et al.—preserve trade and diplomatic relations with the free world. They seem to be bent on outdoing each other in a contest of caviar-vodka parties, as they vouch to the western world that their intentions are all centered on peace, on universal diplomatic friendliness. At the same time, they are busy magnanimously signing non-intervention pacts and charters of human rights, denouncements of colonialism, documents guaranteeing the self determination of nations, etc. Blandly they will tell you that they ask nothing but co-existence.

And the guillible West, blind to the seamy side of these publicized manifestations of big-heartedness, actively contributes to the

very enslavement of that isolated and shackled world which is grossly denied its political birthright. This reprehensible attitude of the West is the only reason why communism has not only survived but has even thrived to the attainment of such dangerous proportions. The Red menace is indulgently warmed and fattened in the vitalnzing sunshine of the tolerance of the West. For this reason, too, the pressure of the yoked nations, though it might exert some centrifugal reaction on the inner walls of that concentration dungeon, finds itself likely to be spent and frustrated upon the torpid international structure of which the Soviet Union itself is an accepted member. Formal international recognition of the Soviet Union, its membership in the Security Council of the United Nations, its active partcipation in every significant international conference—all that serves but to advance the Soviets politically and helps externally to add prestige to Russia's position. Even if the poor Russian muzhik had a personal conviction that his Kremlin dictators are slave masters, he finds this judgment controverted by western statesmen who participate in frequent Potemkin-engineered "peace conferences" with personalities representing world communism. Moscow had need of the Geneva Conference in order to be able to produce for its Russian workers in industry and collective farming those news photographs of Krushchev and Bulganin in the company of the President of the United States and the Prime Minister of Great Britain and the Premier of France; in other words, for the "appeasement" of its own native element. Similarly did Moscow find it highly expedient to use for its own advantage the news reports which were circulated about the peace messages sent by Bulganin to President Eisenhower.

After the sterile aftermath of so many previous conferences, what should have been the underlying motive for this Washington meeting? The Hamlet problem confronting the West today amounts to this: Are the democracies capable of evolving worldwide global tactics to defeat communism or will they themselves ultimately be absorbed by it? A second question evolves from the answer to the first: Is the defeat of communism possible without a resorting to atomic warfare?

We sincerely believe that it is. If the major powers of the West would sever diplomatic and economic relations with the Soviet orbit; if they would unanimously decree that the domestic crimes of communism must be pilloried even internationally; if they would direct to the organizers of the slave system of Moscow this message that they no longer have faith in meeting them at Geneva confabs and at similar seances at which the Communists summon before the eyes of the Western World the ghost of peace, a blessing they have long since consigned to the tomb—then assuredly, Moscow's dictators would shed not only the beaming smiles that wreathe their faces but also their swagger and their cocksureness in political maneuvering. And if the Western World would further draw itself up to its full honorable stature and declare that it has no more patience or interest in honoring the existence of the communistic system and that in every nation and territory it would choose to leave the fate of totalitarianism to the choice of the peoples themselves, expressed in free elections, then such a stand would undermine the hardness of the brutal overlords and encourage healthy resistance on the part of the subjugated nations more than has anything else inspired them heretofore. Given such a situation, definite internal action would be initiated and with psychological assistance from the West, it would culminate in the overthrow of these inhuman oppressors of mankind.

The subject of the Washington Conference has not been divulged. We do not know nor can we surmise what its practical outcome will be. There is as yet no indication as to whether or not the West will undertake a new mode of conduct. However, if Prime Minister Anthony Eden came to Washington merely to negotiate the export of goods from the West to China, then assuredly, this latest meeting has been a grand fiasco.

The pronouncement which President Eisenhower and Prime Minister Eden signed after the 3-day meeting and which is to be entered in the archives of the cold war as the "Washington Declaration" is truly a remarkable paper which, according to Eden, brilliantly summarizes the political philosophy of the Western democracies as they currently confront communism. An aching world, however, is surfeited with such fundamental declarations of the West against communism. There have been so many of them that it is time to wonder whether one additional one might not have the inflationary capacity in respect to all the previous ones. What the West needs today more urgently than salt is not hollow pronouncements but deeds.

The Scrap Trade and Steel Companies

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 10, 1956

Mr. MULTER. Mr. Speaker, I desire to call to the attention of our colleagues the following editorial from the Waste Trade Journal of April 7, 1956, which sets forth the position of the scrap trade in attacks on the industry by steel mills:

STEEL MILL PROFITS SOAR DESPITE HIGHER SCRAP PRICES

Steel mills blame the scrap iron trade for almost everything, with the possible exception of the weather.

If the price of scrap goes up, the steel mills holler blue murder that the dealers are exporting too much thereby creating a domestic shortage and endangering the welfare of the Nation.

If the steel mills want to advance the price of their own products they claim that they are being forced to do so because of the high prices that they have to pay for scrap.

If some steel mills' profits are not larger than they are it's because so much more had to be paid for scrap iron.

These exaggerations, unfounded though they be, are proclaimed so forcefully and so frequently that those who are not familiar with the situation are inclined to believe them, and, believing them, they pass them on to others. For example, a recent issue of the Herald Tribune featured in bold display type on its financial page the following headline: "Small Steel Mills Hit by Scrap Price—Profits Cut by Spiraling Market Rises." And then the story went on to say:

"The upward spiral in price for scrap iron and steel is putting severe pressure on profit margins of many of the country's small, nonintegrated steel plants. These depend on scrap for basic material.

"Major steel companies do not have too difficult scrap problems. They obtain industrial scrap, rerouted to their furnaces from customer manufacturing companies' waste.

"On the other hand, the little fellows in the steel business must depend primarily on purchased or open market scrap. This is material collected by the scrap industry from automobile graveyards, farms, and other sources."

The scrap trade probably never realized the tremendous role that it played in the profit and loss life of the small steel mills. If only they sold their scrap for less, even at a loss, what great benefactors they would be to the steel companies. What greater profits the steel companies could make if they did not have to pay so much for scrap. The following table of steel mill earnings tells the sad tale of woe of how some of the smaller companies suffered in 1955 as compared with 1954:

	Net income for 1955	Net income for 1954
Wheeling Steel	$17,296,000	$9,595,740
Allegheny Ludlum	14,985,660	4,246,083
Granite City	12,611,000	4,012,000
Sharon	7,987,622	3,134,864
Pittsburgh Steel	7,515,000	2,170,000
Lone Star Steel	4,759,000	−1,009,000
Harrisburg Steel	4,387,922	2,779,960
Copperweld	2,365,459	703,150
Superior Steel	1,716,900	532,970
Scullen Steel	414,380	294,698

The Lukens Steel Co., of Coatesville, Pa., which never misses an opportunity to castigate the scrap-iron trade for exporting scrap had this to say in its annual report:

"Though beset by rising raw material prices, particularly iron and steel scrap, which increased costs about $4 million over 1954, net income for the fiscal year ended October 22, was $1,731,238." Profits for the interim period were $941,532, which, projected at an annual rate would have been $5 million, or 5.1 percent of sales.

"Despite scrap price increases and heavy flood damage, the company's working capital climbed $2,291,000, from $13,882,000, to $16,173,000, as of December 31."

Ernest T. Weir, chairman of the National Steel Co., recently criticized the State Department for permitting "unlimited" exports of scrap iron and steel. The effect of such exports, he declared was "not only to deplete the supply of an irreplaceable raw material but also to cause a steep advance in its cost to the steel industry."

Why are the steel mills picking on the scrap iron trade? It seems to be part of a pattern to justify higher prices for semifinished and finished iron and steel products. The Wall Street Journal in a recent issue said:

"Steel market events are adding up to one of the biggest steel price increases on record. It will come right after the steel labor settlement, possibly in early July, and by present indications will probably exceed the $9 a ton boost made in the summer of 1948, the largest of the postwar increase."

The Wall Street Journal goes on to say:

"Scrap iron and coal are the major ingredients of the steelmaking process. The new increases being marked up on them make more certain the prospect that steel prices generally will take a giant step higher within a few months."

If the steel mills feel that they must get more for their products why make it appear that they are being driven to take this step by the scrap trade? While we disagree with Mr. Weir when he flays the scrap trade for its exports, we commend and admire him when he comes out openly and forcefully for higher steel prices on the ground that they are needed to obtain the money for construction of new steelmaking facilities the country vitally needs. That's businesslike and good commonsense.

Of course scrap-iron prices have gone up, but so has the price of pig iron, iron ore, steel-mill extras, copper, lead, zinc, aluminum, and a host of other commodities. There is this difference, that scrap having moved up from depression levels makes the rise seem larger than in some of the other

commodities. The scrap trade has had to pay more for labor and for the raw materials that it uses as have the steel mills. Its profits are by no means commensurate with those enjoyed by the steel mills and yet no dealer has been heard to say that if steel mills were only willing to make a little less profit by paying more for scrap what a blessing it would be for the industry. The steel mills' argument is just as absurd.

The Overton-Red River Waterway

EXTENSION OF REMARKS
OF
HON. GEORGE S. LONG
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 12, 1956

Mr. LONG. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include a clipping from the Alexandria Daily Town Talk Times:

HARDIN AGREES WITH REPRESENTATIVE LONG ON CANAL STUDY

SHREVEPORT, LA.—Maj. Gen. John R. Hardin agreed with Representative GEORGE S. LONG Tuesday in suggesting a new survey of the proposed Overton-Red River Waterway.

General Hardin, Lower Mississippi Valley Division engineer of the United States Army Corps of Engineers, told members of the Red River Valley Association a reevaluation of the economics of the waterway would be necessary before it can be built.

"Great changes in the economy of the region to be served by the Overton-Red River Waterway and increased construction costs have made it necessary," Gen. Hardin said.

LONG NOT OPPOSED

Earlier, Representative LONG, an opponent of the canal project as now planned, told delegates from 4 States he was not opposed to the project in principle. But he said he wanted a new survey before giving it his full backing.

General Hardin further elaborated by saying, "When the initial report was made recommending the waterway, an economic study of costs and benefits, prepared in 1944, was a most important part of the supporting data. A comparison of costs and benefits arrived at 12 years ago must be recxamined before we can say that what was a good investment for our country then is still good in 1956.

"We are required, as a matter of long-standing policy, to demonstrate to the Chief of Engineers, the Bureau of the Budget, and the congressional committees that the project is sound before construction funds are requested," the general said.

BENEFITS VERSUS COSTS

"The economic analysis is a weighing of benefits against costs and comparing it to business studies for plant expansion or enlargement of sales territory," General Hardin said.

The study involves a survey of current potential transportation savings, drainage benefits, up-to-date detailed construction cost estimates, and a determination of the costs of relocating bridges, gas lines, power and telephone lines, roads, real estate costs for rights-of-way, and spoil-disposal areas.

On the profit side of the ledger is a commerce analysis. He said that a study is being made of existing commerce that might reasonably be expected to move into or out of the area by water.

Despite General Hardin's suggestion not to get too hasty in building was ignored by the meeting of the association.

EXTENSION SOUGHT

Ending its second day of work, the association called for a speedier release of an engineer's report on a proposal to extend the inland canal from Shreveport to Texarkana and Jefferson, Tex.

The Members also passed a resolution requesting a speedup on a final status report by the United States Corps of Engineers detailing the possibilities of the long-sought Overton-Red River Canal project.

Fred Webb of Shreveport was elected president of the association.

EXCERPTS FROM A SPEECH DELIVERED BY HON. GEORGE S. LONG, OF LOUISIANA, AT THE ANNUAL MEETING OF THE RED RIVER VALLEY ASSOCIATION, SHREVEPORT, LA., APRIL 2, 1956

Mr. Webb, members of the Red River Valley Association, my colleagues in Congress, and honored guests, I am sure that I can safely speak for every member of the Red River Valley congressional delegation when I say that we Members of Congress look forward with great anticipation to this time in the spring when we have high hopes to be invited to the Red River Valley Association's annual meeting. It is indeed a high point in our life. So, Roy, let me insist that no meetings be held unless we are asked to attend.

Almost every one of our friends here today can be classified as expert on flood control and related subjects and we are bound by a desire toward a common goal—that is, protection from one of mankind's most relentless enemies—uncontrolled water. However, I believe the time is now when we can at long last, look down the road and see a glimmer of light shining on this protection. I believe the Congress, the Chief Executive, the Bureau of the Budget, and all other official agencies, and the heads of whatever party might happen to be in majority, has come to the conclusion that we can no longer afford to ignore the need for protection against floods. It is just this simple—floods are much too expensive to tolerate. I am sure that the members of Appropriations Committees who have ever visited the mighty Mississippi when it was bank full and rampaging; who have ever visited the Arkansas, the Red, and the other rivers in this great Southwest of ours in times of spring floods, cannot fail to be impressed with the absolute necessity for sufficient funds to protect this fertile valley which is indeed the breadbasket of America.

Now, my friends, much has been printed in the newspapers in recent weeks about the stand I have taken in connection with the Overton-Red River Lateral Waterway. I want to assure the assembled guests, the Corps of Engineers, and the Red River Valley Association that I have never made the statement that I am opposed to this project, or any other project which might bring industry and progress to our section. What I have said is this: I am opposed to this or any other project which cannot stand the light of day upon it; I am opposed to any proposal which will damage beyond estimate the many in order to benefit the few.

I have asked the Corps of Engineers to furnish me with certain information which, to date, they have not done. The data being used to justify the Overton-Red River Lateral Canal was put together in 1946, according to my information, not by the Corps of Engineers, but by another agency hired to do the work. Times have changed since 1946 and it could well be that reexamination will show a different picture altogether. So let me say in conclusion, my friends, that I want to endorse this project; by the same token I want the committees to have access to the data and evidence used in their survey. I want the findings presented to the newspapers and TV and radio in order that the people can be informed. I want a detailed estimate of what it will cost local interest and I want the cost-to-benefit ration well discussed and justified. Then my friends of the Red River Valley Association and of the Corps of Engineers, you will find GEORGE LONG in your corner. Thank you.

Name It the Walter Dam

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 12, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Morning Call of Allentown, Pa., dated April 11, 1956:

NAME IT THE WALTER DAM

Within a few weeks—April 26, to be exact—ground will be broken for the construction of the vast impounding dam on Bear Creek and the practical part of the program for making the people of the Lehigh Valley and their property safe from floods will be gotten under way.

Of course it is merely a beginning in the construction program but it is the presage of greater things to come. It is the ray of hope for the many communities and their large populations that at long last the fight against the ravages of floods has left the talking stage. Instead of nothing but the results of surveys and sheaves of elaborate plans, there will be action to put up the physical defenses which are required to curb the violence of floods.

Like many other dams which have been constructed throughout the country, not alone in the interest of flood control but for the production of hydroelectric power, increase in recreational facilities, and so on, the Bear Creek Dam should have a name. We submit the suggestion that the name should be meaningful and that it should be bestowed as an honor upon an individual who has been conspicuous in the long and hard legislative and departmental battle to advance the flood control program for the Lehigh Valley to this important point.

That individual is Congressman FRANCIS E. WALTER, of the 15th Congressional District which is made up of Northampton, Monroe and Carbon counties.

Mr. WALTER, who has been in the House of Representatives for more than 20 years and has increased his influence and effectiveness term after term, has been conspicuous at all times in efforts to advance flood control projects not alone for the Lehigh Valley but for the Valley of the Delaware as well.

Specifically, he worked hard to induce Congress to make the first appropriation for planning in 1946. He has been in the forefront in Washington in securing all the appropriations for planning which have totalled a half million dollars up to this time.

It will be remembered that a year ago when there was agitation for "make-work" projects in an area depressed by reason of unemployment, he saw a way to help that problem and at the same time advance the flood control program. He proposed—and an appropriation of $300,000 was secured to achieve both ends—to employ men and to begin a long needed job.

Every conference that has been held in this section of the State on the subject of flood control has been cheered by the knowledge that the idea had a "friend at court"; that Mr. WALTER, in Washington, would permit no stone to be left unturned in efforts to advance it. All the individuals and organizations associated with the idea

have been encouraged by the many steps that he has taken from time to time to make Washington sympathetic to the serious problems of the Lehigh and Delaware valleys.

It is from these groups that the impetus to give the name "The Francis E. Walter Dam" or some similar designation to the initial flood control project should arise and be pressed to successful conclusion.

They will honor themselves by such an expression of gratitude for persistent and consistent work by Mr. WALTER. He has never missed an opportunity to advance the general idea. His experience and great prestige in Washington have afforded him the opportunities of which he has availed himself at all times in the interest of the people of these two valleys.

Hon. A. M. Artajo, Minister of Foreign Affairs of the Republic of Spain, Visits Washington

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. ZABLOCKI. Mr. Speaker, the city of Washington is playing host this week to the distinguished Minister of Foreign Affairs of the Republic of Spain, the Honorable A. M. Artajo, and to his charming wife and daughter. I join my colleagues on this occasion in expressing the hope that the distinguished foreign visitors will enjoy their stay in Washington, and that the official conferences between Foreign Minister Artajo and Secretary of State Dulles will aid in providing firm groundwork for cooperation between our two nations in coping with the menace of international communism.

I am certain that I need not recall the fact that the Republic of Spain has shown very realistic understanding of the nature and menace of Communism. Perhaps the most prominent evidence of this understanding has been the attitude of the Government of Spain toward the fate of the once-free nations of Europe which are today suffering under Communist domination. On repeated occasions, officials of the Spanish Government have declared their sympathy for the people of those captive nations, expressing their conviction that the principles of justice demand that they be freed from the bonds of Communist enslavement.

Indicative of the position taken on this issue by the Government of Spain is a statement made recently by Foreign Minister Artajo who, when asked to comment on the subject of coexistence with the Soviets, said:

> When Russia will liberate the subjugated countries, we will begin to believe in her good will of coexistence.

This was a forthright and farsighted statement, which offers an open and objective test of Soviet intentions.

Mr. Speaker, it is my sincere hope that the exchange of views taking place this week between the representatives of the Republic of Spain and of our Nation will make a constructive contribution to our efforts intended to bring about an era of just and lasting peace in the world.

Only Americans Can Defend America

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 12, 1956

Mr. DORN of South Carolina. Mr. Speaker, the following address was made recently in New York by Brig. Gen. Bonner Fellers. It is timely, logical and should be considered by every thoughtful and patriotic American:

ONLY AMERICANS CAN DEFEND AMERICA

(By Bonner Fellers)

If world war III comes, the decision will come from the sky. It will come quickly. There will be no time to prepare. Trained troops, manning the weapons on hand when the fight starts, will decide our destinty.

A quick decision from the sky is a wide departure from long drawn out past wars. This new concept astonishes many people because it is not well understood. And it must be explained over and over.

SURFACE CONCEPT FALLACY

The Western Armies cannot defeat the vast armies of the Soviet Union. This fact has nothing to do with communism. It has been true for more than a century.

Napoleon defeated the Russian Army. He captured and sacked and burned Moscow. Then Russia's eternal allies, distance, winter and unlimited manpower turned on Napoleon and he escaped into Europe with 30,000 sick and hungry stragglers. Hitler attacked the Red army with 220 Nazi divisions. He lost 5 million men. And he failed.

Our fleet, larger than the combined fleets of the world, cannot deal a knockout blow against the Soviet Union. Even a complete blockade would not have a decisive impact. The Soviet Union is immune to this traditional form of pressure. Deep within her borders she has all the resources and industrial productivity needed for total war.

This is not to say that we no longer need a modern Army and Navy. They are both essential. But in the light of airpower, the missions of the Army and Navy—in a war against the Soviet Union—have changed.

Against the Red armed forces, neither the fleets nor the armies, nor the armies and navies combined of all the Western Powers can be decisive against the Red armed forces.

THE RED THREAT

The United States, thanks to ocean barriers, is safe from a major Red army attack. But the Red air force and submarine-launched guided missiles can strike the United States. These two threats are real, immediate, and inescapable.

The greater of these threats is from Red intercontinental bombers. These bombers—an estimated 1,500 in number—based in the Soviet Arctic, have the capability of flying over the polar cap and dropping nuclear bombs on our military installations, industrial areas, and population centers.

The second threat is from submarine-launched guided missiles carrying atomic warheads. The Reds have some 400 submarines which could surface off our coast and unleash an atomic assault against our coastal cities and harbors.

To meet these Red threats the United States instituted a number of defensive measures. Most of these, unfortunately, are excessively expensive and hopelessly inadequate.

THE NATO FALLACY

Our leaders have created widespread belief that European NATO forces are essential for the survival of the United States.

A one-time Army Chief of Staff has testified before the Congress:

"Our troops in Europe are not there simply for the defense of Europe. They are really there in defense of the United States."

And only 15 days ago the NATO supreme commander, our own General Gruenther said:

"Our participation in this enterprise (NATO) is a matter of our own survival."

But NATO as a military force, capable of defending Western Europe and thereby protecting the United States is a pure humbug. Red ground forces, facing the NATO defense forces, outnumber them some 10 to 1. The Red air force, thoroughly modern—and approaching our own in quality—has 5 times the numerical strength of the European NATO air forces.

We are attempting to hold Europe with a ground force too weak to meet the Red army. NATO ground forces are supported by a NATO air force in Europe too small to defeat the Red air force. So great are the odds in power ratio against NATO, that Germany's proposed 12 divisions and 1,300 aircraft—possibly available in 1959—cannot materially improve the situation.

Our leaders are giving us a distorted estimate of NATO strength. They represent NATO power as continuously increasing. The truth is our European allies have already passed the peak of their military effort. Content to receive lavish American aid, they rely on us to defend them should the Kremlin strike.

NATO in Europe is not a war deterrent because it is not feared by the enemy. Nevertheless, a successful NATO holding operation along the Rhine—were this possible—would not and could not prevent Red air attacks against the United States from Soviet bases in the Arctic. Nor would a success along the Rhine prevent submarine-launched missile attacks against our coastal cities.

The United States cannot look to European NATO even for partial security.

THE COLLECTIVE SECURITY FALLACY

Collective security sounds wonderful if one does not stop to think. This concept contemplates that each nation contribute what it is best able to contribute. Some are rich in manpower, others in natural resources, still others are industralized. The collective concept envisages that these resources, someway, somehow, will be integrated into a terrific striking force. In the words of General Gruenther, "collective security is the only answer."

Collective security was tried in Korea. And except for the South Koreans, the United States provided more than 90 percent of the forces and probably paid all the bills.

However, if world war III comes, decision will be reached from the sky. Manpower will not be the decisive element. And, if our leaders continue to force the manpower concept upon us, we shall lose, because Red manpower vastly outnumbers us. Of all our allies, only Great Britain has an appreciable air force. And this air force is not large enough to defend the United Kingdom.

Despite the weaknesses of the collective security concept, it has become the basis of our foreign policy. It appears that our foreign policy is induced by the herd instinct. Our top leaders believe that the more people we have on our side, the safer we will become.

The truth is, manpower, no matter how great, cannot defend us against Red bomber

and submarine-launched guided missile attack. Thus, in reality, our allies constitute an additional American defense obligation.

State Department alliances may have political and economic and psychological advantages, but in war we cannot and we dare not depend upon allies to defend us.

THE LITTLE WAR FALLACY

Ardent propagandists, and even high officials, attempt to resolve our defense problem by urging that we should fight little wars and thereby avoid the big one. There are five so-called little wars now on the horizon. If any one of them should start, we may depend upon Kremlin leaders to kindle the other four.

One little war may start in Palestine—possibly in March. The consequences of our participation would be disastrous. Aid to Israel would engender the hatred of 400 million traditionally friendly Moslems. Our participation might be the signal to the Red army to occupy Iranian and Arabian oilfields where lie more than half the known oil reserves of the world.

Our leaders must awaken to the gravity of this explosive situation. Let us pray that they will have sufficient character to stay out of this one—should it come.

A revolution rages in north Africa. American helicopters and French forces with American equipment from NATO in Europe are killing Algerian and Moroccan patriots who seek the independence we ourselves won in 1776. Here American air bases are endangered.

Another little war may be kindled in southeast Asia. There is fighting in Malaya.

A fourth little war is possible in Korea. On the 38th parallel, fighting could be resumed by either side. In either case the matter is out of our hands—but not the obligation.

A fifth little war could start in the Straits of Formosa. We are pledged to enter—and we should be—and the enemy would be the same Red dragon, with much stronger claws, which we failed to slay in Korea. If MacArthur had been permitted to win in Korea, much of our trouble today would have been ended.

In these turbulent areas, Communist propaganda effectively exploits the tension and turns the population against the United States.

It is possible that while trying to avoid the big war, we might be drawn into all 5 little wars. Meanwhile, the Red armed forces of the Kremlin, waxing stronger with not a single man committed to battle, might decide the time was ripe to strike the United States. By this time our own losses might have become so great and our effort so diffused that our utter destruction would be inevitable.

All this could come about by fighting little wars to avoid the big one.

THE CONSCRIPTION FALLACY

A 5 million trained United States Reserve is now being created. What this Reserve is for is unclear. But it is certain that it could neither stop nor influence attacks against us from Red bombers and guided missiles. Should the next world war come, the decision will be reached before the ground reserves could be mobilized. Let us not be deceived that our proposed 5 million reserve can defend our country.

THE BASE ENCIRCLEMENT FALLACY

Much publicity has been given to our ring of Allied air bases around the Soviet Union. Magazines publish attractive maps in color showing devastating massive arrows leading from these bases and pointing to the industrial heart of the Soviet Union. It is a graphic presentation of how easily and quickly our potential enemy could be destroyed.

What this map fails to show, is that the Red Air Force has some 20,000 modern combat planes, instantly ready, and that this is roughly 3 times the number of combat planes in the entire United States Air Force. There is also the dire certainty that this Red Air Force will strike first. And this air strike may well consist of a sudden and simultaneous all-out effort to drop nuclear bombs over each of the Allied air bases which encircles the Soviet Union.

After this initial air strike, we would be compelled to fight the war with the weapons which survive the first enemy blow.

Moreover, some of our air bases overseas may suffer damage from sabotage. Other overseas air bases will be denied us by powers which seek to remain neutral; others may be captured by the Red Army.

The nearer our bases are to the Soviet Union, the more likely they are to be destroyed. It is a certainty that they will suffer great damage. Even the vaunted and expensive floating carrier bases are vulnerable to Red Air Force attack. And they would be the natural prey of the Red submarine fleet which stalks them from underwater cover. Thus, the true value of close-in Allied bases is more apparent than real.

Nevertheless, we should retain our overseas air bases until we have a sufficient number of B–52 intercontinental bombers.

THE TRUE DEFENSE

If the Kremlin unleashes an air and guided missile attack against us, only our own Air Force, if stronger than the Red Air Force, and our fleet, supported by airpower, can defend the United States.

Only air power can deal a knockout blow against the Soviet Union. If war comes strategic bombers—if sufficient in numbers—can destroy Soviet industry and the Red air bases in the Arctic and elsewhere. And they can deny supplies and munitions to the Red Army. Thus, airpower is the true war deterrent because it can destroy the enemy.

Airpower can be decisive in war. The United States bombing survey, composed of our most eminent civilian scientists, objectively reporting on our World War II air attacks against Germany and Japan, found that "enemy planes enjoying control of the sky over one's head can be as disastrous to one's country as its occupation by physical invasion."

The foregoing is irrefutable. The power which possesses the better air weapons, which can strike the more deadly and quicker blow, can gain the decision, if the next war comes.

What we must never forget in America is that this decision must be won with personnel already trained, manning the weapons on hand, when the war starts.

WESTERN HEMISPHERE SECURITY

From our present bases in Alaska, Labrador and Greenland, our heavy bombers and medium bombers within-flight refueling, can strike and return from any target in the Soviet Union.

From bases in Labrador, in the United States, and in the Carribean, heavy and medium bombers can defend our Atlantic coastal frontier.

From bases in Alaska and the Philippines our bombers can dominate the Asiatic coast from the Bering Sea to the Straits of Malacca and thus defend our Pacific frontier.

Bombers of our Strategic Air Command can fly in bad weather and at night. With electronic aids they can hit and demolish their targets. If our Air Force possessed 2,000 bombers of the B–52 class, this threat would so impress the Kremlin that the chance of world war III would be very remote indeed.

And were war forced upon us, these bombers, together with ample fighter interceptors, would give us an invincible defense and a quick victory.

It seems evident that the only bases which can adequately be defended against bombardment, sabotage, ground attack and guided missiles, lie almost entirely within our own Western Hemisphere. And although contrary to foreign policy, our planners are being forced inevitably to come to the only solution to our survival in total war—a Western Hemisphere Defense.

Because of these facts, a gradual withdrawal of American troops from the Eurasian mainland is the only sensible course. This would enable us to reduce our Army and Navy.

A strategic reserve of some 10 divisions should be created. Based in the United States and streamlined to be air transportable, this modern air army could be flown where needed, in a matter of hours. Our air bases in Alaska, vulnerable to Red air borne attack, require this type of reinforcement which is not now available.

Our Strategic Air Force is the best in the world, but it is a one-shot air force, limited both by available trained personnel as well as bombers. The advantage it once held over the Red Air Force is now rapidly being lost. Our 1957 aircraft procurement is a continuation of the steady reduction instituted 3 years ago; it is a reduction of 20 percent over the 1956 budget.

Meanwhile the program for Red Air Force expansion is being tremendously accelerated. Unless our Air Force program is immediately expanded, we shall have lost our air advantage within 2 years.

To depend upon Western Hemisphere bases means that the Air Force must be allocated funds to procure an ample supply of intercontinental bombers. Planes of the B–52 type are admirably suited for this work but, for lack of funds, they are being produced at an exceptionally slow rate. We should have 2,000 of these superb bombers within the next 5 years. At present, the Air Force procurement funds permit the production of only 25 percent of this number.

This is no plea for increased defense spending. But it is a plea that no defense item should be allowed to take precedence over the creation of a greatly increased strategic Air Force. An Air Force which can withstand initial losses and have the numerical strength and capability of striking back effectively after the initial blow.

There must be a shift in the emphasis of defense spending. Since our surface forces cannot be decisive, Army and Navy budgets can safely be pared. Foreign aid now has an unexpended fund of $9 billion. No more should be appropriated.

Such a reapportionment of military spending would save billions of dollars. It would all but guarantee peace. It would guarantee the best possible defense and victory, should war come.

The hemisphere defense concept is not an abandonment of our European and Asiatic Allies. Without a strong hemisphere defense, we can support no allies anywhere. Without the assured survival of the Western Hemisphere, without a striking force based principally in North America and capable of atomic assault anywhere on the globe, the whole free world is doomed.

It is common sense, that before we can gamble on any overseas' military undertaking, we ourselves must have a strategy which will guarantee our survival here at home. This we have failed to do. Despite vast expenditures, we are not buying adequate defense.

The Soviet Union is the base from which emanate all activities dedicated to world communization. If it is certain that world war III will destroy this base, the Kremlin will scarcely dare to strike.

Only by the immediate creation of overwhelming American airpower can we prevent war—and, thereby, save ourselves and our Allies.

Only Americans can defend America.

Federal Aid to Education

EXTENSION OF REMARKS
OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1956

Mr. GWINN. Mr. Speaker, why do we continue to tolerate an alien idea that politicians in Washington can manage our private affairs better than we can ourselves? They now manage our corn, wheat, cotton, rice, butter, cheese, dry milk, tobacco, peanuts, et cetera, or one-third of our agriculture. It is a mess. Government housing at half rent, tax-exempt, is an outrage on the taxpayers and just as bad on the Government tenants. Government socialized power, like TVA, and irrigation projects at taxpayers' expense everywhere are blights on the people who take the money. Our foreign aid, now up to $60 billion, or $1,500 per American family on the average, does not satisfy the socialist governments to whom it is paid. They want it doubled. Our friends over there out of power scold us for financing their enemies and ours. They are nearly all mad at us. We have bought few friends. So, Government robbing of Peter to pay Paul weakens Peter and demoralizes Paul.

The very idea that our Government should ever exercise such powers was utterly repugnant to us for 140 years. It was thought impossible. We so feared the evil tendencies of government that we drastically limited its functions to its only legitimate sphere, namely, the protection of life and property, keeping law and order. Then, to make doubly sure, we had the politicians chained to these proper and limited functions—we specified in 1789 what Congress could tax and spend. We limited the functions and taxing and spending power of our cities and counties and States, too. Fortunately, we have kept and enforced those limitations and as a result we have not gone socialist, with few exceptions, in our cities, counties and States. Our socialism, viz: converting private property into public or government-owned and operated property, is confined almost entirely to Washington. We breed our socialists and Communists there.

After 25 years of their infiltration of one of the old parties in power, Congress is unable to repeal and wipe off the books the socialism we have already got. Unless we are able to somehow wipe it off the books completely, we must go on. For we must be all socialized or all free. There can be no coexistence—half-Socialist, half free. Obviously if we socialize corn as we have for 17 years, every living thing that consumes corn must ultimately be socialized. Farmers cannot buy Government owned and controlled corn and sell beef, pork, milk, and eggs in a free market. The burden of an average of $250 per year on every family taxed to pay the $10 billion our present socialization costs makes its extension inevitable. For example, you hear people cry out under this burden and you hear them say: "After we pay our taxes we have not enough left to pay for the care of our sick, our aged, the education of our children," and so forth.

So Mr. KELLEY, Democrat, of Pennsylvania, introduces the Kelley bill providing for Federal aid and control of education on a vast scale. It has already passed the House Committee on Education by a vote of 21 to 9. It will likely come before the whole House for action at this session.

It proposes to take from the taxpayers $400 million a year for each of the next 4 fiscal years, a total of $1,600,000,000, and redistribute that largess to some of the States at the expense of others for schoolhouse construction. Six industrial States in the North and West, that is, New York, Pennsylvania, Ohio, Illinois, Michigan, and California, would be compelled to put up 57.654 percent of the total tax moneys and get back but 35.747 percent of the benefits as grants for classroom construction in those States. They will pay approximately $928 million in taxes and get back approximately $576 million for the 4-year period. Besides, they will pay additional taxes to cover the overhead cost of the United States Government doing this utterly foolish job of taking our money from us, giving only about half of it back, and giving the rest to other States. Thus the unblushing scheme for the redistribution of the wealth started in 1932 goes on.

It works in detail like this: For example, for the 4-year period New York State will be compelled to give up $299,984,000 toward the $1,600,000,000 and will get back but $128,950,640. Thus New York will lose $171,033,360 in the transaction, plus its share of the overhead costs of the operation mentioned.

The city of New York would pay $134,454,320 and get back $72,480,000 representing a loss of $61,974,320 plus the usual overhead.

Westchester County residents would pay $13,777,920 and the county would get back $7,427,560 for building schoolhouses, a loss of $6,350,360.

And as for Putnam County, the smallest county, the Federal taxes would amount to $287,040 and the county would get back $154,740 in Federal aid, or a loss of $132,300 in the 4-year period. Thus you can readily see, based on the current cost of between $33,000 and $40,000 to construct a classroom, Putnam County will pay in Federal taxes enough to build about 8 classrooms in order to get the Federal funds back to build about 4 classrooms. The Federal Government will decide where to build the other schoolrooms with Putnam County's money.

These figures were compiled by the Empire State Chamber of Commerce at Albany, N. Y. They are available for every county in New York State.

Title II of this Kelley bill would put the Commissioner of Education in the investment banking business by creating a school bond purchase revolving fund with an original appropriation of $300 million and the further authority to purchase "obligations of local educational agencies" in the aggregate principal amount of $750 million. This is on the theory that the school district credit is so bad nobody else would make the loan to them. So, under the Kelley bill, the Federal Government just robs Peter and loans the money to Paul anyway. This so-called revolving fund is to have a life of 4 years. At the end of 4 years the headaches and uncollected balances, together with any cash remaining in the fund, will be transferred to the Treasury Department for them to worry about.

But, Mr. Taxpayer, these two little practice blows of the Kelley bill are just meant to condition you for the third blow. Otherwise title III of the bill would knock you cold.

Title III proposes that the Commissioner of Education may make Federal Government advances not to exceed $6 billion to some, but not all, of the 57,000 school districts. They would be selected according to his judgment as to need and other deserving qualities. So that those States that have sweated out their bond issues to build schools will get none because they no longer need them, while those that have dragged their feet longest, waiting for the Federal Government to take over, will get their loans. What a bonanza. Six billion to play politics with. But that's not all—the Commissioner of Education is authorized under the Kelley bill to "pay, compromise, waive, or release any right, title, claim, lien, or demand, however acquired or arising under title III."

So, if these borrowing school districts continue to drag their feet and say they "can't pay," why then the Commissioner can forget the loans. What politician wants to sue voters, especially school districts, anyway?

And section 313 (b) provides that the "financial transactions of the Commissioner in making advances pursuant to this title shall be final and conclusive upon all officers of the Government."

This means that the Commissioner's acts are final. There is no appeal from his management even if he never collects a dime of the loans.

Now, all this adds up to $1,600,000,000 under title I, $750 million under title II, and $6 billion under title III, a possible total of $8,350,000,000. There are 40 million American families to pay it. That means that each American family will be taxed $207.75 on the average to provide this new form of Federal aid. Add to that $1,450 per family on the average each one pays now, and add $25 per family for each new billion dollars for new socialization to come, and you will get some notion of what we face.

Those families in New York State and the other States mentioned will get next to nothing under titles II and III because they are not so-called needy States. They can pay but can't take. Many other States will get back a mere drip at best.

Thus, the Kelley bill, sponsored especially by the National Education Association, takes us the first big step in social-

izing and controlling the school system, like other areas described above are already socialized.

Below are the losses six industrial States will sustain annually under title I alone. These are normallly Republican States outrageously penalized by every Federal aid program on the books, including this proposed new one.

The overhead is not shown below because it is well-nigh impossible to estimate Government overhead costs. It runs as high as 30 percent in most Government activities. Our 2,400,000 Government employees, their offices, rents, and expenses come high.

We must add to these costs of Federal management of our schools the Federal wage rates of the Bacon-Davis Act. School districts can't chip in and get volunteer workers, or workers of any kind if they accept Federal funds except generally unionized workers at union wages as determined by the Department of Labor. These additional costs are estimated at from 25 to 30 percent over and above what the school districts would pay without Federal intervention.

State	Pays in percent	Pays in dollars	Gets back aid dollars
California	7.620	$30,480,000	$27,545,819
Illinois	8.228	32,912,000	20,247,262
Michigan	8.711	34,844,000	17,058,887
New York	18.749	74,996,000	32,794,708
Ohio	6.734	26,936,000	20,236,416
Pennsylvania	7.612	30,448,000	25,105,737
Total	57.654	230,616,000	142,988,829

Subtracting the aid received back from what is paid out, the losses in each State are as follows:

California	$2,934,181
Illinois	12,664,738
Michigan	17,785,113
New York	42,201,292
Ohio	6,699,584
Pennsylvania	5,342,263
Total	87,627,171

Compare the losses in the 6 States with the gain in the State of Mississippi. Mississippi will pay in taxes $800,000 toward the Federal-aid program and get back $6,506,886, which is better than an 8-to-1 return.

In spite of that a committee of the Mississippi Legislature investigated and rejected some years ago the idea of Federal aid to education. Yet this proposed bill virtually forces the States to take it whether they want it or not.

There is great variation in the percentage of income which each State spends on education. There is not a single State but that can better afford its own education than can the Federal Government with its almost bankrupt Treasury. Some States spend twice as much as others. For example, Wyoming spends 3.99 percent of its income and Massachusetts spends 1.88 percent on public education. This makes no allowance, of course, for the private and parochial schools.

The following table shows the percentage of income spent for the school year 1953–54 by each State and the rank of each State on the basis of its current expenditures for schools:

State	Percent of income spent on current expenditures	Rank
Alabama	2.92	18
Arizona	3.14	13
Arkansas	2.49	29–30
California	2.87	19
Colorado	2.76	21
Connecticut	1.90	47
Delaware	1.96	45–46
Florida	2.57	26
Georgia	2.61	25
Idaho	3.18	12
Illinois	2.04	43
Indiana	2.26	33
Iowa	3.34	7
Kansas	2.77	20
Kentucky	2.14	40
Louisiana	3.12	14
Maine	2.25	34
Maryland	2.24	35–36
Massachusetts	1.88	48
Michigan	2.19	37–38
Minnesota	3.24	10–11
Mississippi	3.00	16
Missouri	2.07	42
Montana	3.45	6
Nebraska	2.66	24
Nevada	2.16	39
New Hampshire	2.41	31
New Jersey	2.30	32
New Mexico	3.90	2
New York	2.12	41
North Carolina	3.08	15
North Dakota	3.61	4
Ohio	1.98	44
Oklahoma	3.24	10–11
Oregon	3.25	9
Pennsylvania	2.19	37–38
Rhode Island	1.96	45–46
South Carolina	3.32	8
South Dakota	3.49	5
Tennessee	2.49	29–30
Texas	2.56	27
Utah	3.75	3
Vermont	2.75	22
Virginia	2.51	28
Washington	2.74	23
West Virginia	2.97	17
Wisconsin	2.24	35–36
Wyoming	3.99	1

In some areas two-thirds of the school-age children go to private or parochial schools. They are cut out of aid entirely although the parents must pay the taxes. The Federal Government would, if let alone, flatten out all differences, religious, economic, and political, between the States. Obviously when this process which is now on is completed there will be no taxpayers to pay for our socialized areas. And there will be no private or parochial schools for the same reason. Central governments just cannot endure variety and differences between people, between States, between communities. It cannot endure differences in effort and compensation. It would flatten out everybody and make the industrious look just like the lazy and indifferent—and call the program Federal aid. It no doubt would give all pupils the same grade. There would be no reward for extra effort and skill.

Column 1 of the following table shows the percentage that each State pays of all taxes collected, for whatever purpose; column 2 shows on that basis how much each will contribute annually to the $400-million annual fund; column 3 shows how much each State will get back, according to the United States Office of Education:

State	Percent they pay in	Dollars they will pay in	Dollars they will get back
Alabama	0.542	$2,172,000	$8,968,658
Arizona	.232	928,000	2,537,686
Arkansas	.226	904,000	5,313,957
California	7.620	30,480,000	27,545,819
Colorado	.897	3,588,000	3,611,322
Connecticut	1.841	7,364,000	4,782,562
Delaware	1.288	5,152,000	835,050
Florida	.967	3,868,000	7,623,902
Georgia	1.002	4,008,000	10,237,501
Idaho	.153	612,000	1,691,790
Illinois	8.228	32,912,000	20,247,262
Indiana	2.287	9,148,000	10,226,857
Iowa	.755	3,020,000	6,420,128
Kansas	.719	2,876,000	4,750,027
Kentucky	1.900	7,600,000	8,317,970
Louisiana	.744	3,096,000	8,090,229
Maine	.244	976,000	2,244,876
Maryland [1]	2.726	10,904,000	16,292,148
Massachusetts	2.719	10,876,000	10,573,691
Michigan	8.711	34,844,000	17,058,887
Minnesota	1.516	6,064,000	7,699,816
Mississippi	.200	800,000	6,506,886
Missouri	2.532	10,128,000	9,174,710
Montana	.167	668,000	1,594,187
Nebraska	.585	2,340,000	3,220,909
Nevada	.121	484,000	466,327
New Hampshire	.178	712,000	1,279,688
New Jersey	2.944	11,776,000	11,343,672
New Mexico	.152	608,000	2,320,780
New York	18.794	74,996,000	32,794,708
North Carolina	2.206	8,824,000	12,178,549
North Dakota	.091	364,000	1,724,325
Ohio	6.734	26,936,000	20,236,416
Oklahoma	.894	3,576,000	5,715,215
Oregon	.611	2,444,000	3,893,287
Pennsylvania	7.612	30,448,000	25,105,737
Rhode Island	.424	1,696,000	1,778,549
South Carolina	.361	1,444,000	7,005,748
South Dakota	.102	408,000	1,724,325
Tennessee	.729	2,916,000	9,174,710
Texas	3.120	12,480,000	21,982,431
Utah	.424	1,696,000	2,168,962
Vermont	.108	432,000	965,188
Virginia	1.539	6,156,000	9,207,244
Washington [1]	1.184	4,736,000	6,355,059
West Virginia	.419	1,676,000	5,747,750
Wisconsin	1.857	7,428,000	8,740,918
Wyoming	.081	324,000	780,826
Hawaii	.194	776,000	1,409,825
Possessions			422,000
Total	99.656	398,664,000	400,000,000

[1] Maryland includes District of Columbia and Puerto Rico. Washington State includes Alaska.

Such taking of private property without due process and transferring it into public or socialized property is, of course, pure socialism, according to the dictionaries.

The Kelley bill is not the administration bill, nor is it a Republican Party measure. It is the proposal of the National Education Association—a teachers union and lobby—and of the Socialist wing of the Democrat Party.

The bill sets up no formula to guide the redistribution of $8,350,000,000. It writes a blank check. It makes a commissar out of the Commissioner of Education to "do good" with other people's money as he pleases.

This Kelley bill is the last word in a Socialist bureaucrat's prayer.

Think of the reams and reams of regulations that can be written around every step in getting this $8,350,000,000 away from the places where it is and out to the favored districts of some of the 57,000 school districts where the Commissioner thinks it should be.

Then just think of the thousands of new bureaucrats that will be needed to administer this section of the bill, to settle and cancel the claims, and do all the other things necessary to satisfy enough of the voters to keep the plan alive and going beyond the deadline of 1960 set forth in the bill. All of this is supposed

to end then. But that too is only a part of the Government's deception.

For do we not know by now that a temporary measure in Congress to meet an emergency for schools or anything else becomes one of the most permanent pieces of legislation?

Mr. Eisenhower has said in a letter to me regarding Federal aid to education:

In my own mind I am perfectly clear as to the basic principle and have more than once made public statements to the effect that I definitely oppose every unnecessary intervention of the Federal authority and the Federal Treasury in what should be local business and local responsibility. * * *

I would flatly oppose any grant by the Federal Government to all States in the Union for educational purposes. Such policy would create an ambition—almost a requirement—to spend money freely under the impulse of competition with other localities in the country. It would completely decry and defeat the watchful economy that comes about through local supervision over local expenditures of local revenues.

That is the truth we all know.

Then he warns:

In short, unless we are careful, even the great and necessary educational processes in our country will become yet another vehicle by which the believers in paternalism, if not outright socialism, will gain still additional power for the Central Government.

And to indicate that he is aware of the evils of socializing our local school systems, Mr. Eisenhower had this to say:

If local communities do their job, then there will be no need for additional centralized revenues for nationwide subsidies of an essential local character, and we will avoid the pitfalls of extreme centralization.

Very frankly, I firmly believe that the army of persons who urge greater and greater centralization of authority and greater dependence upon the Federal Treasury are really more dangerous to our form of government than any external threat that can possibly be arrayed against us.

His fear, our fear, lies in the seizure or assumption of power by government over us. We all fear, indeed we witness, the corrupting evils of government promises to do for us what we ought to do for ourselves. It weakens the capacity and the will of the people to manage their affairs for themselves. All of our great leaders have warned us against the evils of the central government we are now embracing. Who is so dull that he cannot understand that the government has not a dime that it does not first take from the people? It corrupts us with our own money. It captures us and takes away our resistance by false promises of something for nothing.

All this adds up to a rule that whatever you add to the power of government you subtract from yourselves. So there is no such thing as Federal aid. For the Government to promise aid as though it has something to give apart from what it takes from the people themselves is a fraud on the people.

Of course, it is a bit natural that the professional schoolman should want the power of money from the Central Government in his hands. Some superintendents naturally want to be relieved of the slower, more hesitant, and more democratic processes, as well as the mistakes inherent in the exercise of local responsibility. He assumes that in the exercise of the people's responsibility by government, it will make no mistakes.

To maneuver the people into a willingness to put themselves under Government management and control, the Government itself controls the very thoughts of the people by its own propaganda. For example, the Government makes a survey to see if there is a classroom shortage. A Government agency, the United States Office of Education, gathers the information from school superintendents in the States, and not from the parents, taxpayers, or laymen who have no professional interest at stake. The professionals who gather, and those who provide the information for the Government are by and large already committed to Federal aid and have been for years. After they get the information all slanted the way they want it they arrange a White House conference. When the conference is over it is manipulated so that a committee of 2 is appointed, 1 a former president of the National Education Association, now a State superintendent of public instruction in one of the States, and the other the executive secretary of the National Education Association. Both are active—almost violent—crusaders for Federal aid. With some considerable difficulty with the stubborn facts growing out of the White House conference of 1,800 delegates, this National Education Association committee of 2 report what they wanted to think was a consensus of the 1,800 delegates at the conference. The Government itself picks up just the right lines and gives them the whole Government propaganda works. The delegates had no opportunity to vote and create news for their side of the case. No one knows how they would have voted. All we have is the above-described consensus report of two prejudiced persons. All the modifying, restrictive, and the downright opposition to Federal aid that was in the White House conference is buried. Even the great widespread opposition of the professionals themselves is buried at the bottom of the confusion of paperwork. What private citizen or group of so-called free citizens would dare to controvert even the false statements of Government?

The governmental propaganda machine picks out of the consensus report what the professionals who set it up intended for it to emphasize. So all officialdom beats the drums for the Kelley bill. The power of government smothers individual freedom. It's out already in the march now strongly under way.

While the President called the White House Conference in the best of good faith to study the 6 fundamental problems in our educational system, only 1 of the 6, namely Federal aid, got any serious attention. The best thinking of the professionals who manipulated the conference was that there was nothing wrong with education that more money from the taxpayers wouldn't cure.

The laymen, taxpayers, parents, businessmen, farmers, and laborers, a small minority in the conference, asked questions about improving teaching methods. What about the use of television? How about renting school buildings more scientifically built by private capital, just as all the post offices are now being rented instead of owned by the school board? They wanted to know why the inventive creative capacity of the local citizens were not more capable of meeting all their local needs than the Federal Government. They questioned whether the great teachers of unusual skill and ability might not be used through new techniques such as television to reach a greater number of pupils. Could not such teachers be helped by assistants or aids or apprentices at lower cost to free the great teachers of many chores incident to the real job of teaching? They wondered why no particular changes had been made in the teaching techniques and particularly in the number of pupils per class and the costs per pupil while in every other profession tremendous improvements have taken place increasing the number served and reducing the cost of the same. Why should teaching be static?

No answer to any of these questions came out of the conference. The professional and the governmental bureaucratic purpose is to bring down the number of pupils in the class and bring up the number of the classrooms, always at increased cost. Obviously the size of classes must be increased far beyond what has been standard for about a century in order to bring down costs. Many of our colleges are conducting classes of 100 or more. George Washington University has had classes of as high as 1,300. It must not continue to be easier for one of the biggest lobbies in Washington to lobby for taxpayers' money than it is to try to improve education and reduce the cost at the same time.

Our school buildings, highly expensive, are idle much of the time, the weekends and holidays. Their use starts at 8:30 or 9:00 a. m., ends at 4:00 p. m. When William A. Wirt started his plan at Gary, Ind., he pointed out:

We are handling three times as many pupils and giving each pupil more hours of education than is customary in a high school and that actually the cost per pupil is around 65 percent of the normal cost.

By starting his classes at 8:00 a. m., continuing them through the day and into the evening, 12 months of the year, he was able to give far more effective education at a lower unit cost. A similar plan might be suggested as one of the possible economies.

Local communities, if left alone, with their native American genius, intelligence, necessity, and financial capacity, will find a way to solve their problems. They alone can meet their necessities. They alone know what they are.

Fuller Brush Co. Golden Anniversary

EXTENSION OF REMARKS

OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1956

Mr. SADLAK. Mr. Speaker, without fanfare an outstanding Connecticut citizen whose name and products are known

throughout the world observed the golden jubilee of his inventive genius.

I refer to Mr. Alfred C. Fuller, the originator and founder of the Fuller Brush Co., started in a shed on April 10, 1906, in Hartford, Conn. The success story of Mr. Fuller, a close acquaintance and friend of many years, is another American story of inventive genius, courage, determination, and ingeniousness to which we point with pride and great admiration. The great difference between the success of this industry and that of others lies in the fact that Mr. Fuller attributes his success to his novel use of advertising in newspapers in the so-called want-ad column. As the article from the business financial section of the New York Times for April 11 points out, the inventor of these useful brushes and other indispensable products of the home and industry made his brushes at night and sold them during the day, and, although the newspaper article does not say so, I know from my acquaintance with Mr. Fuller that his wonderful personality contributed as much to breaking down the sales resistance of those on whose doors he knocked, as did the fine product which he made in that shed he rented for $11 a month.

It is a genuine pleasure, Mr. Speaker, for me to include in my remarks today the writeup in the New York Times, which also included a photograph of this American genius, a picture of the original shed, and the newest home office in the company's modern building at Hartford, Conn.:

FULLER BRUSH, AT 50, THANKS THE WANT ADS—CLASSIFIED COLUMNS RECRUITED ARMY OF SALESMEN

A business built by help wanted ads celebrated its golden anniversary yesterday. That's the way Alfred C. Fuller, 71-year-old chairman, describes the Fuller Brush Co., which he started in Hartford, Conn., on April 10, 1906, in an $11-a-month shed.

Operating on an initial capital of $375, Mr. Fuller turned out brushes on a $15 machine he had designed. He made the brushes at night and sold them door to door by day. His first year's gross was $8,500, an amount that many Fuller Brush men clear now as independent dealers.

The company was strictly a one-man operation until December 14, 1909. On that day Mr. Fuller inserted a four-line ad in the Syracuse Post-Standard seeking salesmen. The response was so great that the company adopted a fixed policy of recruiting Fuller Brush men through the classified columns.

Mr. Fuller remarked yesterday:

"If it hadn't been for the newspaper classified ad I used in 1909, I gravely doubt that we'd be having our 50th anniversary today. The pulling power of those four lines set our consistent policy of using want ads over the years."

Despite his threescore ten and more, Alfred Fuller is still active in the company. His sons A. Howard and Avard E., are president and vice president, respectively.

Fuller Brush now operates 3 factories, 23 distribution stations and 109 branch offices. Some 7,400 dealers in this country and Canada sell each week more than $1,600,000 worth of brushes, mops, cleaning chemicals, cosmetics, and vitamins. Gross sales last year amounted to $91 million.

A good part of Fuller's business these days comes from the sale of industrial brushes. There are some 700 different kinds used in 4,000 ways. The industrial brushes do such things as card wool, process leather, roll cigarettes, and polish fruit and eggs. Not the least important: Fuller brushes remove sand from spinach.

The material going into these industrial brushes comes from all over the world. White, gray, and black horsehair is imported from every continent except Africa. Then there's istle (Mexico), palmyra (Ceylon, India, and Burma), palmetto (Cuba and the Bahamas) and bass (Africa and South America). The toughest brushes are made of steel, copper, bronze or nickel wire.

Fuller Brush also makes the machines that employ industrial brushes. Its equipment is used, among many other things, to polish mirror glass and clean the scale from hacksaw blades. In addition, the Hartford plant turns out precision hydraulic and electronic equipment. Output now includes castings and aluminum masts for yachts.

All this varied activity stems from the tiny shack in Hartford, one machine and a want ad. The Fuller Brush story has all the aspects of an American industrial saga.

Peacetime Application of Atomic Power

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 12, 1956

Mrs. KEE. Mr. Speaker, the current news about the experimental gas turbine test automobile now on a cross-country tour comes at a time when Members of Congress are concerned with another type of industrial development in which the Federal Government has become deeply involved. Apparently the new car is still so much in the research stage that it is impossible to predict what the ultimate results will be. What is important is that further scientific and research developments may lead to an actual revolution in the automotive industry, so far as the propelling force is concerned.

This turbine power engine in the automobile now on tour has been developed by the Chrysler Corp. without assistance from the Federal Government. It is an example of what can be accomplished under free enterprise through the courage of investors and the creative genius of America's technicians. How much longer it will be required to put this kind of motorcar on a practical operating basis is not known. The Chrysler Corp. no doubt has earmarked a special fund for this project, which will continue to be carried out on a schedule based on practicability and on budgetary considerations. Management know how much can and should be spent in this work.

Now let us look at the other industrial development to which I have referred: the peacetime application of atomic power. As everyone realizes, the Federal Government went into the business of putting the atom to use for defense purposes. With the realization that fissionable materials might be utilized in a number of ways other than for destruction, the Government began a research program to learn just what could be expected of the atom in a peacetime economy.

A great deal has been learned and a great many billions of dollars have been expended since the Federal Government undertook this program. We have, in fact, reached a point where the whole effort now needs to be reappraised. Through research, it has been determined that electrical power can be generated by using the atom as a fuel. That revelation is a welcome one. We are all enthusiastic at the possibilities opened through development of reactors which can be used to produce light and heat and power in contributing to a better life for all of us.

My question, Mr. Speaker, is this: Now that the way for atomic-produced electric power has been opened, how much more of the taxpayers' money should be expended in this field? It is estimated that reactors now in the process of construction will be able to create electric power at perhaps 10 times the price of what it would cost to do the same job through the use of coal. Our experts are convinced that this cost will be progressively reduced as more is learned about the atom and how to handle it. I do not think that anyone would challenge this conjecture. It is entirely possible that at some time in the future electricity from atomic plants will be competitive—pricewise—with that which comes from steam plants using coal. Perhaps America's public-utilities industry will be able to accomplish this reduction in price through their own research and development programs. In any case, I believe that it is time for the Federal Government to stop going to the Treasury so that such a program can be expedited.

Let us have another look at the Chrysler research car. That car is a creation of private industry. If the Government were to invest several billion dollars to bring about the consummation of the work envisioned in this developmental program, I am confident that the gas turbine automobile could be on the showrooms floors throughout the country within a very short time. Similarly, if the Government continues to invest more Federal funds in the reactor program, America is certain to get a good supply of atomic generated electricity much quicker than if the electric utilities were forced to run on their own resources. I therefore suggest that Congress hesitate before approving of any further expenditures by the Atomic Energy Commission in this direction. The electric power company in my district of West Virginia has done all that can be asked of it without resorting to Federal contributions. When demand for greater supply of electricity has arisen, the Appalachian Electric Power Co. has increased its capacity. It will continue to do so in the future.

We in the Fifth Congressional District are making every effort possible to attract more industry. Our vast coal reserves, which are the power behind electric power, are one of the inviting features of the area.

If the public utilities want to invest more of their earnings in the atomic energy program, the people of West Virginia are certainly not going to oppose the plan. We object, however, when the Government insists upon contributing to a project which actually will create un-

employment. I have come to the conclusion that it is time for private industry to withdraw the hand that is accepting—under the garb of free enterprise—these Federal handouts in the so-called participating projects. It is at least obligatory upon the Congress to object to the Atomic Energy Commission's continued use of public funds for this purpose.

I call your attention to a letter which presumably went to the entire membership of the House from Mr. Tom Pickett, executive vice president of the National Coal Association. Mr. Pickett, who distinguished himself in the House of Representatives as a Congressman from Texas, gave this brief explanation of the coal industry's position with respect to the commercial development of atomic generated power:

The Government should conduct basic and applied research;

Government sponsorship of the development phases of a power generation program is justified on the grounds that it may provide economically feasible nuclear power for underdeveloped or power-short nations;

There is no urgency for the domestic development of atomic-generated power—an adequate supply of coal reserves guarantees a continued adequate supply of low-cost electric power;

Government subsidies should not extend beyond the development stages, and the amount of such subsidies be made public information.

It appears to me that Mr. Pickett has gone just as far as he possibly could in accepting the proposals for Government experimentation in the commercial application of nuclear power. It may be, in fact, that the Atomic Energy Commission is allowed too much latitude, especially in the light of its ambitious attempts to push the electric power program beyond the bounds of reason.

In the latter part of November of last year, President John L. Lewis of the United Mine Workers of America, appeared before a Senate subcommittee and expressed this opinion regarding peacetime application of atomic power:

Atomic power, if, as, and when it comes, and if, as, and when we can survive its arrival, will only be able to produce energy for a very small percentage of our economic and industry requirements. As a matter of fact, I think it is a safe assumption that the amount of dollars that is being put in and will be put into the development of atomic energy is much more than atomic energy will ever render American industry. Because by the time they encompass all of the problems and make atomic power relatively efficient and learn how to coexist with atomic power—which has not yet been done—then some genius is going to harness the sun or harness the tides, or perform some other modern miracle that will render atomic power obsolete.

In the meantime, we have to keep warm and keep our economy functioning. So we will do it with coal. The coal industry for the first time for a long time is facing a clear road ahead. Modern mines, well designed, well managed, well financed with commercial outlets and credit are offering, today, as attractive opportunity for American investment as can be offered within the limitation of our economy.

Congress must take these views into consideration before giving the Atomic Energy Commission a free hand to invest taxpayers' money in what should be a commercial business enterprise. By contributing most of the construction and agreeing to provide the fuels for operation of atomic plants, the Atomic Energy Commission is in fact taking away traditional coal markets, whether or not these markets are within close proximity of coal-producing areas. Despite the encouraging increase in coal production for last year over 1954, we still have a very great number of unemployed miners in West Virginia. Some of them have not had employment for a long time, and their families have had to depend upon surplus food and upon other such items which they are willing to accept only because they have been deprived of an opportunity to earn their own subsistence. Government and private fuel experts have promised that consumption of bituminous coal in the United States by 1975 will be approximately twice that of the present time. Although output per man-day has been increasing steadily, it will still require a large force of skilled technicians to extract the coal necessary to meet rising demands; it is, therefore, illogical for us to permit the Government to follow policies that would discourage our mining families from remaining in the coal-producing areas. Our families have established their homes within working distance of the mines and they are quite naturally opposed to any Federal program that calls for using Government subsidies to drive them out of their jobs.

What also must be taken into account is that it is unfair for taxpayers to assume so much of the financial risk in this whole undertaking. If the Federal Government completes the research, builds the reactors, underwrites the risks involved, and provides other subsidies, then turns over everything—plants and know-how—to private companies, how can such transactions be conducted in the name of free enterprise?

Mr. Speaker, I ask that Members of Congress keep these facts in mind when they read more about the gas turbine automobile engine. As a creation of private enterprise, it will be produced if it is proven to be feasible and practicable; if not, the conventional motors will remain in our cars until some newer development comes about. If the electric utilities, through their own finances and ingenuity, are able to provide electricity from the atom at rates lower than those of coal-fired steam plants, America will welcome this progress. Until that day arrives, however, it is incumbent upon the electric power companies to use traditional fuels.

South Carolina

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 12, 1956

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith one of the most beautiful addresses that it has ever been my pleasure to hear. The title of this magnificent treatise is "South Carolina." It was delivered by the distinguished director of the State development board of South Carolina, Hon. R. M. Cooper, on the occasion of the celebration of St. Patrick's Day by the Hibernian Society of South Carolina on March 17, 1956. In responding to the toast to South Carolina, Mr. Cooper delivered his splendid address. In words reminiscent of Henry Grady, over 60 years ago, Mr. Cooper spoke of the invigorating atmosphere that prevails in my native State—of the great excitement that pervades and permeates the air, and the faith the people have in the future of the great region from whence I come.

Mr. Speaker, my people are enamored of the work of making God's unsurpassed bounty to my section of the world attractive to the other people of the Nation.

Mr. Cooper treats with the great economic progress my State has enjoyed and is enjoying, and calls to mind the factors responsible for such progress. He speaks of its beauty and its progress in agriculture and education. His address is one which I want every Member of Congress to read. You will then be curious to visit my section of America where opportunity beckons to all men of good will.

The treatise is as follows:

SOUTH CAROLINA

(By R. M. Cooper)

There is excitement in South Carolina today. The air is charged. An invigorating atmosphere prevails everywhere. One word tells the story.

It's progress—stimulating, thrilling progress.

The people themselves, steeped in the glory and richness of a past that fills history books, find it a bit hard to believe. Even the statisticians must stay on the run to keep up with it.

Just one item: a keynote of that progress is industrial development. In 1945 there were barely $500 million invested in industry in South Carolina. Since then, over $1 billion more have been added, and that doesn't count the Atomic Energy Commission's Savannah River plant, estimated to cost one and a half billions more.

The same upward trend pervades agriculture, business, and social affairs, such as education. Yet visitors to the State (and they are beginning to come in thousands now) find the same atmosphere of gracious living, the same beautiful scenery and historic shrines preserved. Just a good bit of paint has been added, and perhaps the smiles of hospitality are a little more relaxed.

Right here at the outset, I want to add my testimonial to the many which have come to those whose broad vision and determined energy have made possible the Bushy Park project.

On a visit to Oak Ridge, Tenn., recently to attend an atomic-energy conference, I heard more enthusiastic discussion of Bushy Park than I hear right here in South Carolina. Don't you forget it—the informed industrial leaders of this country are well aware of the possibilities of Bushy Park, and they know how fortunate we are to have it.

This whole matter of water supply is a critical question in the United States. At Oak Ridge I talked with a leading economist who made some rather startling predictions about South Carolina because of our water. Dr. Harold F. Clark, professor of education economics at Teachers College, Columbia

University, had this to say (I later asked him to write it down for me):

"I can see no reason why such States as South Carolina should not become among the very wealthiest of the States. In fact, there is no reason why within a century South Carolina, Mississippi, and Arkansas should not become the three richest States in the Union. They are better supplied with water than almost any other States. This could easily become a decisive advantage in the period just ahead. A dependable supply of water is going to be crucial for agriculture. Many industries are already drastically limited because of the growing shortage of water. If you couple these factors with a climate mild enough for workers to spend their leisure time outdoors almost the year around, you have the basic requirements for an extraordinary economic expansion.

"Clearly, you are going to have two somewhat competing demands upon your water supply. They are the enormous advantage industrially and economically on one hand and the great advantage from the standpoint of the leisure time of the workers on the other. To get a satisfactory balance of the two things will naturally be difficult. Certainly the great water supply of the State is one of its most important advantages. Every State should capitalize on these resources."

Sometimes it takes an outsider to see and understand just what we do have.

Some say the Nation generally should join industry's leaders and take a second look at South Carolina. Not only to see the changes, but to reevaluate the great contribution she has made to America.

On June 28, 1776, fighting from a hastily built fort of palmetto logs, South Carolinians won the first great victory of the Revolution. Hence, the Palmetto State. About a year earlier, in what is now acknowledged as the first act of war by colonists, they had seized from the British by force old Fort Charlotte on the Savannah. And a century before that, South Carolinians had begun the first real opening of the West when her traders penetrated to the Mississippi to establish a brisk and long profitable Indian trade. Few history readers know these things.

They do usually learn of the great and pleasant plantation society which lasted more than 150 years and made South Carolina the richest of the colonies. Great houses standing today testify to the times when 1 or 2 Palmettans could have bought and sold New York City.

Under the calm graciousness, however, there lay a frown of economic uncertainty. Beginning with the exotic indigo, one crop after another met disaster in the State's agricultural society. Indigo went the way of encroachment by man-made dyes. Rice fell by the wayside when slavery went out. The next mainstay, cotton, was snatched from his throne by a tiny demon called the boll weevil.

Adding to these disasters, the Confederate war destroyed the State's wealth almost completely, even to the burning of its great buildings and homes.

The climb back was not a rapid one. Poverty has a way of begetting poverty. But the ultimate answer lay in the character of South Carolinians, which was enough to conquer hardships of decades past and which today is the key to the State's progress.

In the late 1920's when South Carolinians found themselves faced with 5-cent cotton and a ruined agriculture, a few thinking people realized that the State would never prosper again if it continued to depend entirely on the vagaries of farming.

They looked around for a balance, and found one in the infant textile industry. Here, they knew, lay the opportunity to achieve an economy founded on the twin bedrocks of agriculture and manufacturing.

Through the years, this idea dominated the thinking of South Carolina's leaders, and today the results may be seen in burgeoning per capita income, bustling business activity, a sound, stable businesslike government, a revitalized educational system, and in every other facet of the society.

One writer, touring the State with the agriculture committee of the American Petroleum Institute who came to see for themselves went away terming it a "fourfold pattern of progress": farm mechanization, better education, two-armed farming (crops plus livestock), and new industries. That's a good way to express it.

From 1940 to 1955 the number of tractors used on Palmetto farms increased 872 percent, highest in the Nation. In 1939 only 14 percent of the farms had electricity; today it's about 90 percent. Other modern practices are keeping pace, including extensive soil conservation and irrigation.

The role of education both implements this progress and complements it. In other words, better educated people can earn more money, which permits them to educate their children better.

The implementation part is best illustrated on the farm. Clemson Agricultural College through its resident teachers, experimental work, and extension service is the ring leader. Today over 55,000 youngsters are in 4–H clubs, 12,000 are FFA members, and about 800 owners or operators have enrolled in veterans' farm training. And the work of the Soil Conservation Service, State Agriculture Department, and vocational teachers have all had their effect.

Then, as to the "complementary" part: South Carolinians in 1951 were better off than ever, and they felt able to pass a 3 percent sales tax for educational purposes. This tax is dedicated to building better schools and to school transportation. It insures modern schools now and in the future for both white and colored. Ten years ago the same school problem existed, but a sales tax proposal would have been laughed out of the legislature because people were too poor.

On the farm, cotton and tobacco are still the king crops, but this rule is leavened by a strong "parliament" of livestock, grain, vegetables, fruits, and other staples. Even rice is coming back in the low country.

The pace is fact. In 1948 South Carolina farmers devoted 250,000 acres to improved pasturelands. In 1954, only 6 years later, the total was 1,407,000 acres. We're waking up to the fact that we can graze cattle 12 months a year and do not need the elaborate barns, winter feeding, and heavy equipment of colder States.

Georgia is still known as the peach State. Yet today, one South Carolina company alone (Spartanburg) ships more fresh peaches to market than the entire State of Georgia. In many other crops we have attained high national rankings.

In industry, the growth has been even more dramatic. Where cottonfields once gleamed white in late summer, the brick, steel, and glass of modern industrial buildings may be seen nestling quite naturally in their rural settings. From nearby farms Johnny and Jimmy drive to work in their new car, returning in the late afternoon to help Dad with the chores and bringing perhaps $100 or more home on Saturday.

These days industry prefers to be away from crowded centers. Thus South Carolina benefits by a trend which enables industry to fit comfortably and happily into the community. Sometimes one may actually see industry and agriculture dovetailed: one cloth manufacturer has a herd of whitefaces constantly grazing on the beautiful "lawn" around his plant near Clemson; another, now operating a wool-processing plant at Johnsonville has installed a herd of sheep.

Since World War II, over 125,000 new jobs have been created in South Carolina industry, with brand new payrolls exceeding $300 million. That's quite a hunk of cash for a State which had less than $70 million in industrial payrolls 20 years ago. Since 1945, about 1,150 new industries have been established in Palmettoland, and 1,200 substantial expansions have been made.

Not all of these have been textiles, although that industry has been completely integrated and diversified, and South Carolina is now the acknowledged textile State. In addition, industries such as sewing machines, builders' hardware, home ironers, paint, boat building, and many others have come into the State. There is even a maker of church-bell carillons at Greenwood.

Why do they come? People, mostly. People, and the conservative and efficient government they maintain.

South Carolina is fundamentally conservative. South Carolinians are virtually unanimous (they are 99.6 percent native born) in their conservatism, in religion, social life, and custom. This life-thinking creates harmony in industrial work. It also leads to an appreciation for the job, and exceedingly high production.

In government, South Carolinians have a habit of electing men who will run the State's affairs on a business-like basis. Their constitution, in fact, dictates that the budget must be balanced annually.

Despite this seeming hardheadedness, the typical South Carolinian forgets temporal affairs at the end of the day and turns to a gracious, hospitable life made easier by a gentle climate and the unrivaled beauty of his surroundings. Nowadays he is extending gracious hospitality to thousands who are discovering the vacation charms of the State for the first time.

South Carolina has long been known as a world leader for its beautiful gardens, both public and private. One of these, Magnolia, was listed many years ago by Baedecker as 1 of only 3 double-starred attractions, Niagara Falls and Grand Canyon being the others. There are now 13 public gardens of national fame, many lesser ones, and literally thousands of home gardens which are free for the street-side looking.

There are a dozen ocean beaches, which have often been described very seriously as the world's most beautiful. One of these, Myrtle, has attained national recognition.

But beyond these well-known assets there are myriad tourist attractions in South Carolina which have been largely overlooked by the Nation. For instance, over 140 battles of the Revolution, including several decisive ones, were fought in the State. An equally large share of the Confederate War took place here. (Sherman burned Columbia to the ground, and the marks of his shells may be seen today on the statehouse.) Charleston, described as America's most historic city, is said to be the best-preserved 18th century city in the Americas, and one of the world's best. Colonization attempts were started as early as 1526 at Georgetown.

Here are a few other things that perhaps you didn't know about the Palmetto State:

Near Salem is Whitewater Falls, highest cascade east of the Rockies in one of the truly awe-inspiring gorges in eastern America. You can drive your car up for a picnic, and fish for mountain trout in Sumter National Forest.

On Hilton Head Island, one of the largest sea islands on the Atlantic coast and recently opened to the public, you can see wild turkey tracks on the beautiful strand.

For off-trail trips, nothing could compete with a boat excursion from the wildlife refuge at McClellanville to lovely Bull's Island, where you'll see wildlife you didn't know still existed.

These, and many other attractions are bringing South Carolina to the attention of visitors, who are beginning to enjoy the exciting charm of this 300-year-old new South Carolina.

Money Backing for Hog Farmer Viewed by Banker-Agriculturist

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 12, 1956

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New Castle (Ind.) Herald-Times of March 26, 1956:

PORK PRODUCT SQUEEZE—MONEY BACKING FOR HOG FARMER VIEWED BY BANKER-AGRICULTURIST

(EDITOR'S NOTE.—This is the text of an address by J. Alvin Hardin, Knightstown, at the 12th Agricultural Clinic at Purdue University. Hardin, well-known Henry County farm leader, also is president of Knightstown's Citizens National Band.)

(By J. Alvin Hardin)

I, being a farmer as well as a banker, may give some of the farmers' viewpoints, but I believe what is good for the farmer on this subject is also good for the banker.

The hog situation for the past few months has been a much-talked-about subject, but still a rather unpopular subject to discuss at this type of meeting. During a 3-day agriculture conference of the ABA in Chicago last December, about every phase of agriculture was discussed but hogs and if hogs were mentioned they just smiled and changed the subject.

In order to give you the picture of the hog situation as I see it, it may be necessary to touch a little on other agricultural products and some on the economic situation.

WAR, PRICE SUPPORTS CONTRIBUTE TO PROSPERITY

Agriculture as a whole has enjoyed about 12 years of prosperity because of war and the effects of war coupled with the fact that we have had high guaranteed prices on grain. These prices made it profitable to sell grain with the result that the CCC now holds about 8 billion dollars' worth of grain and surplus crops.

Then as open-market grain prices dropped and hogs being a good price, the farmer increased his hog feeding operation with the result of an overproduction of hogs.

The answer is not too difficult—you make any agricultural product profitable and farmers will soon overproduce that product.

It is the old law of supply and demand. We may interfere with this law for a while through a regulated economy, but it will eventually crop out. There are some phases of our economy that can and have been regulated, but I don't think we have as yet found the answer to a successful politically regulated farm economy. I don't say it can't be done, but we have not yet found the answer.

We have enjoyed a good hog market for several years up until last year with the exception of the spring of 1952 when our market dropped to $16. That year we produced 101 million pigs which were just too many for the market. We usually produce from 80 to 90 million, of which 80 to 85 percent go to the market. Only 3 years in our history have we exceeded the 100 million mark.

Last year we went to 95 million pigs and the bottom dropped out of the market to $11 and $12. You as individuals have enjoyed lower prices for your bacon, but it certainly has not contributed to your banks' deposits.

DROP IN 1952 NOT SO SERIOUS AS NOW

The drop in 1952 was not as serious as the present one, even though the corn-hog ratio was almost as low, because the price of corn was higher and if the farmer raised his corn, his total income was much higher than it is today.

In fact, the hog farmer today is in just about as serious a shape as he was for a whole in the 1930's when hogs averaged about $4. A tractor then would cost about $1,000. Today that same tractor will cost over $3,000. Of course, it is a better tractor. But other costs are about on the same basis. Labor is four times as high as in the 1930's.

As a rule, the hog market moves in a 4- to 6-year cycle, depending upon the demand and the extent of liquidation during the low period. The longer and the greater the liquidation, the better the market usually recovers. Of course, this depends also on the buying power of the public, their likes and dislikes and the competition of other meat.

MEAT CONSUMPTION REACHES ALLTIME HIGH

In 1955 our total per capita meat consumption reached an alltime high of 161 pounds, up 8 pounds over 1954 which was 153 pounds.

The 1955 per capita pork consumption was 66 pounds, up 6 pounds from 1954 which was 60 pounds. Back in 1952 when we marketed over 100 million hogs, pork consumption was 71.6 pounds.

Beef in 1955 was 81 pounds, raising from 55 pounds in 1951 and 79 pounds in 1954, exclusive of veal. I give you these figures to show that we consume what we produce but usually with high production and consumption goes lower prices, especially to the farmer.

Other competition in the meat market is poultry and eggs. The number of commercial broilers produced in 1940 was about 140 million. By 1954 this had increased to over 1 billion. Turkeys had also doubled in this period. So you see that pork has competition from all sides.

Another contributing factor to lower hog prices has been the decline in the demand for lard, the use of which has been replaced largely by the much-advertised vegetable oils and fats. Hence through lack of research, education and advertising, we have lost our lard market.

When lard drops from 16 cents per pound to 8 cents per pound and accounts for approximately 20 percent of the live weight of the hog, we know that the popular cuts must carry the extra load.

RETAIL CUTS PRICED HIGH TO CONSUMER

There seems to be a tendency on the part of the processor and retailer to charge the consumer all he will stand on the choice cuts of pork, thus pricing the hog out of the competitive market of other meat. The farmer lives under the impression that he does not get his share of the pork dollar because of this situation.

To prove this statement, last December and January we had the lowest hog prices in 14 years and the greatest spread between the price of the live hogs and the price to the consumer in all time.

Incidentally, the Senate bill passed Tuesday requires packers to pay the farmer support parity or a fair price for meat purchased by the Government and certify a statement for same.

PROGRESS MADE ON BACON-TYPE HOG

Now going back to the excess supply of lard, it brings up the subject of the bacon-type hog which has been much talked about and on which much progress has already been made. However, the packer has been slow to encourage this progress because he has not been willing to pay much, if any, premium for this type of hog.

If the spread was greater between the lard and bacon type, it would definitely encourage the farmer to produce it and thus help to reduce the supply of cheap lard.

To produce the bacon type hog, the farmer has the added expense of buying boars bred for this type which probably take a little longer to finish. This is a subject that needs much consideration; and if the packers do not cooperate, we as bankers must still encourage the production of the meat type hog. We must, if possible, produce what the market demands. On my farm we have been doing this for the past 3 years.

Sometimes we get a 25-cent premium. This is not very encouraging when you have to pay high prices for boars of this type. But nevertheless I think we are going to be forced to do it to keep our hog market on a competitive basis with other meat. This subject deserves your attention and cooperation. The manufacturer will not stay in business if he produces something the public does not want.

WHAT BANKERS CAN DO ABOUT IT ALL

You, as bankers, may rightfully ask, "Well, what can I do about the situation? How can I advise a farmer what to do, whether to sell out and wait for better prices or stay in or cut down 10, 15, or 20 percent? And shall I finance him or turn him away?"

Now I realize that many of you own farms yourselves and are as well qualified to answer this question as I am. But here is my answer.

You as a banker in a rural community should keep yourself well informed on existing feeding ratios. A corn-hog ratio of 13.6 to 1 is about the average over the past years. Anything below that is not so good. Now we are on about 10–1 ratio, depending on how you price corn. You should keep posted on where we stand in our hog cycle.

In other words, keep yourself posted on changing conditions so you may discuss the problem intelligently with the farmer when he comes in. Encourage him in the control of disease. Never let him go without vaccinating hogs because of lack of funds.

You cannot say, "Well, I am sorry but your note is due. What are you going to do about it?" You must discuss it with him from a practical standpoint. He might be your future depositor.

FOUR CLASSES OF BORROWERS ARE CITED

There are four clasess of hog farmers who are borrowers. You have farmers who have made a success out of the hog business. They have proved their ability as managers. They know how to feed. They have the physical setup. They operate as economically as possible. If this man needs cash, I know you will go along with him. He will be your future depositor.

Then there is the other extreme—the farmer who could barely make it when hogs were a good price. To begin with, he may not be on a good hog farm, a farm with the correct equipment. He seems to have more than his share of disease. He is usually on the market at the wrong time. Things just don't click for him. He is already overobligated.

I think you would advise him to sell out while he still has an equity and find something else to do. I am sure it can usually be done on a friendly and cooperative basis. In a few cases I have already accomplished this. There might be one exception to this class of farmer.

If he is close to retirement age and can establish his social security by staying in a little longer, you will be doing him a good turn to go along for awhile, provided, of course, that the risk is not too great.

BANKERS AS CONSULTANTS FOR PROBLEMS

The above two illustrations are not too difficult. It is the farmer in between that is your problem. He has not made much progress and you feel a little uneasy about his future. Can you advise him, get him on a better farm if a tenant, encourage better feeding practices, extend him long-time credit, set up with small payments and eventually make a good hog farmer out of

him? This is where your ability as a banker come into play.

Fourth, there is the beginner, the young man who wants to get into the hog business. Will you advise him to start now or wait? Certainly there is no better time to stock up than when prices are low and ride the market up. It is partially your responsibility to help him decide when this low point is reached.

Of course, other things enter into this class of farmer. Does he have a farm background and the ambition and determination to succeed? And the size of his proposed operation must be econmical.

WHEN WILL MARKET GET BETTER

Now, when will the hog market get better and how high may we expect it to go. I realize I am on dangerous ground when I try to forecast the market, but I will say this much, a major rise will only come after we have had sufficient liquidation and I doubt if that has happened yet. We should have a reasonable rise in June or July, but next fall and early winter I do not expect much improvement over last year.

But by 1957, if demand holds up, we should have a better market, but it will not get back to the high prices we have been enjoying until our surplus grain has been disposed of.

HOG WILL CONTINUE TO BE MORTGAGE LIFTER

In central Indiana the hog has been known as the mortgage lifter and although we have our market cycles, I believe it will maintain that place because we are in the corn belt.

The hog farmer who knows how to feed efficiently, to manage well, will keep his place in agriculture.

I have purposely stayed away from feeding rations and cost of production because of a previous arrangement with the next speaker, N. S. Hadley. This is a very important phase of the hog business and I know he will cover it in excellent manner.

I am thoroughly convinced that we as bankers have a definite role to play in the next few years to carry out our part in the readjustment of agriculture whether it be hog farming or other types.

It is our responsibility to see that the good and worthy, reliable and ambitious farmers have sufficient credit to carry them over until our surplus is in some manner disposed of, or our population catches up with our supply of food.

A Definition of Montana

EXTENSION OF REMARKS

OF

HON. ORVIN B. FJARE

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1956

Mr. FJARE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following article published in the January 26, 1956, issue of the Montana Standard, Butte, Mont., and reprinted in the February 17, 1956, issue of the Dallas Morning News, Dallas, Tex.:

We have been asked to define Montana. What is it, we are asked? What does it mean? Where did it come from? Who owns it? Where is it going? Who runs it?

Those are tough questions, when you attempt to answer them.

You might say: Montana is one of the biggest wheat piles in the world. It's one of the biggest copper piles. It's one of the biggest lumber piles. It's a million sacks of sugar.

It's potentially the biggest hydroelectric powerhouse in the world. It's a silver dollar. It's one State west of the divide and one State east of the divide. There's enough waste material left over to make a third State.

Montana is Robbers' Roost. It's the vigilantes hanging Henry Plummer. It's a million Christmas trees. It's Custer's last stand.

Montana is Lewis and Clark and Sacajawea. It's the world's largest giant spring from which flows the mighty Missouri and the turbulent Columbia.

Montana is Fort Peck Dam, the largest earth-fill dam in the world. It's a cattle ranch with the front gate 30 miles from the front porch. It's Old Faithful. It's Gunsight Peak. It's Going-to-the-Sun Highway.

Montana is Charlie Russell. It's the Richest Hill on Earth. It's Last Chance Gulch. It's a 50,000-mile trout stream.

Montana is Marcus Daly looking into the earth and seeing billions of dollars worth of copper.

Montana is Big Hole Basin with 10,000 haystacks.

Montana is a jewel-like mountain lake.

Montana is a miner, a cowboy, a lumberjack, a farmer, a dude rancher, an Indian, a cattle baron, a vigilante, a road agent, a fur trapper, a banker, an oil driller, an engineer, an artist, a soldier, a millionaire.

Montana is a pine tree.

Montana is a fat steer.

Montana is a gold mine, a silver mine, a copper mine, a zinc mine, a manganese mine, a lead mine. Montana is a ghost town. It's a Grasshopper Glacier. It's Yellowstone Park. It's Glacier Park.

Montana is a church spire. It's a school. It's a boy with a dog and a fishing rod.

Montana is a scenic wonder. It's a volcano. It's a geyser. It's Hell cooled off.

It's a cherry tree, an apple tree, a potato, a mustard seed, an alfalfa patch, a lovely flower.

Montana is all of these things and millions more.

It's home to some 600,000 people.

Some 2 millions of visitors come annually to drink in its beauty, enjoy its built-in air conditioning system, mingle with its friendly people.

These visitors spent some $90 million last year, according to Jack Hallowell, sales advertising director.

Mr. Hallowell thinks that if more people knew more about Montana the annual tourist crop would be considerably greater.

There isn't any doubt about Mr. Hallowell's being right. When you try to add up the total of what Montana is, the column is simply too long. It can't be added.

When you attempt to define Montana you have to say it's everything and then some. Who owns it? It belongs to the ages. Who runs it? It has 600,000 operators, and there is room for 600,000 more. And it's the greatest State in the Union, if anyone asks. Any more questions?

The Oregon Corrupt Practices Law

EXTENSION OF REMARKS

OF

HON. HARRIS ELLSWORTH

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1956

Mr. ELLSWORTH. Mr. Speaker, in the RECORD for Monday, April 9, there appeared in the Senate proceedings a letter published in an Oregon newspaper signed by the State chairman of the Democratic Party. The same letter was apparently submitted to many Oregon newspapers and printed in several of them. I saw the letter in the Portland (Oregon) Journal. It is a political effort but contained so many untruths that I thought it should be answered. The Oregon Journal very kindly printed nearly all of the letter I wrote in reply. Under leave to extend my remarks in the RECORD and include a letter I present the full text of my letter to the Journal which was printed in part in its The People Speak column April 3:

MARCH 28, 1956.

To the EDITOR, OREGON JOURNAL,
Portland, Oreg.

DEAR SIR: A letter to the editor which was printed in the Oregon Journal Sunday, March 18, 1956, signed by Howard Morgan, chairman of the Democratic Party of Oregon, impells me to call your attention to a paragraph of the Oregon corrupt practice law. It read as follows:

"260.370. Political criminal libel; penalty: (1) No letter, circular, poster, bill, publication or placard shall contain any false statement or charges reflecting on any candidate's character, morality, or integrity. The author and every person printing or knowingly assisting in the circulation of the matter described in this section shall be guilty of political criminal libel; (2) violation of this section is punishable, upon conviction, by imprisonment in the penitentiary for not more than 3 years."

The Morgan letter certainly contains false statements reflecting on my character and integrity, and I am a candidate.

The Morgan letter says: "Representatives NORBLAD, COON, and ELLSWORTH have spent the last 3 years parroting the private power line that the Federal Government has stopped building power dams."

No such statement has been made by any of us.

The Morgan letter says: "The record demonstrates that these men have dragged their feet on every authorization or appropriation bill for Federal dams in the Northwest."

That is totally an untruth. I introduced and secured passage by the House of the bills to authorize the Cougar and Green Peter Dams and the Talent irrigation project as Federal multiple-purpose projects, including power. I have vigorously supported all such authorization bills. I have battled consistently for appropriations for these projects for 10 years and am doing so this year. Written records easily available prove this statement.

The Morgan letter says: "They offered no help to Senators MORSE and NEUBERGER and Representative GREEN in last year's successful Democratic fight for three new starts on Federal dams in the Northwest."

That is an untruth. I appeared before the House Appropriations Committee strongly urging appropriations for those dams. The Democrat Members of Congress made similar testimony some 2 weeks later.

The Morgan letter says: "They tried to deauthorize every Federal power project so the private power companies, after endless delays, can try to get authorization for gravy-train partnership deals."

This is likewise a falsehood. There has been no attempt to deauthorize Federal projects by Oregon Republicans.

Those printed statemenis are clearly "false statements or charges reflecting" on my "character, morality, or integrity"—to use the language of the law quoted above.

It was obviously the intention of the Oregon Legislature in passing that law to protect the public against untruthful statements and to protect candidates against such character assassination as contained in the Morgan letter quoted here.

Apparently, our opposition will, in desperation, continue to make such attacks. This seems to be the New Look in Oregon politics. I hope you, and the other editors and publishers in Oregon will give most careful attention to all political material offered for publication to the end that the spirit as well as the letter of the Oregon law is not again violated.

Sincerely yours,

HARRIS ELLSWORTH.

Development Little River Basin, Ark.-Okla.

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1956

Mr. HARRIS. Mr. Speaker, along with other Members of Congress, I was invited to speak to the annual meeting of the Red River Valley Association in Shreveport, La., Monday, April 2, 1956. It was my privilege to speak to the delegates of the Association that afternoon.

The Little River and its tributaries in Arkansas and Oklahoma are a tributary of the Red River, which traverses several States, including Texas, Oklahoma, Arkansas and Louisiana. The development of the Little River Basin for flood control and water conservation is a part of the comprehensive Red River program.

There is a lot of interest in the development of this watershed and since the major part of the program would be in my district, I spoke to the association on this problem. Because of its importance and the interest of the people throughout the area, I presented a plan which I believe should be a basis to compromise the differences and get this development under way. As a matter of public information and because of its importance, I include the speech I made at that time in the RECORD:

ADDRESS BY HON. OREN HARRIS BEFORE RED RIVER VALLEY ASSOCIATION ON APRIL 2, 1956

Mr. Chairman, members of the Red River Valley Association, distinguished guests of the Corps of Engineers, and friends, it is good to be back with you for this annual occasion. I consider it a signal honor and privilege to have the opportunity of this visit and to participate in this program. I appreciate the courtesy of your kind invitation.

This second session of the 84th Congress is about half over. These few days of respite gives us an opportunity to reorganize and reinforce our vigor and vitality, which we hope will be conducive to more formidable results toward the best interest of our Nation. We are hopeful that out of the maze of activity, we will experience the best possible decisions for the betterment of the American people.

I want to commend this Association for your efforts and continued progress toward the development of the Red River Basin. I know it appears some times that progress in this development is slow. It is sometimes discouraging but through the patience, understanding and determination of your officers and members, and with the drive of your able and forceful executive vice president and manager, Roy Matthias, you have achieved some very fine results.

It has been my pleasure to work with and cooperate with you and the people throughout the Red River Basin on those programs so necessary and imperative.

To be sure there are differences here and there which are only natural and to be expected in an area as big as Red River and which traverses some 4 or 5 States. The end result is the more important, however, as it always provides benefits and protection that bring advantages and economic opportunities to the people. We have worked together before the committees of the Congress in authorizing these important projects and obtaining appropriations for their development.

I have been an ardent supporter of the programs for flood control and to develop our rivers and streams, and in the conservation of our water resources throughout my years of service in the Congress of the United States. It means so very much to the protection and economic opportunities of our people and thus strength to our Nation. I have personally observed what it has meant to the localities and the areas affected by such development.

Permit me to say that we have the finest support in these justified and worthwhile projects of our Corps of Engineers. I am glad to see such a good representation of the corps here today. I want to commend them for the fine service they are performing for our country and to express my appreciation for the cooperation I always find them willing to give when at all possible.

We are deeply appreciative of the fact that we have been well received and had fine support and understanding from our congressional committees on this program for the development of the Red River Basin. The Public Works Committee and Appropriations Committee have both been quite considerate of our problem. Some of the major projects have been completed, as you know, such as, Bodcaw, Texarkana Dam and Ferrell's Bridge, which is now underway, and there are many others.

There are others to be developed. The major and most important ones necessary to the comprehensive Red River program are those in the Little River Basin, a major tributary of the Red River. The major part of this proposed development is in my district. In view of the circumstances and the importance of controlling and utilizing the waters of the Little River Basin, I feel it is appropriate for me to discuss it on this occasion.

In the first place, I want to make it very clear that I am not an engineer and do not claim any capabilities as an engineer. We maintain a Corps of Engineers for engineering data and information.

I also wish to say that I do not claim to know all the answers or to be in the position of determining myself what should or should not be done. It requires joint effort on so huge a task.

My mail has been exceedingly heavy, indicating the tremendous importance of this program. A lot of people, good people, with good intentions have contacted me about it. I am always glad to have such expressions of interest.

Also, let me say that I fully recognize the differences of opinion that prevail over the method of this proposed development. I am fully aware of the intense interest that exists and to the extent that many are apparently alarmed.

I cannot help but feel that some of the tension which exists is the result of some misunderstanding, some misinformation, and some fears of sophistry which in my opinion are not present, together with some prejudices in the minds of a few well-meaning citizens to the extent this has almost become an obsession.

I wish that I was capable of presenting the facts on which calm judgment would be exercised and just decisions made. I think I know most of the people affected and I know them well enough that they want to do what is right and best for all concerned.

I am going to undertake then to present this in a way, based on the knowledge and facts that I have, which I hope will be understood and considered accordingly. I want it perfectly understood that neither I, nor do I believe anyone else would want to do any injustice to anyone, or any area.

I have been quite familiar with this problem since its inception. I, therefore, believe I know something about the facts and the problems involved.

Let me give you something of the background of this matter for information. The Corps of Engineers reported some years ago a program for the comprehensive development of the Red River Basin below Denison necessary to protect the lives and property of the people throughout the basin and its tributaries, including the Little River in Arkansas and Oklahoma.

In 1945, we experienced the biggest and most devasting flood in recorded history of the valley. As a result, the Congress authorized a number of projects in the Flood Control Act of 1946. Millwood Dam in my area was one of those major projects. The major part of this program being in my district, imposes terrific responsibility on me as your Congressman, which I am glad to assume, I feel it my duty to do the best I can for my people.

It was authorized as a flood-control project only. There were no provisions made for conservation or water supply. In fact, there was no request for it at that time. I supported the authorization of the project, along with others then, and do not recall any serious objection being offered. This was in 1946.

In 1950, there was a budget request of $150,000 for planning funds of the project. The Appropriations Committee of the House approved the planning funds and it was included in the bill reported by the committee.

At this stage, opposition to the project as authorized began to show, and an amendment on the floor of the House was offered to strike the planning funds. It was defeated.

The bill went to the Senate and the opposition had become more forceful and came to a head before the Senate Committee. The opposition was based on a desire for the development of upstream reservoirs and a reduced facility in the vicinity of Millwood.

As a result of the controversy, the Senate Appropriations Committee provided an additional $200,000 and directed the Corps of Engineers to make a further study as to the economic feasibility and justification of developing a number of upstream projects.

Remember, this happened in 1950, and no further progress has been or can be made until the report of the engineers which was authorized at that time is filed with the Congress. The Congress has not yet had the benefit of the report from this additional study and now 6 years have elapsed.

In 1954, this question unfortunately was injected into a political campaign in my district. When you inject politics into one of these type problems, so often nobody wins and everybody loses.

I thought I saw what would be necessary if we were ever to be able to work out a solution.

I endeavored to obtain engineering data and information from our Corps of Engineers to be used as a basis for a decision which I believed to be best. Therefore, I took a definite position on the court house front at DeQueen, in Sevier County, and outlined a program that I would support, should it be economically feasible, as determined by the engineers.

I stated publicly then and unequivocally that I would support the development of

upstream dams with modification or reduction of Millwood making it a much smaller project. I had been advised by the Division Engineers Office that it might be possible and that such a program, if it could be worked out, would reduce the Millwood project by some 25 or more percent of its original authorized capacity. This was 2 years ago.

I have not changed my position since that announcement, as I have had no further information that any other plan would be more feasible, justified, or acceptable.

A year ago, the Red River Valley Association, included a request to the Appropriations Committee, $250,000 for planning of the presently authorized Millwood project. There was no budget request before us. I appeared with your group representing this association and opposed the request to the committee for planning funds at that time. I did so on the basis that the Congress had previously provided for and directed the engineers to make the survey of the upstream projects and report. I urged the committee then of both the House and the Senate to join me in requesting the engineers to get their report into the Congress.

Last September, the district engineers and the southwest division in Dallas submitted technical data and information to the Chief of Engineers' Office in Washington, with certain recommendations. This information will be on the basis of the final report. Some seem to think that the information and data filed, together with the recommendation of the field engineer is the final decision. This is not necessarily true at all.

Under established procedure, it is yet to be considered by the Board of Rivers and Harbors, composed of top officers in the Corps of Army Engineers. It is then submitted to the governors of the States affected for comment and the Federal agencies.

The Chief of Engineers will consider all of this information as he makes his decision, which will be final and which decision will be included in his report filed with the Congress.

How, as to the present status. The division engineer has announced the submission of their data and information, together with their suggestions to the Board of Rivers and Harbors in Washington. The announcement explains the recommendations of the district engineer. In addition, it invites attention that there may be further consideration given to the justification of including (1) Lukfata in Oklahoma, and (2) water supply at Millwood. It invites interested parties to present views on these two questions along with the other suggestions in the report. Comments are to be received by the Board of Rivers and Harbors by April 17.

Following this public notice, the Board has issued a notice of public hearing to be hld in Washington on April 25. All who are intersted or may be affected by the plan of improvement to be considered are invited to appear.

Now, as to the question of what should be done in the best interest of all who may be affected. I should like to give you what I honestly believe would be in the best interest and call on all parties today to consider it with reason, calm, sound judgment, and on a practical and realistic basis.

It is a compromise proposal which I submit as a basis of agreement and as a joint and united effort.

In considering this compromise proposal I wish to remind you that there are two proposed methods for the development of the Little River Basin. (1) Millwood Dam and Reservoir as authorized in 1946, which would require the taking over by the Government a huge reservoir area of 107,000 acres of land, and (2) the construction of some six upstream reservoirs with a greatly reduced Millwood in capacity and acreage requirement.

In presenting this proposal for your consideration, let me ask you to keep in mind three basic facts. These three basic facts from my information cannot be denied or refuted. They are the basis for determining the method of properly and adequately controlling the waters of the Little River Basin to better serve the interest of all the people.

The first basic fact we must keep in mind is that the waters of the Little River Basin will inevitably and ultimately have to be controlled as a part of the comprehensive flood-control program of the Red River Basin. This is recognized by most everyone familiar with this problem. It is an accepted fact.

To meet this problem and to provide adequate flood protection, water conservation and water supply I think the public would be better served by providing for the construction of upstream reservoirs to be supplemented with a reduced facility at Millwood.

Therefore, I think the upstream reservoirs should be authorized and constructed as a basic part of this program. I think all six of the proposed dams in the upstream areas should be included as a comprehensive program in the upper reaches of the Little River Valley. This would include Lukfata Dam in Oklahoma, about which there seems to be some close economic question.

I think there should be as much flood-control protection in these six upstream reservoirs as they can provide.

I think each of these upstream dams should have as much water supply as the reservoirs can provide for the use and benefit of any possible development in the areas affected. For this water supply the upstream reservoirs would have first call on the water that could be impounded in them for this use.

Many people have asked me in letters and through other contacts to support the construction of upstream dams. This is a part of my proposal which I believe should influence people in this area to accept this compromise plan and join me in getting it underway. To give assurances for the upstream dams and supply of water I would be favorable to specific provisions in the act as a safeguard, similar to the language contained in the authorization of Denison some years ago.

If the people of Oklahoma and in my area in western Arkansas affected want these benefits and heavens knows they need them, I will lend my wholehearted support to obtain them, just as I said I would 2 years ago.

The second basic fact which must be considered is that to economically justify and provide adequate flood protection it will be necessary to have modification of the presently authorized Millwood project. This is a fact confirmed in every report or statement of the engineers.

Some people have been led to believe and sincerely feel that it would be sufficient to satisfy the program by the development of these six upstream projects and thus make it unnecessary to have any facility at Millwood.

I am informed by the people who know, that is, the Corps of Engineers, that in the first place it is not possible to provide sufficient flood protection by these several smaller projects, and in the second place, unless there is a modified facility at Millwood, the Government could not justify the expenditure of the funds necessary for the construction of the upstream projects.

I am informed that in addition to the flood protection that can be provided by upstream projects, there should be a facility at Millwood sufficient to provide maximum flood protection of 1,666,000 acre feet. This would be a reduction in capacity of that facility by a little more than 25 percent from the original proposal.

With the construction of such a facility to provide this minimum requirement, some are fearful that it would adversely affect present highways, railroads, and some existing industry. I want to here and now allay any such fears.

Highway 71 would remain where it is. It would be raised slightly in varying amounts for a distance of 5.5 miles, I am advised.

The G. N. & A. Railroad from Nashville to Ashdown would not be relocated. It would be raised by varying amounts for a distance of about 14 miles. The service it provides would not be impaired or affected, in any way.

Neither would the Missouri Pacific Railroad or the Kansas City Southern Railroad be affected at all.

The town of Okay would not be affected because it is located above the reservoir area.

The Okay Cement Plant would not be endangered or affected. It would be adequately protected by a levee more than 8,000 feet long.

The town of Mineral Springs and the town of Horatio would not be adversely affected or ever be threatened in any way with floodwaters.

Another, thing, some of our Oklahoma friends are fearful that some of their lands will be submerged by a Millwood facility. With a modified Millwood, not 1 foot of land in Oklahoma would be flooded with even a maximum flood.

This is not my word as a layman, but it is assurances from the Engineers who know what the facts are.

Therefore, if anyone has any such fears on these questions let them pass from your minds.

Now, then, another important question is, how much area would be affected?

Under the original proposal which was authorized in 1946, 107,000 acres of land would have been subject to floods. That amount of property would for all practical purposes have been useless except for flood protection.

Therefore, the third basic fact is that with a modified Millwood complementing the upstream dams, the 5 year flood line would include an area of approximately 63,500 acres of land. This acreage would be required whether the project would be an open, so-called dry dam, or a closed, so-called wet reservoir.

This land would become useless for all practical purposes other than flood control. A small percentage of it could perhaps be usable for pasture purposes. This is a reduction of some 40 percent of the acreage involved as originally contemplated in the authorized project.

Nevertheless, this sixty-odd thousand acres of land would be necessary to the project as a necessary part of the overall program, regardless of whether it would be an open or closed dam.

Should, in addition, a water supply be included in Millwood for utilization in the area, it would require an additional estimated 7,300 acres of land, or less, depending upon the amount of water supply.

Therefore, whether there would be an available supply of water for municipal, industrial, and other purposes, or it would be a dry dam used only for flood protection involving only some 7,000 acres of land.

I think these are facts that ought to be understood by everyone in the consideration of this question.

Another fact, which is apparently misunderstood, if my mail is any indication, is that of the acreage which would be affected by the project, either wet or dry, only about 10 percent are cultivatable lands. A few acres, about 1,000 in fact, of this cultivatable land affected are located in Howard County.

Only 2,000 acres or less in Sevier County and some 3,000 in Little River County. The rest of it is wooded lands, with a goodly portion of timber already cut out.

I repeat that this will be the effect, whether the project would be open or closed.

Another question which has been so highly exaggerated and misunderstood to my mail, is the effect it would have on continuous timber harvesting operations. Some have been led to believe, and honestly feel, that there are enormous amounts of timberlands involved with the issue.

As it is in the case of the acreage, it would only amount to some 7,300 acres, or less, dependent on the amount of water supply. No one could seriously contend that this relatively small acreage could have any great effect on any large timber operation.

I am assured by the engineers that there is plenty of water for all the storage supply that can be provided by the upstream dams and an amount in Millwood depending on the acreage of storage supply available. Therefore, even if water supply were to be included in the Millwood Reservoir, it would not deprive the upstream projects of 1 gallon of water.

Thus, the entire issue hinges on a difference of only 5,000 to 10,000 acres of land involved, dependent upon the amount of water supply and most of this would be cut over timbered lands.

This to me, when all the facts are recognized, should not be of sufficient consequence to cause such grave concern or a proper and just settlement to fail.

Therefore, it is my intention to go before the Board of Rivers and Harbors, on the 25th of April, in support of a program based on these facts for the construction of all 6 upstream reservoirs for such flood protection and water supply as they will provide; as necessary to complement them, I will support and recommend a modified Millwood Dam with flood protection of 1,500,000 acre-feet capacity.

This is 166,000 acre-feet less than suggested by the District Engineer, which would be converted to and to provide for a water supply for municipal, agricultural and industrial purposes in the area.

If this were to be accepted, no additional acres of land would be involved by the water supply storage. The same number of acres of land would be required with this proposal as if it were to be a dry or open dam suggested in the data and information of the Division Engineer.

In my opinion, this would not materally affect, if at all, flood protection. In fact, it would provide over 600,000 acre-feet more of flood capacity than the original Millwood proposal would have provided.

If this recommendation is unacceptable to the engineers, as an alternate plan, I will suggest that the additional acres necessary of some 5,000 to 10,000 acres be included to provide such water supply depending upon the amount engineeringly feasible.

If, as has been established, this would not affect the highway, the railroads, the cement company, or these communities adversely, and would not deprive any of the upstream reservoirs of any part of their water supply, and thus not interfere with any opportunity for the development of industry, and would not involve but a few additional acres of land, if any, that would in no way impair or affect timber or mill operations, there could be no legitimate objection to this approach to the problem.

Again, I call on all of those throughout the area affected, to seriously consider this approach as a practical and realistic method of determining this question.

If we could have unity and united effort, we could get this to the Congress and authorize this year. If not, it will be most difficult and perhaps impossible to get it in this year's omnibus authorization.

If this or some similar approach is not accepted the alternative will be tragic to our area. We may very well be faced with a problem which would be beyond our reach.

As I have already said, Millwood Dam is presently authorized for flood control protection only. If we fail to reach some acceptable compromise there will inevitably be a budget request for this presently authorized project.

The Engineers, the Government and the Congress, no doubt would conclude that since we have not reached an agreement the presently authorized project at Millwood should be constructed. Certainly the Red River Valley Association will be urging it. Should a budget be submitted to the Congress to initiate its construction it would very likely be accepted regardless of our efforts. This is so, because as I have said, as a basic fact, the waters of the Little River Basin will inevitably be controlled.

Should this happen we would never be able to get any of the upstream reservors. We would in fact be barred forever of making them economically feasible.

Should this happen there would be no water supply in the Millwood Reservoir. The people throughout all of the area would be forever barred of any water supply so badly needed and necessary if we are to have any future development.

Therefore, you can see why I plead for some acceptable compromise in order that we will not lose the greatest economic opportunity ever afforded for the future of this area.

The only objection in my opinion that could be seriously entertained against this solution would be on the question of pollution. I cannot conceive of anyone advocating that this river be used as a sewer disposal. If so, they might as well change their thinking.

This river has been one of the finest streams for recreation in the country. The people are not going to permit it to be so destroyed. Our State and the Constrvation Department of Arkansas, in my opinion, would never permit.

In fact, industry throughout the country is fast coming to a full realization that polluting the streams must come to a halt and other methods of disposal adopted. There is urgency now for legislation to prevent pollution, both in the States and in the National Congress. This is a policy the country might as well in my judgment get ready for. I hope it will so be understood at the outset in this particular instance.

I earnestly solicit serious consideration of the members of the Red River Valley Association and of all those who may be affected throughout the area of this position which I take, and these recommendations; which I believe would do justice to all concerned.

There is no area anywhere in greater need of economic opportunities and development than the area affected by this watershed in Oklahoma and Arkansas. There has never been a water project developed anywhere that did not bring opportunities for economic development to it. I want to see some of these advantages brought to our part of the country, and I am thoroughly convinced that if the people throughout the area would join together with me in this development, it would enhance our economy many fold. It is our chance, let us take advantage of it.

The Greatest Challenge

EXTENSION OF REMARKS
OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1956

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Tablet of April 7, 1956:

THE GREATEST CHALLENGE

(By Julius Epstein)

Nikita S. Khrushchev's desanctification of Stalin offers the free world its greatest break since 1917.

If the American Government does not avail itself of the tremendous possibilities which range from the propaganda field to the possibility to roll back the Iron Curtain, America will rightly have lost its claim as the leader of the free world.

Unfortunately, we have already lost most valuable time without having reacted in any to the earthquake in the east.

FREE WORLD WAS SILENT

Neither did the President care to make a statement to the American people and the whole free world, nor did any Member of the House or the Senate, not even Senator KNOWLAND, advance any suggestion.

Nor was a session of the National Security Council called to discuss the enormous opportunities, thrown into our lap by Khrushchev's and Mikoyan's speeches.

Our Secretary of State toured east Asia and our Ambassador to the U. S. S. R. chose to leave Moscow for a vacation resort in Western Europe.

This is the situation in a historical moment which calls more than any other moment in the history of American-Soviet relations since 1933 for the greatest vision, both initiative and swift action on various fronts of the cold and semihot war.

What are possibilities, offered American foreign policy by Khrushchev's and Mikoyan's exposure of Stalin?

SUGGESTS DIRECT APPROACH

The most important and the most promising possibility is the immediate and direct approach by the President to Nikita S. Khrushchev. The President and none else should most certainly address Mr. Khrushchev along the following lines:

"The whole free world, and particluarly the American people, are welcoming your destruction of the Stalin myth, the most mendacious myth ever forced upon a great people in modern times.

"While the free world has always known that Stalin—with the possible exception of Hitler—was the greatest murderer and megalomaniacal tryant modern history has seen, it welcomes and admires your courage with which you dared, even at the risk of a tremendous shock to the Soviet peoples, to destroy the legendary mask of the monster and to tell a part of the truth.

"But this, Mr. Khrushchev, is the moment to tell not only a part of the truth but the whole truth, nothing but the truth. Won't you do it?

"The whole truth is, of course, that Stalin, the insane tyrant, the curse of mankind, did not only commit the terrible crimes you revealed to your comrades, as the slaughter of the 5,000 officers which almost led to the de-

feat of Hitler and the unspeakable mass murder of millions of peasants during the man-made famines of the 1920's and 1930's, but that he had to act by nature with the same criminal insanity in the foreign field.

"You'll certainly not assert that Stalin while criminally insane in his domestic actions, conducted a wise and correct foreign policy.

"Stalin, as you know, violated by force almost every international treaty ever signed by the Soviet Government. (Von Ribbentrop, Hitler's foreign minister, was hanged for much less treaty violations than Stalin committed in his lifetime.) In violation of the most solemnly signed and ratified nonaggression and frienship pacts, Stalin waged war against or blackmailed his way into Finland, Poland, Lithuania, Estonia, Latvia, Hungary, Rumania, Bulgaria, Albania, and East Germany.

QUOTES LENIN

"While nothing you can do, Mr. Khrushchev, will bring back to life the untold millions of victims of Stalin's great crimes within and without the Soviet Union, there is the moral duty, directly following your destruction of the Stalin myth, to undo Stalin's crime in the field of foreign policy and to go back to Lenin's principles, as embodied in his classical 'Declaration of Peace,' issued by the Soviet Government after it was unanimously passed by the All-Russian Congress of Soviets of Workers, Soldiers and Peasants, Deputies on November 8, 1917.

"The declaration is signed by Lenin, the head of the Soviet Government in which I. V. Dzhugashvili (Stalin) held the post of a chairman of nationalities. This declaration reads, in part, as follows:

" 'The just and democratic peace for which the great majority of war-exhausted, tormented toilers and laboring classes of all belligerent countries are thirsting; the peace for which the Russian workers and peasants are so insistently and loudly clamoring since the overthrow of the Czarist regime is, in the opinion of the government, an immediate peace without annexation (i. e., without the seizure of foreign lands and the forcible taking over of other nationalities) and without indemnity.

" 'The government interprets the term annexation or seizure of foreign lands, in the light in which it is understood by the democracy in general, and the working classes in particular, that is to say, every annexation by a large and strong state of a small and weak nationality, without a clear and voluntary expression of agreement to that act by the said nationality; regardless of the time when such forcible annexation took place; regardless of the cultural development or backwardness of the nation forcibly annexed or forcibly detained within the frontiers of a certain state; regardless, finally, of the fact whether said nation is in Europe or far away across the ocean.

" 'If any nation whatsoever is detained by force within the boundaries of another state; if it is detained against its will—whether expressed in the press, national assemblies, party decisions, or restlessness and uprising against national oppression—and is not able to vote freely, owing to the presence of troops of the annexing or stronger nation, and to determine, without the least pressure, its form of state life; then such an acquisition is annexation, that is to say, seizure by force.'

URGES FREE ELECTIONS

"If you really want to undo Stalin's betrayal of Lenin's principles, as you surely must if the world is to believe in the sincerity of your exposure of Stalin as the century's greatest megalomaniac tyrant who even overshadows by far the sinister monsters of the mad Caligula, Nero, and Vespasian, you simply have to give the oppressed satellite peoples of Lithuania, Estonia, Latvia, Bulgaria, Rumania, Poland, Albania, and East Germany the sacred chance Stalin took away from them: To freely elect their own governments.

"Only then will the world believe in the sincerity of your promised policy to do away with the one-man dictatorship forced upon the Soviet peoples as well as upon the satellite countries."

This certainly has to be the grand theme of the American approach to Khrushchev from now on. It has to be the grand theme of the whole free world, to be hammered out day and night, not for 1 month or 2, but if necessary for 1 or 2 years.

At the same time, the President should ask Mr. Khrushchev to tell the world the whole truth about the fabricated confessions of the Moscow trials of the thirties.

The President should invite Khrushchev to admit Stalin's and Beria's guilt in the massacre of 15,000 Polish officers during the war, of whom more than 4,000 were found in the mass graves of Katyn, a guilt established beyond the shadow of any doubt by the great investigation undertaken by a select committee of the House of Representatives.

WOULD RELEASE TESTAMENT

The President should invite Khrushchev to release to the Soviet press the whole text of Lenin's testament, in which Lenin warned his comrades against any further employment of Stalin.

The President should further invite Khrushchev to expose Stalin's instigation of the Korean war and the not-so-secret Soviet participation in it. Mr. Eisenhower should insist that the Soviet Government and the Soviet Communist Party use their tremendous influence upon Mao Tze-tung, Chou En-lai, and the North Korean Communists to allow free elections under United Nations auspices in North and South Korea.

Only such a program would electrify the masses before and behind the Iron Curtain, the Soviet peoples as well as the satellites. After Khrushchev has told them in effect that the West has always been right about Stalin, they would be extremely susceptible to the envisioned approach.

It would snowball into millions of voices all over the globe, the voices of the tormented millions as well as of the free ones. Ultimately, it could not fail to succeed.

But the President has to act now, not tomorrow.

Members of Congress and Members of Parliament Compared

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 12, 1956

Mr. HOSMER. Mr. Speaker, the following comparison of Members of Congress with members of Parliament recently was written by editorial columnist Lawrence A. Collins, of the Long Beach Independent. It was interesting to me, and I think will be interesting to our colleagues:

BRITISH POLITICIANS

The members of Parliament in Britain when compared with our Congressmen appear to have about equal responsibilities. But the compensation and expenses of the two are vastly different. In a busy year the member of the House of Commons may get as much as $3,500 for his service. By comparison our Congressmen get $22,500 a year. But that is only a part of the difference in cost.

The member of Parliament in Britain is not furnished an office or secretaries as our Congressmen are. Neither do they get the franking privilege whereby our Congressmen can send out hundreds of thousands of letters without cost to himself. Neither is the British member of Parliament allowed to collect campaign expenses as is our custom here. This difference is stressed in the Senate investigation now in progress.

When the two systems of cost are compared we seem to be fabulously out of line. But there is a great difference in the responsibilities of the British members of Parliament and our Congressmen. In Britain some 600 members of Parliament represent about 50 million people. In our House of Representatives 435 Congressmen represent 166 million people. That means our Congressmen represent almost five times as many people as the average member of Parliament does.

It is in this respect that the elaborate office staffing and facilities are necessary here. It must also be considered that the British member of Parliament is rarely more than a few hours from his home district by train or automobile. Here our Congressmen on the average are far away from home. They represent much wider distribution of interests than is found in Britain.

On the average it is probable it costs each of our Congressmen $25,000 to run his campaign each year. In Britain it is unlawful for a member of Parliament to spend over $3,000. We have limits on congressional campaign expenditures here, but they are rarely enforced. But in Britain they are strictly enforced.

By these comparisons it would seem we are far out of line. But it should be considered that the average cost of living in Britain is about half what it is here. When the cost of living in Washington 6 months out of the year is considered, it is doubtful that our Congressmen are much better off than the British members of Parliament. When the cost per constituent of the member of Parliament and our Congressman is figured, and the cost of living considered, there is not the difference the dollar compensation implies. But there is no evidence that we get better men and women to represent us under our high costs than the British have on their austerity system.

Americans Will Not For Long Remain Immoral and Economically Ridiculous Too

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 12, 1956

Mr. GWINN. Mr. Speaker, I would like to say to the House what I said in a speech before the Freedom Club in Los Angeles, Calif., on March 22, 1956, so am repeating for the RECORD what I said then:

AMERICANS WILL NOT FOR LONG REMAIN IMMORAL AND ECONOMICALLY RIDICULOUS TOO

Why do we continue to tolerate the pretense that politicians in Washington have any right or power to take our private incomes and manage them better than we can for ourselves? Slavery for a long time was tolerated because it was claimed by Government to be best for the slaves. In the

same way, and for the same reason, our Government now manages our corn, wheat, cotton, rice, butter, cheese, dry milk, tobacco, peanuts, etc., or one-third of our agriculture. It is a mess. Government housing at half rent, tax exempt, is an outrage on the taxpayers and just as bad on the Government tenants. Government socialized power, like TVA, and irrigation projects at taxpayers' expense everywhere are blights on the people who take the money. Our foreign aid, now up to $60 billion, or $1,500 per American family on the average, does not satisfy the socialist governments to whom it is paid. They want it doubled. The political party or parties out of power over there scold us for financing the parties in power and keeping them in office with the help of our money. Imagine how mad all Americans would be if Great Britain had spent $3 billion or $4 billion to help Harry Truman stay in power and keep the Republicans out. They've got too much sense to try it.

So, Government robbing of Peter to pay Paul weakens Peter and demoralizes Paul. It has bought us no friends.

The very idea that our Government should pretend to exercise such powers was utterly repugnant to us for 140 years. It was thought impossible because we had a contract with our Government specifically prohibiting all this. We so feared the inevitable evil tendencies of Government that we drastically limited its functions to its only legitimate sphere, namely, the protection of life and property, keeping law and order. Then to make doubly sure, we had the politicians chained to these proper and limited functions. We specified in 1789 what Congress could tax and spend. We limited the functions and taxing and spending power of our cities and counties and States, too. Fortunately, we have kept and enforced those limitations, and as a result we have not gone Socialist, with few exceptions, in our cities, counties, and States. Our socialism, viz: converting private property into public or Government-owned and operated property, is confined almost entirely to Washington. We breed our Socialists and Communists there.

After 25 years of their infiltration of one of the old parties in power, Congress is unable to repeal and wipe off the books the socialism we've already got. If we are unable somehow to wipe it off the books completely we must go on. For we must be all socialized or all free. There can be no coexistence—half Socialist, half free. We can't even be one-quarter or one-tenth Socialist and remain static at that point. For obviously if we socialize corn every living thing that consumes corn must ultimately be socialized. Farmers can't buy Government-owned and controlled corn and sell beef, pork, milk, and eggs in a free market. The farmers can't get enough for their products on a free market to buy Government-owned corn boosted far above the free market level. So, Government must give each buyer a subsidy so he can buy subsidized Government corn.

The burden of taxes on 40 million families is $10 billion, or an average of $250 per year on every family to pay the costs of the socialization already mentioned. Still more groups are asking to be brought under new areas of socialization. Indeed, every socialized area makes the socialization of all areas related to it inevitable. For example, you hear the people cry out under our present burden, saying, "After we pay our taxes we haven't enough left to pay for the care of our sick, our aged, the education of our children, etc."

So, Mr. KELLEY, Democrat, of Pennsylvania, introduces the Kelley bill providing for Federal aid and control of education on a vast scale. It has already passed the House Committee on Education by a vote of 21 to 9. It will likely come before the whole House for action at this session.

It proposes to take by force from the taxpayers $400 million a year for each of the next 4 fiscal years, a total of $1,600 million, and redistribute that largesse to some of the States at the expense of others for classroom construction. It's all done without taxpayers' consent. They are not permitted to vote on the question. Six industrial States in the North and West, viz: New York, Pennsylvania, Ohio, Illinois, Michigan, and California will be compelled to put up 57.6 percent of the total tax moneys and get back but 35.7 percent of the benefits as grants for classroom construction in those States.

You may ask how can this redistribution of wealth go on and on as it has been going for so many years. Why do they take it without a fight? The answer is that it is done by the cleverest kind of government deception and organized votes of pressure groups. The individual, unorganized voter is made to feel helpless. In order to arouse the people to write their Congressmen they are told by the government propaganda machine for example that we have a dreadful shortage of classrooms and teachers. The people are made to feel inadequate for their responsibilities; unable to meet the cost. The Federal Government must. Washington is held out as the source of money and mercy and concern for the people. Washington admits that people used to manage themselves but asserts they can't anymore.

It should be obvious that no central government can know what the total needs for classrooms are in 57,000 separate school districts. Only each local school district can know what its needs are. If it pays for them itself all the needs will be at one figure. If some far-off giveaway Federal aid for free government is to pay for them, the needs will be at least doubled. The United States Office of Education survey of such needs got just such a result. It asked the superintendents of schools, "What are your new classroom needs, assuming, of course, that the Federal Government may pay for them or a part of them?" The answers showing the needs that came back to Washington were fantastic. The report of the Federal Government showed that there was not a single State in the Union on present tax structures that could pay for all the classrooms the professionals said were needed. Bear in mind, not a single school board or taxpayers' group or parents' group or citizens' group who are going to pay for the school buildings somehow, sometime, was consulted. The professionals scrapped a large part of our present school buildings as unfit. You should have seen the needs for new gymnasiums, auditoriums, cafeterias, and extracurricular facilities that showed up.

It was on just such shoddy, strictly professional, one-sided Government reporting that the President was asked to announce to the country that it needed 307,000 classrooms. Hardly a week went by before the Office of Education had to scale down the number by nearly half. While the Government was wrangling, the school districts were themselves building their own schools.

Now, my friends, I am not a pure anarchist. We have a legitimate area for Government functions. All others are illegitimate. Those illegitimate functions I hate as much as anyone.

There is just one legitimate area, and only one, where the central Government is honorable, and indeed admirable, and, on the whole, honest. That area has to do with the defense of the people's rights and property, the maintenance of law and order, and the sacrifice having to do with national defense.

These are not legitimate functions of Government merely because the Constitution or the contract with Government says so. They are proper functions because the moral and natural law made them so, long before the Constitution. They are in the nature of things. The individual has the same rights and powers with the same limitations imposed on him by the moral and natural law. He can use force to defend himself and his property. And that's the only time he can use force on another person without his consent. He can transfer that right and power to Government as his agent. And since all rights and powers come from the Creator to the individual, he can convey no different or higher right or power to Government than he himself possesses.

Even if people should vote by a majority to give more power to Government than they themselves possess as individuals, the transfer would be no good. When Satan offered to Jesus, in the hour of His greatest temptation, the powers and privileges of the kingdoms of the world, Jesus rejected them utterly. Satan had no such power as he pretended to have to transfer to Jesus. He had simply assumed to have an immoral and illegal power over the people which he had no right to convey.

When the Government goes beyond that restricted area which is the only natural and moral area possible for Government to occupy, then without exception it becomes dishonorable, full of misrepresentation and corruption. It exploits the people to do special favors for special groups in return for their votes. It pretends to be able to manage people and their property better than they can manage for themselves. It attempts to play God in the lives of the people.

But it is beginning to dawn upon us that using the force of Government to take other people's property to do good according to Government's notion of what is good is all dead wrong. The fact that the whole world is morally wrong by taking people's private property and making it Government-owned emphasizes the extent of the world collapse of morals. And, of course, what is morally wrong is contrary to the laws of God. The world violates them with contempt. When Government violates the laws of God by doing what no individual can morally do, then it is just as guilty of wrong as the individual would be guilty. What we have been doing has always been economically wrong. It is now both economically and morally wrong.

For example, a lot of our old neighbors, some of our children, fell in love with the mountains and deserts of the great West. They knew before they went West that there was no water in these deserts. They went anyway. They never dreamed of tapping every eastern family $25 for every billion dollars needed for water. Yet when they organized themselves into political groups they said to their Congressmen, "You go back there and take $25 on the average from every family in the East, or we will not reelect you to Congress." So, the Congressmen have done very well. They have already collected about $150 from each family, or about $6 billion altogether.

As another example of the immoral and ridiculous, take a look at TVA in Tennessee. That was our first planting of a socialist rose in a patch of weeds, otherwise called the free economy. All competition was killed off for its benefit. The rose has had to be artificially fed ever since 1922. And the feeding has cost us in recent years $190 million per year, a total of over $2 billion. That is another $50 per family Government has outrageously presumed to have the power to take from us. It sells power below cost so that 110,000 families heat their houses with electrcity at your expense. TVA never can earn a surplus at such rates to build new facilities for a growing population. And Government can never raise the rates and keep the votes of the people. There will always be a shortage of power so long as TVA has to depend on Congress for its life. Industry won't move into Tennessee because they can't depend on Congress to continue to carry such a weakling. Congress can't depend on itself either

in that regard. TVA doesn't pay a dime toward the national defense—it's exempt from all taxes. It has been a blight on the State of Tennessee that it has constantly fallen behind all the other 11 southeastern private power-producing States in agricultural products, in manufacturing, in retail sales, in growth of new business, in postal receipts. All this is in accordance to the Chamber of Commerce of the United States survey in 1953.

On all of our socialist project above described, the Government spends $10 billion annually, and loses most of it. That's $250 annually per family. And it's growing much worse. There is no restraint or reversal of the trend in sight.

What is the remedy for all this? Clearly the President can't stop it. When he runs for reelection this fall, he will be met by a committee at nearly every State line asking, one after the other, "How much, Mr. President, will you take from others to give to us for more power this year?" The President must say, "Well, boys, you've been getting along with about $190 million a year for a good many years. I guess we can't drop below that on this election year."

Then come the corn boys. And at the next State line the wheat boys. And the water boys; the irrigation boys.

On his way home the big city boys say, "How much, Mr. President, will you take from those awful corn boys to give us Government houses, tax exempt, at half rent? How much for Federal aid to education? How much for health and hospitalization? And how much, Mr. President, for our cousins and our uncles and our aunts abroad?" So, 1956 will turn out to be not an election year for a great statesman but the 25th anniversary of the great auction of the people's rights and their property in return for votes. The continued transformation by force of more and more private property into public ownership for the benefit of special groups and their political corruption.

Congress certainly can't stop it. Congress has tried and failed.

One day the corn boys, the stalwarts from Illinois, appeared in the House and said, "Our consciences hurt. We've got to reduce taxes. We don't dare go back home for election until we throw some group out of the public feed trough. Where shall we start. Which one shall we choose for confession of a sin and the sacrifice?" Which group of voters would you throw out if you were running for Congress on election year? It would have been a beautiful and encouraging thing if the corn boys from Indiana, Illinois, Iowa, and Nebraska had marched down to the Well of the House and sacrificed corn. But it never dawned upon them to do so. They have been feeding on billions of dollars for 17 or 18 years, so that by now they feel they have a vested right to continue to feed on the public. Their commodity is basic. If they should quit taking subsidies from the people that might cause such a shock as to seriously affect the whole economy. No, sir; we can't have that. You know we have $8 billion worth of surplus corn, wheat, and other commodities in cribs and bins, molding and wasting away. That's $200 per family the Government takes of your income to buy the votes of the corn boys. They constitute the very seedbed of conservatism—they don't want stealing in any case unless it would be corn.

So, corn decided to pick on peanuts for the secrifice. Peanuts were such a very natural selection. Few losses of Republican votes were involved. The Illinois boys led off with two days of debate. "Why," they said, "this country could get along if we never grew another peanut. They are sort of indigestible anyway."

By this time the Members from Virginia, the Carolinas, Georgia, and Texas were so furious and their wit so sharp, that they made the corn boys ashamed and they frightened all the other little groups feeding at the public trough. When the vote was taken it was 238 to 170 to keep peanuts in the trough with all the rest and forget the whole business of restoring the free economy and constitutional government.

Apples and other commodities were greatly encouraged. They said, "Why, we're basic commodities. An apple a day keeps the doctor away. We must have our subsidies too." And so it goes on and on.

We are now in somewhat the same position of our ancestors just prior to 1789. We, the people, must, as they did then, reassert and redefine, so that even the Supreme Court can't misinterpret, the constitutional limitations on the functions of government and the taxing and spending powers of Congress. We must first of all correct the dreadful mistake made in 1913, called the 16th amendment, which gave unlimited power to Congress to tax and spend. We much chain the politicians, as Jefferson said, to the limitations of the Constitution so they can't break away from them.

California would be a good State to lead off now as Virginia and Massachusetts were in the beginning. Many groups are forming, like the Campaign for the 48 States, the American Coalition of Patriot Societies, For America, We the People, to support the Reed-Dirksen amendment to the Constitution. It limits Congress to a top income tax, both corporate and individual, of 25 percent. The tax would start at nothing and go no higher than 25 percent, except in case of war or national emergency. Federal estate and gift taxes would be abolished. Estates should be a special source of taxes for State and local governments, instead of being liquidated by the Federal Government bureaucrats who have a theory that they should be liquidated anyway.

This amendment would reduce the spending powers of Congress by about $10 billion, almost exactly what our present socialism costs. It would dry up on our books our socialism which we can't or won't repeal. It would starve out our Socialists and Communists who must continue to breed faster than we can investigate them unless we quit completely operating our own socialism on which they feed.

The proposed 23d amendment would wipe off our books at once 7 or 8 illegitimate Government enterprises. They cover everything from housing, electric-power projects, irrigation, crop subsidies, down to coffee roasting, representing $50 billion, or $1,250 taken from the people per family here tonight. This amendment is a California product, proposed 11 years ago by the American Progress Foundation, 6413 Franklin Avenue, Los Angeles, Calif. It is now being actively advocated before the State legislatures. Illinois has passed it, others will do so soon, we hope. It's a perfectly splendid idea. So good that I was especially proud to propose it to the House of Representatives. When it is passed, as I am sure it or something very like it will pass, I shall be especially proud that it will be known as the Gwinn amendment. It provides: "The Government of the United States shall not engage in any business, professional, commercial, financial, or industrial enterprise except as specified in the Constitution."

There should be adopted the Byrd-Bridges amendment. It will force Congress to stay in session each year until they have balanced the budget. Congress must not spend any more than they are willing to tax the people to pay currently, except, of course, in case of war. That will stop increasing the debt and operating on borrowed money for current expenses.

The Reed-Walters amendment clarifies the Constitution and makes it possible for the States to amend the Constitution by initiating amendments themselves. The Constitution intended that they should have that power to amend.

These amendments should be presented to the State legislatures for action. When 32 of the States send identical resolutions to amend to Congress, Congress must resubmit them to the States. When ratified by 36 of the States, the amendments forthwith become a part of the Constitution.

Thus we can limit the Federal Government's power to tax and spend, just as our local political subdivisions are limited.

If we should elect a Socialist President, as we may, he could do no special damage in carrying off our property and violating our rights without limitations.

We should thus be able to look forward possibly to another 150 years of freedom.

The States reserved to themselves the power to amend the Constitution. They defined the powers of the Federal Government in 1789 just as they may redefine and clarify them now. We should by such amendments release again the inventive, productive, creative, even the atomic, energy which lies in the individual mind and heart alone. Government is never creative, or productive except as it protects the creative and productive powers of free men. It can only use force on mankind. We should, by these constitutional measures, take off our backs the unbearable burdens of our incredible Government that has broken out of bounds. It has illegally and immorally seized power over us. We have unwittingly permitted it to grow upon us.

We should make of ourselves a true example of freedom again in the world. It does not exist today. Thus we might hope to repeat the contribution which we made in the past against the police states of the world. Thus we could hope to reestablish peace at home and in the world.

Analysis of Farm Bill

EXTENSION OF REMARKS
OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1956

Mr. MILLER of Nebraska. Mr. Speaker, the agriculture bill of 1956 represents the combined judgment of 10 topmen on the Senate and House Agriculture Committees. They worked many days and nights diligently and carefully in order to produce a bill that would be acceptable to the administration. It is very difficult to write an agriculture bill that will fit all parts of our agriculture economy in the 48 States. There were conflicting ideas that had to be compromised.

I believe the bill the conferees brought to the House was brought by men who lifted themselves above prejudices and partisan politics. They tried to write a bill that would serve agriculture, but they naturally did not please all sections of agriculture. Indeed, the three great farm organizations do not see eye to eye on the question of accepting or rejecting the bill. I have listened carefully to the debate; I have read the bill, and I am of the opinion that there is more good in the bill than there is bad. There are some things that I would have liked to have taken out of the bill—there are

some things that I would have kept in the bill. It seems to be the best measure we can get.

I voted against recommitting the farm bill because the only provisions that would increase the farm income for 1956 would have been stricken from the bill had it been recommitted.

The President, in his message to Conress on January 9, 1956, set up a 9-point program and urged prompt action in order to increase the farmer's income this year. The soil bank would have placed about $1.2 billion in the pocket of the farmer. It is too late for the soil bank to take effect in 1956. It seemed to me that the only way to carry out the President's wishes to raise the income of the farmer this year would be by keeping parity prices up for 1 more year. Without this provision there would have been a reduction in the parity prices as well as in the acreage. You cannot help the farmer by taking land out of production, and at the same time reducing the prices he receives.

I feel there is more good in the bill than bad. The soil bank, which will go into effect next year, is designed to pay the farmer for taking land out of production. The present bill contains a domestic parity plan for wheat. This must be voted on in 1957 and carry, by two-thirds vote of the wheat farmers, in order to become effective. The bill carries a dual, modern price system for 1 year. This is designed to raise farm income until the soil bank can become effective. It contains a provision for $500 million to process surplus crops and get them into channels of relief both in this country and in foreign countries. It contains a provision for a commission to sutdy the proposition of converting surplus crops into industrial alcohol. It contains a provision to prohibit production of supported commodities on Government-owned land.

I am convinced that the buying power of the farmer is essential to the men and women in labor, industry, and business in all communities. Farmers find themselves in a price-squeeze situation which in many towns has severely affected all business.

Farm income was estimated in 1955 to be about $10.8 billion. That is down 9 percent from 1954. In 1954 farm income was less than it was in 1953. The 1953 income was less than in 1952. The President said in his January 9 message, "Farm prices and incomes are depressing; unless corrected, these economic reverses are a direct threat to all of our people." I believe this bill as enacted, with the dual modern parity system, will bring income to the farmer this year. Dual parity and 90-percent parity will be the only means for a year to assure the farmer additional income. This is the only way you can carry out the President's desire to raise the income of the farmer, because the soil bank, which would have cost $1.2 billion, cannot become effective this year. The 90-percent parity will cost less than the soil bank.

If the farmer approves the domestic parity plan for wheat by his vote in 1957, it will not cost the Government one thin dime. I think it is a good provision. There are some consumers who claim it will increase the cost of bread and flour, but the evidence shows that from 1948 to 1955 wheat prices declined 31 percent, while the price of bread went up 28 percent.

Under the present farm bill, wool and sugar are supported at about 100 percent parity; cotton, tobacco, and peanuts at about 90 percent parity. The only crops not being supported at near 90 percent parity would be corn and wheat.

When the soil-bank provisions become effective, there ought to be a revaluation and a restudy of the parity situation.

I repeat, you cannot help the farmer by taking land out of production or by reducing the parity price he receives. I trust the President will consider this when he decides the question of signing or vetoing the bill. I trust his advisers will point out that the soil bank cannot become effective this year, and that if he really wishes to keep the income of the farmer in balance, then the dual-parity and the 90-percent-parity provisions in the bill will be in existence this year. They are only for 1 year's duration.

There are some provisions in the bill that I do not particularly like; but when you consider that 10 earnest, sincere men worked many days on the compromise, you must conclude that there is more good in the bill than harm. It cannot please everyone. Each Member of Congress has a duty to perform to his district, State, and Nation. I have followed the dictates of my conscience. I hope the advisers to the President will weigh carefully the pros and cons of the bill, particularly in the light of the President's message of January 9 this year.

Our Government

EXTENSION OF REMARKS
OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am inserting an address by Mr. George E. Stringfellow before the Scottish Rite reunion banquet at Duluth, Minn., on March 29 on the important subject of our Government. The comments by this outstanding American should be considered by every Member of this body. Mr. Stringfellow has spent many hours traveling about the United States discussing this important matter of our Government and its place in the family of nations. The address follows:

OUR GOVERNMENT

(By George E. Stringfellow)

I am complimented by your cordial invitation to speak to this fine assembly on the subject of Our Government. May I at the outset pay my respects to Illustrious Sir Clesson H. Wiles, distinguished potentate of Aad Temple, A. A. O. N. M. S., and his gracious and effective divan who honor us with their presence.

Brother Berg, I would have you and your associates know that this is one of the most inspiring banquets and reunions I have ever witnessed. It is, I am sure, a tribute to your organizing and executive ability and that of those who worked so closely with you in making this reunion banquet eminently successful. The entertainment has been of the highest caliber, therefore synchronized with this unusual and uplifting occasion.

Since the adoption of our Constitution 169 years ago, the important countries of Europe, such as France, Italy, Germany, and Russia have radically changed their form of government by violent revolution. Great Britain, the most powerful of them all, has during that period lost most of Ireland and all of India. Her great continental-sized colonies, such as Canada and Australia, while still sentimentally allied, have become independent of the mother country.

Despite civil strife in our country during the sixties, the United States has not changed its form of government since its inception in 1787. We have acquired a great domain west of the Mississippi, another bordering on the Rio Grande, and a third to our northwest. Let us, in all humility, ask why our form of government remained intact.

Are we of better human stock than our European cousins? Is not our stock their stock? Have we had better leaders, or wiser statesmen? Few of our leaders have attained the international stature of Gladstone, Bismarck, and Churchill—yet we have had the same kind of human material to draw from. Most foreign observers think we have not been successful in attracting our best specimens for the work of government. Most of our American geniuses have chosen other fields, in which America is preeminent.

We must find some other cause for the stability of our Government, and I'm afraid it is one for which we living Americans cannot claim credit. We were fortunate in 1787 in having as leaders in our several colonies, a small cluster of men whose like had not been seen before nor since. It was either extraordinary luck, or it was a providential intervention. Those men fashioned and handed to us what Gladstone termed: "The greatest document ever stricken off in a given time by the brain and purpose of man."

We agree, and we accept it as the nearest approach to perfection. However, we don't go along with Mr. Dooley who said, "If the Constitution hadn't been perfect the Democrats would have given us a better one," for on 22 occasions the people found, or thought they found, imperfections or inadequacies in that "greatest of all documents" which necessitated tinkering by the amendment process.

We even adopted one amendment to repeal another. And some amendments and even original clauses, are the current subject of efforts to amend or appeal.

Our Constitution, like every living thing, is still growing and changing. It will never be completed as long as we have Congressmen and Senators, and free men voting for or against them.

Our Constitution is like a certain great cathedral which will never be finished. They are always building on something new.

Pat and Mike were working at that cathedral one hot day. Pat laid down his shovel, mopped his corrugated brow, lit his corncob pipe and philosophically remarked: "Mike, it's a glorious thing us Catholics can build this magnificent edifice to the Lord."

"What do you mean, us Catholics? This cathedral is being built by the Episcopalians," said Mike.

"Ain't they Catholics?," asked Pat.

"Well they are, and they ain't. They're the kind of Catholics that vote Republican," concluded Mike.

At any rate, our Constitution has as one of its strongest points the separation of church and the state. In America, we have no Catholic, or Episcopalian or Presbyterian political parties. I think one of the features that explains our survival without revolution is our two party system. I direct your atten-

tion to France to illustrate my point. The French are a logical people. In fact they are so logical that even the slightest issue between one voter and another means they have to be in different political parties and thus they change their government every few months, or even weeks.

We in America get along with a party that embraces both Senator HARRY FLOOD BYRD, of Virginia, and Senator HUBERT H. HUMPHREY, of Minnesota. Another party had Senator Robert A. Taft, of Ohio, and Senator WAYNE MORSE, of Oregon. The former passed on to his great reward, and the latter passed over the aisle to the opposing party.

In my State in 1954, two opposing candidates for the United States Senate, although representing two different parties, stood for the same things. They were like Tweedledum and Tweedledee. Both were endorsed by the Americans for Democratic Action group. These candidates were so much alike in almost every particular, many voters tossed coins to determine which to vote for, if either. Incidentally, the successful candidate did not receive the majority of the votes cast at that election.

However, illogical, our Government has survived all these and other inconsistencies and continues to function better than any other form known to man.

We Americans fight our battles inside the party instead of starting new parties as do the French. Each party has a wide fringe of moderates bordering on and even overlapping the other.

In earlier days the campaign talk was rough—really rough. For example, in the Middle West a man was given $1,000 damages by a jury because an editor called him a Federalist. The Federalists were considered nice, influential people in Boston, New York, and Philadelphia, but the word "Federalist" was a fighting word in the open spaces out here in the Middle West.

A little later the Democrats were unpopular in certain districts. For example, a Republican candidate for Congress from a small Vermont town, is alleged to have said: "I am, I hope, a fair man. Fair even to my opponents. I do not go so far as to say that every Democrat is a horsethief. But I do say, without fear of successful contradiction, that every horsethief is a Democrat."

And in certain sections of the South, the only thing that protected a Republican was the game law.

It's getting more refined now. "Rum, Romanism, and rebellion" and "malefactors of great wealth" were watered down to mere "boondogglers" and "economic royalists" and now to "giveaway men" and the "mink-coat boys."

While we still make faces at each other, we are as one in letting Comrade Bulganin and his gang of bandits know where we stand in regard to their godless ideology which proclaims that man exists for the state and that faith in God is an opiate of the people which must be exterminated everywhere before communism is safe anywhere.

If you want to get a picture of the working of our American Government, with all its remarkable virtues and its faults, I heartily recommend that you read The American Commonwealth by the Englishman Lord James Bryce. He was a Member of the British Parliament and of Gladstone's Cabinet, and Ambassador to the United States during the administration of William Howard Taft. Bryce's survey of our Government, made nearly 70 years ago, is as sound and accurate today as it was when he wrote it. Every one in our Government should, I think, read it and regard it as a bible on American Government at all levels.

Our system of government works because it is based, like a well-designed engine, on sound principles and lofty ideals. Our way of life, to a large degree, was conceived by members of our craft and the principles of Freemasonry, therefore, are in a very large degree reflected in our Government.

Freemasonry is premised on high ideals. Most of the great generals of our Revolution were Masons. Most of the signers of the Declaration of Independence and Constitution were also Masons. The Masons who founded our way of life were motivated by purest and soundest ideals.

An idealist is in our midst now—a gentleman who has offered us, without taint of partisanship or selfish interest, a practical program that would reduce the cost of our Government more than $7 billion a year. That idealist is Herbert Clarke Hoover, 31st President of our Republic. He is not a partisan. He is a practical idealist. He and his factfinders have shown us how to increase the efficiency of our Government and thus reduce the crushing tax bill $7 billion a year.

If Lord Bryce were living today I am sure he would concur with Mr. Hoover. Mr. Hoover is, I am sure you agree, outside the bias and turmoil and self-interest of our American political scene. He, theerfore, speaks as an idealist—hence, as a truly practical man. He speaks a language we Freemasons understand.

So, I cannot offer a better close than to enjoin you to get behind Mr. Hoover and the nonpartisan recommendations of his Commission. I urge you therefore to write your Congressmen, to write your Senators, and write our President and urge them to implement those recommendations of the Hoover Commilssion to the end that the cost of Government is reduced $7 billion a year. Our alternative to a reduction in cost of Government is confiscatory taxes and ultimate inflation from which dictatorship grows.

Obvious Lessons From the Farm

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. DIXON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Deseret News, Salt Lake City, Utah, of April 6, 1956:

OBVIOUS LESSONS FROM THE FARM

It was well to have a favorite son of this area back with us Thursday night and even better to have him talking such basic good sense about farm problems—for good sense is one farm commodity not in surplus in Washington these days.

No matter how a politician may juggle them or hide them, there remain, as Secretary of Agriculture Benson pointed out in his talk in the assemby hall, these basic facts:

1. Rigid price supports at 90 percent of parity created the present tremendous surpluses.

2. Those surpluses depress farm prices; the decline in farm income has been almost entirely while 90 percent parity has been in effect.

3. Flexible price supports have not yet been given an adequate trial.

4. The dairy industry, the one place where they have been tried, has shown remarkable recovery, and now the Government is out of butter.

All this, one would think, should give pause to the farm bloc in Congress in its headlong rush to replace the administration's carefully planned and integrated farm program with a something-for-everybody hodgepodge. Since it hasn't, may we suggest two rather new and persuasive arguments that were developing almost as Secretary Benson was speaking.

One is a study released this week by the nonprofit, nonpolitical National Planning Association which concludes that "holding price supports at high levels works in exactly the opposite direction from that needed."

The NPA study represents, after all, merely expert, informed opinion, and the farm bloc in Congress has paid mighty little attention to such opinion.

But the second argument may be more impressive. It is the pall of dust that whirled over the western plains States this week and last.

Both the study and the dust storms say the same thing—that returning to the high price supports that were adopted to spur wartime farm production and then were continued because of political timidity is the worst possible course the Nation can take.

If the American farmers are to prosper by standing on their own feet, the NPA study shows, they must tighten up their operations. "They should cull out their poorest acres," the report declares, "and divert these to more extensive uses requiring lower inputs per acre—from wheat to grass, from corn to hay and forage, from cotton and tobacco to corn and hay and forage. The livestock farmers need to cull their poorest cows, sows, and hens and the like. These changes will all reduce the expense side of their ledgers more than their receipts."

The six-State Dust Bowl of eastern Colorado, southeastern Wyoming, and parts of Kansas, Oklahoma, Texas, and New Mexico is even more eloquent. It is estimated that 75 percent of the winter wheat in eastern Colorado was blown out of the ground in last week's windstorm, with damage comparable elsewhere throughout the area.

Why? Because that land shouldn't have come under the plow in the first place. It is submarginal land, from the standpoint of wheat farming. Its sod was broken up only because Government wartime and postwar price supports made it profitable to do so. Nature is now showing the folly of continuing to plant it to wheat.

Tremendous surpluses, tremendous quantities of topsoil destroyed by wind and drought, tremendous economic loss to farmers (and ultimately to taxpayers and food consumers) these are the fruits of high price supports. The administration's soil bank intended to take poorer acreage out of production and plant it into soil-conserving grasses would go in the opposite—and proper—direction.

The soil bank is, of course, a tremendously expensive affair, with enough pitfalls of its own built in. To tie with it a return to higher price supports, as the Senate-House conference committee seems determined to do, simply cannot be accepted by the Nation or the President.

Arms for Israel

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 28, 1956

Mr. MULTER. Mr. Speaker, the following letter on the Middle East situation, forwarded to me on March 26, 1956, by the Brooklyn Council of Pioneer Women is worthy of the attention of our colleagues:

BROOKLYN COUNCIL OF PIONEER WOMEN,
Brooklyn, N. Y., March 26, 1956.
Congressman ABRAHAM J. MULTER,
House Office Building,
Washington, D. C.

DEAR MR. MULTER: Thank you for your efforts to prevent war in the Middle East. May your conference with Mr. Dulles bring a much-needed change in our foreign policy.

Many Americans who saw Edward R. Murrow's program See It Now on March 13 (wherein the tensions between Egypt and Israel were explored) are now convinced that we are building on quicksand when we try to buy Arab friendship by sacrificing Israel. If Israel is destroyed or badly weakened, we lose our only reliable ally in the Middle East, the only country which understands and practices democracy, and which is politically mature enough to understand and guard against the menace of communism.

What about Premier Nasser and the other Arab leaders? Their statements on See It Now indicate their ignorance or deliberate distortion of historic facts, and their total disregard of aid received from the Western Powers.

Premier Nasser said, "The whole Western World has encouraged the Zionists and stamped down the Arabs. The United States, Britain, etc., arm Israel and give her economic assistance but deny assistance to the Arabs." And further on he said, "Britain and France have oppressed Arabs, so we fear them. Russia has never hurt the Arabs. We have no reason to fear them."

What are the facts? The Arabs owe their independence and their sovereignty to the Western World. The western allies freed them from Turkish rule in World War I and gradually created eight sovereign states. Arab States were admitted as charter members of the United Nations after a war they did not fight. They issued a declaration of war against Germany only a few months before Germany's defeat in order to qualify as charter members. The Jews of Palestine fought and worked with the Allies in both world wars. Only after 6 million Jews had been murdered by Hitler (many of whom might have been saved if any land had opened its doors to them), only then did the conscience of the world express itself through the United Nations' action in the creation of a tiny Jewish state.

One state of 8,000 square miles for Jews, 8 or more states of 1½ million square miles for Arabs—does that sound like favoring Jews and stamping down Arabs? Israel would have been even smaller if the Arab States had not invaded Israeli territory in 1948 and had not been badly defeated.

Britain and the United States have armed and given economic assistance to Iraq, Iran, Jordan, Egypt, Saudi Arabia, etc. We persuaded the British to vacate the Suez Canal and leave massive military installations for the Egyptians. Much of the arms have been given free of charge to the Arabs, while Israel is not even allowed to buy arms.

In spite of all this aid, the Western World does not have the friendship of the Arab States. Will fulther sacrifice of Israel appease Premier Nasser or make him aware of Communist dangers? It hardly seems likely in view of past performance and present attitude.

Would it not be good common sense to strengthen Israel and base our Middle East policy on the loyalty and friendship of the only outpost of western democracy in the Middle East? When the Arab leaders realize they cannot blackmail us into sacrificing Israel, they will gladly accept a guaranty of all frontiers against aggression. They will agree to the resettlement of Arab refugees in Arab lands with resulting benefit to all their economies. Israel and the Western World will help financially and in every other way. Peaceful development of the region will be assured. Refugees have been peacefully resettled in India, Pakistan, and elsewhere. Why not here? It can and will be done if the United States, Britain, and France adopt a firm policy and give adequate leadership to the forces of good will in the United States.

If we continue our present policy of drift—war, chaos, and communism will invade the Middle East.

Sincerely

ROSE S. BERKENBLIT,
American Zionist Affairs Chairman.

Will Eisenhower Veto the Farm Bill?

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 29, 1956

Mr. DIXON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Roscoe Drummond in which he concludes that President Ensenhower "would impair the integrity of his administration—and lose farm votes as well" if he accepts the new farm bill as it stands:

WASHINGTON
(By Roscoe Drummond)
WILL EISENHOWER VETO THE FARM BILL?

WASHINGTON.—There hovers over President Eisenhower today one of the most difficult political and personal decisions of his administration. Unless the House of Representatives reshapes the farm bill on the floor vote this week, it will shortly go to the White House piled high with features profoundly objectionable to the President.

Mr. Eisenhower's dilemma is this: Whether to veto farm legislation (mostly of Democratic origin) which does violence to every economic principle this administration has stood for, or to approve it for fear a Presidential veto would seriously damage his party in the coming campaign.

Many of the President's political advisers are urging him to sign anything "because good or bad, we must have a bill." Most of his policy advisers are urging him to be ready to use the veto.

As the bill now stands—and the prospects of improving it significantly on the floor of the House are doubtful—it has built into it high, rigid price supports and other provisions which turn upside down the whole agricultural program the administration has advocated thus far. Secretary Benson says the bill "is not acceptable" to him. Senator GEORGE D. AIKEN, Republican, of Vermont, a staunch administration supporter, says that Mr. Eisenhower "won't sign it unless he has completely revised his character, his disposition and his knowledge of farm problems."

Mr. Eisehower hasn't said.

The President will have plenty of arguments to choose from. Here are the arguments that he should sign almost any farm bill which comes to him:

That, politically, a bad farm bill is better than none at all.

That many farmers in many key States would blame the Republicans, not the Democratic majority in Congress, if a Presidential veto means no legislation at all—which it probably would.

That while a veto might or might not cause Mr. Eisenhower to lose many votes, it might prevent the Republicans from regaining control of Congress.

That because of his respect for the independence of Congress, Mr. Eisenhower ought not to impose his views through the instrument of the presidential veto.

That a veto would kill the "soil bank." (The time for using it this year is fast running out.)

That, as some Republican politicians will argue, a bad farm bill wouldn't do the country as much damage as a Democratic victory this fall—hence the President should not risk a farm bill veto.

The arguments in support of a Presidential veto are these:

If Mr. Eisenhower and the Republican Party believed they were right when in 1952 and 1954 they campaigned on the platform of flexible price supports, they can't turn around now and assent to the opposite.

President Roosevelt's Secretary of Agriculture Henry Wallace President Truman's Secretary of Agriculture Clinton Anderson, and President Eisenhower's Secretary of Agriculture Ezra Benson, all agree that high rigid price supports will keep piling up unsaleable surpluses which will wreck the farmer, not help him.

Mr. Eisenhower has consistently contended that there is an issue of economic principle here, and if on grounds of political expedience he goes along with a program he deems wrong in principle and bad in effect he will stultify the moral basis of his administration.

By exercising a veto when he deems it necessary, a President is not showing disrespect of Congress; he is discharging a Constitutional duty.

The great majority of Republicans in Congress have opposed the present farm bill. If Mr. Eisenhower vetoes it he would be supporting the majority view of his party.

The administration might well lose some farm support in vetoing the bill, but it could gain support in the country as a whole by doing what it believed right in principle and frankly and forthrightly explaining why it did so.

My own judgment is that President Eisenhower feels more at home with the arguments for veto and that if he should accept the bill as it now stands he would impair the integrity of his administration—and lose farm votes as well.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

Tribute to Admiral Byrd

EXTENSION OF REMARKS
OF

HON. JOHN STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, April 16, 1956

Mr. STENNIS. Mr. President, after a long and varied career in the Navy, Adm. Richard E. Byrd is in command of the naval forces engaged in operation Deep Freeze, a 4-year project in which the Navy is supporting the many United States agencies taking part in the International Geophysical Events from 1957 to 1958. This project is greater than all of his previous expeditions combined.

I have stated many times publicly my great admiration and high esteem of Admiral Byrd. What are the traits and characted that make a man great? Some of these have been set forth in an address by Adm. Arleigh A. Burke, United States Navy, Chief of Naval Operations, before the New York meeting of the International Rescue Committee. Admiral Byrd is now serving as honorary chairman of the International Rescue Committee, which has been responsible for rescuing many thousands of liberty-loving people from totalitarian oppression.

I ask unanimous consent to have the address by Admiral Burke, delievered in New York on April 3, 1956, printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Duke, Admiral Byrd, Mr. Chairman, distinguished members of the International Rescue Committee, ladies and and gentlemen, it is a honor and a privilege to participate with you in this testimonial for Admiral Byrd.

Admiral Byrd is an outstanding public figure. In fact, he is the world's foremost living explorer. His reputation as a geographer, a philosopher, and aerial navigator is outstanding. He is also one of the Navy's most famous flag officers.

Many of us are fortunate enough to know Admiral Byrd personally. Others have read of his many accomplishments since the turn of this century. My own admiration for this pioneering naval officer goes back many years. It is a particular pleasure on this occasion to recall with you some of the highlights of the career of the fellow mariner, whom we honor here tonight.

Admiral Byrd graduated from the United States Naval Academy at Annapolis with the class of 1912. His class was one of those which supplied our country with a large number of outstanding officers.

As a midshipman, Admiral Byrd suffered a severe leg injury as a result of his enthusiastic participation in athletics. During his first 4 years of active commission this injury was aggravated. As a result he was transferred to the retired list. Prior to his retirement he had served admirably on six ships and was twice cited for bravery. Fortunately, his retirement was only a temporary loss to the Navy—because he came back to active duty immediately to train recruits in preparation for our entry into World War I. Here he demonstrated exceptional ability in organizing an effective training program.

In 1918, after completing a course of instruction at the Naval air station, Pensacola, Fla., Admiral Byrd was designated a naval aviator. Meanwhile, he began to develop plans for a transatlantic flight of the Navy's famous Curtiss flying boats, which were then being made ready. With this in mind, he began intensive study of the many new problems connected with aerial navigation. He developed the drift indicator and the bubble sextant. Improved versions of these instruments are still standard navigation equipment for oceanic flights. Admiral Byrd is recognized today as one of the greatest of the Navy's aviation pioneers.

The years immediately following World War I were lean ones for naval aviation. The times were so critical that Admiral Byrd had to forego the transatlantic flight because his talents were badly needed in the Navy Department. His efforts and influence in this new assignment were largely responsible for the creation of a separate bureau for naval aviation, which we now call the Bureau of Aeronautics.

Admiral Byrd organized and commanded the naval flying unit which in 1925 accompanied the polar expedition of another famous American Arctic explorer—Mr. Donald B. MacMillan. This achievement won him a commendation by the Secretary of the Navy for meritorious service.

In 1926, Admiral Byrd made the first flight over the North Pole. He was assisted in this great undertaking by Floyd Bennett, chief machinist mate, United States Navy. As a result of this history-making flight, Admiral Byrd was awarded the Medal of Honor and the Distinguished Service Medal.

Not satisfied with his pioneering achievements of 1926, Admiral Byrd prepared to conquer new frontiers. Only a few weeks after Lindbergh's historic crossing, Admiral Byrd made the first successful nonstop crossing of the Atlantic by a multiengined aircraft. For this notable and historic achievement, Admiral Byrd was awarded the Distinguished Flying Cross.

In 1928 he organized and commanded another polar expedition—this time to the Antarctic. It has here that he established the now famous Little America base. On November 29, 1929, he made the first successful flight over the South Pole. For this extraordinary and hazardous achievement he was awarded the Navy Cross and the Byrd Antarctic Expedition Medal.

These successive achievements, each equal to or greater than the one preceding, fired the imagination of the entire world. In response to public acclaim, and on behalf of a grateful Nation, Congress promoted Richard E. Byrd to the rank of rear admiral on the Navy retired list. This was done in spite of the personal objections of Admiral Byrd who in all modesty believed that such a great honor was not warranted.

From 1933 to 1935 Admiral Byrd organized and headed the second Antarctic expedition. Most of you are familiar with some of his extremely hazardous experiences which he has recounted so skillfully in his numerous articles and books. For his achievements during this expedition, the second Byrd Antarctic Expedition Medal was authorized by Congress and awarded to Admiral Byrd.

In 1939 he returned to active duty and assumed command of the United States Antarctic Service. While serving in this cacapacity, he established two Antarctic bases 1,500 miles apart. For this great service he received a letter of commendation from President Franklin R. Roosevelt and was awarded a Gold Star in lieu of a second Distinguished Service Medal. He was also awarded the Antartic Expedition Medal for the operations from 1939 to 1941.

From this duty, he reported to the Office of the Secretary of War as a consultant for the development of all types of cold-climate, military clothing. In 1942, he again returned to the Bureau of Aeronautics and energetically analyzed the effectiveness of overseas base planning in all World War II theaters of operation. His tireless energy, unusual foresight, and superb leadership contributed immeasurably to the success of many phases of World War II planning. He was awarded a letter of commendation, with ribbon, by the Secretary of the Navy. In addition, he was awarded the Legion of Merit and a Gold Star in lieu of the second Legion of Merit.

Admiral Byrd commanded the 1946–47 Navy Antartic expedition which was under the tactical command of Rear Adm. Richard H. Cruzen. This expedition was the largest ever to go into the Antarctic. The purpose of this operation was to train naval personnel and test standard Navy ships and equipment under extreme conditions of cold weather. Valuable scientific information was obtained on this expedition for use in the Navy's development programs.

One of Admiral Byrd's important accomplishments was in the advancement of the science of weather observations. He was among the first to recognize that basic weather originates in the polar regions. His pioneering research in this field has been invaluable to the Navy and to the entire world.

Today, Admiral Byrd is in command of the naval forces engaged in Operation Deep Freeze. Rear Adm. George J. Dufek is his tactical commander. Operation Deep Freeze is a 4-year project in which the Navy will support the many United States agencies taking part in the International Geophysical Events from 1957 to 1958. The scope of this operation is greater than all of the previous expeditions combined. Under Admiral Byrd's experienced leadership, we can be sure that the Navy's missions in Operation Deep Freeze will be accomplished in an outstanding manner. The United States, and the United States Navy in particular, are extremely fortunate to have the services of Admiral Byrd for this gigantic, international scientific endeavor. We expect to obtain additional scientific material of vast importance, and we expect to explore the few remaining frontiers of the Antarctic, which constitutes an area almost the size of the United States and Europe combined.

Of necessity, only a few of Admiral Byrd's many citations have been mentioned. There are many, many more, both military and civilian—national and international. He

has received all of the highest awards that a grateful nation can bestow.

Admiral Byrd has already made his niche in naval history. His wholehearted devotion to duty, his rare combination of imagination, planning foresight, and his organizational ability make him one of the truly great officers in the history of our Navy. No officer has contributed more to the United States Navy than Adm. Richard E. Byrd. No officer has contributed more to his country. When the history of this era is written, there is no doubt that Admiral Byrd will take his place alongside the traditional heroes of the Navy—the Deweys, the Farraguts, and the John Paul Jones—to inspire the many generations of naval leaders yet to come.

Admiral Byrd's career is like the mighty oak tree—it has many branches. Its shadow passes over a large area. He is now serving as honorary chairman of the International Rescue Committee. This great organization has rescued many thousands of liberty-loving people from totalitarian oppression since 1933. You have aided more than 100,000 Iron Curtain refugees alone. Your appreciation of Admiral Byrd's further contribution to humanity through your great organization is evidenced by this testimonial dinner which you have sponsored.

Admiral Byrd has already completed over 30 years of active naval duty. It is therefore too late for him to change a habit of a lifetime. Hence, it is quite possible that as he sits here among us tonight, he is thinking of new frontiers to conquer. I shall not be surprised to see him commanding the first naval expedition to the moon. If he does command the expedition, we can rest assured that he will get there successfully, and accomplish what he sets out to do.

Tribute to Mrs. Fanney Neyman Litvin

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, April 16, 1956

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news story from the Montana Standard, of Butte, Mont., of April 11, 1956, relative to a high tribute paid to Mrs. Fanney Neyman Litvin, who recently retired as an attorney for the Federal Communications Commission after 28 years of distinguished service. She has earned this tribute because her service has been outstanding and meritorious. We of Montana are very proud of Fanney Neyman Litvin and we join with the Bar Association of the District of Columbia in extending our best wishes and congratulations for 28 years of Government work well done.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ATTORNEYS PAY TRIBUTE TO MRS LITVIN, FORMER BUTTE WOMAN

A former Butte resident and one-time Montana State College student, Mrs. Fanny Neyman Litvin, who became a career attorney in Federal Government, has been honored by the Bar Association of the District of Columbia. Mrs. Litvin was an attorney for the Federal Communications Commission for 28 years until her retirement.

The bar association, stanch stronghold of private practitioners, adopted this resolution, honoring Mrs. Litvin:

"Whereas Mrs. Fanney N. Litvin has recently retired from Government service after almost three decades of active and effective work which has included service as broadcast attorney and as hearing examiner of the Federal Communications Commission, and

"Whereas her high professional standards and her sense of fair play, in both her personal and professional life, have earned for her the respect and affection of the members of this association: Now therefore, it is

"Resolved that this association express its sincerest admination for her past work and its best wishes for her continued success."

Mrs. Litvin received the testimonial and a leather attaché case from Charles S. Rhyne, president of the bar association, at a recent meeting in Washington.

A native of Butte, she attended Montana State College in 1924–25 and is a graduate of George Washington law school. She joined the legal staff of the Federal Radio Commission in 1927, transferring to the Federal Communications Commission in 1934 when that Commission took over the radio work. When the Administrative Procedure Act set up the legal staff of the Federal Communications Commission Mrs Litvin transferred to that work, leaving her former duties of writing briefs, arguing cases, and work on rules. She worked there until her retirement.

Authorizing Construction for the Military Departments

SPEECH
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 12, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 9893) to authorize certain construction at military installations, and for other purposes.

Mr. SMITH of Wisconsin. Mr. Chairman, I move to strike out the last two words.

(Mr. SMITH of Wisconsin asked and was given permission to revise and extend his remarks.)

Mr. SMITH of Wisconsin. Mr. Chairman, there is a question in connection with the military construction bill which we are considering that is important to many of my constituents. I have asked for this time to secure an opinion from the very able chairman of the committee handling this bill as to the liability of the Federal Government for school bonds which cover part of the property to be acquired for the erection of a jet interceptor base.

Plans are under way to purchase or condemn a considerable number of acres at a village called Kansasville, which is in Racine and Kenosha Counties. At the present time the State and local school officials are concerned about school bonds affecting the property to be acquired.

The State superintendent of schools in a letter to me has stated there is no Federal law which would relieve outstanding bonded indebtedness for a local school district where the Federal Government acquired property for a Federal building.

To me this presents an inequitable situation in view of the possibility that the burden of the bonds would be shifted from Government-owned property to the remaining property owners in the school district. In view of that situation I would ask the chairman if that question has ever been raised in committee.

Mr. VINSON. That question never has been raised. I should not like to give an opinion on it. That is a legal question. That is, where there are bonds of a certain character on certain property and the Government acquires the property, the question raised by the gentleman is, Do those bonds continue to follow even though the ownership is in the Federal Government?

Mr. SMITH of Wisconsin. That is right, sir.

Mr. VINSON. That is a very important question, but I am frank that I would rather not risk an opinion on it, because there are so many able lawyers present, such as my colleague, the gentleman from Virginia [Mr. HARDY]. If he were not here perhaps I might venture an opinion.

I will say to the gentleman that we shall try to get some information on the question and advise the gentleman.

Mr. SMITH of Wisconsin. If the gentleman has no objection, I should like to submit a statement on the situation so that I may assure my people that the Committee on Armed Services is doing all it possibly can to settle the question satisfactorily to my constituents.

Mr. VINSON. We shall make inquiry not only of the Department of Defense but of the Attorney General.

Mr. SMITH of Wisconsin. I thank the gentleman.

St. Thomas Home Remembers Its Young Charges

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, April 16, 1956

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news story from the Great Falls Tribune, of Great Falls, Mont., dated March 27, 1956, entitled "St. Thomas Home Remembers Its Young Charges Need More Than Just a Place To Sleep and Eat." This home, which has been in operation since 1910, has performed outstanding services in looking after orphan children and children of broken homes. I am delighted to bring this news story to the attention of the Senate and, at the same time, to commend Sister Eileen Mary, Superior, Sister Martha Elizabeth, all the other sisters, and Father McHugh for the love, devotion, and understanding shown. May God bless them and the children under their care.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ST. THOMAS HOME REMEMBERS ITS YOUNG CHARGES NEED MORE THAN JUST A PLACE TO SLEEP AND EAT

Three-year-old Johnny's scowl changed to a crow of delight as Brer Rabbit scrambled out of the bramble patch and went bouncing away, lippity-lip, lippity-lip.

It was story day for the little folk at St. Thomas Orphans Home and Johnny was but one of a dozen or more to go sober and then chuckle at Sister Martha Elizabeth's tale of old Brer Fox and Brer Rabbit.

Listening to stories, watching television, outings, and playing games are just a few of the delights that St. Thomas provides for its charges, for it has many years of experience caring for the young.

Boys like cherubic little Chucky, and little girls too, first came to the home December 21, 1910, when 36 orphans were transferred there from Columbus and St. Clare hospitals.

During the years the number of residents has varied and now the home has 43 girls and 38 boys under its care. Ages of the children range from 3 years old to boys who stay through eighth grade and girls who remain until finishing school.

Eleven of the boys and girls are orphans, 18 have no mothers, and 3 no fathers. The remainder are from broken homes—homes where parents either cannot or will not take care of their children.

All elementary grade-school age boys and girls attend classes in a school at St. Thomas and from 1935 to 1950 a fully accredited high school was operated there. This closed when Central Catholic High School opened to all students and the space now is used for grade school pupils.

The home has 8 teachers, including the music instructor, all sisters except 1. They also have five supervisors or "little mothers" in the junior department, which consists of youngsters from 3 to 9 years old.

Most of the children realize their own mothers are gone or that they have no real home any more. But to them a "mommie" is someone who combs and curls your hair, washes your face and hands, kisses and doctors your cuts and bruises, provides nice food for you to eat and irons your dresses and shirts.

Mommie, or sister, the word is much the same here, also means someone who rocks you a bit, tells you stories, takes part in games, helps you lace your shoes, teaches you your prayers and tucks you in bed with a kiss and a God bless you.

A regular schedule is followed at the home, with all taking part. The youngest group goes to bed on schooldays about 7:30 p. m. and is up at 7 a. m. The older children end their days about 8:30 and rise at 6 a. m., with the exception of Sundays and holidays.

Children from all parts of the State may come to St. Thomas Orphan's Home, but about two-thirds of them are from Great Falls. A few of the children, especially the older ones, have trouble adjusting to their new environments.

"I cannot say we are 100 percent successful with all the children," Sister Eileen Mary, sister superior, said, "but with those who have difficulty we try to help them feel at home by talking with them, and with understanding and prayer."

Once in a while a boy or girl will run away from the home. One child from a broken home, about 9 years old, could not become used to the home life and finally was sent to Boys Town, Nebr.

But the majority of the little Johnnys, or Susies, and their older brothers and sisters find this 16 acres of playgrounds and buildings a haven.

On the sunny days the sandboxes, swings, outdoor playground equipment, and outdoor toys provide hours of fun that brightens eyes and cheeks. There also is a regular program of baseball, football, track, and basketball. There is singing, modern and square dancing too, and the reacting of plays and, for the little girls, the never-ending game of playing house.

St. Thomas Home, 3200 Central Avenue, was well out on the Montana prairies when it was first built and like all good farms it had a herd of cows and a yard full of chickens. But civilization crept up and all thoughts of agriculture have been abandoned.

The chicken coop is now a garage and a new gymnasium sits where the barn used to be. An infirmary, with a registered nurse always on duty, also has been built, and there is a chaplain's residence, a large chapel and auditorium as well as the convent and the front office of the main three-story building is being enlarged.

No attempt is made to change any faith of those residing at St. Thomas, but their spiritual and moral training is not neglected. Guidance is given to all. Each day begins and ends with a simple prayer and the oldest of the Johnnys and the Susies go to Rev. M. McHugh, school chaplain, for a practical answer to their problems.

Nuclear Weapons and Disarmament

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 9, 1956

Mr. PRICE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement of Thomas E. Murray, Commissioner, United States Atomic Energy Commission, before the Subcommittee on Disarmament of the Committee on Foreign Relations on April 12, 1956:

Mr. Chairman and members of the committee, your invitation to express my views on disarmament is most welcome. Your committee is dealing "with one of the few great central problems of our time. Today no nation or person on earth can have a reliable assurance of security when weapons exist which are capable of destroying all mankind." Mr. Chairman, these words of yours at the initial meeting of this committee demonstrate an awareness by you and your associates of the realism with which disarmament must be faced.

My purpose today will be to present some ideas that may help in forming a national policy so urgently needed in the nuclear age. This policy must be based on all the facts about nuclear weapons—our need of them, their usefulness, and the dangers connected with their misuse.

On February 23, 1956, I appeared in executive session before the Joint Committee on Atomic Energy. At this time I made recommendations pertaining to our nuclear weapons program and our nuclear power program. As the weapons program has the more important and immediate bearing on disarmament I shall limit my remarks today, within the limits of classification, to weapons.

What I have to say on disarmament may be put in one straightforward proposition. In the existent state of world affairs disarmament means rational armament, especially in the nuclear field. This is the difficult field and the dangerous field, in which rationality is of extreme importance.

Disarmament doubtless means much more than rational nuclear armament. But if it does not mean at least rational nuclear armament it means nothing.

Before developing my proposals I should like to comment on one central aspect of the past history of our nuclear weapons program. The fact is that from the outset we were primarily seeking the answer to one question: What can be done with nuclear energy in form of bombs The problems we faced were scientific ones. Questions concerning the development of a national policy with regard to the use of nuclear arms were not in the foreground. We were simply looking for results, always with some antecedent doubt about what the results might be. Ever since the first nuclear explosion at Alamogordo the specific and continuing major objective was to develop ever larger bombs. This was true of the H-bomb program, which achieved in 1952 a spectacular success.

Throughout my 6 years on the Commission I have strongly supported this mode of procedure. However, I long ago recognized the need of developing a national nuclear policy which could keep pace with scientific and technological progress and tried to help in developing it.

The Mike thermonuclear explosion on November 1, 1952, and our Castle tests in the spring of 1954 presented the nuclear weapons problem in an altogether different light. These tests reemphasized in a most dramatic way the urgent need for a national nuclear policy interrelated with the types of bombs to be produced. The major question no longer is, What can we do with nuclear energy in bombs? We know what we can do. We know that there is no upper limit to the size of bombs that can be made.

A new question therefore assumes the primacy. Should our future program proceed on the same basis as in the past, and with the same major objective in view—to keep on making bigger and bigger bombs? Would this, in our present circumstances, which are different from those of the past, be a rational course of action? I do not think so. I think that policies will have to be adopted that will set our nuclear weapons program on a basis more in conformity with the realities of the present day international life, more in conformity with certain principles of reason, and better calculated to fit into a new national policy on the use of nuclear weapons.

The new direction of our policies as I see them could be summed up in the phrase "rational nuclear armament." This phrase means that decisions with regard to the size and type of nuclear weapons to be placed in stockpile should be made in the light of two principles. There is the military principle that the weapons we manufacture should be demonstrably useful for the purposes of actual war. And there is the higher principle that the use of force in warfare is subject to the dictates of the moral conscience.

The moral norm is the more important. There is something in the atmosphere of the age of violence through which we have lived, in which, indeed, we are still living, that tends to dull the moral sensibilities. In a strange way the sheer brilliance of our technical achievements with nuclear weapons also tends to dull the moral sense. It is therefore necessary constantly to remind ourselves that a concern for justice in the use of force is an obligation upon a civilized nation.

As a nation under God we are obliged to act under the limitations of the moral law. The imperatives of this higher law bind us to a due measure of moderation and discrimination in the use of force. Within the Christian tradition to which we owe our national origins the duty of setting limitations on war and on the use of force in war has been a recognized moral obligation.

For instance, our moral tradition does not permit us to use nuclear weapons whose

effect is mass destruction on an indiscriminate scale. As the only historical examples of the use of nuclear weapons in warfare Hiroshima and Nagasaki are pertinent. The weapon used on Hiroshima, for instance, was 15 kilotons, or so, about 60,000 times more powerful than the largest conventional bomb of World War II. It destroyed 4 or 5 square miles of territory and killed or injured nearly 150,000 people. At our present distance from that disastrous event I do not think that the use of this bomb against this particular target, the city of Hiroshima and its multitudes of innocent people, could be justified on moral grounds.

The concept of a moral limitation is, I am sure, felt by the American people as a whole. However, we must beware of the false idealism lurking in the Soviet slogan, "Ban the bomb." In the discussions and negotiations looking to disarmament, it would be sheer folly to be maneuvered into making a blanket renunciation of the use of all types of nuclear weapons.

This brings me to the second principle of rational nuclear armament—the principle of military usefulness.

Wars in the future will be nuclear wars. This does not mean that they need be all-out nuclear wars. All-out nuclear war is no more acceptable than murder or suicide. It would be fatal to permit ourselves to drift into the habit of thinking about nuclear war only in all-out terms. The traditional moral effort of western civilization to impose limitations on warfare must be continued even in the nuclear age. A limited nuclear war is a possibility that our consciences can face and accept.

In the different kinds of limited war that might confront us certain types of nuclear weapons have a genuine military usefulness. It would, therefore, be wrong on our part to deprive ourselves of these weapons.

However, our stockpile should include only weapons that are actually useful in war. Moreover, it should include only weapons that we can legitimately intend to use. I am altogether opposed to any school of thought that would move on toward weapons of ever-increasing magnitude, while at the same time disclaiming the intention of using them. To say the least, this position is unrealistic. Under the stress of a threat to its survival a nation will use any weapon it has in hand, however recklessly, if there is any seeming advantage in its use.

It may be said that certain nuclear weapons, which we might not intend to use in actual warfare, are still useful as a deterrent of war, as a means of terrifying the enemy, or at least as a means of striking a balance of terror. For my part, I think it is time we stopped for an instant to take a hard look at this concept of deterrence and at the complementary concept, more recently added, the balance of terror.

I am particularly distrustful of the latter concept. There is no doubt that a balance of power is one necessary foundation, among others, of lasting world peace. Whenever this balance is upset, there is danger of aggression and of war.

This seems to be the lesson of history. However, it is by no means clear that a balance of terror furnishes an assurance that aggression even on a limited scale will not be undertaken and that it is in this sense a protection of total peace. A balance of terror is too easily upset. It is at the mercy of miscalculation. Such a balance may even put a premium on the moral cynicism that would not shrink from striking the first blow, from launching an atomic blitz.

On the other hand, the concept of deterrence is in itself valid. Force, whether in the form of the policeman's nightstick or in the form of atomic weapons, is certainly a deterrent of injustice, aggression, lawlessness. Yet force serves as a deterrent only when the mind of the world clearly understands the exact nature of the force and that the force will actually be used. The deterrent value of nuclear weapons is drained out of them when there is any doubt about their actually being used. In a word, the usefulness of nuclear weapons as a deterrent against war is exactly proportioned to the universally known certainty of our intention to make use of them.

Rational armament therefore should include the making and stockpiling only of such weapons as are demonstrably useful for the purpose of actual warfare. What kind of nuclear weapons, of what size, are usable and useful for the purposes of war? In other words, what manner of nuclear arms should be included in our stockpile?

The primary responsibility for answering these questions rests with the military. However, the military usefulness of a weapon cannot be evaluated apart from consideration of the moral law.

Moreover, it is my belief that decisions with regard to such questions should not be left exclusively to the military. A due measure of participation in these decisions should be accorded the Congress and other agencies of Government.

Moral judgments with regard to the measure and kind of destruction that may legitimately be wrought are often difficult to make in the concrete. Yet, I would emphasize the fact that the demands of morality control military action in the same way that they control all manner of human action. It cannot be maintained that man's obligation to act as a man, that is, in obedience to the moral law, ceases at the moment when he goes to war.

Furthermore a special problem presents itself in judging the military usefulness of large thermonuclear weapons. We now know a great deal more about the effects of nuclear explosions than we did a few years ago. For instance, we now know considerably more about the contamination of the atmosphere and soil by radioactive strontium. Yet knowledge of important aspects of the problem is still not complete. Our knowledge about the genetic effects of radiation is even more incomplete. When the military usefulness of a weapon is being determined all the knowledge that we do have must be brought to bear. Serious account must also be taken of the gaps in our knowledge; these gaps make it imperative to proceed with caution in evaluating the military usefulness of large nuclear weapons.

Here the chief question is this: How does the factor of contamination resultant from large thermonuclear explosions affect the military usefulness of these weapons? Surely it must limit their military usefulness. Indeed, in certain circumstances the factor of contamination might well cancel all seeming military usefulness. This is particularly true in view of the further fact that this contamination lingers for years and would affect life on earth long after hostilities had ended.

We come now to the question, What concrete conclusions result when these criteria of rational nuclear armament are applied? In my own mind I have reached the following conclusions. Taken together, they constitute the program of rational armament that I propose as part of the substance of disarmament.

My first proposal is that an upper limit should be set on the size of thermonuclear bombs to be placed in our stockpile. From the scientific and technological point of view there is, as I said, no upper limit to the size of bombs that can be produced. It is for us, as rational human beings, to set limits to their size, on the basis of moral principles and military usefulness. Concretely I know of no reason why we should develop bombs more powerful than those we now have. I would add that, when a full military theory with regard to a moderate and discriminating use of nuclear weapons has been evolved in the light of moral principle, the conclusion might be that the bombs we presently have are already too large.

This proposal that a limit should be put to the size of thermonuclear bombs seems to have been supported by the President at a press conference on March 21. He is reported as stating:

"While I have been told many times that there is no theoretical limit to the size of these instruments which can be made, there is, I think, a practical limit, as long as you are thinking of using it only against someone else, and there is size of targets.

"There is an old saying: 'You do not drive a tack with a sledge hammer.' So when you have gotten something of a, let us say, of a maximum tactical size, useful size, why I would think you would go no further."

My second proposal is that a limit should be set to the number of large thermonuclear bombs to be placed in stockpile. I have had the need of this policy in mind ever since November 1, 1952, when I witnessed the Mike thermonuclear detonation at Eniwetok. That event impressed me with a lasting sense of the menace to humanity inherent in an unlimited program of nuclear armament. Shortly thereafter I made a public statement that "mankind now has within the range of his grasp the means to exterminate the human race." For 3 years I have consistently and repeatedly tried to convey this fact to the American public. This same consciousness of ultimate danger appears in the testimony given by the Secretary of State, Mr. Dulles, before your committee. He said: "The destructive power of modern weapons is such that a major war with those weapons would inevitably destroy a great part of the human race." He also spoke about "the risk of doing nothing and allowing this menace to go on in increasing proportions."

The Secretary is right in speaking of the "risk of doing nothing." One thing that needs to be done is to put a limit to the number as well as the size of the large thermonuclear bombs to be stockpiled.

My third proposal is that increasing concentration should be set on the stockpiling of a wide range of very small nuclear weapons.

The reasons for this proposal are both military and moral. I have said that limited nuclear war is a possibility that the moral conscience can face and accept. It is also a possibility that is inherent in the present state of international tensions.

We have, of course, been preparing against this possibility by our program for small weapons. However, this program requires greater intensification, to the end that it will put us in possession as soon as possible of larger numbers of small weapons. When I speak of small weapons I mean very small weapons. When I speak of larger numbers I mean tens of thousands of weapons in this range. These tens of thousands of weapons could form a broad and solid base upon which could be superimposed a stockpile in the image of a pyramid of intermediate and large size weapons.

A stockpile of this composition will support a theory of moderate and discriminating use of force against all aggression, including aggression that may be minor in degree. With this diversified nuclear armament, possessed in abundance, American and allied military forces of reasonable size would be equipped to handle all the various wartime contingencies that might arise.

We shall have to face the fact that an intensified small-weapons program will be more costly in terms of fissionable material. This increased cost would result, not only from the larger total numbers, but also from the inherently less efficient utilization of material in smaller weapons. For this reason, if for no other, it will not be possible as has been suggested to restrict the future use of all new fissionable material to peacetime

uses. A continued flow of fissionable material into a very small weapons program should, for some time to come, be considered a matter of vital national policy.

My fourth proposal concerns the testing of atomic weapons. The testing of small weapons must, of course, go on, and even be greatly accelerated to keep pace with the intensified program that is necessary in this field. However, I propose that the tests of multimegaton thermonuclear weapons be stopped. My proposal that they should be stopped follows from the position I have already taken, namely, that the weapons we now have in hand are large enough. I am not recommending the cessation of these large tests on the grounds that they are dangerous to health and safety. The evidence presently available does not warrant stopping tests now for this reason.

The foregoing proposals suggest in outline a program of nuclear armament that I consider rational and necessary.

It will be asked, What effect would the adoption of this plan have upon our national security? I believe the effect would be entirely beneficial. The present nuclear superiority of the United States would be materially strengthened. In my testimony before the Joint Committee on Atomic Energy on February 23 I emphasized the point that superior strength means flexible strength. And flexible strength means the fuller development of the capability for limited military use of nuclear weapons—their use in limited wars, and their use in combat for limited military objectives.

Tragic weakness would result if we were to build our nuclear strength with overemphasis on large nuclear weapons.

We should possess in sufficient numbers the kind of nuclear weapons that would be useful especially in so-called limited wars. Such wars are dangerous in themselves, and there is the further danger lest they develop into full-scale conflict. We must be able to take action against this kind of limited aggression, in such a way as to defeat it, and also in such a way as to prevent it from developing into something more formidable. It means the capability of a moderate and discriminating use of force. It means the capability of meeting the particular occasion with the measure of force it requires, and with no more than this. It means the capability of limiting wars to a rational scale.

I believe that my proposals for a limitation of the size and number of nuclear weapons and for an increasing concentration on a wide range of very small weapons will at least diminish the proportions of the menace to which the Secretary of State pointed in his testimony. This menace is inherent in a stockpile of nuclear weapons that are unlimited in size and number. It is also inherent in the mentality that sees no alternatives in between an uneasy hostile coexistence on the one hand, and on the other hand, an all-out nuclear war. This mentality betrays a bankruptcy both of sound military theory and of moral principle. The fact is that many alternatives are possible in between these two extremes. In proportion as these alternatives are seen to be real possibilities, and in proportion as we provide for them with a balanced arsenal of nuclear weapons the menace of the ultimate alternative, that is, all-out nuclear war—will diminish in the minds of men. Indeed, the menace itself will have been reduced to proportions that are manageable by political and military reason.

It may also be asked whether the plan I have proposed would further the cause of international disarmament. The realistic purpose of any disarmament plan should include limitations on the number and size of nuclear weapons. However, we should not wait for the establishment of an international disarmament control agency. In this present moment an obligation rests on our Government to make up its own mind about what disarmament should rightly mean. In other words, the United States must have its own program of rational armament.

I further believe that this program must be publicly defined and explained on the highest possible level. There must be no misunderstanding or ignorance about the diversity of our nuclear capabilities, about our intention to use these capabilities, and about the moderate and discriminating manner in which we would use them under defined conditions. This public statement of our capabilities and intentions is a duty that we owe both to our own moral integrity as a nation and to the cause of world peace that our armaments serve. We are further summoned to the fulfillment of this duty by that decent respect to the opinions of mankind which has always been a traditional motive of American public action. The community of nations, of whose peace we are the foremost guardian, has the right to know how we intend concretely to exercise our guardianship.

In this same connection there is another consideration. The United States has led the world in the scientific and technological development of nuclear energy as an instrument of war. We now have a further duty thrust upon us by our leadership in this field. Great power is always dangerous. But great power, without a right policy with regard to its legitimate uses, can be disastrous. I believe the time has come for us to establish for ourselves and to present to the world right concepts, military and moral, with regard to the uses of nuclear power in war.

If we do this, the progress of disarmament will be importantly advanced. What I propose, therefore, is not only rational action but independent action. Frankly independent action along rational and moral lines would do much to solve the present crisis of lawlessness in the field of armaments. America's call at the moment is to independent and rational action. Our response to this call of reason is a matter of duty, and to that extent an obedience to the will of God, as it manifests itself in the circumstances of human life.

Extension of Minimum-Wage Coverage

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 12, 1956

Mr. ANFUSO. Mr. Speaker, several days ago I received a letter from Mr. George Meany, the distinguished labor leader and president of the American Federation of Labor and Congress of Industrial Organizations, concerning the problem of extending minimum-wage coverage to include millions of low-income workers in the country who do not have this protection at the present time.

Mr. Meany was also kind enough to send me a copy of the March 1956 issue of the AFL–CIO publication Labor's Economic Review which contains a detailed analysis of the subject. This is a very interesting and informative study.

Mr. Speaker, there are several bills pending before the House Committee on Education and Labor regarding the extension of minimum-wage coverage. Unfortunately, no action has been taken to date on any of these bills. Consequently, I have addressed a letter to the chairman of the committee urging him to set early hearings on these bills so that Congress could still take action in the matter before the end of the present session.

Under leave to extend my remarks in the RECORD, I wish to insert Mr. Meany's letter to me and my letter to the chairman of the House Committee on Education and Labor:

AMERICAN FEDERATION OF LABOR AND,
CONGRESS OF INDUSTRIAL ORGANIZATIONS,
Washington, D. C., April 6, 1956.

Hon. VICTOR L. ANFUSO,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: When the Congress raised the minimum wage last year, it was generally recognized that only half the job of modernizing the Fair Labor Standards Act had been accomplished. This task will not be completed until the law's coverage is extended to millions of low-paid workers now denied its protection.

Extension of minimum wage protection is the responsibility of the Federal Government. There is not the remotest possibility that State action will provide adequate minimum wage protection for workers exempt from the Federal law.

In recognition of the urgency of this matter, the AFL–CIO convention unanimously called upon the Congress "as a matter of first priority, to extend the full protection of the Fair Labor Standards Act to all workers in industries engaged in or affecting interstate commerce."

You will find a detailed analysis of our proposals in the enclosed March issue of our publication, Labor's Economic Review.

On behalf of the AFL–CIO, I urge you to do everything possible to assure that hearings on extension of minimum wage coverage are held at the earliest possible moment so that Congress may act during this session to remove from the law all unnecessary and unjust exemptions.

Sincerely yours,

GEORGE MEANY,
President.

APRIL 11, 1956.

Hon. GRAHAM A. BARDEN,
Chairman, House Committee on Education and Labor, House of Representatives, Washington, D. C.

DEAR MR. CHAIRMAN: Many people throughout this Nation took note of the fact that on March 1 of this year an amendment to the Fair Labor Standards Act went into effect raising the minimum wage from 75 cents to $1 an hour.

This is a considerable step forward, but it is still not enough. There are estimated to be at least another 10 million American workers who should be given the same protection. That means at least 10 million American families who live on substandard wages.

I believe we should not tolerate substandard wages in a country like ours. It constitutes economic injustice to millions of people and it is also injurious to the economy of the country. By extending minimum-wage coverage to include those who are not now covered by the law, we will help increase the purchasing power of these millions of our citizens, we will help to improve living standards, and it will also serve as a stabilizing factor in our economy.

I urge you, Mr. Chairman, to set early hearings before your committee on extension of minimum-wage coverage so that Congress may have an opportunity to act in the matter before the current session ends.

Sincerely yours,

VICTOR L. ANFUSO,
Member of Congress.

Organization of American States: Its 16th Anniversary

SPEECH
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 12, 1956

Mr. SIKES. Mr. Speaker, Saturday, April 14, 1956, marks the 66th anniversary of the founding of the Pan American Union. This oldest international association in the world has grown into what we now know as the Organization of American States. On this date we pause each year to contemplate the handiwork that built this union, and I think we may be pardoned for our pride. That such a union of 21 independent, sovereign nations of many races, and a diverse cultures and languages, should have been conceived of in the first place is remarkable indeed. That it has endured and grown stronger over the years in spite of occasional conflicts between its member states and the world shaking effect of 2 major world wars is truly extraordinary. I take this opportunity to congratulate the other republics of the inter-American family on another year of earnest work toward perfecting our mutual alliance. The existence of the organization should be an inspiration to the world that where good will and patience reign; international understanding and cooperation are possible.

All of us know, however, that the success of an international organization in promoting peace and prosperity depends, in the main, on the public support it enjoys. No matter how fine a building it occupies or how devoted are its employees, an international organization of sovereign states can do no more than reflect public opinion. We in Florida feel, perhaps, a particular concern for the progress and well-being of the OAS. Florida's historical and cultural ties with her Latin American neighbors have deep roots. Even the name of our great State reflects its Spanish heritage.

For this reason, Florida has made great efforts to promote inter-American relations on the level of individual citizens. The University of Florida, for instance, has become one of the major centers for studying all aspects of Latin America—political, economic, historical, geographical, and cultural. A new and novel project for getting the American people—both north and south of the Rio Grande—better acquainted is presently taking shape on Biscayne Bay in Miami. We are building an Inter-American Cultural and Trade Center, 1,800 acres of beautiful fairgrounds to house industrial and handicraft exhibits of the 21 sister republics. We hope it will become a meeting ground for exporters and importers throughout the hemisphere. We hope, too, that the fine products on display will help the many people who visit Florida each year to get some idea of the wonderful people we call our neighbors.

On this threshold of the 67th year of the existence of the union of Pan-American republics, it is fitting that we recall Bolivar's prophetic statement:

Freedom of the Americas is the hope of the universe.

For it is only by our working diligently and harmoniously together that our beloved freedoms can be secured. Let us, then, rededicate ourselves today to the lofty principles and high ideals embodied in the Organization of American States as we wish it a "Happy Birthday" and Godspeed in the year to come.

What I Owe My Country

EXTENSION OF REMARKS
OF
HON. OLIVER P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. OLIVER P. BOLTON. Mr. Speaker, each year, the American Legion conducts an essay contest on Americanism among high school students throughout the country. I am very happy to report that one of this year's winners is Miss Linda Allen, daughter of Mr. and Mrs. William Allen, of Geneva, Ohio. Linda is a student at Ashtabula High School. Her essay on What I Owe My Country competed with 300,000 others in Ohio, and was selected as one of the 12 best essays in the State. I have read Linda's essay, Mr. Speaker, and commend it highly to your attention and to the attention of the Members of Congress. Under unanimous consent, I insert the essay in the CONGRESSIONAL RECORD:

WHAT I OWE MY COUNTRY

What do I owe my country? At first, this question seemed impossible to answer. I could think only of what my country does for me, but now I think I have an answer to the question.

First, I owe my country duty. During time of war—if I were a boy—I would fight for my country in one of the armed services. Being a girl, though, my duty might lie in a Government factory or in a branch of one of the women's military services.

Second, I owe my country public service. There are many public services in which varied positions may be obtained. Doing a service for the entire country are the civil plane watchers. Doing a service for their towns are town council members. Doing many services for their communities are such people as the Red Cross workers and the gray ladies of the hospitals.

Third, I owe my country good citizenship. It is up to me to obey the National, State, township, and city laws and the law-enforcement officers. It is up to me to learn and obey the traffic laws of my country. In a few years it will also be up to me to obey my country's tax laws. As a good citizen, I should learn all rules and laws which might in some way concern me, therefore giving me no excuse for breaking them. I should love and treat the colored race as I do the white race, for it is written not only in the laws of our country but also in the laws of our Lord.

But most of all I owe my country allegiance and loyalty. These almost speak for themselves, I believe. And why do I owe my country these things? This is the reason why—because America is the best and most stable-governed country in the world; and also it is probably the freest country in the world. When I become of age I will gain the privilege of voting by secret ballot—one of the most precious privileges we in America have. America also has two other wonderful privileges—freedom of the press and freedom of speech. And, of course, from the very beginning of the United States itself, comes the heritage of the privilege of choosing our own religion—to worship God in any way we choose.

Norman Rockwell, the famous American artist of characters, summed up our freedoms very well by his four famous paintings—freedom of expression, freedom of worship, freedom from fear, and freedom from want. Should our country ever lose any of these freedoms, everything about America which we cherish would soon be lost.

Duty, service, citizenship, as well as allegiance and loyalty are owed to this country by every American citizen and must be given by every American citizen to keep America free.

American Doctrine for American Progress

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Monday, April 16, 1956

Mr. KUCHEL. Mr. President, on Tuesday, April 10, I had the pleasure of speaking in Los Angeles at the Rodger Young Auditorium, and I ask unanimous consent to have printed in the Appendix of the RECORD the remarks which I made at that time.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AMERICAN DOCTRINE FOR AMERICAN PROGRESS

I cannot tell you how grateful I am to meet with all of you today. I am proud to be introduced by a distinguished American, Mr. Manchester Boddy, lifelong Democrat, and former publisher of a great daily newspaper in Los Angeles.

This is not a personal meeting. It represents, rather, a typical American opportunity for all of us—regardless of political party—to voice our agreement on some fundamentals by which we hope our Federal Government will be guided in the future, and through which we pray the cause of American freedom will be strengthened and the cause of a just and enduring peace in the world will be advanced.

We believe in the freedom of man. We are devoted to the American constitutional system whose goal is to preserve our free American society, and to guarantee to each citizen in our Nation the right to live his own life and do as he wishes with those opportunities which may present themselves to him. The civil rights written into our Constitution belong to each of us, and belong, also to our Nation. We decline to be pushed around as citizens or as a people. In the spirit of the Declaration of Independence, we intend to pursue happiness, to enjoy life as we may, all under the liberty which our Republic was founded to maintain.

Ours has been a magnificent history. I think we rather convincingly demonstrated in 1776 that Americans intend to be citizens and not subjects. That was the year, you know, when we first rejected colonialism and laid down the precept that Americans believe in the self-determination of peoples. And ever since the rebellious American colonists wrote a Constitution, and conceived the free society of the Republic of the United States,

we have overcome the dangers which new situations have placed before us. Each succeeding American generation has preserved American freedom, and has resolutely clung to the same self-evident truths which the patriots laid down at Philadelphia 170 years ago.

All in all, ours has been a history of progress, and we mean, under the providence of God, to continue that progress in the years and generations which lie ahead.

We are now well embarked into a new era on the globe. Unhappily, the struggle for freedom must continue. Almost entirely from the Red ideology of communism stems the current danger to freedom which our generation must overcome. This is the era of the atom and of thermonuclear energy. Men have discovered the secrets of unbelieveable physical power. It is available, on both sides of the Iron Curtain, for either evil or for good. It can annihilate the whole world and all its peoples, or it can be the source of a truly amazing new age of happiness. It can turn wheels, supply power, and wondrously contribute to man's health. One of our great challenges is to assure the use of it in the cause of peace and not in the cause of war.

It is in that background that we can assess our lot in 1956. Our country is at peace. The Korean war ended a little less than 3 years ago. We can be grateful that no American casualty lists are being published. And a very great man, a very humble man, is leading our Government in a dedicated search for the achievement of peace with justice among all nations.

There are many sorely troubled areas around the globe. The insidious policies of Communist Russia in the Middle East are an appalling and heavy factor in the strife and bloodshed in that unhappy area. Russia's aim is to become a power in the Middle East. A conflict of arms between the Israelis and the Arabs poses a most tragic danger to the cause of freedom everywhere. Positive steps must be taken to avert it.

The travail on Cyprus seriously disconcerts all of us. Greece and Turkey, as well as Great Britain, are all our friends, and are all implacable foes of communism. Now, to find them embroiled in a bitter conflict is almost unthinkable.

The Middle East and Cyprus, indeed, each sector of the world must have the closest attention of our Government. Through the United Nations, and also through arrangements with our free friends, which have been made and which are being made, all our actions are designed to bring about a just and enduring peace among all nations.

I sincerely believe that war was averted a year ago in the Far East by the bold leadership of our President, in which Congress, controlled by one political party, and the executive branch, by another, stood firmly together in approving an official American policy—the Formosa resolution—which made unmistakably clear our firm and inflexible decision that Free China shall not be overrun by communism. I mention this here because I hope, and I believe, that politics must still stop at the water's edge. And I hope, and I believe, that almost all the people of the United States are knit closely together in their desire to maintain a foreign policy free from partisanship—or from extremes—designed solely for our own people's security in a world of peace and justice.

Those are my views, and I feel assured that they are yours as well. Extremes and extremists, either left or right, must be avoided, as they are being avoided, in all our foreign policy decisions, and, for that matter, in our domestic decisions as well.

Every facet of our foreign policy must be determined on the basis of our own American self-interest, albeit an enlightened self-interest. We are a peaceful nation. We are a free nation. We intend, as Americans, not as partisans, to determine a course that is best for us, as Americans, to pursue. It is to our own interests to promote peace in the world and comradeship among free peoples. That is what we are doing, that is what we propose to do.

That is what this Nation was doing when President Eisenhower last year voiced his electrifying proposal for "open sky" reciprocal air inspection for both Communist territory and the free world. Just a few days ago at the meeting of the United Nations Subcommittee on Disarmament at London, and for the first time, the Soviet apparently announced some tentative acceptance of the Presidential plan. Their deeds, rather than their words will, however, still be the measure of their sincerity.

"What we are trying to do here," said a Western representative at the London Conference, "is to establish some common ground with the Russians. * * * In this nuclear age, if you can devise a sure guard against surprise attack, there will be no attack. And if there is no attack, there will be no war."

In the last 2 years, substantial progress has been made in our mutual-security agreements. Over the violent protests of Mr. Molotov and Russia, our Government led the way in granting sovereignty to the Federal German Republic and approved—with our fellow members—her entrance into the North Atlantic Treaty Organization—a real achievement. How the Russians hate it and fear it.

Austria's sovereignty has been restored, not, it is true, as an active ally of the West, but certainly not a partner of Moscow. I feel reasonably assured that Austria's spirit and prayers are entirely with the free nations and entirely against the Communist nations. And on the other side of the world in southeast Asia, the multilateral mutual security pact continues to furnish the means for friendly cooperation and for agreement to stand firm against aggression.

So, I repeat, our generation continues making progress in determining and overcoming those modern dangers to the cause of our freedom. There are some deadly serious questions remaining with which we must deal, and deal firmly. But the basic hazards of Communist aggression and intrigue is not for one for the people of the United States alone. They are the concern of all free peoples, and it will be in concert with them that we shall continue to oppose the Communist ideology.

Meanwhile, the whole world now knows of the fantastic changes in the Communist line. Almost deified in his lifetime, Stalin now is reviled by the Kremlin as a sadist and a wanton murderer. I suppose we will have to wait some time before understanding the full implications of this abrupt change in Soviet philosophy.

There is one part in the Communist line here in California, which remains steadfast. I am proud to tell you that the Communist newspapers in California say a lot of terrible things about me. They are asking our people to defeat me. I can't tell you how glad I am that this is true. A man is known by the company he keeps. I never have kept company with communism and the Communist press in the past, and I promise all the people of my State I will not keep company with them in the future. We, all of us, Democrats, Republicans, and Independents, are agreed on our uncompromising objection to this godless creed. We shall together oppose communism and all those who fraternize with it.

I am not a witch hunter. I have voted in the Senate for the strongest kind of laws to stamp out all kinds of subversion. And subversion is being stamped out in this country, in my judgment. Our Federal Department of Justice and our Federal Bureau of Investigation are working steadfastly toward that end.

All I can say is that I shall continue, so long as I remain in the United States Senate, to vote for an enlightened foreign policy which, is in the best interests of the American people and which promotes the cause of a just peace among all nations. My vote will be free of political concern and partisan concern.

Closely alined with America's international relations is the question of the defense of our people. How have I cast my vote in the Senate on this important question? How have I discharged this obligation to my 13 million fellow Californians? I have done it by voting consistently in favor of the recommendations of President Eisenhower. Preeminently qualified himself in this important field, he has advising him a group of the foremost military men in our country. Chief among them is Adm. Arthur Radford, Chairman of the Joint Chiefs of Staff and a veteran of more than 40 years of military experience. Here is what he said last year:

"I feel as of today that we are better prepared to meet any emergency than we ever have been during my service in the Armed Forces.

"In fact the United States forces we plan to maintain are the most powerful, individually by service and collectively as a team, that our Nation has ever undertaken to maintain during a period when we were not actually engaged in a shooting war. These forces are fully adequate to perform all essential tasks in the initial stages of a shooting war, global or otherwise, and they constitute an ample base which will permit a rapid and orderly buildup when and if that should become necessary."

Ten days ago, in Washington, I asked Admiral Radford if his opinion was the same today. He replied that it is, with the continuing understandable proviso that world conditions do not materially change for the worse.

Here at home we have much to be thankful for. We enjoy the highest level of economy in all our history. More people are employed in California and in the Nation than ever before. Part of the responsibility of a United States Senator is to work to continue that kind of healthy, dynamic economy. I promise each of you I shall do just that.

These last 3 years I have introduced legislation, now the law, to construct irrigation projects, dams, storage reservoirs, and good flood-control works to improve the lot of our people. But they'll do more than that. They'll also provide jobs for our people.

The care of our disabled American veterans is a just responsibility of the Nation. America can never fully discharge it. I have interested myself in the welfare of our former servicemen. I am glad to tell you that I successfully urged the Senate to approve my request for an $8 million hospital at Long Beach for our paraplegic veterans. And for nortern California the Senate agreed to approve a new 1,000-bed neuropsychiatric hospital for veterans of our wars. These two new institutions will soon be a reality.

I am a coauthor of pending legislation to permit veterans to reinstate their GI insurance. This is of particular interest to Californians, with our country's second largest veterans' population. I shall work for early action on this in the Senate.

There continues to be the most urgent need for Federal legislation providing for the construction of a modern, efficient interstate highway system in America. Last year more people were killed on our highways than died in the entire Korean war. We need this legislation not only to deal with this monstrous problem, but also because of the military and defense needs of our Nation. I promise the people of my State to continue to work diligently for the passage of this long overdue and vital legislation.

Our tuna-fishing industry has suffered woeful deterioration by reason of what I believe to be unfair competition through unlimited and spiraling importation of foreign tuna. I do not quarrel with trade

between nations. Indeed, I have enthusiastically supported reciprocal trade legislation. But that very legislation provides for peril points to protect our domestic economy. It should be crystal clear that the peril point has long since been reached and passed as respects the American—the Californian—who makes his living farming the sea. I have cosponsored legislation to assist that industry in the Congress, and I have very much hope that we can receive legislative and Executive approval of it.

I had the honor to be chairman of a Senate subcommittee which wrote the Federal lease-purchase legislation. With appropriate safeguards to protect the public interest, this law permits the Federal Government to use its rental monies to buy necessary public buildings on a time-payment plan. A new custom house for Los Angeles is in the mill under this legislation. A $40 million Federal building for San Francisco is about ready for bids. Many other of our communities will be the recipients of new Federal structures built by private enterprise which thus will provide new avenues of employment.

Under this legislation, the Government will pay to construction employees the prevailing wages which obtain in the area of construction. This is a sound principle in my judgment. Thus, construction for Uncle Sam will not depress the market in those towns where Uncle Sam becomes a property owner. The theory of paying prevailing wages on public construction in each area of the country ought to apply, in my view, to all Federal undertakings.

Our President has said that there must be no second-class citizenship in America. You and I agree. And I here repeat what I said earlier in our State: I believe that we have made more solid progress these last 3 years in honoring the Biblical tenets of the brotherhood of man than in any comparable period since Abraham Lincoln's day.

Many other problems confront us in this year's election. I shall discuss them in detail in the days ahead. If California can unite, as I believe it will, on its hopes and aspirations for herself, our country, and the goal of a just peace in the world, we will contribute markedly toward their attainment in the city of Washington.

My father once said that one's successs in life is attained in great part, by the help of his friends. That is also true of principles. In the coming months, I shall wage a vigorous and an intensive campaign, and I shall do it on the basis of principles you and I share. But I will need the help of friends like you. I thank you for coming here today. I will keep your faith.

The Western Cattle Producer

EXTENSION OF REMARKS
OF
HON. GORDON ALLOTT
OF COLORADO
IN THE SENATE OF THE UNITED STATES

Monday, April 16, 1956

Mr. ALLOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Mr. Farrington R. Carpenter, of Hayden, Colo., delivered before a meeting of the New Mexico Cattle Growers Association. Mr. Carpenter is one of the finest and most outstanding citizens of Colorado, and he is well known throughout the United States for his work in the agricultural field.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE WESTERN CATTLE PRODUCER

(By Farrington R. Carpenter)

THE BEEF CATTLE PRODUCER IN 1956

As one who has been continuously in the cow and calf business for 47 years, I naturally am chiefly interested in the producer's part of the beef industry. But the producer's problems are so associated with the beef industry as a whole, and it, with farming in general, that I will say a few things about them first in order to have a background for my remarks on cattle raising.

THE AGRICULTURAL SITUATION IN 1956

A little more than 100 years ago, steam was harnessed as a new power for mankind's use. It was readily adaptable for industry and commerce and in the course of 50 years completely changed all manufacturing and transporting methods. The period in which this changeover occurred is called the industrial revolution.

Steam, however, did little or nothing to change the farmer's way of life. Steam propelled threshing machines was about its only use. The greatest part of the farmer's need for power, the manipulation of the soil was furnished by the horse and mule. As late as World War I, 95 percent of the power on American farms was furnished by horse power.

This great disparity in power between industry and commerce on the one hand with steam power, and agriculture with horsepower on the other hand, caused a widening gap between the productivity of an hour of labor in those pursuits. Today it seems ridiculous that as late as 1915 one of the leading agricultural journals was carrying a series of articles discussing in great detail the relative merits of the tandem hitch for horses as compared with the doubletree or horizontal hitch. Is it any wonder that the whole farm economy lagged far behind that of their city cousins?

Then all of a sudden between World War I and II, the rubber-tired tractor made its debut on the farm and gasoline and diesel started an agricultural revolution destined to be as portentous in its changes in farming as steam had been in industry and comcerce a century before. It is difficult for you and me, who are living in the midst of this change, to comprehend its impact. The first manifestations of the increase in production of farm labor with this new power indicates some of its possibilities.

In the past 15 years farm production shot up 40 percent without any increase in acreage, and with nearly 2 million less farms. The use of the new power increased 75 percent, and the output per man went up 89 percent, or 5.9 percent per year, as compared with 3 percent per year for the industrial worker.

The revolution has now hit its stride enough for us to trace certain trends which have been set up and which will continue for the next 15 or 20 years, or until the new pattern for farming becomes fixed.

Those trends are:

(1) Fewer farmers. The farm population is decreasing at the rate of 750,000 a year. In the next 10 years it will leave only half the number on the farms as are now on them.

(2) A corresponding decrease in the number of farms and an increase in the size of the average farm; from 138 acres in 1910 to 242 acres in 1954.

(3) A noticeable increase in specialty farming. Nineteen percent less farms have chickens as had them 5 years ago.

(4) The need for large capital investment for machinery. This now almost equals the real-estate valuation.

Summary

The agricultural revolution cannot be stopped any more than the industrial one of 100 years ago could be stopped. The hand loom workers in Manchester, England, rioted and destroyed some steam power factories, but it had no effect on the changeover.

Farming is fast losing its characterization as a way of life and is becoming a business in the modern sense of the word. Some may deny the change and call it "plowing the little farmer under," but they cannot stop it.

Bearing that fact in mind let's turn to the beef industry and see how it sizes up in company with other gigantic organizations.

The beef cattle industry

The industry itself is big and important. Cattle are produced on 4 million farms located in all 48 States. Only chickens are raised on a greater number of farms. The cash receipts from cattle and calves in 1953 were $4.9 billion. This is the largest receipt from any single farm product and amounts to 15.7 percent of the total cash receipts to farmers and ranchers.

The industry ranks with steel, automobiles, electrical equipment, and textiles as one of the largest in the United States. But it has a unique producing unit makeup.

Only 1 percent of all farms having cattle have 100 or more cows.

Only 5 percent have 30 or more cows.

And 75 percent have less than 10 cows.

In the 300 years of its existence on this continent there has never been a serious attempt to develop a trade consciousness to control its market. From the cow to the dinner table beef must be bought and sold four times to separate branches of the industry. The producer sells to the feeder, the feeder to the packer, and the packer to the retailer, and the retailer to the consumer. All of these pay toll to the transporter, railroad or truck. The last three of these agencies, the packers, retailers, and transporters, have labor costs fixed and protected by unions, so that drops in the price of beef have to be cushioned on the labor of the producer and feeder.

It is estimated that less than 90,000 persons control more than 50 percent of the production of quality beef cattle in the United States. In New Mexico the number would be in the hundreds. If these individuals could agree to regulate the flow to market of calves and yearlings, a beginning could be made on the most crying need of the cowman-trade organization.

Nearly all other great industrial units have a verticle organization which reduces the cost as the product goes through the various stages to the consumer. Thus the major oil companies themselves are producers, refiners, transporters, and retailers through leased gas stations. The accumulation of the many in-between costs which are thus saved amounts to a big saving in the industry and to the consumer.

Predominance in the specialty production of quality beef cattle lies in the 11 Far Western States and Texas. The ultimate fate of cattle producers will probably be decided by the action of operators in those States. A movement by any one State which met even with a qualified success would spread to other States and soon become of national importance.

Failing any concerted action to protect his branch of the industry, the cattle producer must rely upon his individual efforts to effect savings and increase the efficiency of his own setup. These efforts fall into three categories.

THE WESTERN CATTLE PRODUCER

The three ways a cow and calf man can help his income are: Better feeding, better breeding, and less losses.

BETTER FEEDING

If his principle feed is range and pasture grasses, he can look back at the progress made in the past 15 years in burning, spraying, and clearing brush. The development of stock reservoirs, concentrate and salt feeding, and many other improvements now common on most ranches. More recently the American Society of Range Management has been formed with branches in all the Western States and a monthly publication reporting all new discoveries and advancements in this field.

If cultivated feeds are part or all of the producer's ration science is just now beginning to lift the curtain of ignorance which has obscured the action which occurred in the cow's rumen when certain foods entered it. Hormones such as Stilbestrol which have entered the market within the past 2 years have already become standard ingredients in feeding. The use of corn cobs, corn stalks, straw, and other roughages when mixed with urea is just beginning to be recognized as a wonderful feed for growth, as are the ensilages.

The crying need for more research on the chemical action upon the feeds in the cow's rumen, is just beginning to be recognized.

After all the steer is merely a converter of carbon hydrates into a protein food and in competition with other converters, he certainly needs all the aid science can give him.

Professor Maynard, of Cornell University, is authority for the statement that the pig is by far and away the most economical converter of cereals into meat. Twenty percent of the calories fed a pig are returned in the form of pork. Next high to the pig is the milch cow whose milk returns 15 percent in protein food. Then comes the hen whose eggs are 10-percent protein return on the calories fed. Last and away down the list come the steer and the lamb who return only 3 percent of their feed in beef or mutton. This low rate of return, however, is offset by the fact that the principle food of the steer and the lamb is grass, brouse, and roughage which a pig or a hen could not eat. Also the pig and the hen eat principally concentrates like grain which brings them into direct competition with human beings, whereas the steer and the lamb garner what otherwise would be a total waste.

Less losses

Under this heading comes the whole new field of modern veterinary science. It taxes the efforts of a cowman today to even keep abreast of the new remedies and preventative serums and medicines which the laboratories of the great pharmaceutical firms are advertising. Many ranchmen carry a full line of such drugs and have learned to administer them themselves. Animal hospitals in most dairy regions and many beef cattle sections are reducing the cost of veterinary attention and multiplying the veterinarian's usefulness.

Insecticides are gaining on disease pests every day. Use of these drugs and facilities has already cut the oldtime customary 5 percent range loss to less than 1 percent in the better-managed herds.

Better breeding

Better breeding which is the top accomplishment of better management holds the greatest opportunity of anything else to bring prosperity to the producer. If you have read the report of Alan Rogers' research committee to the American National Cattle Association given in New Orleans in January of this year, you will be shocked to note the customary 20 percent loss in calving and the appalling lack of information about the breeding ability of herd bulls. The producer of tomorrow will not be able to continue any such wasteful practices.

Then comes the matter of increasing the rate of gain of an animal, i. e., his ability to make more economical use of his food and to convert a greater amount of it into flesh and at a greater rate of speed. All of these new developments have come so lately as not to be given any recognition in the show ring where the old standards of beauty, color, markings, finish, and type govern exclusively.

The result of this is that a demand has arisen for new standards for rating bulls.

The new American Beef Cattle Performance Registry Association which held a meeting in Denver this month is an attempt to meet this need. It will open its books to register calves of all beef breeds which can show a weight-gaining ability above the average. Since ability to put on flesh is inheritable, it is believed such a standard will do much to benefit beef cattle.

The United States Range Experiment Station at Miles City, Mont., has probably done more along those lines than any other station in the United States. They have been breeding for that objective since 1936 and have developed a long bodied, stretchy animal that shows an extraordinary ability to put on flesh and do it rapidly. They produce several hundred yearling bulls a year which they index for rate of growth. These are sold at a uniform price of $500 and are contracted for clear through the 1958 crop. Calves from such bulls are bringing a premium of 2 to 3 cents a pound over other calves. In addition to weighing their calves the Miles City Station has done a lot of measuring. They do not claim exact correlations between size and rate of growth but they do think there are three characteristics which are very important. Those three are: (1) Birth weight; (2) length of body; (3) length of hind leg from hock to point of hip.

And now in conclusion, let me ask your pardon if I tell you of my own brief experience in breeding for rate of gain.

Three years ago I read in the Farmers Digest about a California breeder who had weighed his weaner calves and kept records and by selling off his cows that brought in light calves, had in the course of 9 years raised the average weight of his weaner calves by 90 pounds.

I drove my pickup to his ranch and bought a calf that weighed 765 pounds when weaned at 8 months with no concentrate and only his mother's milk. Later I bought his half-brother a year older. Both were large bodied and long legged and not the show type, but they were smooth on the tail, evenly fleshed and fair heads. I am now getting my second crop of calves from these bulls and from two bulls loaned me from the Miles City, (Mona.) Range Experiment Station. The calves average 74 pounds at birth. Several have weighed better than 90 pounds this month. The cows do not have more trouble having big calves than they do with smaller ones if the delivery is normal. When assistance is required the bigger calves seem to take longer to get their full vitality.

Between the 2 California bulls, 1 of them had calves averaging 10 pounds more at birth date and those heavier calves averaged one-tenth of a pound a day more gain than the others. One-tenth of a pound a day is 3 pounds per month or 18 pounds in 6 months.

I might add that all this work is being carried on in a cooperative research experiment between the United States Department of Agriculture, the Colorado A. and M. College at Fort Collins, and a group of Yampa Valley ranchmen of which I am one.

I want to say from a lifetime of pleasure and experience in raising purebred Hereford cattle that I never felt the possibilities for improvement were so near at hand and so limitless in their possibilities as they are now in this year 1956.

Thoughts of a Farmer Upon Leaving the Farm

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES

Monday, April 16, 1956

Mr. NEUBERGER. Mr. President, in the March 22, 1956, issue of the Reporter there was published a letter from Mr. Eldon "Zeke" Roberts of the National Farmers Organization, Corning, Iowa. I hope, Mr. President, that when President Eisenhower goes before the Nation to discuss the farm bill, he will have clearly in mind the agricultural picture so dramatically and vividly portrayed in Zeke Roberts' letter. I ask unanimous consent that Mr. Roberts' letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

TO THE EDITOR:

I am one of those thousands of small farmers squeezed off the soil by a combination of conditions, most of them beyond our control. We of the National Farmers Organization are doing all in our power to get the legislation necessary to save American agriculture from passing into the hands of large corporations. We feel that this is a social problem, a dangerous social problem because this exodus of the small farmer from his land weakens the very foundations of our democracy. We realize, of course, that modern technology has inevitably made the smaller farm an uneconomic unit in a good many cases, but I feel that eventual decentralization of industry, specialization on the small farm, and on the whole a more sympathetic attitude from the Department of Agriculture can to a large extent keep that man and his family out in the country.

I am sending you some thoughts that I jotted down the night that I had my sale. They are entitled "As I Am Leaving the Farm." Perhaps they will give you an insight into the ideas and thoughts that run through the minds of us who have been or are being squeezed off the land:

"Today you sold out. Now the crowd has gone and you have loaded the last reluctant cow and stubborn hog out to their various destinations. As the last truckload pulls out of the driveway into the road, you lean up against the darkened, strangely silent barn and smoke thoughtfully.

"Somehow you dread going into the house; the kids, not too long home from school, will be noisily asking questions about the sale, questions you don't care to answer. The whole family will be discussing the move to town, a move you hate to think about. You pull your collar a little higher around your ears and hunker down on the lee side of the barn, out of the gusty wind—to think.

"A confused jumble of thoughts runs through your head. 'Where did I fail? Surely not from lack of hard work.' You think of the backbreaking years of toil you and your wife spent. Lack of management? Maybe you could have managed better, but you were always counted a good farmer. You loved the soil and tended it carefully.

"Your mouth twists bitterly as you contemplate the fate of those fields. The man who will farm your land next year has merely added your little 160 to his already extensive holdings, and a vision of your farmstead, deserted and weed-grown, flits through your mind's eye. The new operator is also a firm believer in straight rows; you sadly

contemplate the fate of your terraced fields and grassed waterways.

"What in the devil are you going to do in town? You can slop hogs and milk cows, but Omaha doesn't seem to have any demand for those skills. Also you have come to realize that you are a lot older than you thought you were. Seems like 45 is 10 years too old to be worth a darn for anything as far as getting a job is concerned. You think of the future with a deep, aching fear. You can't help it.

"You turn the yard light on. You feel that somehow it will make the silent barn and empty lofts less lonely. You make the rounds closing the open doors and widely flung gates. There's nothing left to get out, but habit is strong.

"You look across the driveway to the crib. In the glare of the yard light, the different-colored sale bills, tacked up there today, stand out strangely. There they hang, an even dozen of them, stuck up there by fellow farmers, each one bearing that pathetic heading 'As I Am Leaving the Farm * * *.' You gaze at those brightly colored scraps of cardboard. Some of the names on them are men you know, men like yourself, being torn from the soil they loved and have cherished, to be thrown into a strange and unfriendly environment. Men whose dreams and hopes withered with their crops the last two drought-stricken years, and who now, like you, will be walking city pavements when the bluegrass greens the hills next spring. You can't help but wonder about the bright boys; those boys whose heads are full of statistics rather than brains; whose answer to the farm problem is 'Get rid of the small inefficient farmer.' You wonder how they'd feel if they were in your shoes.

"You're getting cold so you start slowly toward the house. Under the yard-light pole lies one of your sale bills. Your own name in big letters at the bottom looks strange. You walk up to it and idly turn it over with your foot. A gust of wind grabs it and away it goes, across the driveway into the road to disappear in a cloud of dust—into the cold, windy dark."

ELDON (ZEKE) ROBERTS,
National Farmers Organization.
CORNING, IOWA.

Appraising Soviet Troubles

EXTENSION OF REMARKS
OF
HON. BARRY M. GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Monday, April 16, 1956

Mr. GOLDWATER. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an interesting editorial appearing in the Arizona Daily Star of April 8, 1956. It is written by Mr. W. R. Matthews, the editor of that newspaper.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

APPRAISING SOVIET TROUBLES

The outstanding fact made clear by the new domestic political troubles in the Soviet Union is that the revolution is over as far as the Soviet Union is concerned.

1. The Russian people, as a whole, accept the Communist society as an intimate part of their life. It is the only kind of society they know how to make work, because there are so few Russian people alive today who were adults when the revolution began.

There may be more changes in the palace guard; a new dictator may emerge, all of which would be a normal Russian development. There is little if any danger of any further revolutionary changes. Henceforth, they will be organic ones, such as modification of political and economic policies and practices now going on.

2. The present turn of events, the destruction of the "Stalin is God" legend, the emphasis on collective leadership, the glorification of Russian history, expresses a growing Russian nationalism which the Red Army finds strengthens its hand. Since the death of Stalin the Soviet leaders have been tapping a vigorous native patriotism and determination of the Russian people to take care of themselves—the Soviet Union—ahead of everything else. As such, it represents a natural growth which, despite temporary confusion, will strengthen rather than weaken the Soviet Union.

3. The unconcern of the Soviet leaders and the people about the effect of this new development on foreign Communist parties confirms that. These parties are left with uncertain direction as to doctrine; they are seriously discredited; their influence is weakened. As a result, they will have to put the soft pedal on the revolutionary program, and attempt to hold their own as participants in coalition or popular-front governments.

4. Of course, the Russian leaders and people will be confused for awhile. Political textbooks and histories will have to be rewritten; party personnel reindoctrinated; museums, like the Museum of the Revolution in Moscow, that were devoted to the glorification of Stalin, will have to be done over. What happens to the remains of Stalin, at present in the Red Square mausoleum, may give a clue to the future line. However ridiculous the contradictions of the official explanations may appear to Americans, they will not only make sense to most Russians, but come as a gleam of new hope.

5. There will be no fundamental change in Soviet international policy. Moscow will continue to make itself appear as the dove of peace. That is good domestic as well as good international policy. The Red army can be counted upon to see that future Moscow governments will keep close control over the satellites. Any Moscow government will have to support the historic policy of insulating Russia from the West.

6. Moscow will never cease looking after its interests, and quietly making trouble when it is to its interest to do so. It will shrink from getting involved in any war other than one clearly of self-defense. The Red army will see to it that Soviet military strength will be maintained, but that should not be taken to mean that the Red army will make a surprise attack on us or our allies.

7. In appraising Soviet intentions we should, at all times, bear in mind that the Russian people have suffered as no other people have suffered. They have memories not only of the invasions of 1914 and 1941 but of the civil war of 1917–21, of which the older ones speak with horror. Moreover, families of Russian political leaders shared the awful sufferings of World War II. Consequently, not until time effaces these nightmarish memories, does any Moscow government dare to risk war. To the contrary, it will go to great lengths to keep its country at peace because that is the best way it can win the support of the people. The people will never rise up to overthrow a government that maintains peace. That is the main reason why there will be no civil war at this time.

8. Behind these factors is another grassroot development. Within the Soviet Union economic conditions have improved rapidly, and are far ahead of what they were in 1937 and 1939. The gigantic experiment in socialism is beginning to tick. As conditions improve, the hopes of the people and of the leaders will grow. The leaders see the prospect of giving their country a successful economy with many new benefits to themselves, as well as the people. War would ruin most of this progress, and the prospects of being the builders of a successful socialistic society. Hence, this common objective will cause the people and the leaders to watch their step for some years to come.

Conclusion: The Soviet Union is destined to grow stronger economically, and its people to enjoy a constantly improving standard of living and a freer society. Its armament tempo will attempt to keep pace with ours, and will be stimulated by bellicose statements by our military and political leaders.

We must distinguish between Soviet intentions and ability to launch a war of aggression and its abilities and intentions to defend itself. Soviet leaders and Soviet people do respect American industrial technique and they fear our military strength. Their own self-interest will keep them for many years—possibly 10—from doing anything that would involve them in war with us. Such is the one great benefit of our action in Korea.

Behind all of this attitude, however, is the fact that the revolution within the Soviet Union is over, and that today the Soviet Union emerges as the new Russian Empire which, as it grows stronger, can be counted upon to develop the traditional Russian ambitions, particularly in the Balkans and the Middle East.

Paradoxical as it may be, the growing economic strength and prosperity within the Soviet Union will compel any Russian government to look for more fuel. That nearly one-half of the oil reserves of the world lie within the Persian Gulf area fits in with the traditional Russian interest in the Middle East, and forecasts clearly what we must be prepared to meet in the future.

Turkey Ponders United States Aid Policy

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, April 16, 1956

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Constantine Brown, which appeared in the Washington Evening Star of last Saturday, April 14. It is an extremely timely article, and I wish to call it to the attention of all who have not read it. I feel that we in the United States must consider very seriously making it possible to grant a loan to the Government of Turkey.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TURKEY PONDERS UNITED STATES AID POLICY—EAGERNESS TO HELP NEHRU AND TITO NOTED, WHILE A STANCH ALLY DRAWS FLAT "NO"

(By Constantine Brown)

ISTANBUL.—Turkey's reluctance to deal with Russia and her satellites is less ideological than practical—from the point of view of self-defense.

The Communist countries are offering on a long-term barter system industrial products which must now be imported from the West on short-term credit. But experts and technicians to service such mechanical equip-

ment would have to be allowed to enter Turkey.

Since the majority of such technicians are also MVD, intelligence, or subversive agents, the Turks are afraid to take even a calculated risk. Experience has justified their apprehension.

Recently Turkey yielded to the strain of foreign exchange and allowed a Polish firm to establish itself in Istanbul to sell adding machines. They were of fair quality and far less expensive than the western products. And they were sold on long credit, with the Poles accepting anything in payment, including copies of antiques.

Three of the technicians supposed to service the machines and teach Turkish mechanics how to handle them were caught by the Istanbul secret service preaching neutralism, the evil of capitalism, and saying that the United States intends to let Turkey go bankrupt because "the Turks are Moslems and the American Government is dominated by Jews, who hate Moslems."

The young Turkish mechanics may not have taken to heart the part about bankruptcy, but they were impressed with the story about the Jews and Moslems, and spread it. Officials "invited" the Poles to leave the country.

Despite Turkey's reluctance to trade with the Reds, she may be forced to do so unless Washington reverses its decision against a long-term commercial loan.

The Turks have committed some serious mistakes. They were overoptimistic in their gigantic industrialization program in the belief that they could meet their heavy short-term obligations. It is only recently that they changed their laws which prevented foreign capital from exploiting the vast mineral resources and possible rich oil fields which are believed to exist in this country. This change will in all likelihood get the country out of the hole eventually. But positive results cannot be expected for at least 5 years.

The United States must regard Turkey's tribulations from a political rather than financial viewpoint. We made the costly blunder of refusing to support Chiang Kai-shek when he was still holding the mainland of China but could not stop inflation without support from the United States. Cries at home of corruption in the Chinese Government and incompetence in handling economic and financial matters prevented further assistance to the Kuomintang Government. These were partially responsible for the loss of China to the Communists.

The Turkish situation is only partly comparable to the Chinese. Washington does not accuse Ankara of corruption. In fact Americans responsible for assistance told this reporter there are fewer sticky-fingered officials in Turkey than in any other allied country, with the possible exception of Britain.

But the State Department seems to look at the present situation with a view of teaching the Turks a financial lesson. This overlooks the far more important political angle—the keen interest of the U. S. S. R. in Turkish affairs and eagerness to "help out."

Russia's objective is not to dominate Turkey or take some of her territory but only to neutralize her.

The Turkish Government is in a difficult position. It may soon not be able to explain to its people why it refuses the apparently friendly hand of the Soviets when all the West is waltzing with the Reds. The man in the street wonders about the wisdom of his government turning its back on the Kremlin when the Istanbul press publishes pictures of Malenkov being kissed by two English girls, stories about the British plans to welcome Bulganin and Khrushchev, and American Senators and Representatives visiting Moscow.

Turkish leaders say that their country is at least on a par with Britain in its strategic importance to the United States. When Britain was threatened in 1947 with an economic crisis apparently less serious than the one here, the American Government did not hesitate to lend the Britsh Labor government $3.75 billion. The explanation was that unless the loan was forthcoming immediately we might lose Britain as an ally. Less than 10 percent of that amount, for the same period and at the same rate of interest, has been sought in vain by Turkey since last year.

It is strange, remark responsible Turkish officials, that after turning down the Egyptions for more than 2 years in their request for help on the Aswan Dam America rushed to give them all they wanted on conditions imposed by Premier Nasser himself as soon as the Russians showed up in Cairo. It is even stranger, they say, that the American Government is anxious to give $100 million to Mr. Nehru's India to help its backward people and is giving a similar amount this year to Yugoslavia's Tito without strings. Yet America is not willing to help Turkey which has proven itself a loyal friend.

The British, French, Canadian and Indian ambassadors at Ankara have been pressuring Turkey for the last 2 years to line up with them to recognize Communist China. The same counsel was given Foreign Minister Fuat Koprulu by the Arab governments, who are anxious to see Turkey join them in an anti-Western bloc. The answer so far is a definite "No."

The Turks who eagerly read Secretary Dulles' words wonder why, if "our help is unconditional," it excludes an ally who stands unflinchingly by America.

Conference Report (Farm Bill) No Help to the Farmer

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. McGREGOR. Mr. Speaker, in December 1955, I submitted a questionnaire to the people of the 17th District. The newspapers, through the courtesy of their owners and editors, in our district carried this questionnaire, giving approximately everyone an opportunity to sign their name, their occupation, and their views. Many items were covered but I especially want to call your attention to the results of the voting on one particular subject—the farm program. I submit those results for your consideration:

THE FARM PROGRAM: WHICH PLAN DO YOU FAVOR?

(a) 100-percent price support with acreage control:

Total replies: 0.7 percent, 99.3 percent no.

Farmers voted: 23 percent yes, 77 percent no.

(b) Flexible price support with acreage control:

Total replies: 37 percent yes, 63 percent no.

Farmers voted: 17 percent yes, 83 percent no.

(c) Elimination of all price supports and acreage controls:

Total replies: 54 percent yes, 46 percent no.

Farmers voted: 63 percent yes, 37 percent no.

On April 11 the House Conferees on Agriculture submitted to us, and asked for our approval, a bill which is not fair, a bill that would hurt the majority of the farmers and give preferential treatment to a few. The bill would increase cost to dairy, poultry, and livestock farmers. It would help hold down prices on feeder cattle, lambs, and hogs, and without question it would tend to dry up markets for the very farmers for whom help is needed. I voted "no" on the recent conference farm bill, H. R. 12, for the following reasons:

It would put the American farmers more under Federal control and domination.

It would keep the farmers from growing wheat that is necessary for them to feed and use as seed on their own farm.

It would prevent all farmers from voting on a wheat referendum and crop control.

It would continue to permit a sky-the-limit program for loans and payments.

This conference report, as passed, is a one-crop big-farmer bill, helping only the Far West and South and would definitely be detrimental to the rotation farmers, which are so essential to our economy. Very little financial assistance is given to the small-acreage farmer. The Campbell Farming Corp., of Hardin, Mont., received $430,691. The Chandler Co., Saragosa, Tex., received $814,041. One king-size farm drew $1,292,475.25 on his 1954 wheat crop. Thirty-seven loans, Mr. Speaker, exceed $200,000. The records clearly show that the big one-crop farm operators of the South and West are able to get bigger by Uncle Sam underwriting most of the expenses while the small farmers of our State and area are paying the bill.

We want the equitable treatment and freedom, Mr. Speaker, that many of us fought for; which certainly is not contained in the conference report for the farm bill, H. R. 12.

Statement of Thomas E. Murray, Commissioner, United States Atomic Energy Commission, Before the Subcommittee on Disarmament of the Committee on Foreign Relations, on April 12, 1956

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I enclose a statement made by Hon. Thomas E. Murray, Commissioner, United States Atomic Energy Commission, on April 12, 1956, before the Subcommittee on Disarmament of the Committee on Foreign Relations. Commissioner Murray is one of the best versed men in the world on the subject he discussed before the Senate subcommittee. His views are worthy of profound consideration by

everyone; also, an editorial Point of Military Nonsense, appearing in the Boston Herald of April 14, 1956.

The statement and editorial follow:

Mr. Chairman and members of the committee, your invitation to express my views on disarmament is most welcome. Your committee is dealing "with one of the few great central problems of our time. Today no nation or person on earth can have a reliable assurance of security when weapons exist which are capable of destroying all mankind." Mr. Chairman, these words of yours at the initial meeting of this committee, demonstrate an awareness by you and your associates of the realism with which disarmament must be faced.

My purpose today will be to present some ideas that may help in forming a national policy so urgently needed in the nuclear age. This policy must be based on all the facts about nuclear weapons—our need of them, their usefulness, and the dangers connected with their misuse.

On February 23, 1956, I appeared in executive session before the Joint Committee on Atomic Energy. At this time I made recommendations pertaining to our nuclear weapons program and our nuclear power program. As the weapons program has the more important and immediate bearing on disarmament I shall limit my remarks today, within the limits of classification, to weapons.

What I have to say on disarmament may be put in one straightforward proposition. In the existent state of world affairs disarmament means rational armament, especially in the nuclear field. This is the difficult field and the dangerous field, in which rationality is of supreme importance.

Disarmament doubtless means much more than rational nuclear armament. But if it does not mean at least rational nuclear armament it means nothing.

Before developing my proposals I should like to comment on one central aspect of the past history of our nuclear weapons program. The fact is that from the outset we were primarily seeking the answer to one question: What can be done with nuclear energy in the form of bombs? The problems we faced were scientific ones. Questions concerning the development of a national policy with regard to the use of nuclear arms were not in the foreground. We are simply looking for results, always with some antecedent doubt about what the results might be. Ever since the first nuclear explosion at Alamogordo the specific and continuing major objective was to develop ever larger bombs. This was true of the H-bomb program, which achieved in 1952 a spectacular success.

Throughout my 6 years on the Commission I have strongly supported this mode of procedure. However, I long ago recognized the need of developing a national nuclear policy which could keep pace with scientific and technological progress and tried to help in developing it.

The MIKE thermonuclear exposion on November 1, 1952, and our CASTLE tests in the spring of 1954 presented the nuclear weapons problem in an altogether different light. These tests reemphasized in a most dramatic way the urgent need for a national nuclear policy interrelated with the types of bombs to be produced. The major question no longer is, what can we do with nuclear energy in bombs. We know what we can do. We know that there is no upper limit to the size of bombs that can be made.

A new question, therefore, assumes the primacy. Should our future program proceed on the same basis as in the past, and with the same major objective in view—to keep on making bigger and bigger bombs? Would this, in our present circumstances, which are different from those of the past, be a rational course of action? I do not think so. I think that policies will have to be adopted that will set our nuclear-weapons program on a basis more in conformity with the realities of the present-day international life, more in conformity with certain principles of reason, and better calculated to fit into a new national policy on the use of nuclear weapons.

The new direction of our policies as I see them could be summed up in the phrase "rational nuclear armament." This phrase means that decisions with regard to the size and type of nuclear weapons to be placed in stockpile should be made in the light of two principles. There is the military principle that the weapons we manufacture should be demonstrably useful for the purposes of actual war. And there is the higher principle that the use of force in warfare is subject to the dictates of the moral conscience.

The moral norm is the more important. There is something in the atmosphere of the age of violence through which we have lived, in which, indeed, we are still living, that tends to dull the moral sensibilities. In a strange way the sheer brilliance of our technical achievements with nuclear weapons also tends to dull the moral sense. It is, therefore, necessary constantly to remind ourselves that a concern for justice in the use of force is an obligation upon a civilized nation.

As a nation under God we are obliged to act under the limitations of the moral law. The imperatives of this higher law bind us to a due measure of moderation and discrimination in the use of force. Within the Christian tradition to which we owe our national origins the duty of setting limitations on war and on the use of force in war has been a recognized moral obligation.

For instance, our moral tradition does not permit us to use nuclear weapons whose effect is mass destruction on an indiscriminate scale. As the only historical examples of the use of nuclear weapons in warfare, Hiroshima and Nagasaki are pertinent. The weapon used on Hiroshima, for instance, was 15 kilotons or so, about 60,000 times more powerful than the largest conventional bomb of World War II. It destroyed 4 or 5 square miles of territory and killed or injured nearly 150,000 people. At our present distance from that disastrous event I do not think that the use of this bomb against this particular target, the city of Hiroshima and its multitudes of innocent people, could be justified on moral grounds.

The concept of a moral limitation is, I am sure, felt by the American people as a whole. However, we must beware of the false idealism lurking in the Soviet slogan, "Ban the bomb." In the discussions and negotiations looking to disarmament, it would be sheer folly to be maneuvered into making a blanket renunciation of the use of all types of nuclear weapons.

This brings me to the second principle of rational nuclear armament—the principle of military usefulness.

Wars in the future will be nuclear wars. This does not mean that they need be all-out nuclear wars. All-out nuclear war is no more acceptable than murder or suicide. It would be fatal to permit ourselves to drift into the habit of thinking about nuclear war only in all-out terms. The traditional moral effort of western civilization to impose limitations on warfare must be continued even in the nuclear age. A limited nuclear war is a possibility that our consciences can face and accept.

In the different kinds of limited war that might confront us certain types of nuclear weapons have a genuine military usefulness. It would therefore be wrong on our part to deprive ourselves of these weapons.

However, our stockpile should include only weapons that are actually useful in war. Moreover, it should include only weapons that we can legitimately intend to use. I am altogether opposed to any school of thought that would move on toward weapons of ever-increasing magnitude, while at the same time disclaiming the intention of using them. To say the least, this position is unrealistic. Under the stress of a threat to its survival a nation will use any weapon it has in hand, however recklessly, if there is any seeming advantage in its use.

It may be said that certain nuclear weapons, which we might not intend to use in actual warfare, are still useful as a deterrent of war, as a means of terrifying the enemy, or at least as a means of striking a "balance of terror." For my part, I think it is time we stopped for an instant to take a hard look at this concept of "deterrence" and at the complementary concept, more recently added, the "balance of terror."

I am particularly distrustful of the latter concept. There is no doubt that a balance of power is one necessary foundation, among others, of lasting world peace. Whenever this balance is upset, there is danger of aggression and of war.

This seems to be the lesson of history. However, it is by no means clear that a balance of terror furnishes an assurance that aggression even on a limited scale will not be undertaken and that it is in this sense a protection of total peace. A balance of terror is too easily upset. It is at the mercy of miscalculation. Such a balance may even put a premium on the moral cynicism that would not shrink from striking the first blow, from launching an atomic blitz.

On the other hand, the concept of deterrence is in itself valid. Force, whether in the form of the policeman's nightstick or in the form of atomic weapons, is certainly a deterrent of injustice, aggression, lawlessness. Yet force serves as a deterrent only when the mind of the world clearly understands the exact nature of the force and that the force will actually be used. The deterrent value of nuclear weapons is drained out of them when there is any doubt about their actually being used. In a word, the usefulness of nuclear weapons as a deterrent against war is exactly proportioned to the universally known certainty of our intention to make use of them.

Rational armament therefore should include the making and stockpiling only of such weapons as are demonstrably useful for the purpose of actual warfare. What kind of nuclear weapons, of what size, are usable and useful for the purposes of war? In other words, what manner of nuclear arms should be included in our stockpile?

The primary responsibility for answering these questions rests with the military. However, the military usefulness of a weapon cannot be evaluated apart from consideration of the moral law.

Moreover, it is my belief that decisions with regard to such questions should not be left exclusively to the military. A due measure of participation in these decisions should be accorded the Congress and other agencies of Government.

Moral judgments with regard to the measure and kind of destruction that may legimately be wrought are often difficult to make in the concrete. Yet, I would emphasize the fact that the demands of morality control military action in the same way that they control all manner of human action. It cannot be maintained that man's obligation to act as a man, that is, in obedience to the moral law, ceases at the moment when he goes to war.

Furthermore a special problem presents itself in judging the military usefulness of large thermoneuclear weapons. We now know a great deal more about the effects of nuclear explosions than we did a few years ago. For instance, we now know considerably more about the contamination of the atmosphere and soil by radioactive strontium. Yet knowledge of important aspects of the problem is still not complete. Our knowledge about the genetic effects of radiation is even more incomplete. When the

military usefullness of a weapon is being determined all the knowledge that we do have must be brought to bear. Serious account must also be taken of the gaps in our knowledge; these gaps make it imperative to proceed with caution in evaluating the military usefulness of large nuclear weapons.

Here the chief question is this: how does the factor of contamination resultant from large thermonuclear explosions affect the military usefulness of these weapons? Surely it must limit their military usefulness. Indeed, in certain circumstances the factor of contamination might well cancel all seemingly military usefulness. This is particularly true in view of the further fact that this contamination lingers for years and would affect life on earth long after hostilities had ended.

We come now to the question, what concrete conclusions result when these criteria of rational nuclear armament are applied. In my own mind I have reached the following conclusions. Taken together, they constitute the program of rational armament that I propose as part of the substance of disarmament.

My first proposal is that an upper limit should be set on the size of thermonuclear bombs to be placed in our stockpile. From the scientific and technological point of view there is, as I said, no upper limit to the size of bombs that can be produced. It it for us, at rational human beings, to set limits to their size, on the basis of moral principles and military usefulness. Concretely I know of no reason why we should develop bombs more powerful than those we now have. I would add that, when a full military theory with regard to a moderate and discriminating use of nuclear weapons has been evolved in the light of moral principle, the conclusion might be that the bombs we presently have are already too large.

This proposal that a limit should be put to the size of thermonuclear bombs seems to have been supported by the President at a press conference on March 21. He is reported as stating:

"While I have been told many times that there is no theoretical limit to the size of these instruments which can be made, there is, I think, a practical limit, as long as you are thinking of using it only against someone else, and there is size of targets.

"There is an old saying: 'You do not drive a tack with a sledge hammer.' So when you have gotten sometihng of a, let's say, of a maximum tactical size, useful size, why I would think you would go no further."

My second proposal is that a limit should be set to the number of large thermonuclear bombs to be placed in stockpile. I have had the need of this policy in mind ever since November 1, 1952, when I witnessed the MIKE thermonuclear detonation at Eniwetok. That event impressed me with a lasting sense of the menace to humanity inherent in an unlimited program of nuclear armament. Shortly thereafter I made a public statement that "Mankind now has within the range of his grasp the means to exterminate the human race." For 3 years I have consistently and repeatedly tried to convey this fact to the American public. This same consciousness of ultimate danger appears in the testimony given by the Secretary of the State, Mr. Dulles, before your committee. He said: "The destructive power of modern weapons is such that a major war with those weapons would inevitably destroy a great part of the human race." He also spoke about "the risk of doing nothing and allowing this menace to go on in increasing proportions."

The Secretary is right in speaking of the "risk of doing nothing." One thing that needs to be done is to put a limit to the number as well as the size of the large thermonuclear bombs to be stockpiled.

My third proposal is that increasing concentration should be set on the stockpiling of a wide range of very small nuclear weapons.

The reasons for this proposal are both miltary and moral. I have said that limited nuclear war is a possibilty that the moral conscience can face and accept. It is also a possibilty that is inherent in the present state of international tensions.

We have, of course, been preparing against this possibility by our program for small weapons. However, this program requires greater intensification, to the end that it will put us in possession as soon as possible of larger numbers of small weapons. When I speak of small weapons I mean very small weapons. When I speak of larger numbers I mean tens of thousands of weapons in this range. These tens of thousands of weapons could form a broad and solid base upon which could be superimposed a stockpile in the image of a pyramid of intermediate and large size weapons.

A stockpile of this composition will support a theory of moderate and discriminating use of force against all aggression, including aggression that may be minor in degree. With this diversified nuclear armament, possessed in abundance, American and allied military forces of reasonable size would be equipped to handle all the various wartime contingencies that might arise.

We shall have to face the fact that an intensified small-weapons program will be more costly in terms of fissionable material. This increased cost would result not only from the larger total numbers, but also from the inherently less-efficient utilization of material in smaller weapons. For this reason, if for no other, it will not be possible, as has been suggested, to restrict the future use of all new fissionable material to peacetime uses. A continued flow of fissionable material into a very small weapons program should for some time to come be considered a matter of vital national policy.

My fourth proposal concerns the testing of atomic weapons. The testing of small weapons. The testing of small weapons must, of course, go on, and even be greatly accelerated to keep pace with the intensified program that is neecssary in this field. However, I propose that the tests of multimegation thermonuclear weapons be stopped. My proposal that they should be stopped follows from the position I have already taken, namely, that the weapons we now have in hand are large enough. I am not recommending the cessation of these large tests on the grounds that they are dangerous to health and safety. The evidence presently available does not warrant stopping tests now for this reason.

The foregoing proposals suggest in outline a program of nuclear armament that I consider rational and necessary.

It will be asked, What effect would the adoption of this plan have upon our national security? I believe the effect would be entirely beneficial. The present nuclear superiority of the United States would be materially strengthened. In my testimony before the Joint Committee on Atomic Energy on February 23 I emphasized the point that "superior strength means flexible strength." And flexible strength means the fuller development of the capability for limited military use of nuclear weapons—their use in limited wars and their use in combat for limited military objectives.

Tragic weakness would result if we were to build our nuclear strength with overemphasis on large nuclear weapons.

We should possess in sufficient numbers the kind of nuclear weapons that would be useful especially in so-called limited wars. Such wars are dangerous in themselves, and there is the further danger lest they develop into full-scale conflict. We must be able to take action against this kind of limited aggression, in such a way as to prevent it from developing into something more formidable. It means the capability of a moderate and discriminating use of force. It means the capability of meeting the particular occasion with the measure of force it requires, and with no more than this. It means the capability of limiting wars to a rational scale.

I believe that my proposals for a limitation of the size and number of nuclear weapons and for an increasing concentration on a wide range of very small weapons will at least diminish the proportions of the menace to which the Secretary of State pointed in his testimony. This menace is inherent in a stockpile of nuclear weapons that are unlimited in size and number. It is also inherent in the mentality that sees no alternatives in between an uneasy hostile coexistence on the one hand, and on the other hand, an all-out nuclear war. This mentality betrays a bankruptcy both of sound military theory and of moral principle. The fact is that many alternatives are possible in between these two extremes. In proportion as these alternatives are seen to be real possibilities, and in proportion as we provide for them with a balanced arsenal of nuclear weapons the menace of the ultimate alternative, that is, all-out nuclear war—will diminish in the minds of men. Indeed the menace itself will have been reduced to proportions that are manageable by political and military reason.

It may also be asked whether the plan I have proposed would further the cause of international disarmament. The realistic purpose of any disarmament plan should include limitations on the number and size of nuclear weapons. However we should not wait for the establishment of an international disarmament control agency. In this present moment an obligation rests on our Government to make up its own mind about what disarmament should rightly mean. In other words, the United States must have its own program of rational armament.

I further believe that this program must be publicly defined and explained on the highest possible level. There must be no misunderstanding or ignorance about the diversity of our nuclear capabilities, about our intention to use these capabilities, and about the moderate and discriminating manner in which we would use them under defined conditions.

This public statement of our capabilities and intentions is a duty that we owe both to our own moral integrity as a Nation and to the cause of world peace that our armaments serve. We are further summoned to the fulfillment of this duty by that decent respect to the opinions of mankind which has always been a traditional motive of American public action. The community of nations, of whose peace we are the foremost guardian, has the right to know how we intend concretely to exercise our guardianship.

In this same connection there is another consideration. The United States has led the world in the scientific and technological development of nuclear energy as an instrument of war. We now have a further duty thrust upon us by our leadership in this field. Great power is always dangerous. But great power, without a right policy with regard to its legitimate uses, can be disastrous. I believe the time has come for us to establish for ourselves and to present to the world right concepts, military and moral, with regard to the uses of nuclear power in war.

If we do this, the progress of disarmament will be importantly advanced. What I propose therefore is not only rational action but independent action. Frankly independent action along rational and moral lines would do much to solve the present crisis of lawlessness in the field of armaments. America's call at the moment is to independent and rational action. Our response to this call of reason is a matter of duty, and to that extent an obedience to the will of God, as it

manifests itself in the circumstances of human life.

[From the Boston Herald of April 14, 1956]

POINT OF MILITARY NONSENSE

The West cannot afford to reduce its atomic weapons stockpile unless there is a guarantee that the Soviet Union will follow suit.

But there is a point where the power and numbers of our atomic weapons go beyond any imaginable need, and our capability to use them falls behind the quantity.

Perhaps this should be called the point of military nonsense, where we build the elephant gun to hunt the mouse. And Thomas E. Murray, the "stormy petrel" of the five-man Atomic Energy Commission, thinks we have reached that point.

"There is no reason why we should develop bombs more powerful than those we now have," Mr. Murray told the Senate Disarmament Subcommittee.

He advised that the United States should limit the size and power of hydrogen bombs despite what Russia might do, that we should stop testing the big ones, and that we should develop instead "tens of thousands" of "very small" nuclear weapons.

At first glace the Murray plan appears to be a rather radical disarmament measure. But actually it has very little to do with disarmament and is, in fact, a new version of the old "bigger bang for a buck" idea, except this time the word is "better."

Mr. Murray is being realistic. "The deterrent value of nuclear weapons is drained out of them when there is any doubt about their actually being used," he said. There is certainly very real doubt that this country would, under any circumstances, use a 10 megaton bomb, which the London Economist recently described as being capable of almost totally destroying London. There just would not be any advantage to be gained.

And knowing that we would not use it, the potential enemy is not deterred by it. It may be better, then, to stockpile small nuclear weapons which we might conceivably use, keeping only a handful of the monsters because we already have them.

Mr. Murray's idea is attractive. It demonstrates a certain faith in humanity which many of the thinkers on military affairs do not seem to have, in that he does not seem to believe that we would ever uncork our suicide weapon. And yet he recognizes the dreary fact that some weapons might be uncorked and that we must be prepared accordingly.

Mr. Murray's suggestion should be studied hard by our policymakers. His slant seems eminently practical.

What Kind of Veto?

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of April 16, 1956:

WHAT KIND OF VETO?

President Eisenhower's decision on the farm bill is extremely difficult because Congress seems to have left him only a choice of evils. If he should sign the bill, he would again write into law principles which he and a very large portion of the people (farmers, consumers, and economists alike) believe to be unsound. If he should veto the bill, it is said that he would deny the farmer any additional relief this year from what is admittedly a serious economic plight. No wonder the President is deeply perturbed by this dilemma. There is, however, another way of approaching the problem.

We think the country will not be satisfied by acquiescence in either of the two above-mentioned extremes. Despite the sharp division over support prices at 90 percent of parity, the country wants farm legislation. Specifically it wants the soil bank embodied in the present bill. This is evident from the widespread support given the soil bank in both political parties and the almost complete absence of opposition, although there are many differing views as to its effectiveness in reducing farm production. If the President vetoes the bill, therefore, we do not think he should accept the assumption that no other farm legislation will be passed this year.

This newspaper has already expressed the view that a veto is desirable. But the veto need not be merely negative. The administration has extensive authority to alter price supports within the 75 to 90 percent formula now on the books. The President could raise basic support levels for this year only without upsetting the principle of flexibility, and he could make such action contingent upon the passage of a new soil-bank bill by Congress. A simple bill for that purpose could be enacted within a week if Congress made the effort. The result would be constructive relief of the farmer's plight instead of mere political warfare to win votes.

To our way of thinking, such a compromise would be preferable either to the signing of a basically unsound bill or to a veto that would merely toss the problem into the lap of the next Congress. Additional aid to agriculture is urgent now. The President can return this unacceptable bill to Congress along with a powerful plea for enactment of the soil bank to which there is virtually no opposition. If the administration shows its willingness to meet Congress halfway, we cannot believe that Congresss would turn a cold shoulder to the only farm measure that has a chance of approval.

George E. Flood Memorial Hospital

EXTENSION OF REMARKS
OF
HON. GEORGE S. LONG
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. LONG. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I enclose a resolution of the 1955 national convention of the American Legion in support of a bill I introduced today to change the name of the Seattle Veterans' Administration Hospital to the George E. Flood Memorial Hospital.

The resolution follows:

1955 NATIONAL CONVENTION OF THE AMERICAN LEGION, MIAMI, FLA., OCTOBER 10 TO 13, 1955

Resolved by the 37th Annual National Convention assembled in Greater Miami, Fla., October 10 to 13, 1955, That we recommend that the name of the Seattle Veterans' Administration Hospital be changed to the George E. Flood Memorial Hospital.

George Edward Flood was born at Boisfort, in Lewis County, Wash., October 12, 1893, and received his common, collegiate, and legal education in the State of his birth. He was a lifetime citizen and resident of the State of Washington, and except for his wartime service to his country and peacetime service in the American Legion, his life was spent there in devoted service to his family, his church, his political party, and his profession.

George Flood entered the service of his country in World War I on May 9, 1917, and was discharged July 29, 1919.

Upon returning to civilian life George became active and loyal member of the American Legion, in whose councils he was a respected leader. He served in various capacities in post, State and national organizations of the American Legion, including service on the National Executive Committee, and he gave freely of his time and energies in rehabilitation and veteran's service work. At the time of his death, George was a member of the National Legislative Commission of the American Legion. During the 9 years he served on the Legislative Commission he rendered valuable service to the American Legion and through it to all war veterans and his country; and he enjoyed the friendship and esteem of all other members of the Commission.

In 1925 George Flood married Virginia Claire Flynn, herself a Legionnaire; and to this happy union 5 children—George Gratten, Virginia Diane, Edward Thaddeus, Leo Timothy, and Brigid Claire—were born. Mrs. Flood died in 1940. In addition to his children, George was survived by his mother, Nellie M. Flood, his sister, Maude E. Williams, and his brother, Dr. C. R. Flood.

George Flood was an able lawyer and attained high stature in his profession. He was a member of the Washington State and the American Bar Association; he was admitted to practice in all his State courts and the Supreme Court of the United States; and he was a member of the law firm of Wettrick, Flood & O'Brien, Seattle, Wash.

George Flood was a consecrated member of St. Joseph Parish, Seattle Council No. 676, Knights of Columbus, the Holy Name Society; and he was active in the Republican Party, and in civic and charitable organizations.

George Flood attended the annual banquet of the Last Man Club of Seattle on Armistice Day, 1954, as was his wont; and while he was being praised for unselfish work in behalf of veterans, divine agency removed his name from that earthly roster and inscribed it in the eternal roll of the heavenly host to there await the coming of "the last man." What a fitting scene and time for the curtain to come down on a full and useful life. George would have wanted to make his exit that way when his destined work on earth was done. Even unto death he gave himself to comradeship and service of war veterans.

George had a warm heart, generous nature, and friendly manner, and for that his comrades of the American Legion loved him; he spent his energies and substance freely for the betterment of veterans, deceased veterans' widows and orphans, crippled and dependent children, and for that his comrades of the American Legion respected him; he abhorred sham, pretense and dishonesty, and for that his comrades of the American Legion admired him; in his private and public life he stood for the principles enunciated in the preamble to the constitution of the American Legion, and for that his comrades of the American Legion loved, respected and admired him.

George is gone, but departing he has left behind him "footprints on the sands of time."

Now, therefore, be it

Resolved by the national legislative commission of the American Legion in a meeting regularly held in the offices of the American Legion in the city of Washington, District of Columbia, this 23d day of March 1955 (being the first meeting after the death of

George Edward Flood), That the members of the commission will ever cherish the memory and feel the imprint of the character and unselfish service of George Edward Flood and will miss his wise counsels, good humor and friendly nature; that the American Legion is a better organization because George Flood was a member of it and gave so much of his substance and energy to it; be is further

Resolved, That this memorial resolution be incorporated in the minutes of this meeting and that copies of it be sent by the director of this commission to each of George Edward Flood's children, his mother, the pastor of his church, the law firm of which he was a member in Seattle, and to the adjutants of his post, his department, and the national organization of the American Legion.

Parris Island

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. KELLEY of Pennsylvania. Mr. Speaker, the incident of Parris Island recently in which six Marine lives were lost has not gone without attention from the people back home. The absurdity of having the Marine Corps investigate themselves is set forth in the following editorial. Under unanimous consent I am including an editorial from the Greensburg Tribune-Review of April 12, 1956.

I have written to the chairman of the Armed Services Committee urging that he conduct on investigation into this matter due to the fact a similar episode occurred 2 years ago at the Marine training base at Quantico, Va., where 2 men died and 1 was permanently physically disabled from 1 practice march.

The editorial follows:

CONGRESS SHOULD INVESTIGATE—

General Randolph Pate, Marine Corps Commandant, says he feels that the Marine Corps can handle the situation growing out of the drowning of six marine recruits during a forced night march. He was talking against a congressional investigation of the affair.

General Pate may feel that Marine regulations cover the case and that the corps will deal out the proper punishment to the sergeant blamed for ordering without authorization, the forced march into South Carolina swamps in which the six men died.

But Americans whose sons are about to become members of the Marine Corps—or for that matter any other branch of the armed service—should have more assurance than that of General Pate.

Discipline must be maintained in the armed services; no one will object to that. But when disciplinary action in peacetime is inflicted without authorization and when recruits are led into situations which might lead to their deaths, it's time that an investigation be made of the methods being used in the training camps.

Parents ought to be assured that while their sons are being adequately trained for war, they are not being subjected to the whims of any noncommissioned or commissioned officer who might decide that he wants to inflict "disciplinary action" such as took place in South Carolina.

Address by Former President Truman at Des Moines, Iowa

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include an address delivered by former President Harry S. Truman in Des Moines, Iowa, the evening of April 11, 1956. In his effective address, former President Truman exposes the broken promises of President Eisenhower and the Republican Party to the farmers of our country.

[From the New York Times of April 12, 1956]

TEXT OF TRUMAN'S SPEECH AT DES MOINES

I am very happy to have this opportunity to come back to Iowa. It reminds me very strongly of what happened in 1948. The meeting we had in Dexter that year was the greatest farm meeting I ever saw—10 acres of people.

I estimated two to the square yard and you have 96,820—so for round figures I always said 100,000 were present. At that meeting I could tell that the Democrats were on the road to victory. We are on the road to victory again today just as we were in 1948, and for the same reasons.

In 1948, we had a Republican Congress—remember, it was the notorious do-nothing 80th Congress. That Republican Congress went all-out for big business and the special interests and cared nothing at all for the farmer and the workingman and the white collar worker and the small-business man. And that Republican Congress tried to block everything the Democratic President was trying to do for the people.

This year, the roles are reversed. This year we have a Democratic Congress and a Republican President. And the Congress has been trying to help the farmers, while the President has been putting roadblocks in its way. This year its a Republican President that's causing the trouble, instead of a Republican Congress but the results are just as bad—maybe worse.

With Presidential leadership we could have a good farm program. He deserves to be rejected by the people just as the 80th Congress was, because he is a do-nothing President just as that 80th Congress was a do-nothing Congress.

LOOK AT THE RECORD

Let's just look at the record on the farm situation. And remember, this is Ike's record just as much as it is Ezra Taft Benson's. Secretary Benson is merely the President's hired man, and Ike could fire him in 1 minute if he didn't like what he's doing.

I know what I am talking about. I had to fire some pretty important people while I was President. And if I had ever had a farm situation like the one General Eisenhower has now, I would have known how to handle Mr. Benson. It wouldn't take very long to do it, either.

But the President has been working hand in glove with Mr. Benson and his mistaken farm policies for 3 long years. General Eisenhower has personally been doing all he could to keep Congress from raising the support prices farmers get. This is one of the most amazing records of political betrayal I have ever seen in all my years of public life.

LOOK AT THE PROMISES

First, let's take a look at the promises. In 1952, General Eisenhower went all over the country handing out promises about what he would do for the farmers. Just remember that the next time anyone talks to you about honesty and sincerity. Just look behind the mask and remember those promises—remember how they were not only broken but deliberately denied.

Here are some of what the Republican candidate said in 1952:

At Brookings, S. Dak., on October 10, he said:

"The Republican Party is pledged to the sustaining of the 90 percent of parity price support, and it is pledged even more than that to helping the farmer obtain his full parity, 100 percent parity, with guaranty in price supports of 90 percent."

And down in Columbia, S. C., he said:

"I believe wholeheartedly and without any ifs or buts in Federal programs to stabilize farm prices, including the present program insuring 90 percent of parity on all basic commodities."

Now, let's see how these promises were kept.

When the Eisenhower administration took office, they began to reduce farm price supports just as fast as they could. Where the level of supports was discretionary with the Secretary of Agriculture, he began to cut them in 1953.

He reduced the price of milk in 1954. From 1952 to 1955, the Eisenhower administration reduced the support price of milk by 17 percent, reduced the support price for soybeans 20 percent, reduced the support price for oats by 22 percent, reduced the support price for barley by 23 percent and reduced the support price for grain sorghum by 24 percent.

And all this time the administration—Benson and Eisenhower—were clamoring and complaining because the law wouldn't let them make the same kind of reductions in the support price for corn and wheat.

SUPPORT LAW TO EXPIRE

Unfortunately, the law providing mandatory 90 percent supports for basic commodities expires this year. Congress has been trying to extend it, but Benson and Eisenhower have been fighting the extension tooth and nail. The Congress has stood its ground, however. The Democratic Members have led the fight, and I hope they lay a bill to help the farmer right on the President's desk.

I don't know what Ike is going to do with that bill. He would like to veto it, of course, because it is directly contrary to his philosophy of reducing farm prices. However, this is an election year, and he may well decide that it's the better part of valor to sign this bill in an effort to get reelected. But if he is re-elected, you can be sure that next year he will go back to his efforts to cut support prices, because that is what he really believes in.

My advice to him is that if he wants to cut farm prices still further, he had better go ahead and do it now—because next year I don't think he will be in any position to do anything about it one way or the other.

In fact, this time next year I think he will be looking at these things from the viewpoint of a farmer in Gettysburg instead of a politician in the White House. You know, I think it is a very good thing for any President of the United States to have experience as a farmer, but it is much better for the country if he has that experience before the goes to the White House instead of after he gets out. It's too late then for it to do the people much good.

You may wonder why an administration, even this one, would want to reduce farm prices. I have wondered about that myself, and frankly, I don't know the answer. Some people have suggested that it is because they want to help the processors and the middlemen at the expense of the farmers.

We do know that the profits of the processors have been going up while the spread between producer and consumer has been increasing. We do know that Secretary Benson has been trying to stir up city people against the farm program by telling them it costs too much and talking as if there were something immoral about Government programs to help farmers make a decent living.

REASONING CALLED BAFFLING

We do know that, whatever the reason, the Eisenhower administration has fought day in and day out to cut farm prices. They have tried to tell us that lower prices would cut production, that lower production in turn would reduce the surpluses, and that the net result would be a healthy condition in which the farmers would be better off.

How in the world the farmer would be better off reducing both his prices and the size of his crops I do not understand and never will. And, in addition to that, Benson is completely wrong in his argument about lower prices resulting in reduced production. That was made abundantly clear in the last Republican farm depression from 1921 to 1923, and now Eisenhower and Benson have proved it all over again.

They have lowered farm prices and lowered them some more, and every time they lower farm prices, production increases and surpluses get bigger and bigger.

From the day Benson became Secretary of Agriculture, he never tried to make the farm program work. Instead, he tried to wreck it and, with Eisenhower's help, has done a pretty thorough wrecking job. What we have to do now is to throw them out and replace them with someone who will start back in the other direction. The first thing to do is to restore the 90 percent support prices and move on from there.

We need to do something about supports for livestock and other perishables. Charlie Brannan recommended a system of production payments for this purpose in 1949, and it was killed largely because of bitter partisan attacks from Republicans in Congress. They made all kinds of false and malicious attacks on the plan with no justification whatever. I think what they were really afraid of was that it would work.

These unbridled political attacks by the Republicans had their effect. They persuaded a lot of farmers and others that it was time for a change in 1952. Well, they got a change—and what a change. I think the farmer's memory is going to be a little longer this time. I don't think he is going to let the same people who deceived him in 1952 deceive him again.

BRANNAN PLAN CITED

Remember, it was the Republican candidate in 1952 who promised—yes, he was a very promising fellow—to find a way to support the price of perishable commodities and livestock without what he called the "normal bankruptcy of the Brannan plan." You all know how well he has kept his promise—which is not at all—with or without the Brannan plan or otherwise.

Ladies and gentlemen, if that is moral rectitude, I had just rather be in moral bankruptcy with the farmers. Most farmers are headed for financial bankruptcy anyway if this administration stays in control of the White House.

Eisenhower and Benson paid no attention at all to this promise until last fall, when the prices of hogs went so low they got scared for their political lives. Then what happened? They started a pork-buying program. But they bought from the processors instead of the farmers, and the processors' profits went up while the price of hogs kept on going down. That was a price-support program for the meatpackers, not for the farmer.

I'm just a political has-been, but I'm as stubborn in my way as Mr. Benson is in his. I thought production payments to support livestock prices were right when we recommended them back in 1949. I still think they are right and I think they ought to be enacted into law.

And I understand that one of your great farm papers published here in Des Moines has repeatedly polled the farmers on this question and found that they agree with us.

By now, I believe there are a lot more people who agree with us all the time. They are converting more Republicans into Democrats than we were ever able to do.

We are seeing history repeat itself. During the 1920's we had a farm depression under Republican administration. Those administrations paid no attention to the farmers' troubles. They talked about how well everything was going, and keeping cool with Coolidge, and two chickens in every pot with Hoover.

But things weren't really going well. Little by little the farm depression spread throughout the economy and then we had a big depression everywhere. And, finally, the people turned the Republicans out.

We all know what happened after that. You know how the Democrats under Franklin Roosevelt you got the country back on the track. You know how the New Deal and the Fair Deal carried the farmers and all other groups of our people to new and unprecedented heights of prosperity. And, finally, after more than a decade of great prosperity, another Republican President was elected.

SEES HISTORY REPEATING

Now the same thing is happening all over again. Another Republican depression has started on the farms. Farm prices and farm income have gone down. But the prices farmers have to pay for the things they buy have remained at high levels. The squeeze on the farmer has gotten worse. Farmers' bank accounts have gone down and their debts have gone up. Their farm machinery and equipment is wearing out and they are not able to replace it. They are having to give up thoughts of sending their children to college. This is bad, and it's not going to be confined to the farms.

Already the effects are being felt in the towns and cities that draw their major support from farm families. Already they are being felt in those industries that sell primarily to farm customers. Farmers are among the best customers of American labor and American industry. You good people here in Iowa know that very well. You know that a nationwide depression can be born on the farm under Eisenhower just as well as under Herbert Hoover.

The only question now is whether you and other people across this great country of ours have learned this lesson well enough to act on it. Are you going to throw the Republicans out now or are you going to give them 4 more years to finish busting the farmers?

I think I know the answer. I think the refresher course you have been getting for the last 3 years is going to be enough. I don't think the Madison Avenue advertising boys are going to be able to fool the American people again this year the way they did in 1952.

My friends, I have spoken to you tonight mostly about the agricultural situation. However, there is another matter which should never be absent from our thoughts—that is the question of foreign policy and world peace. I have spoken on this subject a number of times recently and I shall not dwell upon it tonight. But we should always remember that this subject is so important it overshadows all our other problems here at home. And in this field, unfortunately, the Eisenhower administration has made the worst mistakes of all.

They have made a mockery of bipartisanship in foreign policy. They have put politics first and the national interest second. The result has been to dismay our friends, comfort our enemies, weaken the position of the free world, and drive other nations closer to the Communist bloc.

HITS AT SERVICE CUTS

In the face of the growing military strength of the Communist nations, the Eisenhower administration has actually been cutting down on the size of our Armed Forces. In the face of growing economic strength of the Communist nations, the Eisehower administration tells us the Soviet policies have failed.

They have been withholding the truth from the American people because they fear the political consequences if the truth were known. But the truth is that they have drifted into a situation where the danger of Communist domination of the free world is greater than ever before.

This is a sorry record and a frightening one. This, above all, is the reason we must elect a Democratic President who can rally the free peoples of the world once again to work together to improve their economic conditions, to maintain their independence, and to establish a peace based on freedom and justice.

My friends of Iowa, I have spoken to you plainly and bluntly about the things that are in my mind and heart, because I conceived it to be my duty. We are faced with the election of a President of the United States, which is the most important exercise of the democratic franchise in all the world.

We are not going to find the right answers by pussyfooting. We need to get the facts out in the open and look at them for what they are so we can make the right decision. You talk about a mess in Washington. We have a real one there now—you farmers are a part of it—you are messed up, the foreign policy is messed up, Government finance is messed up, small business is being ruined. Really, the only people who haven't been messed up are General Motors, big business, and the stock-market gamblers.

It was in this state in 1948 that I first felt the tide running so strongly for the Democrats and the principles in which we believe. I sense the same tide running this year. I am convinced that our party is going to be called again to lead our Nation in these troubled times in this troubled world.

May God grant that we shall be equal to the task.

Finland's Ambassador Visits Connecticut

EXTENSION OF REMARKS

OF

HON. HORACE SEELY-BROWN, JR.

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. SEELY-BROWN. Mr. Speaker, on March 31, 1956, the people of my district were honored by a visit from the Honorable Johan A. Nykopp, Envoy Extraordinary and Ambassador Plenipotentiary from the Republic of Finland to the United States of America and the United States of Mexico.

This visit was arranged by the junior Senator from Connecticut, the Honorable WILLIAM A. PURTELL, in the interest of the National Finnish-American Marathon Committee, but unfortunately it was not possible for Senator PURTELL to be present on the occasion of Ambassador Nykopp's visit.

Upon the Ambassador's arrival from Washington, a small reception in his honor took place at my home in Pomfret,

where he also had an opportunity to be interviewed by members of the press.

The national chairman of the Finnish-American Marathon Committee, Otto L. Pussinen, is a constituent of mine, and one whose friendship I have long valued. He and his committee conducted the successful project for sponsoring and financing the visit to this country of two athletes from Finland, Eino Oksanen and Antti Viskari, who are to participate in the 30th annual Boston Marathon on April 19, 1956.

These young men have been living in my district since their arrival from Finland several weeks ago, and they have been doing their training for the Boston marathon on the roads in and around Plainfield.

A reception in their honor, attended by more than 1,000 citizens of my district, most of them of Finnish birth or ancestry, as well as by visitors from Massachusetts and elsewhere, took place on Saturday evening, March 31, in the town hall at Plainfield, at which time it was my privilege to introduce Ambassador Nykopp.

Ambassador Nykopp extended a greeting to the athletes from Finland, and from those who had gathered to honor them. After his return to Washington, the Ambassador made some interesting comments about his visit to Connecticut, which I am pleased, under unanimous consent to extend my remarks, to insert at this point in the RECORD:

The marathon-benefit night at Plainfield town hall, March 31, 1956, offered me the possibility to learn about the splendid activities of the Finnish-American Athletic Club. For the past 4 years the marathon committee of the club has been raising funds to bring Finland's best marathon runners to compete against the world's foremost athletes in the annual Boston marathon.

The fund has not only made participation possible but also the opportunity for the Finnish sportsmen to arrive early before the competition, to get used to the conditions. The work of the committee, headed by Mr. Otto L. Pussinen, proves how strongly the sport spirit lives among the people of Connecticut.

In this connection I extend my sincere thanks to Senator WILLIAM A. PURTELL and Congressman HORACE SEELY-BROWN, who have warmly supported this good activity of Americans of Finnish origin.

In 1954 the Finnish runner Veikko Karvonen won the marathon, and I am sure that the Finnish participants this year, Eino Oksanen and Antti Viskari, will do their best to defend the Finnish marathon traditions.

At Washington, D. C., April 5, 1956.

JOHAN A. NYKOPP,
Ambassador of Finland.

Danger Ahead in Asia—1956 Could Be Decisive Year

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 11, 1956

Mr. ADAIR. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a news article by Mr. W. R. Hearst, Jr., which I think contains interesting and informative observations upon the Asian situation:

DANGER AHEAD IN ASIA—1956 COULD BE DECISIVE YEAR

(By William Randolph Hearst, Jr.)

This could be the year of decision for the United States in Asia.

Should we again lose or forfeit friendly ground, our fate on that fermenting continent could well be sealed by the end of 1956.

But if the year comes to a close without any further loss of face or free territory, there is reason to hope that a reaction—small at first but possessing the possibility of growth—can be set in motion against the Communist tide.

It would be an exaggeration to say we have lost the cold war in Asia at the present writing.

But there are precious few signs that we are winning it, or even that we are holding our own.

The Communist conspiracy to subjugate Asia by means short of nuclear war is being waged relentlessly and not unsuccessfully.

There appears no immediate danger of the Chinese Communist engaging in armed aggression, although we stand at rifle-point opposite them in Korea, Formosa and Vietnam.

Subversion from within is the sinister weapon through which the Red hierarchy plans to obtain its ends without goading the United States into an atomic showdown.

And uncertainty over American intentions toward Asia compounds the threat poised by incessant Communist infiltration.

Most of the nations on our side fear that we are prepared to write-off the area and not retaliate forcefully in a final test of will.

The small countries are afraid that they are expendable in deals and bargains between the big powers.

These are the chief conclusions of an extensive survey swing through the Far East that took a Hearst task force into 10 nations and encompassed 35,000 miles of steady traveling in the course of a 30-day trip.

Our factfinding party included my brother, Randolph, and my two colleagues of last year's trip to Moscow, Kingsbury Smith, general manager of International News Service, and Frank Conniff, the columnist and reporter who doubles as my editorial assistant.

In addition, my wife Austine made the long, wearying trip acting as hostess and contributed a woman's point-of-view to our discussions.

We talked to countless people, including the emperor and empress of Japan, the Japanese prime and foreign ministers, President Magsaysay of the Philippines, President Chiang Kai-shek of Nationalist China, President Rhee of South Korea, Prime Minister Nehru of India, President Diem of South Vietnam, Prime Minister Pibul Songgram of Thailand, Pakistan's first president Iskander Mirza, and even Soviet First Deputy Premier Anastas Mikoyan, who was cold-warring it in southeast Asia.

In order to touch all the bases on this survey, our party split into two sections at Hong Kong, with Frank and Randy peeling off and covering Vietnam and Pakistan, while Kingsbury Smith, Austine and I proceeded to Bangkok and New Delhi.

HIGH QUALITY UNITED STATES PERSONNEL

In addition to the foreign dignitaries, we talked at every opportunity with American military and diplomatic representatives along the route, visited United States installations, and had a first-hand look at several sore spots where actual shooting could conceivably develop.

At this point I would like to pay tribute to the high quality of the personnel we have thrown into the battle to save free Asia from communism.

We were all deeply impressed by the intellectual statute and moral fiber of those Americans who are ceaselessly striving to keep emerging Asia on the side of freedom.

Let's look at the plus and debit side of the ledger to see where we stand in Asia as of April, 1956.

These are the places and situations which sound danger for the American position in the Orient.

NEHRU SYMBOLIZES INDIA

The "neutralism" of India. (The quotation marks are used because India too often seems to Americans to be "neutral" on the side of Communist Russia.)

Indian Prime Minister Jawaharlal Nehru is an impressive if enigmatic figure. There can be no doubt that he symbolizes the mood of India, and neither Nehru's attitude nor the feeling of the Indian people at this time bode much good for the American side.

Nehru is undoubtedly the outstanding political figure of the subcontinent and under his leadership several other countries have been veering deeper into neutralism.

But that is not to say that he speaks for all Asians. President Diem of Vietnam openly asserts Nehru has fortified his chance for moral leadership by his appeasement of Russia, while President Mirza, of neighboring Pakistan, scoffs at his pretensions.

Nehru, though extremely tough on Communists in India (realizing their threat to his leadership), seems perfectly willing to accept their statements of good intentions internationally.

COMMUNISM GROWING STRONGER

But communism is strong and growing in India. Mark this area as dangerous in your mental map of the cold war in Asia.

The wavering position of Japan, a Nation inclined more and more to sit on the fence although its present leaders voice strong support for close American ties.

Premier Hatoyama and Foreign Minister Shigemitsu are clearly sincere in their expressions of friendship for America, but there are compulsions within Japan that potentially can rip our alliance to shreds, or at least render it ineffective.

Another clear and present danger to America in Asia, although a psychological one, is the doubt eengendered by our apparently contradictory policies.

Leaders who have literally placed their lives and their sacred honor on the American side are puzzled when we spend most of our time wooing neutrals whose loyalty must remain questionable.

VACILLATION ANGERS FRIENDS

This seeming vacillation sometimes angers our friends without gaining the support of the so-called uncommitted nations.

Some nations are beginning to wonder whether they might not extract more from Uncle Sam in money and materials if they played hard-to-get instead of openly alining themselves with the free bloc.

The Egyptian Ambassador to a friendly country told the chief of state:

"Your handling the Americans all wrong. We'll get more out of them by being difficult than you will by being friendly."

True or not, the feeling that America takes its Asian friends for granted while concentrating on the uncommitted nations is widespread and deeply disturbing to good relations with these powers.

MAGSAYSAY FORCEFUL LEADER

The debit side of this balance sheet is of serious concern, but now for the plus factors operating for the United States in the Orient.

Here are the most significant causes for gratification discovered on our long trip.

The sturdy democracy of the Philippines Republic and the dramatic, forceful person-

ality of its president, 48-year-old Ramon Magsaysay.

Here indeed, is a beachhead for freedom in an area where freemen are sometimes inclined to despair of ever halting the Communist thrust.

Here, too, is the kind of leader who can kindle the masses of Asia into a belief that the future belongs to men of dignity and compassion and not to the robotlike creatures of the Kremlin.

SUREST FRIEND OF UNITED STATES

By all means and by any standards, Magsaysay is the most exciting personality and the surest friend of the United States we met on the entire journey.

He has tremendous problems, especially domestic, but he is bringing to their solution a dedicated conviction that the principles of freedom are the best agencies through which the aspirations of Asia can be achieved.

The emergence of Ngo Dinh Diem as a forthright pro-American leader in South Vietnam, an area written off to the Communists as recently as a year ago.

Not only has Diem refuted his detractors—who, unfortunately, included several high-placed Americans—but he has brought into being a state which may ultimately confound the entire Communist position in southeast Asia.

DIEM HEADS GOING CONCERN

Diem now heads a going concern, frail and untested to be sure, but nevertheless one firmly planted on the road to democracy.

South Vietnam is one place where the burden of responsibility rests on the Communists in 1956, because Diem has no intention of acceding to the appeasement agreement reached at Geneva in 1954, under which nationwide elections embracing both Communist and Free Vietnam were scheduled to be held.

The continued influence and determined spirit of those hardy old warriors, Chiang Kai-shek and Syngman Rhee, on the American side in the cold war.

Pakistan's firm adherence to its SEATO and Baghdad commitments despite terrific pressure from India and some other countries in the West, notably France.

NO OPEN WAR IN ASIA IN 1956

Naturally this question most interests Americans in their thoughts about Asia: Will there be war out there in 1956?

One of the most surprising conclusions of this survey is the opinion that there will be no open war in Asia during 1956, despite the tense and explosive nature of the questions facing that area.

It seems generally agreed that a formula will be found to avoid the direct use of arms although underneath the deep-rooted problems of Asia will be working toward their expression.

There are two possible incubators of a shooting war that might involve the United States in the next few months:

The offshore Chinese islands of Quemoy and Matsu; and

Indochina, where Free Vietnam and Communist Vietnam confront each other across the 17th parallel.

IKE MUST MAKE DECISION

As you are probably aware, Quemoy and Matsu are Nationalist-held islands a few miles off the Chinese mainland. Although we are on record to defend the main bastion of Formosa in the event of a Chinese Communist attack the decision as to whether we should go to the aid of Quemoy and Matsu under these circumstances has been left to President Eisenhower alone.

Chiang has garrisoned these islands with his best troops and has sworn to defend them to the last man. In the event of a Red assault, a decision of crucial importance would thus face President Eisenhower.

We are no more able to forecast the President's choice, of course, than anyone else, but we can say this:

Many influential Americans in the area believe that if we lost Quemoy and Matsu, American prestige and power will have suffered an irreparable blow. One high-ranking American in a position to know flatly stated:

"If we give up there, we might as well pull out of all Asia."

INDOCHINA CRISIS IN JULY

There is reason to believe that this is the kind of advice being funneled back to Washington by American officials on the Asian rim, and their advice could be decisive in helping Ike make up hs mind.

The Indochina situation will reach crisis proportions in July, when national elections were to be called under the Geneva agreements.

Diem has bluntly repudiated these accords, reached by Red China, England, and France without the participation of free Vietnam. He asserts that free elections are impossible in the Communistic north.

Will Ho Chi Minh use force to obtain the unification of Indochina under Communist rule that semed to be guaranteed at Geneva in 1954?

And what will the United States do if the Communists attack a country which openly asserts it is on our side?

FORMULA TO AVOID WAR SEEN

South Vietnam is a "ward" of the SEATO powers and it is to be expected that we would come to its assistance, but some doubt about our reaction lingers in the minds of Vietnamese leaders.

It is believed that some formula will be worked out which will avoid a test by arms during 1956, and this, of course, will represent a victory, however temporary, for the free world.

Let the word get around Asia that one of the smaller powers has defied the Communists and made it stick, and it could set free forces which might eventually develop into a major threat to the Communist program.

In concluding this opening article, I would like to stress that reaching conclusions about Asia is no easy matter, because of the complexity of the forces at work within the area.

VARIOUS COMPLEX PROBLEMS

There are wheels within wheels, hatreds within hatreds, and even enmities within the different countries which peril their progress for domestic reasons completely separate from the issues of communism versus freedom.

For instance, there are the scars left by World War II. The hatred, or at best suspicion, that still remains concerning Japan; the emotions of the Filipinos, the Chinese, the Koreans, and other victims of Japanese oppression.

Then there is the dislike of the Vietnamese for the French and the enmity existing between Pakistan and India.

ANIMOSITIES COMPLICATE TASK

Religious, racial, and cultural differences are also a primary cause of dislocation, jealousy, and fear in Asia.

These festering animosities complicate the task of policymaking, and they cannot be wished away.

They are very real forces in fashioning the destiny of Asia.

They bind Secretary of State Dulles' hands when he seeks to forge a unified, coherent policy for the entire area.

In ensuing articles, I will touch on these problems country by country.

Let's Talk Facts About Fibers

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 15, 1956

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following article, "Let's Talk Facts About Fibers," presented as an advertisement in Newsweek magazine:

LET'S TALK FACTS ABOUT FIBERS

Today, with all fibers abundantly available, cotton accounts for nearly 70 percent of the total domestic demand for textiles—more than twice the total of all competing fibers combined. Particularly in the period since World War II, cotton has registered conspicuous advances in such important markets as dresses, sport shirts, shorts, and other clothing items.

Why? Certainly the foremost reason is simple and indisputable—it is consumer satisfaction. Objective analysis of 10,000 customer complaints in a typical large department store shows that the number of complaints reported on cotton, in proportion to the total amount of fiber used, is far lower than for any other fiber. Rayon and acetate, with less than one-third the fiber consumption of cotton, account for twice as great a number of complaints.

This table lists the percentage of complaints for which the analysis shows each fiber to be responsible, and the percentage of the total market for consumer items which each fiber supplies.

Customer complaints

Fiber	Percent of complaints	Percent of total fiber used in consumer items
Cotton	21.3	66.4
Wool	18.8	15.1
Linen	1.1	.1
Silk	4.5	.1
Rayon 18.2	54.3	18.3
Acetate 22.5		
All synthetics 13.0		

(Labarthe, "Ten Thousand and One Customer Complaints," Textile Research Journal 4, 328.)

At the International Congress of Man-Made Fibers in Paris, a representative of the man-made fiber industry, reported on a United States survey in which consumers were asked their dislikes about various fibers. The next table lists the fibers covered in the survey, and the percentage of dislikes each received. (The percentages add up to more than 100, in that some people disliked more than one fiber.)

Dissatisfaction with various materials

Fiber:	*Percent*
Cotton	5.5
Nylon	21.3
Silk	21.9
Wool	31.6
Rayon	55.6

(America's Textile Reporter, vol. LXVIII, No. 42.)

In view of the major share of the total textile market supplied by cotton, these figures are a noteworthy testimonial to the consumer satisfaction it gives. Nylon and silk received 4 times as much mention of dissatisfaction as cotton, wool 6 times, and rayon almost 11 times.

The cotton industry, through the National Cotton Council, maintains close contact with apparel and household markets through extensive programs of market research. Trained investigators have interviewed literally thousands of merchandise managers and buyers in both large and small cities. These retail executives, who obviously represent the most authoritative source of such information, agree that complaints on cotton textiles are negligible in relation to the tremendous volume sold. Complaints relating to the fiber itself are virtually nonexistent.

Nationwide Federal surveys of consumer preferences in apparel and home furnishings give further conclusive testimony. The latest (1955) United States Department of Agriculture survey shows cotton to be the overwhelming favorite in most items of clothing. In housedresses it is preferred by 94 percent of women customers, in sleeveless blouses by 82 percent, short-sleeved blouses by 50 percent, summer skirts by 77 percent, shorts by 89 percent, summer slacks by 73 percent, summer street dresses by 48 percent, anklets by 73 percent, and aprons by 81 percent. Moreover, preferences for cotton were found to have increased substantially as compared with findings made in a smiliar study conducted in 1946.

Let's look realistically at some of the qualities which consumers desire in fibers and fabrics. Where indicated, and where brevity is not violated, authoritative technical sources will be cited. These are not cotton industry opinion, but scientific facts. They are not stretched to prove a point. Today's consumers have become too discriminating to be long impressed by claims made for promotional effect without regard for scientific accuracy.

STRENGTH

Fiber strength is important to customers because it is closely related to wear. Cotton's strength is roughly 100,000 pounds per square inch, or about the same as steel; and it is the only major fiber that actually increases in strength when wet. The special significance of this latter quality is that apparel fabrics often are subjected to their most severe strains while wet from perspiration, laundering or rain.

Wet strength of common fibers

Fiber:	*Wet strength (percent of dry strength)*
Cotton	110–130
Viscose rayon (regular)	35–65
Acetate rayon	60–70
Nylon (regular)	84–90
Orlon	84–86
Dacron	100
Wool	80–90

Wet or dry, the strength of seams is of primary importance from the customer point of view. Seams of garments made from smooth-surfaced fibers tend to pull apart for the obvious technical reason that the yarns slip and slide easily over each other. Cotton does not have this weakness.

LAUNDERABILITY

"Cotton freshness" is no idle advertising slogan, for cotton is easily the most launderable of fibers. In service tests performed by the United States Department of Agriculture, cotton sheets have withstood more than 275 use-launderings. Government tests also have demonstrated that blends of rayon and cotton are inferior to all-cotton fabrics in both wear and appearance after laundering.

Cotton fabrics can withstand high temperatures, vigorous agitation in washing machines, and strong alkaline detergents, though some special finishes require milder treatment. Cotton is less likely to retain oily soil, and particularly odors, than are man-made fibers.

SHRINK AND STRETCH STABILITY

Every consumer wants a garment that will hold its size and shape. Woven cotton fabrics are the only ones which can be stabilized mechanically so that they will shrink less than 1 percent. Or they may be stabilized with resins which react with the cellulose and become part of the fabric.

Cotton is naturally resistant to stretching. In contrast, garments of manufactured cellulose fiber have been known to stretch out of size and shape as the result of simply hanging in a closet.

COMFORT

The comfort of cotton clothing is so outstanding that it has long been universally acknowledged as one of the fiber's major virtues. No other fiber feels so good, or is more certain not to irritate, in contact with the skin. One primary scientific reason is cotton's high absorbency. It readily transmits moisture away from the body, a characteristic important not only in apparel, but also in bed clothing and upholstery. Nonabsorbent fibers, such as nylon, orlon, and dacron, are deficient in this vital function. Their lack of moisture transmission, coupled with a smoothness that causes the fabric to lie flat on the skin, makes hydrophobic fabrics hot and sticky in warm weather, cold and clammy in cold weather, and uncomfortable in both.

COOLNESS

For coolness, garments should be porous, yet strong enough to withstand active wear. Because of its strength, and because its fabrics can be made highly permeable to air and moisture, cotton is a natural for hot weather garments. Its ability to absorb perspiration without weakening, and to release it rapidly to the atmosphere, makes it particularly cool and comfortable. Since cotton yarns do not slip and slide, they can be woven into open constructions which maintain their stability.

FREEDOM FROM STATIC

A major factor in the satisfactory performance of textiles is freedom from static. Probably everyone has been a victim of the unpleasant shock created by sliding across automobile seat covers made of plastics or nylon.

Suits, socks, and dresses which develop static charges have an undesirable tendency to pick up lint. Because of this tendency, such clothing may return from the dry cleaner looking little better than when it was sent. Static may also cause garments to cling to the wearer uncomfortably.

The following table gives the order of electrostatic susceptibility against synthetic rubber, and indicates which fibers build the greatest electrostatic charges:

	Volts
Cotton	50
Viscose rayon	100
Wool	350
Acetate rayon	550
Silk	850
Orlon	900
Dacron	1,025
Nylon	1,050

(Lehmicke, Static and Textile Processes, American Dyestuff Reporter 38, 853.)

CRISPNESS AND SOFTNESS

The cotton fiber occupies an intermediate position on the softness scale. By suitable construction, fabrics can be made either crisp or soft.

Crispness may be intensified by various treatments, the most familiar being the application of starch after laundering. Durable crispness may be achieved by parchmentizing with strong sulfuric acid, and by other chemical processes well known to the trade.

At the other end of the scale from crispness is the quality of soft drape. Cotton fabrics of excellent draping quality can be made by proper selection of construction, and by various finishing techniques. Again, the untreated cotton fiber occupies an intermediate position, subject to modification as the fabricator may specify.

WRINKLE RESISTANCE

Wrinkle resistance is the result of several different factors, some relating to the construction of the fabric, others to the inherent properties of the fiber. The crease resistance of cotton, while not normally equal to that of some of the other fibers, has been improved steadily in the past decade, and this improvement is continuing. Crease resistance treatments combined with larger yarn sizes and more loosely woven fabric constructions, are now being used in entirely new and attractive types of fabrics, particularly tweeds and winter cottons.

WEAR RESISTANCE

Cotton rates very high in resistance to wear in actual service. Probably the most extensive service tests on record are those conducted by the Quartermaster Corps of the Army. While wearing garments made from various fibers, soldiers crawled on the ground, climbed trees and walls, passed through brush barricades, and squeezed along narrow passageways between brick surfaces. The outstanding performance of cotton garments in these tests was a major factor in their adoption as the standard outer clothing used by the military in the field.

HEAT RESISTANCE

Heat resistance embraces resistance to melting, to changes in dimension, and to discoloration. There is no danger of melting cotton fabrics by using too hot an iron, dropping cigarette embers, or similiar failures to exercise proper care. Cotton retains its dimensions at ironing temperatures other fibres cannot stand.

COLOR FASTNESS

Cotton is especially adaptable to vat dyes, which are the most serviceable known today. Government-conducted studies of 1,000 apparel fabrics over a 7-year period, including women's and children's garments of wool, silk, viscose, acetate, and cotton, showed cotton to have the best all-around color fastness of all the fabrics tested. It had the best resistance to fading from laundering, dry cleaning, and light, and was particularly superior in resistance to fading from perspiration.

RESISTANCE TO SOILING

While accurate scientific evaluation of the soiling tendencies of fabrics is difficult, the evidence points to the conclusion that cotton soils no more easily than other fibers. It is commonly recognized, of course, that cotton has much less tendency than hydrophobic fibers to pick up and hold oily discolorations caused by contact with the skin.

The winning research paper in a contest conducted by the American Association of Textile Chemists and Colorists offers as a conclusion, "For the particular fabrics studied (cotton, rayon, dacron, nylon, acetate), cotton appears to soil less readily than nylon or dacron, while rayon and acetate are intermediate."

WEATHER PROTECTION

Recognition of tightly woven cotton fabrics as a weather shield is underscored in the following statement by a key Army official (S. J. Kennedy in American Dyestuff Reporter 34, 511): "The abandonment of wool in outer garments of Army combat clothing has been one of the most important changes in military textiles during the war. The fact that an overcoat itself weighs 7 pounds, and gains an additional 7 pounds when it becomes wet, was one factor contributing to this change. More important, however, was the fact that lighter weight cotton textiles showed themselves to be far superior in wind and water resistance in all controlled laboratory and field tests as well as in actual combat."

LUSTER

Cotton fabrics can be manufactured with almost any desired degree of luster, de-

pending upon the variety of cotton, type of yarn, fabric construction, and kind of finish. The normally subdued luster of cotton is usually preferred, yet where high luster is desired, it can be achieved without difficulty.

VERSATILITY

Any objective evaluation leads incescapably to the conclusion that no other fiber can approach cotton in adaptability to many and varied uses. From exquisite web-like sheers to heavy industrial belting, from elegant evening wear to rivet-reinforced overalls, the cotton fiber demonstrates almost unbelievable versatility.

To increase its natural versatility still further, cotton responds to science as fully as do the chemical fibers. Moreover, it has the advantage of responding to a field of science not applicable to man-made fibers, notably, the science of genetics.

In applying to cotton such scientific disciplines as chemistry and physics, the research worker starts with a basically superior raw material. Technical achievements thus far attained are proof positive that cotton is as truly at home in the laboratory as on the farm.

In no small measure, cotton's strong market position results from its inherent fiber structure. This submicroscopic, marvelously intricate structure of cotton cannot now be duplicated in the laboratory, and it seems quite unlikely that it will be in the foreseeable future. Herein lies much of the secret of cotton's launderability, high fiber strength, toughness, and general durability.

Herein also lies much of the secret of why cotton is far more popular than any other fiber, both with those who buy textile products and with those who sell them.

Trumanism Years Recalled

EXTENSION OF REMARKS
OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD and include extraneous matters, I wish to insert an editorial from the Washington Evening Star of Friday, April 13, 1956, together with an article by David Lawrence appearing in the same issue of that paper.

It is extremely unfortunate that a former President of the United States should so insult the intelligence of our people as was the case in the speech by Harry S. Truman on his recent Iowa tour.

The editorial and article follow:

ROAD TO VICTORY

Former President Truman has told an audience in Iowa that the Democrats are on the road to victory again today just as they were in 1948, and for the same reasons.

If this is true, the former President has little reason to be proud of the road he is traveling. His speech was a typical performance—a mishmash of distorted facts and half-truths. Still, in its way, it was shrewdly calculated to have its desired effect.

To listen to Mr. Truman is to wonder how the farmers have escaped the concentration camps at the hands of this administration. One would think that the President and Secretary Benson have but a single thought in mind—to grind the last farmer into the dirt. Referring to the farm bill, if it can be dignified by that name, Mr. Truman declared: "I don't know what Ike is going to do with that bill. He would like to veto it, of course, because it is directly contrary to his philosophy of reducing farm prices. However, this is an election year, and he may well decide that it's the better part of valor to sign the bill in an effort to get reelected."

This is politics as Mr. Truman plays the game. If the President vetoes this bill, that will prove he wants to reduce farm prices. If he signs it, that will prove he is just another politician trying to get himself reelected. The former President does not concede so much as the possibility that his successor might act from a conviction as to what is best for the farmers and for the country. As Mr. Truman states the case, the President is damned if he signs and damned if he vetoes.

What Mr. Eisenhower will finally decide to do is any one's guess. That the political pressure on him is great is best evidenced by the fact that 48 Republicans in the House and 15 in the Senate deserted him on the final votes. The President may decide to swallow his distaste for some of the bill's provisions and sign it after all. Or he may decide that the bill, on balance, is so bad that he will have to take the political risk of vetoing it.

If he decides to take the later course, he can point to some Democratic support for his views. For example, Senator HOLLAND of Florida told his colleagues during Wednesday's debate that the bill, as it came back from conference, was a "vastly worse bill" than when it first passed the Senate. The 1-year extension of fixed 90 percent price supports on basic crops, he said, makes it obvious that we are "playing politics with this vital economic question of the prosperity of the farming population." All that this bill will do, he added, will be to "enhance surpluses (now amounting to $9 billion), fill up more warehouses and more ships, and cause them to overhang the market with even greater harm than results from the surpluses which now hang over it. After all, we know that the crux of the entire situation is the immense surplus which hangs over our heads and destroys markets."

In short, this is a bad bill. Its desirable features are overbalanced by the injury it promises to do to the farming population. But it is easy to picture it as a panacea for farm ills and to accuse those who oppose it of wanting to drive down farm prices and destroy the farmers. It will not be easy, in an election year, for the President to withstand the pressure from those who have no scruples about traveling this "road to victory."

TRUMANISM YEARS RECALLED—SINCERITY OF EISENHOWER IS SEEN AS OUTWEIGHING "GIVE 'EM HELL" TECHNIQUE

(By David Lawrence)

Eleven years ago to this day Harry S. Truman was starting his career in the White House. He was a humble man, awed by the responsibilities of his office. He reached a high degree of popularity because he seemed to be interested in the public welfare rather than in politics.

But ambition soon seized him, and he began to listen to and accept as gospel what politicians and organization bosses told him. He dispensed favors to his cronies and made a sorry record in allowing important officials in the Internal Revenue Service, which collects the Nation's taxes, to go unpunished for their misdeeds.

Out of this and other errors came the 1952 campaign cry of the "mess in Washington." One of the biggest complaints was about the corruption in the different departments of Government where favors were given to special interests—even to the point of quashing prosecutions.

Today, Mr. Truman is trying to come back. He has taken to the stump, assuming that the American people have forgotten why they voted so overwhelmingly against his administration in November 1952. For while General Eisenhower was popular, he never would have won the election if the people had not been deeply dissatisfied with the incumbent administration. It was a negative verdict—against the party in power. The country knew little about what the Republican policies would be, and cared less.

For 3 years, the Democrats have had a chance to divert the attention of the public from the mistakes of the past but now Mr. Truman, fortunately for the Republican strategists, is out making speeches stirring up memories of "Trumanism" and all that it connotes. Thus, the former President, in his latest speech, proudly boasts:

"I know what I am talking about. I had to fire some pretty important people while I was President."

Who were those "important people"? Certainly, Henry Wallace was one of them and the whole truth about that episode wasn't revealed at that time. Mr. Truman claimed he hadn't approved a speech by Mr. Wallace delivered in New York at Madison Square Garden. But Mr. Wallace now testifies that Mr. Truman heard the speech read to him paragraph by paragraph and did approve.

Another important person fired was Gen. Douglas MacArthur. Here was a man who had served his country brilliantly in World War II and was making a wonderful record in handling the postwar problems in Japan. This was apart from the matters in controversy in Korea. Yet such a distinguished servant of the people was fired without so much as the courtesy of an advance notification. General MacArthur found out about his dismissal from a radio announcement.

Nor was General MacArthur given a hearing. If even a minor Federal employee is accused of anything, he has a chance to learn the nature of the charges, so he or his attorney can have an opportunity to answer them. The so-called liberals of today make quite a point of this right. The other day the Supreme Court held that a teacher couldn't be fired summarily just for pleading the fifth amendment and had to be given a hearing. If General MacArthur was guilty of insubordination, he was entitled to a court-martial proceeding.

But the fact is that Mr. Truman was defiant of all rules of government as well as courtesy. He believed in one-man government. Early in 1952 he ordered the entire steel industry seized, although there was not a single statute permitting it. The Supreme Court later denounced the action as a violation of the Constitution.

Mr. Truman in boasting in his speech about how he fired important people was advising Mr. Eisenhower to fire Secretary of Agriculture Benson. But the difference is that President Eisenhower recognizes sincerity and honesty and doesn't feel that Mr. Benson should be fired for his policies unless they are proved wrong. The White House is supporting the Benson policies.

More speeches by Mr. Truman will be helpful to the Republicans, because they will awaken memories of what the Truman administration stood for. The President's press secretary, James Hagerty, speaking for Mr. Eisenhower, commented: "I don't believe that Mr. Truman by his own standards can recognize accomplishment when he sees it."

There was a time when Mr. Truman was humble, but today he believes in "give 'em hell" speeches. He misjudges the intelligence of the electorate if he thinks such a technique will be effective for the Democrats against Dwight Eisenhower, whose sincerity and honesty have so favorably impressed the American people.

Model Congress

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. OSTERTAG. Mr. Speaker, the students of the social studies classes of the Genesee County high schools last month conducted a model congress at the Le Roy High School. Organized like the Congress of the United States, the committees of the model congress analyzed some 90 bills, of which 9 reached the floor and were acted upon in the plenary session.

Preceding the committee meetings, there was an invocation by the Rev. Herbert Cory; a welcome by Dr. Donald Horr, superintendent of the Le Roy Central Schools; a general orientation talk by Mr. Eugene Webster; and an address by our former colleague in this House, former Representative Donald O'Toole, of New York. Miss Mary Lou Smith acted as chairman of the plenary session.

This was the second annual model congress sponsored by the Robert Morris Social Studies Council, and it was an outstanding success from the standpoint of educational value and student interest.

I regret that the pressure of work here made it impossible for me to attend the congress in Le Roy, but it is a pleasure to call this commendable undertaking to the attention of my colleagues here in the House. It is a splendid example of valuable and imaginative training in the responsibilities of self-government, and the students and faculty who cooperated to make it a success deserve the warmest applause.

Under leave to extend my remarks, Mr. Speaker, I include in the RECORD the text of the bills that were acted upon by the plenary session of the Congress, together with the names of the sponsors and the action taken on these measures.

Resolved, That a copy of the agenda of this plenary session of the model Congress held at LeRoy, N. Y., March 9, 1956, be sent to United States Congressman HAROLD C. OSTERTAG for the purpose of making it a part of the public record.

The titles of bills passed by this congress shall be included in this document.

Offered by Larry Richenburg, Elba, N. Y.

BILL No. 1

(LeRoy Central School; JoAnn Mangafrida, Virginia Peterson)

A bill to allow private industry to build a hydroelectric plant at Niagara Falls

Be it enacted, That private industry be given the right to build a hydroelectric plant at Niagara Falls, this plant to be subject to Federal regulation in matters pertaining to rates, issuance of bonds, and the table of the organization.

Yes, 50; no, 30.

BILL No. 2

(Elba Central School; Ronald Dziuba, Charles Zambito)

A bill to restore parity at 90 percent on basic commodities and provide for a soil bank program.

Be it enacted, That—

(a) The Agricultural Act of 1949, as amended, is amended to read as follows:

The level of support to cooperators shall be 90 percent of the parity price for the 1956, 1957 and 1958 crops of any basis agricutural commodity with respect to which producers have not disapproved marketing quotas.

(b) The Secretary of Agriculture is authorized to formulate and establish a soil-bank program on crops of wheat, cotton, corn, and rice, under which producers shall be compensated for reducing their acreages of the commodity below their farm acreage allotments established under the Agricultural Adjustment Act of 1938.

To be eligible for such compensation the producer (1) shall reduce this acreage of the commodity below his farm acreage allotment within such limits as the Secretary of Agriculture may prescribe, (2) shall specifically designate the acreage so withdrawn from the production of such commodity, and (3) shall not harvest any crop from, or graze, the reserve acreage unless the Secretary determines that it would be in the national interest to permit grazing and gives consent thereto

(c) Producers shall be compensated for participating in the acreage reserve program through the issuance of negotiable certificates which the Commodity Credit Corporation shall redeem in the commodity or in cash in accordance with regulations prescribed by the Secretary.

(d) The Secretary may terminate any contract with a producer if the Secretary determines that such termination would be in the public interest.

(e) The Secretary of Agriculture shall prescribe such regulations as he determines necessary to carry out the provisions of this act.

Disapproved.

BILL No. 3

(New York State School for the Blind, Kenneth Cross)

A bill for the provision of economic aid to South America

Be it enacted, That the Treasurer of the United States be instructed to appropriate $2 billion, to be allocated at the rate of $200 million per year for 10 years, for the purpose of improving economic conditions of South American countries friendly to the Western powers.

SECTION 1. The expenditures made under this bill shall be supervised by a three-man committee to be appointed by the President.

SEC. 2. Not less than one-eighth of the money allocated to each country shall be utilized for the improvement of sanitation.

SEC. 3. Not less than one-third of the money contributed herein shall be expended for the improvement and development of industry.

SEC. 4. Within the next 5 years, the Government of the United States shall allocate to these countries a total of not less than $500 million worth of contracts for goods from factories thus built and improved.

SEC. 5. Any act by a country receiving aid from the terms of this bill which indicates communistic sympathies, as decided by the appointed commissioner and ambassador of that nation, shall render the provisions of this bill void, insofar as relates to that country.

Approved.

BILL No. 5

(Oakfield-Alabama Central School; Robert Harding Lee Breckenridge)

A bill to make life imprisonment and the death penalty mandatory to all persons convicted of selling narcotics

Be it enacted, That life imprisonment be mandatory for all persons over 21 convicted of selling narcotics to citizens 21 years of age and older and the death penalty be made mandatory for all persons over 21 years of age convicted of selling narcotics to citizens under 21 years of age. This law shall be put in effect in all of the United States of America.

Yes, 50; no, 37; abstention, 7.

BILL No. 7

(Alexander Central School; John Pautler, Steven Wiktorski, Jr.)

A bill to restrict interstate traffic

Be it enacted, That all commercial trucks be prohibited the right to drive all Sundays. The time prohibited shall be from 6 o'clock a. m. to 10 p. m. on Sunday. All trucks possessing a special license shall be permitted to drive all day Sunday and all week.

Disapproved.

BILL No. 8

(Batavia High School, Nancy Kibler)

A bill to decrease the amount of Government aid to veterans

Be it enacted, That the Federal Government confine the practice of free medical treatment for non-service-connected disabilities to 3 years after a veteran's discharge from the Armed Forces.

Disapproved.

BILL No. 9

(Le Roy Central School; Allen Cohen, Phoebe Call)

A bill to establish an armed space station

Whereas an armed space station would be the ultimate weapon in deterring aggression; and

Whereas the United States has the technical knowledge to achieve this: Therefore be it

Resolved, That a commission of top Army, Navy, and Air Force scientists, together with civilian experts, be set up to organize a program to build a manned (or remotely controlled) space satellite capable of firing guided missiles with nuclear or thermonuclear warheads anywhere on earth; and be it further

Resolved, That this commission (suggested name, Ultimate Security Commission) ascertain the amount of money per annum needed to build such a station by January 1, 1965, or prior to, depending upon intelligence and espionage reports regarding the success of the Soviet Union or other hostile countries in building such a station; and be it further

Resolved, That these required moneys would come from, or be a supplement to, armed services appropriations, as to be determined by the national economy or other economical factors; and be it further

Resolved, That although the primary objective of this bill is stated in section I, if this project meets the requirements of sections I and II, any other scientific instruments, measuring devices, or similar things may be placed on the space station to further scientific development.

Approved.

The Soviet Formula for Central America

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, April 16, 1956

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by my friend, Dr. Joseph F. Thorning, associate editor of World Affairs, and a member of the United States Special Diplomatic Mission at the inauguration of Brazilian President Jus-

celino Kubitschek early this year. The article is entitled "The Soviet Formula for Central America," and describes, in vivid detail, the deceit which was practised by Soviet sympathizers and Soviet agents in Guatemala. The same techniques of deceit and camouflage can be utilized by local dupes and traitors in other American republics. This article by Dr. Thorning is featured in the spring issue of World Affairs, a widely respected and nationally read magazine, which is published in Washington, D. C.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SOVIET FORMULA FOR CENTRAL AMERICA

(By Joseph F. Thorning)

How was it possible for Soviet sympathizers in Guatemala, throughout 10 years, to deceive large sections of the local population and to keep a majority of United States intellectuals in the dark about what was happening in Central America? Was the establishment of "the first beachhead of the Soviet Union in the Western Hemisphere" a matter of accident, or of design? Were those who participated in this movement unaware of what they were doing, or were they subject to the discipline of the Kremlin? Who were the North American journalists, radio commentators, and university professors naive enough not to understand the true nature of maneuvers which, on other continents, led to the creation of Soviet Czechoslovakia and of Soviet China? It is in the answers to these questions that one may seek the "Soviet formula" for the conquest of all the republics of Central America.

Recently, in a masterly address at Rollins College, Winter Park, Fla., Ambassador José Luis Cruz Salazar of Guatemala gave a clear reply to the initial question proposed in this article. "Most of the Soviet agents and sympathizers in Guartemala," this leader of the Liberation cause related, "sailed under the false colors of liberals, or Marxian Socialists; the real Communists either remained in the background, or maintained the disguise of 'agrarian reformers.'" The truth was, as Col. Cruz Salazar added, that "men and women, some of them trained in Prague or Moscow, actively recruited young Guatemalan intellectuals and workers, organizing them into cells and giving them systematic indoctrination in Marxist principles and tactics." The prize example of this type of deceit was the description which Prof. Juan José Arévalo gave of himself as "a mystical Socialist." Dr. Arévalo, who paved the way for the well-night total domination of Guatemala by Kremlin agents, always spurned the title of "Communist."

Nevertheless, it was during the Arévalo regime (1945–51) that the notorious Mexican labor agitator (himself a product of Moscow indoctrination), Vicente Lombardo Toledano, arrived in Guatemala City in order to supervise the organization of labor unions. Lombardo Toledano's subaltern for this task was a youthful Marxist named Víctor Manuel Gutiérrez. The latter's comrade-in-arms in the labor movement was another local traitor, Carlos Manual Pellecer. The direct tie-in of these Guatemalan labor organizers and the Kremlin did not become apparent until the close of the Arévalo government in 1951 when Luis Saillant, of France, boss of the so-called World Federation of Trade Unions (WFTU) came to Guatemala. Shortly after Saillant's arrival in Central America, lines of affiliation were established which subordinated the Guatemalan labor group both to Lombardo Toledano's "Latin American Workers' Confederation" (CTAL) as well as to the parent body (the WFTU). The chain of command was complete. By the time Arévalo left office, Soviet manipulation and control of the rank-and-file of Guatemalan plantation and industrial laborers were realities with which any local political figures had to reckon. And it must be noted that, although Professor Juan José Arévalo never was candid enough to claim that he carried a card, establishing his position in the Soviet hierarchy, he was an indispensable "front" for the Kremlin-dominated clique which took over Guatemala in 1951.

In the meantime, a brutal murder rounded out the success of "Operation Deception." Throughout the Arévalo administration, the local dupes and traitors were apphehensive about the national popularity enjoyed by Col. Francisco Javier Arana, the Guatemalan Army Chief of Staff. This officer, an ardent champion of freedom against the Marxist elements in his country, was a candidate for the presidency. Although history cannot be written in terms of "what-might-have-been," it is fair to assert that Colonel Arana was the only serious obstacle to the candidacy of the leftwing candidate, backed by Soviet agents and Soviet sympathizers, Col. Jacobo Arbenz Guzmán. The Soviet clique did not see fit to run the risk of a setback in free elections. In secret conclaves in Guatemala City, they recalled the amazingly simple direct action which had liquidated Eduard Benes and Jan Masaryk in what is today Sovietized Czechoslovakia. Colonel Arana was summoned to a meeting outside the capital. At a narrow bridge, where his car was exposed to a barrage of machinegun fire, the best hope of the moderate elements of Guatemala was ambushed and killed. As a result of this assassination, Col. Jacobo Arbenz Guzmán (now a refugee in Soviet Czechoslovakia) took office as the Constitutional President of Guatemala in 1951.

At this point, it is important to observe that, although many American newspapermen failed to emphasize the significance of the Arana killing, there were some good reporters, such as Edward Tomlinson, Jules Dubois and Clark Galloway, who stayed on top of the story and reported the facts. Journalists of the slick magazine set, however, failed to interpret the Central American scene to their huge North American public. A similar unawareness of history was evidenced among a number of State Department officials in Washington. One of these innocents was quoted, at the time of the 10th Pan American Conference in Caracas (March, 1954) as follows: "Those politicos in Guatemala aren't real Reds. They're either cynical thieves or half-baked theorists." Indeed, when I myself tried to alert one of the most responsible authorities in our capital to the progressively serious Soviet infiltration into Central America, I was advised that both Arévalo and Arbenz were "friendly to the United States of America." The next day, after this exchange of views in the State Department, I read in the New York Times that the leftist regime in Guatemala had sanctioned the reopening of the School of Marxist Studies in the capital of that nation.

It is sad to relate that the most horrible mutilations and tortures backed up the lesson of the Arana assassination. A few of the details of this butchery were revealed by Keith Monroe in an article in Harper's magazine (July 1955). His report, in part, reads as follows:

"Some men's tongues had been pulled up by the roots and left dangling from their mouths. Other men got treatment I had never heard of before, nor imagined. I will not describe it."

Eyewitness descriptions are available, it may be added. The techniques, familiar enough in Soviet Budapest, Warsaw, Belgrade, Bucharest, and Peking, had been transplanted to America; intense artificial light, day and night, focused upon the eyeballs of the victims; incessant tapping of scalpels upon the fingernails of those imprisoned without warrant or due process of law; and electric shock assaults upon the most sensitive organs of the human body. These tortures were applied, indiscriminately, to men or women. These were the devices utilized by mystical Socialists and Marxist philosophers in order to inflict Soviet slavery upon the freedom-loving citizens of Guatemala. Outwardly, the butchers and torturers acted like ordinary human beings: they showed their faces wreathed in smiles dedicating rural schools; they posed in front of child welfare clinics kissing babies; they provided picnics in the countryside with free drinks, tasty sandwiches, music, and dancing. In the absence of a Red army, as Ambassador Cruz Salazar has pointed out, the local dupes and traitors were obliged to rely upon guile, conspiracy, demagoguery, and subversion. Their standard practice, politically, was a clever mixture of the methods of Tammany Hall and bigtime racketeers. Soviet gauleiters, everywhere, know when to enact the role of smalltown bully boys and when to go into their act as good-time, vodka-drinking, roistering clowns.

This does not mean that the agents of the Kremlin did not know how to exploit genuine local grievances. In Guatemala the stage had been set for agitation by the long military dictatorship and vicious suppression tactics of the Jorge Ubico gang. Many of the coffee barons of the Republic failed to read the handwriting on the wall—either a reasonable, fair distribution of the national revenue was in order or the field would be open to Soviet revolution. Abuses in the old order of things furnished the basis of the success which Leonardo Castillo Flores, another Moscow trainee, had in forming the Rural Confederation of Guatemala. If the arms of the freighter *Alfhem* dispatched from Soviet Poland had ever reached the hands of Castillo Flores' farm militia, all the sacrifices and heroic leadership of Col. Carlos Castillo Armas, the liberator of Guatemala, might well have been in vain. Large sectors of the coffee and fruit workers would have been willing to fight for the apparent advantages that had been granted to them by the leftist regime. Righteous indignation about past exploitation also sparked the lightninglike progress which Soviet sympathizers had made in the whole educational system, from the elementary level to that of the so-called Democratic University Front in Guatemala's topflight institution of learning, San Carlos University. The glitter of the land distribution program also helped to mesmerize many foreign correspondents. Journalists, who would have been the first to identify and expose a Nazi-inspired reform movement in the American Republics, became as spellbound as some of the local dupes when they were shown throngs of happy villages taking over the estates of corporations or wealthy landowners.

Soviet collectivism, even today after the loss of millions of innocent people behind the Iron Curtain, has not been explained and elucidated as a system quite as inhuman and obscene as the Hitler terror. As long as Soviet sympathizers can ring the changes on the word "democracy" quite apart from its content, they may continue to dupe citizens of the free world as easily and as effectively as they did in Guatemala. Until peace advocates everywhere understand the nature, the techniques, and the record of Soviet colonialism in Guatemala, they will be exposed to the danger of Marxist collectivism on a world scale.

North Dakota Mother of Year Honors Go To Friend of Indians

EXTENSION OF REMARKS
OF
HON. OTTO KRUEGER
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. KRUEGER. Mr. Speaker, under leave to extend my remarks I present the following article from the Valley City, N. Dak., Times Record of March 27, 1956. The brief account of Mrs. Case just begins to relate the many services she has rendered and the work she did for so many years among the Indians of North Dakota. She has truly earned the honors that have come to her.

The article follows:

NORTH DAKOTA MOTHER-OF-YEAR HONORS GO TO FRIEND OF INDIANS

Mrs. Eva Case, 60, who spent 34 years as a schoolteacher and in missionary work among the Indians on Fort Berthold Reservation, has been named the North Dakota Mother of the Year.

Announcement of her selection was made today by Miss Vera Bollinger, Valley City, State chairman of the American Mothers Committee of the Golden Rule Foundation.

Mrs. Case is the wife of Rev. H. W. Case, director of Community Relations Ministry in North Dakota. The couple now reside in Bismarck.

Mrs. Case raised 5 children, 3 her own, a nephew, and a young woman of Indian descent, all of whom are living, and has more than fulfilled the qualifications for the American Mother—that she be a successful mother, as evidenced by the character and achievements for her individual children; that she be an active member of a religious body; that she embody those traits highly regarded in mothers: courage, cheerfulness, patience, affection, kindness, understanding, and a homemaking ability; that she exemplify in her life and conduct the precepts of the Golden Rule; that she have a sense of responsibility in civic affairs and that she be active in service for public benefit, and finally, that she be qualified to represent the mothers of America in all responsibilities attached to her role as the National Mother.

The five children brought to maturity in her home exemplify Mrs. Case's worthiness as State Mother of the Year. Harold W. Case is in Government service with the Bureau of Reclamation; Helen (Mrs. Helen Charles) lives with her family in Boulder, Colo., where her husband is in public service; Lois (Mrs. Charles Pratt) lives with her family in Fort Collins, Colo., where her husband is in business; Vincent D. Case in an architect in Los Angeles, Calif., and Dawnena Anderson (Mrs. Howell) now makes her home in the State of Oklahoma where her husband is in Government service.

As children the five had their grade-school education at the Elbowoods Grade School, however, no high school being available to them in that vicinity, further education work was taken elsewhere by each.

Mrs. Case was born at Lincolndale, Westchester County, New York State, and received her formal education at the Oneonta, New York State Teachers College, and the University of Colorado. She spent the major part of her married life working with her husband, who is now director in the Community Relations Ministry of North Dakota, in behalf of the Indian citizens of the State.

"Mrs. Eva Case has through the years contributed much of her time and interest to education through classroom instruction and participation in community educational activities.

"As a classroom teacher, Mrs. Case is an experienced and efficient worker who commands the respect of students and teachers alike. Her interest and concern for every child under her guidance, and the personal followup of encouragement and assistance where needed, has many times rewarded her effort through the successful ventures of former students wherever they now reside. Much of this success can without doubt be attributed to inspiration and courage instilled through the personality of Mrs. Case," says Education Specialist Richard B. Washington, now of Rosebud, S. Dak., and a former associate of Mrs. Case.

Although busy with the responsibilities of a mother and missionary, Mrs. Case has always been extremely active in all forms of community work as well as statewide and nationwide work on Christian Indian affairs. According to another of Mrs. Case's associates, Ben Reifel, Area Director of Indian Affairs, "Mrs. Case was truly a mother of nearly all the Indian people of that (Fort Berthold) reservation. Her home was always open 24 hours a day to the people of the reservation. No problem or trouble was too small or too great for Mrs. Case. She gave considerable encouraging and helpful assistance in all instances. I know of no one more deeply concerned for the welfare of the nearly 3,000 Indians among the Gros Ventre, Arikara, and Mandan Tribes."

A member of the Congregational Church, she has spent some 34 years as a coworker missionary with her husband on the Fort Berthold Reservation, where she has aptly demonstrated a spiritual influence over her family and community. She is a member of a number of organizations among which are the DAR, Order of Eastern Star, Federated Women's Clubs and several for Indian-American relationships, in all of which she works diligently.

Nominated by Mrs. Robert Pruitt of Beach, Mrs. Case was selected by a judging committee composed of Mrs. Gussty Fossum of Maxbass, 1955 North Dakota Mother of the Year, Mrs. Harold Belcher, Fessenden, Mrs. C. DeBoe, Jamestown, Mrs. Hans A. Hansen, Valley City, Mrs. E. A. Handy, Washburn, and Mrs. Margaret Kinner of Jamestown.

Mrs. Case is among 52 representative mothers selected by the 48 States, District of Columbia, Alaska, Hawaii, and Puerto Rico. She will travel to New York at a later date to participate in the presentation of awards and selection of the Nation's Mother of the Year.

Outpost of Freedom

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. OSTERTAG. Mr. Speaker, on this 8th anniversary of the establishment of Israel as a state, I wish to join with my colleagues in saluting the brave and beleaguered nation that stands as an outpost of freedom on the eastern shore of the Mediterranean.

Israel's history has been turbulent and harsh, but it has also been studded with inspiring accomplishments. With calm courage, indomitable will and prodigious industry, she has established herself firmly, against the hostile designs both of man and of nature.

While the future holds vast problems for her—both economic and military—Israel has proved that her spirit and morale are equal to the challenge. As a nation which experienced similar hardships and struggles in another century, we in the United States have every reason to feel the strongest bonds of sympathy with the Israelis, and to rejoice in each passing birthday.

It is a source of satisfaction and reassurance that the statesmen of the West, both within and outside the United Nations, are today bringing all the arts of diplomacy to bear on the problem of maintaining the geographical integrity of Israel and of her neighbors, as we are pledged to do.

While the intermittent hostilities along Israel's borders have created a high degree of tension in the Middle East, Israel, on her eighth birthday, has every reason to be proud of her past and confident of her future.

Distribution of Surplus Foods

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. HILL. Mr. Speaker, the United States Department of Agriculture is making great strides in the distribution of surplus foods. Under unanimous consent, I include the following release by the Department in the Appendix of the RECORD:

UNITED STATES DEPARTMENT OF AGRICULTURE FOOD DONATIONS UP 65 PERCENT IN FIRST THREE QUARTERS OF FISCAL YEAR

Donations of surplus foods by the United States Department of Agriculture reached a total of 1,400,200,000 pounds during the first 9 month (July through March) of the current fiscal year, 65 percent larger than distribution in the same period of last fiscal year, the United States Department of Agriculture announced today. These donations of food are made to recipients in this country and abroad under the direct distribution program conducted by the Agricultural Marketing Service.

Eligible recipients in this country received $559,900,000 pounds of food, 42.9 percent more than in the same period of the previous year. Gains were made in distribution to all categories of recipients. Donations to schools, totaling 222,700,000 pounds, were up 25.4 percent; donations to institutions, at 80,100,000 pounds, were up 2.3 percent; and donations to needy persons increased 89.3 percent to a total of 257,100,000 pounds for the period. These foods are being distributed in this country to about 11,000,000 schoolchildren, to 1,300,000 needy persons in charitable institutions, and 2,929,000 needy persons in family units.

In addition, foods are being distributed to needy persons in 74 foreign countries through 19 private United States welfare agencies. The foreign donations are made after provision has been made for the needs of eligible recipients in this country. For the 9 months, a total of 840,300,000 pounds of food was distributed overseas, 84 percent more than in the same period a year ago.

The gains in distribution are the result of the intensified efforts being conducted

by the Department to make fullest use of surpluses acquired under price-support or bought under surplus-removal programs. Further increases were made during the period in distribution to recipients in this country, which were already at a high level, and substantial gains were made in foreign donations under provisions of the Agricultural Trade Development and Assistance Act.

During the January–March 1956 period, the first sizable deliveries were made of canned and frozen pork and lard purchased under the Department's surplus-removal program. In that period, too, deliveries of wheat flour and cornmeal under Public Law 311—begun in the previous quarter year—were expanded considerably. The new law authorizes this distribution, strictly as a relief measure, to needy persons only.

The January–March figures also include the first deliveries authorized under Secretary of Agriculture Ezra Taft Benson's announcement of December 14, making wheat, corn, rice, and dry beans available to both domestic and foreign recipients.

These figures also include deliveries to date under the program implementing President Eisenhower's offer of food to help the victims of Europe's severe winter.

Commodities distributed to users in this country during the current year are butter, cheese, nonfat dry-milk solids, canned and frozen pork, lard, sweetpotatoes, rice, dry beans, wheat flour, cornmeal, shortening, fresh prunes, corn, and wheat. Commodities donated for foreign distribution are butter and butter oil, cheese, nonfat dry-milk solids, rice, dry beans, shortening, corn, and wheat.

Domestic distribution of surplus foods is operated under a plan which follows the policy of full utilization of State and local government facilities. The Department delivers the commodities, free of cost, in carload lots to States after they have made satisfactory arrangements for distribution. States agencies determine the eligibility of recipients, and assume full responsibility for all distribution within the State.

After domestic needs have been provided for, efforts are made to use surplus foods to feed hungry and needy persons in foreign countries. The foods are donated to private United States welfare agencies and distributed by them in the foreign countries.

In this country, 38 States and Alaska are currently participating in the program of donation of foods to needy persons in family units. The following table shows the number of persons in family units certified as eligible to receive donated commodities, and the actual number receiving them as of March 1, 1955:

State	Number of persons eligible	Number of recipients
Alabama	266,548	244,472
Arkansas	270,702	248,793
California	37,354	22,249
Colorado	11,812	10,035
Connecticut	2,071	1,417
Illinois	70,307	64,221
Indiana	38,590	33,366
Iowa	94,330	78,718
Kentucky	254,926	223,234
Louisiana	194,266	133,669
Maine	34,238	30,332
Maryland	11,283	11,102
Massachusetts	12,277	4,904
Michigan	118,981	109,049
Minnesota	12,716	8,984
Mississippi	145,894	131,965
Nebraska	2,000	2,000
Nevada	992	703
New Hampshire	10,266	8,393
New Jersey	20,881	17,482
New Mexico	48,947	41,941
New York [1]		
North Carolina	12,662	12,488
North Dakota	14,687	11,833
Ohio	36,130	33,364
Oklahoma	269,096	251,696
Pennsylvania	909,272	789,065
Rhode Island	11,464	10,616
South Dakota	29,709	27,277
Tennessee	13,584	11,799
Texas	58,229	52,585
Utah	28,860	21,402
Vermont	5,210	5,165
Virginia	56,451	50,351
Washington	5,282	778
West Virginia	215,013	209,697
Wisconsin	9,613	8,573
Wyoming	1,711	1,711
Alaska	604	604
Total	3,336,958	2,928,973

[1] New York has entered the program, but actual distribution had not begun as of March 1.

The following tables show the quantities and estimated cost of surplus foods donated for domestic and foreign use:

Quantities of surplus foods donated for domestic and foreign use, fiscal year 1955 and estimated July 1–Mar. 31 fiscal year 1956

[Million pounds]

Not Enough Politicians

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. HARVEY. Mr. Speaker, under unanimous consent to extend my remarks, I include an editorial in the Appendix of the RECORD. This editorial is from a recent issue of the Shelbyville (Ind.) News and pays a very fine and deserved tribute to my colleague Mrs. CECIL HARDEN.

NOT ENOUGH POLITICIANS

The old story of the one rotten apple in the barrel of good fruit is nowhere as appropriate as when applied to politicians and popularly held opinions of them.

Too many people today think of politicians as some sort of personification of all that is corrupt, all that is incompetent, and all that is evil in American Government.

The fact is that, by and large, a vast majority of our politicians are honest and hard-working people performing a good job of handling the public's governmental affairs.

Unfortunately, a comparatively small number are corrupt or incompetent—or perhaps both. These are the rotten apples who tend to spoil the reputations of the far larger number in the minds of the public. But there is a very simple way to reduce the number of bad politicians, and that is for many more average, decent Americans to assume more interest and a more active role in political party affairs and in government itself.

As Hoosier Congresswoman CECIL HARDEN declared only the other day, America needs more politicians. Speaking before a convocation at Indiana State Teachers College, Mrs. HARDEN said that not enough persons take part in political campaigns and elections, which is unhealthy, and our system of government would be strengthened if all Americans took an interest in politics. "There is room in politics for everyone * * * not only is there room but there is also a great need," Mrs. HARDEN said.

We agree with Mrs. HARDEN that there is a great need for more citizens to assume a more active part in politics, for if they did so, then there would be less need for complaint regarding the very few who fail to serve as they should serve.

The first and most basic action in regard to political activity is, of course, to vote in every election. But in addition, there also is an important need for every citizen to learn about political issues and something more than the mere names of those who seek public office.

Everyone cannot be a candidate for office, or an officeholder—nor can everyone be a political party official. But it is possible—and desirable—for every citizen to take an active interest in political party affairs and in Government. After all, the political parties and the Government belong to the people, and the people at large can have the kind of political organizations and government they want. But they can have neither by merely wanting them.

The Forgotten Soldier

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. HENDERSON. Mr. Speaker, the following is a letter which I received from a constituent, Mr. Frank J. Shurtz, who is chairman of the membership committee in the Muskingum County Barracks No. 454, Zanesville, Ohio. His letter is as follows:

THE FORGOTTEN SOLDIER

Yes; the forgotten soldier, the boy of the First World War who marched away in 1917, with a prayer in his heart and a song on his lips that he would not come back till it's over, over there.

Yes; he marched away to fight and die for a cause he thought was right. Some never returned, but sleep eternally in Flanders Field.

It is now nearly 38 years since this same boy marched away. He was paid a dollar a day for his service. No, he didn't complain.

Now he is asking for an adequate pension to help sustain him in the remaining twilight years of his life.

Never before has Congress waited so long to take care of the soldier of pervious wars—he has become the forgotten soldier.

The veterans of more recent wars have received much under the GI bill and its related benefits. The years have taken their toll of many First World War veterans, so it is only right and fitting for those remaining that they should receive a pension after waiting for so many years. Many are now disabled and cannot work.

Congress certainly cannot be so busy with the confusion of world affairs that they cannot take time to consider the plights of the Doughboy of 1918—the forgotten soldier of 1956.

Salaries of all Government employees and of the Members of Congress themselves have been increased in recent years. Is there no help for the forgotten soldier? He does not ask for more than is due him—he asks only that he not be the forgotten soldier.

FRANK J. SHURTZ,
Chairman, Membership Committee,
Muskingum County Barracks, No.
454, Zanesville, Ohio.

The Oresteia

EXTENSION OF REMARKS
OF
HON. RICHARD H. POFF
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. POFF. Mr. Speaker, Randolph-Macon Woman's College, Lynchburg, Va., recently completed a unique and pioneering project. The faculty and student body have produced a full-length color-sound motion picture of a classic Greek tragedy, The Oresteia, by Aeschylus. The language spoken throughout the film is ancient Greek, but there is a commentary in English. The original musical score was written by Dr. Henry Hallstrom of the Randolph-Macon faculty and the choreography was under the direction of another member of the faculty, Eleanore Struppa. The Washington premiere of the film is scheduled at the Dupont Theater on May 8, at 8 p. m. Its New York premiere was held last month. The review of the film by Dr. Antony E. Raubitschek, associate professor of classics at Princeton University, is a great tribute to Randolph-Macon Woman's College, which we in Virginia conceive to be one of the Na-

tion's outstanding educational institutions.

Under leave to extend my remarks, I quote herewith Dr. Raubitscheck's review:

Greek tragedy appealed to the eye as well as to the ear: dance and action were combined with music, song, and speech. All that is left to us are the scripts of song and speech, and these texts have been studied, interpreted, and translated by generations of scholars. Greek tragedies have been occasionally performed in the original language, but in such performances the spoken word has been emphasized; moreover, they were unique events witnessed by only a few. Randolph-Macon Woman's College has been the scene of Greek plays since 1909, and annually since 1925; they were all produced with music, dance, and song, directed by Miss Mabel Whiteside, professor of Greek. Finally in 1954, on the occasion of Miss Mabel's retirement, the three plays of Aeschylus' Oresteia were produced by her and her faithful pupils, and this performance has now been recorded on film as a living and lasting monument to a great teacher and as a permanent contribution to American culture and learning. In 1955, Miss Mabel's successor, Fordyce W. Mitchel, who also helped with the filming of the Oresteia, put on another play, and we all hope that he and the college's energetic president, William F. Quillian, Jr., will keep the tradition of Greek plays alive at Lynchburg.

Those who know and love Greek tragedy will enjoy the film most, for they will hear for the first time the immortal words of the poet spoken and sung in his language and by his characters, and they will see, as did the ancient audience, these characters dance and act upon the stage. This is not to say that the film presents a bookish and antiquarian imitation of what may have been an ancient play. Miss Mabel's Oresteia is full of youthful liveliness and creative enthusiasm, it is classical rather than ancient. Hence it is bound to appeal also to those who have never read a Greek play in the original or in translation. It will stimulate their interest in the mainspring of western drama, and thus contribute to their deeper understanding of our cultural heritage. To all of us will it come as a pleasant surprise and as a profound revelation that Greek tragedy is not a series of speeches and conversations but an artful combination of music, dance, song, and action; it is in the truth the Musikdrama of which Richard Wagner wrote and which he tried to revive in his own operas.

The film follows modern conventions in its frequent closeups. The narrator, Frank Groseclose, explains in English the action without interrupting or disturbing it. The plays have been shortened, especially in the dialogue sections, but the action remains complete and intelligible. The director and producer, Nicholas Webster, is to be praised not only for his skill and his competence but especially for his taste, his patience, and his modesty. He permitted the playwright to present his own play and let the actors do their assigned tasks. He enjoyed the services of the Capital Film Laboratories, Inc.

It may seem unfair to single out for praise the performance of the main characters since the entire cast acted, danced, and spoke superbly well. Nor is it perhaps an accident that in a play in which all parts are taken by young ladies (remember that the ancient plays were acted by men), the female characters are especially well represented, make a deep impression, and reveal the poet's genius and their own talent: Klytaimestra, Judith Weller; Kassandra, Elizabeth Scarff; Elektra, Jeannette Hume; and Athena, Julia Wolfe. The chorus of the Choephoroi (the second play of the trilogy) is thrilling in its graceful modesty, its colorful movement, and its dramatic fervor.

The most impressive thing about the whole performance is the fact that the entire production originated in the college. Eleanor Struppa (dance; assisted by alumna Helen McGehee), Henry Hallstrom and Violet Older Tears (music; the orchestral parts were performed by the National Symphony under Howard Mitchell), to mention but a few, are all members of the faculty. The students, alumni, professors, and administrators of Randolph-Macon Woman's College can be proud of their film, and they should be grateful to all those who helped them.

Miss Mabel's Oresteia is not only a document of the past brought to life by the devotion and energy of a great teacher, it is also a signpost pointing to the future. As this film goes out into the world, it will be an inspiration and an encouragement to teachers and students of schools and colleges. There is no better way to strengthen humanistic studies than to combine the efforts of various departments toward the active understanding of the great works of our civilization, especially in the field of literature. This has been done and is being done in Lynchburg and it can and should be done elsewhere.

North Dakota Republican Officials Unanimous in Opposing Benson Sliding Scale Philosophy—Endorse Farm Bill Passed by Congress

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. BURDICK. Mr. Speaker, just so no one gets the idea that North Dakota is divided on the Benson sliding scale proposals, I have the pleasure to present with these remarks several communications which indicate the strong feeling of Republicans in my State who had the choice of fighting against the administration on the farm bill or selling out the small, family-type farmers of North Dakota. I am proud that every single Republican State official and every congressional Representative from my State fought the Benson sliding scale program. The following communication are self-explanatory:

STATE OF NORTH DAKOTA,
DEPARTMENT OF STATE,
Bismarck, April 12, 1956.

Hon. USHER L. BURDICK,
Representative in Congress,
Washington, D. C.

DEAR MR. BURDICK: Enclosed is a copy of a letter sent to President Eisenhower today by telegraph.

I thought you would be interested in knowing that the State officials of North Dakota have taken this stand on the farm program bill.

With best regards, I am
Very truly yours,

BEN MEIER,
Secretary of State.

Hon. DWIGHT D. EISENHOWER,
The President of the United States,
Washington, D. C.:

I urge you to sign the farm bill that is before you now which has been passed by the Congress of the United States. North Dakota is dependent on farm income. Our farmers are in great need of help, and I urge that you give this your best consideration and approve this measure.

MILTON RUE,
Member, Republic National Committee for North Dakota.

APRIL 12, 1956.

Hon. DWIGHT D. EISENHOWER,
President of the United States,
Washington, D. C.

OUR DEAR PRESIDENT: We, the undersigned Republican State officials of the State of North Dakota, urge you to sign the farm bill as it is drawn. Our farmers need help and need it soon.

We feel that this bill is the best solution that we have at the present time. However, we do ask that Congress continue to work toward a bill that will take care of the farm problems in a satisfactory manner and on a long-range basis.

Again, We ask and urge you to sign the present farm program bill.

Very truly yours,

Norman Brunsdale, Governor; Leslie R. Burgum, Attorney General; Albert Jacobson, State Treasurer; Math Dahl, Commissioner of Agriculture and Labor; Ernest D. Nelson, Public Service Commissioner; Ben Meier, Secretary of State; Berta E. Baker, State Auditor; A. J. Jensen, Commissioner of Insurance; Martin Vaaler, Public Service Commissioner.

Capehart Challenges Democrats

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Liberty (Ind.) Herald in the Appendix of the RECORD:

CAPEHART CHALLENGES DEMOCRATS

Senator CAPEHART is not waiting until after the Republican and Democratic State conventions to meet the issue on the farm problem.

He is branding the Democratic program as espoused by Claude R. Wickard as outright socialism.

Wickard is unopposed for the Democratic nomination, as CAPEHART is for the Republican. It is probable both will win the respective nominations without difficulty, if not by acclamation.

Ordinarily a candidate waits until after the nomination to join the issues. Not so with CAPEHART. He accepts Wickard as the Democratic spokesman on agriculture and he is meeting him head on.

The Senator is performing a public service when he does so because it means that plenty of time will be taken for discussion in order that the people may thoroughly understand the question.

It marks a clean line of division between the two political parties.

CAPEHART claims that the farmer is on the verge of an era of unprecedented posterity unless the Nation goes off on the economic tangent advocated by Wickard.

Naturally, there will be no great farm prosperity if the Government takes over the program and pays the farmer a living wage. If the Government does this, the Govern-

ment will tell the farmer what he has to do to earn his money.

He will end up as a hired man, no matter what pleasanter term may be dreamed up by the Democrats to describe his status.

This is what CAPEHART means when he says the Wickard policies mean socialism with the Government telling the farmer what to raise and how to raise it. It means further the Government would follow the farm product on to the end of the route—the family dinner table.

CAPEHART points out that for years the Government has been spending billions to make the farmer produce more. Now he has produced enormous surpluses which menace the whole price structure of farm products.

Therefore the Government, in paying an exorbitant price for the solution of one problem, has only created another.

There is no overseas market for the surpluses because the Government has been spending more billions to teach foreign farmers how to produce more than thus eliminate markets for Americans.

If we try to give away the surpluses, we destroy the markets of the foreign farmers and arouse howls of protests from the recipients of our tax money.

As CAPEHART points out, any solution such as proposed in the compromise farm bill worked out by a Democratic Congress, merely delays the ultimate solution.

The real hope, and the one that will be forthcoming if Democratic politicans stop tinkering with the issue, is for new uses for farm products in industry.

This is where actual solution lies—in the natural field of supply and demand. And CAPEHART is confident the demand will exhaust the supply if the problem is approached from a scientific rather than a political standpoint.

Billion-Dollar Prescription

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mrs. FRANCES P. BOLTON. Mr. Speaker, recently Senator MARGARET CHASE SMITH introduced a bill to provide additional funds for medical research, medical research facilities, and assistance to medical education. There appears in the current Saturday Review a short article giving a succinct, clear statement covering the situation as it now is and the grave need of assistance that exists. Trusting the House membership will take the trouble to read it, I am inserting it as part of my remarks:

BILLION-DOLLAR PRESCRIPTION

(By MARGARET CHASE SMITH)

We human beings act strangely. With the exception of our moral and spiritual values, the obviously most important thing to us is life—our own life and the lives of our dear ones and our friends. Yet we don't act that way. We pay little attention to our health. We take our health for granted. We don't get concerned about it until we have lost part of it. And sometimes that is too late.

Here in America last year we spent $10 billion for cocktails and other spiritous liquors. We spent $5 billion for tobacco. We spent $264 million for chewing gum. But when I advocated on the floor of the United States Senate that we spend an extra $200 million a year for the next 5 years on the better care of our health, some people were shocked.

"How could you possibly spend that much money?" these people have asked. "Why $200 million a year for 5 years is $1 billion." Indeed it is. One billion. Forty-nine billion less than our drinking bill during those same 5 years. Twenty-four billion less than our smoking bill. More than $250 million less than our bill for chewing gum.

Having made that comparison, I ask my questioners a question:

"Is $1 billion really a huge sum to spend to help protect and perhaps prolong 165 million American lives?"

I think most people will agree that it is not. And here is my prescription:

1. For medical research, spend $500 million.

2. For medical research facilities, spend $150 million.

3. For assistance to medical education, spend $350 million.

I believe that my prescription is unique in one very important respect. It is long-range medicine—something that we in this country have never attempted before.

As I am not a doctor, or even a nurse, I may be suspected of snap diagnosis. This, however, is not the case. I have been concerned with medical research for a long time. I do want to acknowledge, though, that my thinking was crystallized by an editorial in a great Maine neswpaper, the Bangor Daily News. The title the editorial writer chose was "How About $1 Billion for Health?"

The most thorough study to date of the impact of illness upon our national economy was made in a 6-month-long investigation by the House Interstate and Foreign Commerce Committee in 1953 and 1954. I have leaned heavily upon my readings of those hearings in reaching my own conclusions. More recently, criticism of inadequate Federal support for medical research has come from the distinguished reports of the Hoover Commission. In these reports there is a recurrent plea for a 5-year program. I am frank to state that the arguments of the Commission have had a great influence upon me. But the detailed dosage that follows is my own formula.

1. MEDICAL RESEARCH

At present the research and training programs of the National Institutes of Health have a current budget of approximately $100 million a year. I would double this budget, making it $200 million a year, an added 5-year cost of $500 million.

Perhaps I should explain, for the benefit of those who are not so close to Government as I am, that the National Institutes of Health together make up the foremost research agency of the United States Department of Health, Education, and Welfare. They have extensive laboratories of their own, probably the finest laboratories in the world, certainly the best Government laboratories anywhere. But two-thirds of their funds are spent in support of research and training in non-Federal medical institutions. In this extramural research and training each institute (there are seven: cancer, heart, mental health, arthritis, and metabolic diseases, neurological diseases, and blindness, dental, and microbiological) is aided by a National Advisory Council. Council members are citizens outstanding in medical science, education, and public affairs. They review all applications for grants, and make recommendations on these to the Surgeon General, who in his turn requests appropriations from Congress.

Historically the councils have been hampered by our system of annual appropriations. Frequently they have not been able to attract the most qualified men to short-term jobs. And many research projects have been turned down because their continuance over the necessary span of time could not be guaranteed.

The more fundamental research becomes—and all the experts agree that it is fundamental (sometimes called "pure") research we need above all else—the less predictable is the time involved. Testimony before the House Appropriations Committee early in 1956 reminded us, for instance, that 33 years passed between (a) the time that the pancreas was found to contain the secret of diabetes and (b) the time when the secret was identified as insulin. Would anyone today begrudge the money spent in hunting down that elusive chemical, which, when finally discovered, saved millions of lives?

By making $500 million more available to the National Institutes of Health, I do not claim to solve the problem of basic research. But I do feel that the Institutes would be given a degree of flexibility in supporting long-range studies. It seems pertinent to note, at this point, that long-range investigation means most in the little understood metabolic diseases which have their worst crippling effects in our growing proportion of older citizens.

2. MEDICAL RESEARCH FACILITIES

Early this year Senators Lister Hill and Styles Bridges introduced a bill to provide $90 million over the next three years to match construction grants for medical research facilities in medical schools, hospitals, and private foundations in all parts of the country. The Senate passed the bill unanimously and the measure is now before the House. Under my 5-year prescription I would extend this 3-year proposal to cover 5 years at the same annual rate of $30 million; a total of $150 million.

3. MEDICAL EDUCATION ASSISTANCE

Senator Hill also introduced, together with a dozen other Senators, another bill to provide $250 million to match grants for construction of medical-school buildings. This bill has been strongly endorsed by the American Medical Association and almost unanimously by medical school deans. I would increase this appropriation by $20 million a year—from $50 million to $70 million—for a 5-year total of $350 million. That total approximates two estimates made by the National Fund for Medical Education (of which Herbert Hoover is honorary president) regarding the needs of the Nation's medical schools.

My billion-dollar prescription is now complete.

I admit that $1 billion may appear to be a large amount for taxpayers to carry in addition to the burden they carry at present. But I call your attention to the fact that the American people unhesitantly footed a 1954 bill of $1,700,000,000 for research on military weapons alone. This is eight-and-one-half times the annual rate I propose for medical research expansion. May I point out that our national defense and our national security are no stronger than our national health, on which our Federal Government's research spending is less than 1 percent of the national budget?

Compare the current $100 million research and training budget of the National Institutes of Health with the $90 million appropriated at the last session of Congress for research activities in the Department of Agriculture. Add to this $90 million the sum of $250 million which is paid out to farmers for soil conservation. I do not want to imply that I am not heartily in favor of greatly expanded agricultural research. I know, of course, that much of such research benefits us in our studies of the diseases of man. And I have always supported farm-research activities. But I think it is about time this country brought research on human lives up to the level of research on animals and plants.

I referred earlier to the House Interstate and Foreign Commerce Committee hearings on the impact of disease on the national

economy. The committee found that four diseases alone—heart, cancer, tuberculosis, and arthritis—have resulted in an annual loss of 370 million man-days of work and that the annual cost to the Nation from all illnesses is roughly equivalent to the total income-tax revenue, or $30 billion a year. Alongside that enormous loss, my proposed expenditure of $200 million a year would seem a very modest investment.

Would it be a sound investment for a banker?

Over the last decade alone medical research has added 5 full years to the life expectancy of the average American. We all know something of the wonders of penicillin, streptomycin, isoniazid, cortisone, and a host of other battlers against disease. These miraculous products of medical research, along with new surgical techniques and blood plasma, have brought about these percentage reductions in the death rates of some of the major killers and cripplers:

	Percent
Influenza	77
Appendicitis	69
Acute rheumatic fever	66
Syphilis	56
Tuberculosis	50
Pneumonia	50
Kidney diseases	43

Now let us translate this into economic terms. The National Office of Vital Statistics reported that in 1954 approximately 350,000 Americans under the age of 65 died of cancer and heart disease alone. This is greater than the total of Americans who lost their lives in the armed forces during the Second World War and the Korean war together. Remember that those wars last not 1 year but approximately 7 years.

Those 350,000 deaths of 1954 occurred, as I have stated, among people under 65, people in their productive years who otherwise would have been at work, earning money, producing goods and services, and consuming as well. Moreover, these people would have been paying taxes which would have gone, in part, to pay for research which would have helped to preserve their own and other lives.

In an earlier year—the year 1951—a study of federally aided rehabilitation revealed that 8,00 people who were returned to work had been on public assistance prior to rehabilitation, at a cost of $5,700,000 annually. The cost of their rehabilitation was $4 million. These people are now employed. Instead of being tax-consumers they are taxpayers.

When we consider that chronic diseases account for 88 percent of the disability of the approximately 2 million physically handidicapped people in the United States, we can see that the economic benefits to be derived from medical research on disabling diseases would be vast. The research would more than pay for itself.

I have been asked whether my billion dollar prescription for our national health amounts to socialized medicine. I have publicly and privately stated for many, many years that I am opposed to socialized medicine. The 5-year program that I propose would have no aspects of socialized medicine. It is in keeping with recommendations and endorsements made by the Hoover Commission, the American Medical Association, medical-school deans, and such outstanding doctors as Paul Dudley White, the eminent heart specialist who treated President Eisenhower.

Perhaps because he is the heart doctor of the President, Dr. White's own words have a great dramatic and impressive meaning to the American people on the need for expansion of medical research. Dr. White has pointed out that current heart research is severely limited because of lack of money. Testifying before a Senate committee, as a member of the advisory council of the National Heart Institute, Dr. White said he had been forced to use his own money for research because there were not sufficient Government funds.

His was only one of a tremendous backlog of worthy projects, running into millions of dollars, for which the advisory councils have no money. As long as this backlog exists qualified people are being denied the opportunity to save life.

If one of the Armed Forces can build up a 25-year supply of hamburgers, and if another can spend hundreds of millions of dollars on a fighter plane that could not fly, I say we can afford to appropriate funds to give our children and our children's children the best in medicine.

Cleveland Clinic Doctors Develop New Heart Surgery Technique

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mrs. FRANCES P. BOLTON. Mr. Speaker, surgeons at the Cleveland Clinic, by utilizing an ingenious heart-lung machine, have developed a promising new technique in heart surgery which involves complete stoppage of the human heart.

The Cleveland Clinic Quarterly, published today, reports that eight times recently these surgeons have caused the human heart to stop beating, drained it of all blood, and repaired serious congenital defects.

My city of Cleveland, which is pioneering in many phases of medical research, is immensely proud of this work by Drs. Donald Effler, William Johan Kolff, L. K. Groves and others, including Dr. F. Mason Sones, the cardiologist member of the team. The Cleveland Clinic, one of the outstanding medical centers in the Midwest, is typical of the organizations encouraging research in our area.

But I am especially gratified at the part played by Dr. Kolff, the inventor and developer of the heart-lung machine, since I was instrumental in arranging for him to come to the United States from Holland.

About 7 years ago I was informed that the Cleveland Clinic was interested in bringing Dr. Kolff from Holland to become associate professor of experimental medicine at the clinic. Inquiry into the Immigration Acts revealed that he could be admitted as a research professor. He arrived here in 1950, has subsequently become a citizen of the United States, and his family has followed him over. Since coming here, Dr. Kolff has worked intensively on this device and other research. He has succeeded in developing a machine which, for the duration of the surgery, substitutes for the human heart.

This is a notable discovery and will be listed among the many other contributions that have been made to the United States by people who come to us from other lands. We are grateful to those who, like Dr. Kolff, come here and do honor to their new land. And we may be proud that the United States offers an intellectual climate that stimulates and encourages such work. All the world is the benefactor of this discovery and the relief of human suffering that will derive from its use.

Under leave granted to extend my remarks, I am inserting herewith the full announcement by the Cleveland Clinic Foundation:

ANNOUNCEMENT BY THE CLEVELAND CLINIC FOUNDATION

A new operating technique involving complete stoppage of the human heart may open the door to more intricate and precise heart surgery than has ever before been possible. A description of the new technique was published today in the Cleveland Clinic Quarterly.

Eight times in recent weeks, Cleveland Clinic surgeons have caused the human heart to stop beating for as long as twenty minutes, drained it of all blood, and repaired serious congenital defects in its interior. Circulation and respiration in the patients have been maintained by a new-type heart-lung machine also announced in the same publication.

Unintentional stoppage of heartbeat has always been the most dreaded accident in any form of surgery. Yet, movement of the heart and active bleeding during cardiac surgery have been serious handicaps to the delicate work required. In working with any other organ of the body surgeons insist that the operative field be dry and immobile, so they can see their work clearly and use their instruments with precision. Doctors consider this a fundamental requirement.

Doctors have attempted in a number of ways to reduce heartbeat and blood flow to approach these ideal conditions. The most common method, hypothermia, involves "refrigerating" the patient, bringing the body temperature down to about 83°, with a corresponding reduction in body metabolism. This slows both heartbeat and blood flow. Complete stoppage has been opposed as a surgical technique because of the threat of oxygen starvation of the heart tissues (anoxia).

In 1954, an English surgeon named Melrose developed a technique for inducing complete heart arrest. After considerable research he applied this new method in a number of human cases. Exact data and the results have not appeared in scientific publications. In late 1955 Melrose described his procedure in a personal communication to Dr. Willem Kolff, a member of the research division of the Cleveland Clinic Foundation, and suggested its application.

Drs. Donald Effler, Willem Kolff, L. K. Groves and others at the Cleveland Clinic were conducting an intensive series of cardiac laboratory experiments when they heard of Melrose's work. The addition of the heart arrest technique to their operative experiments produced such striking results that they decided that its use on a patient was justified.

The first subject was a 4-year-old child. He had been born with a large opening between the heart's chambers. Diagnosis was made by Dr. F. Mason Sones, the cardiologist member of the team.

After by-passing the blood flow through Kolff's heart-lung machine, Dr. Effler injected potassium citrate into the patient's heart, and within seconds it was motionless and flaccid. The electrocardiogram attached to the patient registered a complete absence of heartbeat. An incision was made in the right ventricle of the heart and it was immediately drained of all blood. In the absence of bleeding and motion, the interventricular de-

fect was easily identified, and carefully closed with fine silk stitches.

When the heart was closed, blood flow was returned through the heart, and the potassium solution was immediately washed away. The heart promptly resumed rhythmical beating of its own accord, without massage, electric or chemical stimulation.

The heart arrest technique has been successfully employed by the Cleveland clinic team in eight consecutive cases, all published in the quarterly. Two patients died later in the post-operative period; the remainder appear to be doing well. No complications have been attributable to the arrest technique.

The new technique seems to reduce the hazard of fibrillation, or other abnormal rhythms. A frequent cause of death, fibrillation has been one of the most feared complications in all heart surgery.

Two significant developments have aided the clinic in their work on congential (birth) heart defects; a new diagnostic aid employed by Dr. Sones, and Dr. Kolff's artificial lung.

Dr. Sones, a cardiologist at the clinic, has been using a high-powered fluoroscope, called an image amplifier, which makes it possible to televise images of the heart on a large screen, and record them on film.

Until now only two heat X-rays per second could be taken, and the relatively weak and small fluoroscopic image could be seen only in a darkened room. The image amplifier, purchased with a grant made through the Cleveland Area Heart Society by the Cleveland Federation of Labor, creates a picture large and bright enough to be seen by a team of diagnosticians in a well-lighted room.

This new application of the image amplifier has proven of immense value in locating and charting heart defects, and in determining what surgical course, if any, must be followed.

Dr. Kolff's artificial lung differs in principle from the widely used bubble-type oxygenator.

In the Kolff lung, blood is redirected from the heart through a series of polyethylene tubes, which are exposed to a constant flow of oxygen. As in the human lung the delicate polyethylene membrane allows oxygen to pass through and replenish the blood. After being pumped through 7½ yards of tubing, the blood has gathered almost as much oxygen as it received normally from the lungs, and it can be sent through the arteries to nourish the body. Funds for development of the lung came from the Cleveland Area Heart Society and Cleveland Clinic Foundation research money.

Flood Control

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. PHILBIN. Mr. Speaker, pursuant to many previous appeals which our delegation flood committee and other members have made to the House Appropriation Committee respecting the flood-relief program for Massachusetts and the Northeast, we hereby respectfully again urge that the House Appropriation Committee take early action to expedite approval of various specific and general remedial and protective projects now under consideration.

Recent severe snowfalls in our area have increased our deep concern. The periodic recurrence of flood disasters requires expeditious action to set up comprehensive and appropriate flood protection.

As we have pointed out, delay in acting upon feasible measures proposed will merely serve to increase the risk of future damaging floods and thus constitute great peril to many communities already sorely beset by the heavy floods of last year.

We respectfully urge that the Appropriations Committee, in the exercise of its wise discretion, after considering the evidence, establish its own standards as to what may constitute adequate funds to inaugurate planning, construction, and general flood protection work on a basis of efficiency, speed, and generosity.

We further urge that the hearings be expedited as much as possible in order that suitable legislation may be reported to the House at an early date for consideration and action in order to accelerate the progress of vital projects in the area.

The pertinent recommendations follow:

The Massachusetts congressional delegation presents the following recommendations with reference to pending legislation and respectfully urges the adoption of the following program:

1. For construction, operation, and maintenance appropriations:

	Budgeted item, 1957 fiscal year	Recommended
Adams	$1,976,000	$1,976,000
Barre Falls	1,150,000	1,150,000
Birch Hill (maintenance and operation)	13,000	13,000
Buffumville	1,200,000	1,200,000
East Brimfield	340,000	840,000
Hodges Village	360,000	360,000
Knightsville (operation and maintenance)	16,000	16,000
North Adams	2,000,000	2,000,000
Tully (operation and maintenance)	13,000	13,000
Worcester diversion	840,000	840,000

2. For engineering and planning:

	Budgeted item, 1957 fiscal year	Recommended
Westville (authorized)	None	[1] $100,000
West Hill (authorized)	None	[2] 100,000
Littleville (State concurrence given)	None	[3] 100,000

[1] State concurrence given.
[2] Subject to State concurrence.
[3] Subject to authorization.

3. For the Army engineers snagging and stream clearance fund and section 212 projects for general operations in all Massachusetts river basins:

	Budgeted item, 1957 fiscal year	Recommendation
Snagging and clearing	$500,000	[1] $5,000,000
Sec. 212	1,000,000	[1] 5,000,000

[1] Subject to completion of current engineering studies.

Snagging and clearing projects, up to $100,000, are authorized by section 208 of the Flood Control Act of 1954. This section permits stream clearance, up to $100,000 on any one stream, without specific congressional authorization.

Section 212 projects are authorized by section 212 of the Flood Control Act of 1950. This section permits small flood prevention projects, up to $150,000, without specific congressional authorization. The project must be complete within itself, be economically justified and not be in an area intended to be protected by a larger flood-control project.

Snagging and clearing and section 212 funds would supplement Operation Noah rehabilitation measures already undertaken by the engineers in the flood-disaster areas of Massachusetts by providing permanent flood-prevention works in the following basins:

Connecticut, Thames, Blackstone, Merrimac, Charles, Neponset, Housatonic, Hoosic, Ipswitch, Mystic, Little, and other streams and waterways in the State where the Army engineers deem protective measures to be necessary.[1]

4. On the following navigation and beach erosion projects, your committee recommends:

	Budgeted item, 1957 fiscal year	Recommended
Fall River Harbor	$500,000	$1,000,000
Mystic River	1,500,000	1,500,000
Town River	302,000	302,000
Fore River (Weymouth)	500,000	500,000
Revere Beach shore protection	75,000	75,000

And we also urge upon the Appropriations Committee early favorable action on pending requests for appropriations for all other navigation and beach erosion projects in our State.

5. The delegation urges immediate consideration of H. R. 7870, introduced by Mr. McCORMACK, and companion bills, approved in principle by Secretary of the Army Brucker, and designed to give the engineers authority to complete urgently necessary projects costing up to $500,000 without further specific congressional authorization.

6. We favor the principle of disaster insurance and urge the Congress to continue its consideration of and report upon pending measures in this field so that action may be taken during this session.

7. For the various recommendations of the New England Governors' Conference, and the New England Council, we once again bespeak every possible consideration by the Appropriations Committee.

8. Thirty thousand dollars for survey of the Neponset and Charles Rivers (request of Mr. CURTIS of Massachusetts).

[1] Merrimac Basin: $90,000 for removal of sandbar in the Merrimac at its mouth near Newburyport (request of Mr. BATES): $500,000 for local flood-prevention projects (request of Mrs. ROGERS of Massachusetts and Mr. LANE).

Charles River Basin: Stream clearance of the Charles River near Newton (request of Mr. CURTIS of Massachusetts).

Resolution Adopted by Kansas Society of the Daughters of the American Revolution

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. SMITH of Kansas. Mr. Speaker, the Daughters of the American Revolu-

tion are holding their convention in Washington this week. I deem it fitting and proper that I insert in the CONGRESSIONAL RECORD the resolutions adopted at the 58th annual conference of the Kansas Society of the Daughters of the American Revolution. Each and every item in these resolutions deserves the attention of every loyal American. But of course, I assure you that there is nothing in these resolutions that will give aid and comfort to that group of so-called intellectual, international minded one-worlders who so often are saying, "Patriotism and nationalism are the stumbling blocks that prevent America from assuming its rightful place as the leader in the world."

I know of no other organization that has done more to preserve America and its constitutional form of government than the DAR. It is the only organization that can draw a draft on me. I have never found them wrong—they are the elite corps of those who desire to preserve basic American concepts.

I commend these resolutions to my colleagues. Read them—ancient American doctrines that have stood the test of time. To those of you who live in a climate where the fogs of European socialism constantly blow in from the Atlantic and obscure our ancient American principles—read what these ladies from the high plains of Kansas are thinking about UNESCO, Federal aid to education, right to work, immigration, un-American activities, Bricker amendment, and peaceful coexistence.

These ladies of the Kansas Society of the Daughters of the American Revolution just do not believe you have to be a social radical to be fashionable.

The resolutions follow:

AMERICAN HISTORY MONTH

Whereas a true appreciation of American history is important to good citizenship and a bulwark against the infiltration of alien ideologies; and

Whereas a renewed and increased appreciation of great lessons drawn from studying the history of our country creates increased spiritual strength and wisdom; and

Whereas certain youth groups have become special targets of internationalism, one such well-known youth organization having designated February as International Month: Therefore be it

Resolved, That the 58th annual conference of the Kansas Society of the Daughters of the American Revolution urge its chapters to designate February as American History Month and urge the Governor of the State of Kansas and city mayors to officially declare February as American History Month to help build a durable heritage of faith, fortitude, and righteousness for future generations.

PATRIOTISM IN EDUCATION

Whereas national security depends upon the character of our citizens and a knowledge of the fundamental principles upon which the United States Government was established, and also an understanding of the forces working toward its destruction and

Whereas the training of our youth today determines the security of our nation tomorrow, presupposes the necessity of specialized instruction regarding the advantages of our system of government above others in order to build good future citizens and provide for the security of coming generations: Therefore be it

Resolved, That the 58th annual conference of the Kansas Society of the Daughters of the American Revolution continue and strengthen its interest in the patriotic education of our youth by the support of laws requiring the teaching of American history, civics and the science of the American form of government in our schools; increased supervision in the selection of instructors and materials used; encouragement of more public meetings for the purpose of increasing interest in patriotic education, and other means for accomplishing the objective stated in this resolution.

UNESCO

Whereas the United Nations Educational, Scientific and Cultural Organization, known as UNESCO, a specialized agency of the United Nations, has declared among other objectionable things that "nationalism is the major obstacle to the development of worldmindedness"; and

Whereas said UNESCO is carrying on powerful propaganda through the American school system and otherwise working toward destruction of the form of government established by the founding fathers with the thought of promoting a one-world pattern; and

Whereas UNESCO is a deliberate plan to create public opinion for world citizenship—especially directed to the schoolchildren of the Nation and is patterned exactly after the Communist teaching in Soviet Russia: Therefore be it

Resolved, That the 58th annual conference of the Kansas Society of the Daughters of the American Revolution go on record as supporting the action taken by the recent national convention of the American Legion at Miami, Fla., urging Congress to take appropriate action to completely disassociate the United States Government from the UNESCO program.

FEDERAL AID TO EDUCATION

Resolved, That the 58th annual conference of the Kansas Society of the Daughters of the American Revolution, reaffirm their adamant stand for control of education by the people through their States and local communities only and oppose Federal aid to education.

INVESTIGATING COMMITTEES

Whereas we have on previous occasions stated our approval of investigating committees devoted to protecting our country against the invasion of alien ideologies and the operation of subversive forces: Therefore be it

Resolved, That the 58th annual conference of the Kansas Society of the Daughters of the American Revolution reaffirm its previous stand in this regard and commend the efforts of those who are exposing subversive activities and request the Congress to appropriate adequate funds for the continuance of the courageous campaign by our duly elected legislators and their staffs.

APPENDIX 9

Whereas a special report prepared some years ago by the House Committee on Un-American Activities when Representative MARTIN DIES was chairman, known as Appendix 9 consisting of several volumes, has been for some reason taken out of circulation; and

Whereas said report is known to contain vital information designed to alert the American people to dangers of subversive activities: Therefore be it

Resolved, That the 58th annual convention of the Kansas Society of the Daughters of the American Revolution urge the Congress of the United States to authorize the reprinting and circulation of this document and appropriate necessary funds required to complete the project.

THE FBI

Whereas the Federal Bureau of Investigation has by its integrity, courage, intelligent leadership and loyalty to the principles upon which the Republic was founded, helped insulate the American people against foes of many types and descriptions: Therefore be it

Resolved, That the 58th annual convention of the Kansas Society of the Daughters of the American Revolution reiterate confidence in the Federal Bureau of Investigation and its able leadership symbolized by the person of Mr. J. Edgar Hoover.

KANSAS COMMITTEE ON UN-AMERICAN ACTIVITIES

Whereas certain States, notably California, have found it advantageous to set up committees on un-American activities to cooperate with various law enforcement agencies and departments of the Federal Government such as the Federal Bureau of Investigation and the House Committee on Un-American Activities; and

Whereas the people of Kansas need to be kept informed regarding the mechanics and machinations of the Communist apparatus, and also alerted to the dangers of Communist infiltration among non-Communist groups, including schools, civic clubs, churches, labor unions and other bodies: Therefore be it

Resolved, That the 58th annual convention of the Kansas Society of the Daughters of the American Revolution suggest that the Kansas State Legislature explore the possibility and advisability of organizing such a committtee in Kansas to function along lines comparable to similar committees now existing in other States.

FEDERAL JURY SYSTEM

Whereas the jury system is a fundamental of the American judicial structure and basic to a free society under law and must therefore be protected; and

Whereas recent attempts have been made to undermine and bring this branch of the judicial system into question and disrepute by secretly planting dictaphones in rooms where jurors were deliberating, thereby eavesdropping on their conversations dealing with the innocence or guilt of persons on trial in open court; and

Whereas Attorney General Herbert Brownell proposed on January 10, 1956, that Congress enact a law prohibiting such activities as being inconsistent with the purposes of the seventh amendment to the Constitution of the United States: Therefore be it

Resolved, That the 58th Annual Conference of the Kansas Society of the Daughters of the American Revolution go on record as condemning said innovations and urge Congress to do everything possible to expedite enactment of the law proposed by Attorney General Brownell.

RIGHT TO WORK

Whereas the Constitution of the United States and the Bill of Rights guarantees to its citizens certain freedoms including the choice of occupation, a fundamental right of the American heritage; and

Whereas totalitarian systems deny their citizens the rights of such choice thereby making those who labor and all others servants of the state: Therefore be it

Resolved, That the 58th Annual Conference of the Kansas Society of the Daughters of the American Revolution recognize and approve the basic right of all Americans to choose their own vocations and at the same time commend those who are trying by legislative processes to preserve and uphold this sacred right.

IMMIGRATION

Whereas the Immigration and Nationality Act, known as the Walter-McCarran Act (Public Law 414), became effective on December 24, 1952; and

Whereas the act has been especially effective in the denaturalization and deportation of criminals and subversives and is operating in the best interests of the American people; and

Whereas pressure is being placed upon Government officials and Congress by certain groups to change this law: Therefore be it

Resolved, That the 58th Annual Conference of the Kansas Society of the Daughters of the American Revolution reaffirm its approval of the Walter-McCarran Act and urge all patriotic Americans to resist any change, weakening amendments, or private bills which would destroy its effectuality.

REVIEW OF U. N. CHARTER

Whereas the 10th General Assembly of the United Nations passed a resolution on November 21, 1955, which calls for a review conference, and the Security Council voted its concurrence on December 15, 1955; and

Whereas a committee of the whole to work with the Secretary General of the United Nations in fixing a time and place for the conference, its organization and procedure, and said committee is to report its recommendation to the 12th Assembly in 1957; and

Whereas proponents of world government are seeking to propagandize the American people into support of converting the United Nations into a world government wherein the sovereignty of our Republic under constitutional government would be destroyed: Therefore be it

Resolved, That the 58th Annual Conference of the Kansas Society of the Daughters of the American Revolution reaffirm its opposition to world government in any form and urge our Congress to carefully investigate charter review and resist any attempt to convert the United Nations charter into a world government.

SUPPORTING THE BRICKER AMENDMENT

Whereas treaties shall be the supreme law of the land and the judges in every State shall be bound thereby when two-thirds of the Senators concur; and

Whereas executive agreements may have the same prerogatives; and

Whereas the United States is one of the few nations in which a treaty becomes self-executing automatically; and

Whereas specialized agencies of the United Nations and other entangling alliances can pose special threats through these treaty-making powers; and

Whereas the supremacy of the United Nations charter over the United States Constitution has already become an issue in some court cases: Therefore be it

Resolved, That the 58th Annual Conference of the Kansas Society of the Daughters of the American Revolution reaffirm its request that the United States Senate consider the advisability of further amending the Constitution, so as to require either a majority or two-thirds vote of the entire membership before any treaty can be adopted.

PEACEFUL COEXISTENCE

Whereas the 20th congress of the Soviet Communist Party recently declared it a part of their global program to work inside the capitalistic world under the slogan "peace," with Kruschev declaring there are only two roads, "peaceful coexistence or war," and at the same time stating that violent revolution is not necessary now to bring about a socialist state; and

Whereas the Select Committee on Communist Aggression of the House of Representatives concluded that the history of Czechoslovakia is the history of every government that tried to coexist or cooperate with the Communists; and

Whereas the Committee further concluded "that peaceful coexistence is a Communist myth which can be attained only through the complete surrender of our free way of life for one of slavery under Moscow-controlled communism": Therefore be it

Resolved, That the 58th Annual Conference of the Kansas Society of the Daughters of the American Revolution support a reexamination of the country's foreign policy by the Congress of the United States that America may not succumb to this poisonous formula of peaceful coexistence distilled by communism; and be it

Further resolved, That the 58th Annual Conference call upon our Government and its citizens to heed the warning: "When they shall say 'peace and safety,' then sudden destruction cometh upon them."

WORLD COUNCIL OF CHURCHES

Whereas the World Council of Churches has on its official roster leaders from the iron curtain countries, as, for example, Prof. Josef L. Hromadka, Prague, Czechoslovakia, a member of the executive committee; Dr. Jan Chadaba, of Czechoslovakia, member of the central committee; Dr. Victor Hajek, of Czechoslovakia, synodical senior of the Church of the Czech Brethren, member of the central committee of the World Council; Bishop Janos Peter, of Hungary, delegate to the World Council; and

Whereas such men are exercising a baneful influence on the Christian program through the world and Communists are known to use the church as a cloak to cover their teachings; and

Whereas Paul the Apostle said, "Be ye not unequally yoked together with unbelievers; for what fellowship hath righteousness with unrighteousness? and what communion hath light with darkness?": Therefore be it

Resolved, That the 58th Annual Conference of the Kansas Society of the Daughters of the American Revolution call upon its members to be alert and protest any contamination of the holy Christian faith which comes to their attention.

REDEDICATION TO RELIGIOUS PRINCIPLES

Whereas by the dispensation of divine grace we are favored to live in a Nation founded on a fundamental belief in God; and

Whereas the thought of mankind is today being invaded and poisoned by atheistic philosophies and doctrines designed to destroy faith in the supernatural content of historical and evangelical Christianity, in the name of socalled liberal theology, the brotherhood of man and related teachings: Therefore be it

Resolved, That the 58th Annual Conference of the Kansas Society of the Daughters of the American Revolution rededicate itself to continued faith, sincere prayer, steadfast belief in the Bible, and greater participation in the field of Christian activities.

The Engineering Profession in the Soviet Union

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. PRICE. Mr. Speaker, I mentioned in the House 2 weeks ago the serious situation which faces us here in this country with regard to shortages of scientific and engineering manpower. Through overconfidence we are facing loss of world leadership in science and technology at a time when the Russians are taking massive strides toward scientific supremacy in the military and civilian fields.

Few Americans have had the opportunity to witness firsthand the progress which the Russians are making in the scientific and engineering fields. One of these is Dr. Weldon H. Brandt, of the Westinghouse Electric Corp., who recently completed a tour of Russia during which he visited a number of manufacturing plants and the University of Moscow. Dr. Brandt's enlightening observations on his visit are contained in an article entitled "The Engineering Profession in the Soviet Union" in the March issue of American Engineer magazine. Because of the interesting comments in the article on Russian technological development and methods of education, under unanimous consent I place the article in the RECORD so that other Members may have an opportunity to give this important information their serious consideration:

FROM FIRST HAND OBSERVATION: THE ENGINEERING PROFESSION IN THE SOVIET UNION

(An American engineer interview with Dr. Weldon H. Brandt, engineering manager, director systems department, Westinghouse Electric Corp., Pittsburgh, Pa.)

Question. Dr. Brandt, we realize that your recent visit to the Soviet Union was primarily motivated by technical considerations—specifically, a study of automation in Russia. However, since such personal observation of the technology of a country also brings an association with the men behind that technology, we are sure that you have brought back with you a great many illuminating impressions about the professional status of engineering in the U. S. S. R. By way of general background, may we begin by asking you if Soviet industry conforms to the concept of a classless society in its overall organization?

Answer. By no means. Soviet industry certainly is not a classless society. The prestige factor is a very big thing, particularly where the managers are concerned. And I am sure that there is a much greater difference between the standard of living of the ordinary workers and that of the managers in the Soviet Union than there is here in the United States. In making this comparison, too, I think I should point out the extreme difference in standards of value between our economies. For instance, it may be a much bigger thing as far as prestige goes in Russia to be able to have oranges for breakfast than driving a high-priced car versus driving a low-priced car in America where both the boss and the worker can have the oranges if they want them.

Question. Did the engineers you met in the various Soviet factories seem to be on the management or oranges-for-breakfast side of the fence?

Answer. The engineers we met were on the management side. In fact, nearly all of them actually were managers.

Question. Did they seem then to have independence of judgment and decision?

Answer. They had some independence of judgment and decision as long as they operated within the framework of the preconceived plan of what their contribution to the Soviet industrial pattern ought to be.

Question. Is this an efficient method of operation?

Answer. There are no doubt some elements of efficiency in it. But I want to make it

clear that I have utterly no sympathy for the Soviet system as such in any phase whatsoever. As an overall thing it is just not right.

Question. Dr. Brandt, could you form any conclusions about the numbers of engineers employed in proportion to the other workers in the factories you visited?

Answer. The number of engineers is quite high. For instance, the Ordzhonikidze Machine Tool Plant, which we visited in Moscow, has 3,500 employees, including 450 engineering employees, of whom 300 have technical degrees while the others qualify as technicians.

This ratio is particularly high in view of the fact that no research and little of the sort of engineering work which we would class as development is done within the factories. Such work is carried out instead in the appropriate institutes. Research work is done in the research institutes which are connected with the Soviet Academy of Sciences. Development work, as we understand it, is done in other institutes reporting to the appropriate government ministry.

Question. Then how are the results of the research done in the institutes channeled to the factories for practical translation into products?

Answer. The results are channeled in two ways. First, in any cases, the development institutes apply the research know-how to the design of the first models. Then after the first model has been built and proven, it is sent to the factory for production. Secondly, certain straight information is also channeled through the development institutes. For example, ENIMS (which is the abbreviation by which the institute which translates to "Experimental Scientific Research Institute for Metal Cutting Machine Tools" is known)—ENIMS follows technical literature in Russia and abroad and disseminates it to the factories.

Question. In this channeling, Dr. Brandt, is there ever any confusion as to who will handle which newly developed product?

Answer. I am glad you asked that, because it seems to me that some very serious problems must arise when a product cuts across the lines of responsibility of two ministries. For example, I inquired at the Gorki Automobile plant as to how they would assign work on a new generator. And I was told that it would be designed in an institute coming under the Electrical Equipment Ministry and then built by a factory coming under the same ministry, but the specifications would be written by the Gorki plant, which comes under an automotive ministry. This means that in case of an argument or a difference of opinion, you must go on to a higher level than even the ministry in Moscow to get a referee for the problem. It certainly is an example of what I would call a monstrous bureaucracy.

Question. Well, coming back now to the number of workers in the factories, how does the ratio of engineers to regular workers compare with the situation in the United States?

Answer. The ratio is obviously higher in Russia than in this country. However, the word "engineer" seems to have a little different significance in the U. S. S. R. than it does here. The regular engineer's efforts in Russia are not channeled so much toward design as they are in the United States, but are directed more frequently toward production management. As a matter of fact, engineers and foremen are often mentioned together as a class. At the Stalingrad Tractor Factory, for one example, there was the director at the top, then the chief engineer, and under him came both the shop and the engineering department.

Question. We are interested in the working conditions which were provided for the Soviet engineers. Could you tell us a little about them?

Answer. Well, I cannot answer this as definitely as I would like to; but I would say that working conditions in industry and in many of the institutes are not as good as our own. Industrial housekeeping is poor. Lighting is not as good in the offices, which are also rather cramped. Desks are small, and many draftsmen work standing. Also, even the better laboratories seem crowded. And I think it was interesting to note that people inside the factories worked in hats and coats, well bundled up against the cold.

Question. Did the Russian engineers seem to be supported in their work by technicians, clerical aides, and so on? Or do they have to do all of the routine, as well as the specialized work themselves?

Answer. I would say that they seem to be fairly well supported by technicians and so on. We can improve our own situation in this regard, of course; but I do not believe that the Russians are ahead of us on it.

Question. What about salaries? Is there any comparison between the salaries being paid to Soviet engineers and the premium offers being made to engineers in the United States today?

Answer. The average Russian engineer in industry makes perhaps 1,400 rubles per month. If he works in a development institute, the average goes up somewhat—perhaps to 1,600 rubles. In a research institute he will get 1,800 rubles per month. Then superimposed on this there are bonuses, prizes, and royalties on patents so that the outstanding performer can do considerably better than the averages I have quoted. A man working strictly as an engineer in industry can reach a peak of somewhere around 2,500 or 3,000 rubles per month.

The exchange rate is four rubles per dollar, and this would not be bad, speaking in terms of salary comparisons, if that also represented the equivalent purchasing power. The purchasing power of the ruble, however, is more like 10 or 12 rubles to the dollar, the black-market rate—although, of course, there is not supposed to be any such thing.

The Russian engineer does not have a standard of living anywhere nearly equivalent to that of the engineer in the United States, though he does far better than his own compatriots of the ordinary working class. I would say there is some comparison between the two countries as to cost and availability of bare essentials, such as bread, for instance. But as soon as you get into even such items as shoes the cost-and-quality gap widens immensely.

Question. We understand that there are labor unions organized within the Soviet Union—although they never strike. Just what are the functions of these unions?

Answer. The functions of the unions seem to be the operation of certain benefit programs, rest camps, and children's camps. They are in theory also responsible for safety standards in the factories, but these standards are certainly not equivalent to those in America.

Question. Are the unions plantwide or countrywide?

Answer. I am not sure. However, in speaking of the unions, the directors of the various factories said nothing to indicate that they had to deal with them as countrywide.

Question. Do engineers belong to them?

Answer. I do not know whether or not they belong. The subject was never mentioned. There was never any mention of engineers as an organized group.

Question. Do the Russians seem concerned at all in regard to what we call the professional status of engineering? Do you know whether they have any professional societies or professional journals like the American Engineer?

Answer. This question also did not come up. It is a little difficult to see how it would, and I would be very surprised to find a professional organization in Russia devoted to developing the professional status of engineers. I doubt that there would be room for anything like this in the Soviet system. The Soviet engineers do have their prestige—which perhaps is their professional status—but they have it only because the Government feels they should have it. It is a matter of Government policy and can be turned on and off like a faucet.

Question. Did you learn whether the Soviet Union has any laws or regulations concerning the practice of engineering similar to the registration laws of the various States in this country? Is there any such thing as professional registration in Russia?

Answer. We did not hear of any registration laws or of professional registration in Russia. I think there is a drastic weeding out process in the educational system itself—much more so than here. Another interesting thing is that if a man is aiming for an engineering degree, he goes to school full time. There is no other way to qualify.

Question. What about the technical schools that are connected with the factories then?

Answer. These train technicans. They do not give degrees.

Question. This may be a superfluous and self-evident question in view of the political philosophy of the country—but did you note any evidence of any independent practice of engineering in Russia? Are there any organizations similar to our consulting firms?

Answer. We certainly saw no evidence of any independent practice of engineering or any organizations that could be termed consulting firms. I am quite sure they need all the engineers they have in industry and in the research institutes. They also need them—and have them—in the Government itself to assist in what we might call "management problems" in the administration of their various taechnological programs.

You see, everything is really a Government-owned monopoly. And I would say that about the only way a man might be in business for himself would be to have something like, say, a produce stand, where he would employ no one but himself.

Question. Dr. Brandt, in this Government-operated scheme is there any choice about the type of engineering job a man may take or the particular industry for which he wishes to work?

Answer. I do not really know how much choice they have. Many articles have been written in this country indicating that they do not have much choice. I would say from my own observation that their engineers are very specialized, and this, of course, would limit the choice that a man would have. But I would not be surprised to find that the really outstanding men have some choice as to where they go initially at least.

Question. We know that you have remarked since your return on the number of women employed in engineering in the factories you visited. Were these women working in the capacity of technicians, or as full-fledged engineers?

Answer. Actually, the comments in the report I prepared on my return were on the number of women employed in factories in general, rather than the number in engineering. They do employ women more than men in almost every civilian field you can think of. In the engineering laboratories which we visited, I am sure that some of the women were technicians while others were full engineers. Those we saw at the Institute of Standards, Measures, and Measuring Instruments, which corresponds roughly to our Bureau of Standards, definitely seemed to be full-fledged engineers. And I believe that they do have more women engineers in Russia than we have in this country.

Question. Are the engineers in Russia encouraged to undertake any advanced study?

Answer. I do not think that encouraged is quite the proper word. They either qualify

or they do not qualify for advanced study, depending on the record they have made in their undergraduate work. If they qualify, they get a very nice stipend for doing this graduate work—about 780 rubles per month.

Question. In doing this advanced work, are they ever advised to familiarize themselves with any subjects other than the strictly technical?

Answer. I don't believe that they are encouraged to study anything that is not strictly technical. Whatever general subjects they study are carried during the first several years of undergraduate work. From that time on they specialize.

Question. What about patents? You mentioned "patent royalties" previously in talking about salaries, Dr. Brandt. Under this strict organization for the development of products do they have a patent system?

Answer. Yes; they do. Developments are Government-owned; but any citizen may apply for a patent, and this gives him the right to collect a royalty on the profit—and may I stress this capitalistic word profit—that results from his invention.

Question. Does it make any difference as to where and how the work on the invention was done? Does this affect the patent rights?

Answer. As I understand it—no. The patent rights apply whether the person works in an institute, development laboratory, or on his own.

Question. Now how do you feel about the specific products you had the opportunity to inspect? Were they up to the standards of their counterparts in the United States?

Answer. As to quality, it seems to me that consumer goods are definitely below American standards. There are exceptions, of course, such as the little alarm clock that I had given to me as a gift. Without further adjustment, it is keeping time to within a minute per week, better than most American clocks of a similar type. However, as to heavy goods and industrial products—in many cases these are rather good. I won't say they are equivalent to United States standards, but they are quite close.

But there are many things that they just do not seem to know how to do. For instance, they don't seem to know how to lay a good wooden floor; or how to build a good, substantial building. And the women's clothes are pretty dreadful by American standards.

Question. Well, what about the general production rate? Does it match our standards?

Answer. Production of many items, at least in many of the plants we saw, is low by our standards. They are only producing 120 passenger cars per day at the Gorki Plant, whereas we produce by the tens of thousands. And, incidentally, I don't think that the ordinary Russian engineers will ever believe this if it is just told to them. They would have to be shown the United States production lines to be convinced. On the other hand, though, they are turning out machine tools at a very good rate.

Question. Did you find any of the specific products or processes you had the chance to examine to be of marked inferiority to those of the United States?

Answer. Well, after we returned to this country, I had some tests made on some ball bearings from the Kagonovich state ball-bearing plant. They were inferior to our best quality, but are probably satisfactory for ordinary commercial grades. I also had some tests run on a bicycle nameplate from the Gorki plant, and there the quality was quite poor. But then it isn't a serious matter if a bicycle nameplate doesn't stand up.

Question. Were there any places where you detected marked superiority in products or processes?

Answer. Let me answer that a bit lightly by saying that the only really superior products I found during my visit were the Russian ballet and Russian caviar. We did see some processes that were unique or showed better development, however. The storage element in use on the automatic ball-bearing line at the Kagonovich plant, for example, appeared to be better than any such device that I have seen in America. But such cases of superiority seemed to be few and far between.

Question. What about the question of obsolescence in the Soviet factory? Do they seem to be "on the ball" in incorporating the most up-to-date machinery and methods in their manufacturing processes?

Answer. In nearly every factory you can find a few spots in which up-to-date machinery and methods are in use. Generally this represents only a small part of their productive capacity. But the important thing to remember is that this clearly demonstrates that they do have the required know-how for using the latest methods. One sees more equipment that is obsolete by our standards than you see in America. And it is also interesting to point out that the "calculation of obsolescence" is one of the functions of ENIMS, so that they are obviously looking forward to the day when they can afford to retire a machine because it has outlived its usefulness even though it is still in running order.

Question. Were the machines you observed in action largely of Russian manufacture? Or were they of foreign make?

Answer. The newest and most interesting machines we observed in the Soviet Union are chiefly of Russian manufacture. We did see some machines that were foreign-made, and those that were in actual use in the factories were usually very old or else of East German manufacture. They are currently studying some machines of Swiss manufacture, though, and I got the impression that they are interested chiefly in machines of the highest mechanical precision. We didn't see any such precision machines of Russian manufacture, but I believe they are getting ready to fill that gap.

Question. Since your tour was immediately concerned with a study of Russian automation, Dr. Brandt, could you give us a brief word on how their development of automation compares with uses employed or being developed here?

Answer. In general, I believe that we could teach them a great deal more about automation than it would be possible to learn from them. However, they do have a somewhat different approach to some problems. They have developed good storage devices, as I mentioned before, in place of trying to synchronize machines on the same line. I believe also that they are making more use of precise schedules for the replacement of tools and adjustment of their machines. This latter, of course, in some cases replaces feedback mechanisms, which are still in their infancy in both countries but are somewhat better developed here. The really important thing to note here is that they have found ways to make an automatic line operate. They have the know-how.

Question. Turning from industry, Dr. Brandt, we know that you are most interested in education and that you had the opportunity to visit the University of Moscow. Would you care to give us some general impressions about what you saw?

Answer. Well, let me point out that the University of Moscow includes no engineering school, although it does offer science courses from which some students later go into engineering elsewhere. It does have the finest, largest single university building I have ever seen and it is, indeed, a showplace. At this university, with their other buildings, they have 22,000 rooms, probably including dormitory space, and so on, and about the same number of students.

Question. What about the university staff? Did you get any clear impression of the status of the educator in the Soviet Union?

Answer. A look at their salaries might help to answer this question. Instructors are paid 1,350 rubles or 1,750 rubels per month, depending on whether or not they have a candidate of science degree, which is roughly equivalent to our master's degree. A dozent is paid 3,250 rubles per month, and this grade is probably somewhere between an associate and an assistant professor as our university staffs run in this country. A full professor receives 5,500 rubles per month. This means that he is paid about twice what he could hope to make as an engineer in industry. And he occupies a position of considerable prestige.

Question. We understand that approximately 96 percent of the university students are paid some sort of stipend while attending school. Is this correct?

Answer. Yes. Undergraduates receive from 290 to 450 rubles per month, although higher stipends may be paid for outstanding scholarship. And we mentioned a while ago that the graduate students get 780 rubles, which is roughly equivalent to what they would receive as beginning engineers in industry.

Question. Did there seem to be much graduate work going on at the University?

Answer. Yes; there seemed to be a good deal going on. Eighteen hundred students, I was told, are taking post-graduate courses. And this was in addition to the 22,000 undergraduates.

Question. Could you draw any comparisons between the Russian students and typical American students?

Answer. No more so than you could draw between any other segments of our respective populations. One thing, though, that is rather remarkable is the lack of noise in Russia. The people go about their business very quietly. And when you see a group of people together, whether students or any others, you learn not to expect noise. The contrast was rather startling, as a matter of fact, when we left Leningrad and landed in Helsinki; you noticed right away how the people were talking and smiling. That doesn't mean that the Russians have no sense of humor. Our particular guide and translator had a very fine one. But things are still extraordinarily quiet there.

Question. Did you have the opportunity to visit any engineering schools while in Russia?

Answer. Unfortunately, no.

Question. Were you welcome in the Soviet Union?

Answer. We were treated with the utmost hospitality. Intourist (the Russian Tourist Ministry) handled all arrangements efficiently and with a minimum of effort on our part. Russian engineers seemed willing and anxious to talk over engineering problems with us, and we believe that they were really sincere in this.

Question. Dr. Brandt, these comments of yours have been very interesting, and we know they will be of considerable value to our readers. Before we conclude this interview, is there any highlight of your trip that we have missed in our questioning? Any particularly outstanding impression that you have brought back with you?

Answer. Well, for one thing, I got the definite impression that the Russians know a good deal more about what we are doing in industry than we know about what they are doing. Of course, we publish our results more freely than they do, and we mentioned this several times to various Russians. Their

only answer was that they didn't believe that the average American could read Russian anyway, even if they did publish more.

And, of course, as we have discussed before, the Government does a lot of their technical reading for them and sees that it is channeled to the interested industries.

One thing that made an impression on me is that we saw a lot of machine tools being manufactured, and the number being produced seemed to be far out of line with the number we saw in use. These machine tools are going somewhere, and one strongly suspects that it is into military effort.

Question. How do you feel about this exchange of Russian and American visits in which you have participated? Do you think it is a valuable program that should be expanded? Or do you have any reservations about it, in line, for instance, with some recent objections that we have been showing too much of our first-class industry to the visitors and that we should not be quite so helpful to them?

Answer. I think that the exchange of Russian and American visits is worthwhile, and I say this even though I believe that there is a great deal more for them to learn from us than they could teach us. I say this, too, partly because we are operating more in the dark about what they are doing than they are about what we are doing at the present time. I think we have been somewhat overly complacent about our ability to outproduce them in every line. Through these visits, the Russians may learn some things from us a little more quickly than they would otherwise, but in turn we will learn some things that we would never learn otherwise.

Question. What particular advice then would you give to the American engineering profession in the light of your Russian observations?

Answer. Well, my first piece of advice is that more American engineers should learn Russian. Then I believe we should not remain complacent about our ability to do a better job than the Russians; we must avoid any such "Maginot Line" philosophy. I think that right now we are doing a better job, but the gap is narrowing perceptibly. We are, I am sure, 25 years and even more ahead as far as general standards of living go, but the question of military production is another matter. Their military production is, of course, on a planned basis, so that they would not have to bother to convert in the event of a major war catastrophe.

I think that the greatest strength that the American engineering profession has, as compared to the Russian, is that we have people here who are broader—broader in the sense of knowing more about various fields of engineering and also in the sense that they have better judgment and knowledge outside the strictly technical field. We should not try to emulate the overspecialization of the Russians. But the thing that we should learn from them, and in which we should have the help of all engineers, is to rebuild the status and prestige of our educational system.

Taking an overall look, I would say that for the two economies to match each other in output, the Russians would need far more engineers than we would. Our economic system is the thing that will save us. We are so much more flexible here. The Russians, because of their strictly controlled system, simply can never be as fast on their feet with consumer goods as we can where the economy is flexible and an individual or a company can see a need and go into production to fill it. We need to develop more faith in ourselves, the superiority of our system, and our own abilities—without at the same time, as I have said, being overly complacent.

The Soviet Challenge and the United Nations

EXTENSION OF REMARKS
OF
HON. H. ALEXANDER SMITH
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES

Monday, April 16, 1956

Mr. SMITH of New Jersey. Mr. President, recently there has been called to my attention an address entitled "The Soviet Challenge and the United Nations," which was delivered by the Assistant Secretary of State for the United Nations formerly chief of staff of the Foreign Relations Committee, Dr. Francis O. Wilcox, before the annual convention of the American Association of Junior Colleges, in New York City, on March 9, 1956. I am informed by the Public Printer that the address is estimated to make 2¾ pages of the RECORD, at a cost of $220, but the address is so much to the point with reference to some of the present discussion regarding the position of the United Nations in the world, that I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE SOVIET CHALLENGE AND THE UNITED NATIONS

We live in a time charged with dramatic developments. In such times it is especially hard to grasp the thread of history. It is even more difficult to determine which developments are transitory, which more permanent.

We have witnessed in recent days an event of unusual significance. We have seen another zigzag of Soviet tactics. The Soviet 20th Congress has rewritten some of the Stalinist dogma. The full import of the decisions taken by the congress will become clearer as Soviet policy evolves in the days ahead.

The change in Soviet tactics is, when you think about it, a logical development. The old line of violence and threatened violence became unprofitable and unworkable, largely because Soviet military might has been neutralized by the free world's defensive buildup. So the Kremlin has turned a new face to the world. No longer is war between the two systems considered inevitable. The frightful collisions Lenin predicted between the two systems do not have to take place, Khrushchev has told us, because the victory of communism can be achieved without violence—unless, he was careful to add, the "exploiters" are unwise enough to resist their own extinction.

But in general the termite is to take the place of the battering ram. There will be more emphasis on smiles and promises and less emphasis on brute force. The goal remains the same: The collapse of the foundations of non-Communist society. Thus the Kremlin has undertaken a new Soviet offensive. Political cooperation is being sought with leftwing Socialists, formerly the target of Soviet abuse. Great stress is being placed on trade and economic assistance. This new look is being directed by the leaders of the Soviet monolithic state, who control with an iron hand the people and the foreign policy of the Soviet Union. It poses a sharp threat to the United States and to the entire free world inside and outside the United Nations. It is a challenge which must be understood and met.

The new look in Soviet tactics became manifest at the Geneva summit conference last July. There Soviet leaders spoke in a spirit of accommodation toward the West. They spoke of an era of peaceful and competitive coexistence between the free and the Communist world. They expressed a desire to reduce tensions.

The more hopeful atmosphere engendered at Geneva was reinforced by a series of Soviet actions taken both prior to and after the Geneva conference. In May 1955, after 10 years of painful negotiations, the Soviets finally signed the treaty with Austria. This was followed by the remarkable visit of Soviet leaders to Yugoslavia to make amends for past deeds. The Kremlin established diplomatic relations with the German Federal Republic. It evacuated its military base in Finland.

The New Look also became apparent within the United Nations. In the General Assembly last fall the Soviet tone was, for the most part, more moderate, less contentious. They partially lifted their barrier to the admission of new members—for a price, of course. In their speeches they stressed the need for economic aid to underdeveloped countries. They made clear their intention to play a stronger role in the United Nations specialized agencies, some of which they had joined or rejoined only a short time before.

This does not mean that international communism has given up its ultimate ambitions or that it is not still the enemy of free governments. As Secretary Dulles said recently, the Soviets "have subordinated those elements of their old creed in the hope that, in a new garb, they could still persue conquest."

Witness the words of Mr. Khrushchev, speaking to the Supreme Soviet on December 29, 1955:

"If certain people think that our confidence in the victory of socialism, the teaching of Marxist-Leninism, is a violation of the Geneva spirit, they obviously have an incorrect notion of the Geneva spirit. They ought to remember once and for all that we never renounced and we will never renounce our ideas, our struggle for the victory of communism."

Witness the Soviet refusal to permit the unification of a democratic Germany and the renewed Soviet efforts to destroy NATO and other Western defensive alliances.

Witness also the arms shipments from Czechoslovakia to Egypt. This cannot be explained away as a simple business deal. In Communist countries the state controls all such transactions, and they are a part of foreign-policy strategy.

Witness finally the Soviet "good will" mission to India, Burma, and Afghanistan. On the one hand the Western Powers were subjected to vitriolic verbal attacks; on the other there were Soviet proffers of trade and aid to the Asian countries.

It is important to note that this offensive was being pursued in Asia simultaneously with conciliatory tactics toward certain strategically important countries in the West. A pattern clearly emerges: first, the U. S. S. R. is conducting a holding operation against Western Europe while seeking to destroy NATO; second, it is seeking to expand its economic influence in the Near East, Africa, and Asia; third, it is attempting to utilize the United Nations and the specialized agencies in support of these objectives and

in order to create the image of a peaceable, cooperative Soviet Union.

WHY SOVIET TACTICS HAVE CHANGED

Why have Soviet tactics changed? Has the strength of the free world made them necessary? Have past Soviet foreign economic policies been a failure?

I would answer both questions in the affirmative.

First, free-world strength. After the Second World War a new threat of Communist expansion developed. It was turned back in Iran, Greece, Turkey, and Korea only by prompt and determined free-world action. To deter further Soviet threats of aggression, nations of the free world joined together to exercise what the United Nations Charter calls "the inherent right of collective self-defense." Last year, in the face of the strongest Soviet threats and political maneuvers, the German Federal Republic became a full partner in the North Atlantic Treaty Organization. The change in Soviet tactics stemmed from about this time. Soviet rulers concluded that their approach to the non-Communist world must be changed. A new route to the old destination was needed.

Second, past failure of Soviet foreign economic policies. After the war the United States shouldered a major share of the task of rehabilitating war-torn countries. In the United Nations we championed the establishment of the specialized agencies and have consistently given them strong support. We took the lead in formulating programs of technical assistance to speed the economic development of underdeveloped countries.

By contrast the Soviet Union stripped the vanquished and provided assistance only to its satellites on its own onerous terms. In the United Nations, until recently the U. S. S. R. gave little, if any, support to the specialized agencies or the technical assistance program. Instead it attacked them as tools of Western imperialism.

This negative attitude did not go unnoticed and did not help the U. S. S. R. in its efforts to penetrate the underdeveloped countries.

The failure of old policies is not the only reason for the Soviet new look. For one, there is a new leadership since the death of Stalin which may be convinced that new tactics are required to reach the old goal of a communized world.

For another, the hydrogen bomb means that virtual disaster rather than possible victory may be the price of aggression.

For a third, the Soviet economy may now, for the first time, be in a position to provide goods and technical services for export. In many cases this will mean withholding consumer goods from their own people.

Whatever the reasons for the changed Soviet tactics they constitute, in effect, a shift in foreign policy. A recent Communist publication describes them as "prolonged coexistence and economic competition between the two systems."

This new strategy is the challenge. We must take it seriously. It is not sufficient to say that the Soviets may have seen the errors of their ways. We must look ahead and be prepared to meet this and other Soviet challenges in the foreseeable future.

WHAT THE SOVIET CHALLENGE MEANS TO THE U. N.

I am particularly concerned with how we meet this challenge in the United Nations.

There are 16 new members in the United Nations. Many of them are newly independent, proud of their sovereignty, and anxious not to become committed to any great power. They have swelled the ranks of the underdeveloped nations which constitute a majority of the United Nations.

They want to acquire rapidly the material attributes of developed countries. Industralization has become a magic word. People of Asia, Africa, and Latin America hope to find in quick industralization a cure for many of their domestic economic and political problems.

In Asia and Africa the new Soviet campaign has taken on various forms. It includes the barter of surplus arms in areas where tensions were already high. It includes the purchase of agricultural surpluses. The Soviets have given great publicity to these purchases. They have not made known, however, that some of these commodities have been reexported to markets which would normally have been supplied by the original sellers. The Soviets have also made low-cost loans in increasing numbers to countries important to them strategically. They are flooding the underdeveloped areas wth offers of experts, equipment for training centers, invitations and fellowships for travel and study in the Soviet Union.

In the expanded United Nations, the U. S. S. R. can be expected to champion the demands of the underdeveloped countries for a substantial United Nations fund for economic development, although it remains to be seen whether they would be prepared to contribute much of it. Indeed, the world may find, in time, that they are long on promises and short on deliveries.

In certain of the specialized agencies the Soviets have also made an about-face. In the past they have ignored, opposed, or sought to frustrate the economic and social activities of the United Nations. They ignored membership in the International Bank, the International Monetary Fund, the Food and Agriculture Organization, the International Labor Organization, and UNESCO. For a short while they did belong to the World Health Organization, but they withdrew in 1949.

During this period the U. S. S. R. was not content with merely boycotting the specialized agencies. They were the targets of Soviet attacks. The Soviets rarely missed an opportunity to describe the International Labor Organization as "an instrument of capitalist employers to enslave the workers of the world." UNESCO they described as an instrument of "American cultural imperialism."

Now this is changed. Since the death of Stalin, the U. S. S. R. has joined UNESCO and rejoined the ILO. They are renewing their membership in the WHO. They have contributed 4 million rubles a year or the equivalent of $1 million a year for the past 3 years to the United Nations Technical Assistance Program.

What does this mean for the United States? I remind you that there is nothing new about the United States engaging in economic assistance to the less developed areas. We have provided billions of dollars over many years. In doing so we have strengthened the foundations of the free world, which is clearly in our national interest. We have no imperialist designs. We are simply helping other countries maintain their independence and strengthen their free institutions. It is a compliment to our programs that the U. S. S. R. is trying to copy them. Current Soviet activities in the Middle East and Asia merely underline the importance of what we have been doing.

To meet the Soviet economic challenge, two things are essential: greater flexibility and greater assurance of continuity in dealing with economic aid problems. Without these two elements we run serious risks of a rigid policy which will not be able to cope with the variety and shifts of Soviet attempts at economic penetration.

We can continue and possibly expand our support for both the United States bilateral aid and the multilateral economic programs of the United Nations. From a dollars-and-cents point of view, economic and technical aid through the United Nations is less costly to us in many instances since it spreads the burden over many countries. Moreover, the multilateral approach is more acceptable for political reasons to some of the underdeveloped countries.

Much is being done in the field of international financing through the International Bank and the Export-Import Bank. Now that Congress has approved our membership in the International Finance Corporation, we look forward to increased efforts to encourage the flow of capital to underdeveloped countries. The early approval of this agency by the Congress has gone a long way toward stimulating other countries to ratify. We hope this new instrument of international cooperation will begin to function late this summer. Meanwhile, we must continue to review our economic programs, both within and without the United Nations, to make them as sound and effective as possible.

We must maintain our leadership in the specialized agencies. This is especially important in view of the new Soviet interest in these agencies. I do not agree with those who are apprehensive that Soviet membership will mean Communist domination or corruption of the specialized agencies. There are those, for instance, who think we should quit the International Labor Organization because the Russian employer delegates are in reality government officials and not employers as we use that term. Nothing could be more injurious to our national interest than for us to walk out and leave such organizations as the ILO to the Russians. The overwhelming majority of both the employers and the workers represented in the ILO are on the side of freedom.

Soviet participation in such organizations as ILO and UNESCO serves to bring into the open the fundamental differences which separate the free world and the Soviet world. We need not fear such comparison. I would be the last to claim that these organizations, or any other human institutions are perfect. But they serve our interests, and we are constantly alert to improve their programs.

WHAT COLLEGES AND UNIVERSITIES CAN DO

Of course this new Soviet challenge cannot be met by Government action alone. It is a long-range problem. It must have the continued attention and understanding of our people. In developing such understanding, the colleges and universities have a vital role to play.

I believe the colleges should encourage by every means possible an interest in and understanding of world affairs. I do not mean merely the traditional study of ancient and European history but also the history of the newly independent and resurgent areas of the world. They are on the march toward political and economic equality with the most advanced countries. Your students were born into a world in which western concepts were dominant. They will exercise their responsibilities as citizens in a world in which western concepts must be reconciled and harmonized with those of Asia and the Middle East. This will require new familiarity with comparative economic, social, and political concepts and customs.

Our college and university students must be made fully aware of the developments of the last few decades to understand the demands of the new position of leadership into which we have been thrust since the war. They must understand the limits as well as the possibilities of leadership in coalitions of free states and in parliamentary organizations such as the United Nations. Only in this context can they comprehend the new forces at play in the world. Such education is essential to understand what we can do to meet the Soviet bid for leadership of newly independent states and those peoples still seeking self-government or independence.

I would advocate that all colleges teach their students the cold facts about communism. They should know the origin of the

Communist ideology, its evolution into an absolute dictatorship under the Soviets, its methods of subversion, its weaknesses and its strength, its spurious appeal in an era of vast social change.

I believe the junior colleges have a special responsibility in this regard. A great many of your students will complete their formal education with you. They will then go directly into business, industry, and trade. Others will continue preparation for their life's work. While you have them they should be exposed to a general course on world affairs. If this is done, they will be far better equipped to discharge their responsibilities of citizenship, cognizant of the strength of democracy and vigilant to the challenge of communism.

This responsibility of the colleges and universities becomes greater as the Soviet threat becomes more long range. It is not only a threat of military aggression to be met by military preparedness on the part of the free world, it is a threat for years to come. Continuing deterrent power is essential in the nuclear age. But this must be backed by an increasingly informed American public opinion in the field of foreign affairs.

Many of your graduates will be called upon to go abroad to represent the United States in one capacity or another. In the military or diplomatic services, as technical specialists, as recipients of study or travel grants, they will have the opportunity to speak and act for the American people. They should be equipped to discharge this responsibility in meaningful terms to the people of other lands.

Statistics, I realize, are sometimes misleading. But statistics show that the Soviet Union is training and graduating far more scientists and technicians than we are. The Soviet Union is determined to outproduce us in the scientific and industrial fields. They are not doing so now, but we have no grounds for complacency. The junior colleges, I believe, should provide the best in scientific and technical training for their students and encourage and stimulate them to go on to the university for higher training. American leadership and training is not self-perpetuating. It must be cherished and inculcated at every level of education.

I would venture to direct a word to the administrators of the great American junior college system. The teachers whom you employ are the caretakers of tomorrow's civilization. It is to them that we entrust education for leadership and understanding in this complex world. Only good teachers can do this. It takes good salaries to attract and keep good teachers. They should have at least the incentive and security which we provide for labor, for our armed services, and for the public service. Arnold Toynbee has written that societies have often been spurred to self-improvement in the face of external challenges. If the threat our society now faces teaches us to place a higher premium on our intellectual and educational human resources, it will have served at least one useful purpose. There is no doubt that a free society can meet and surpass any challenge posed by a society under dictatorship. But to do so it must both recognize and accept the challenge.

FACTS AND FALLACIES ABOUT THE U. N.

Of great importance in the teaching of international affairs is a study of the United Nations. This is not an ephemeral organization. It is a going concern affecting the security and well-being of nations on a day-by-day basis. We must know how it was created, what it has done, what it can and cannot do.

The United Nations has had strong bipartisan support from the Congress. But this support cannot be taken for granted. It must be based on an informed and sound public opinion. It is, after all, the responsibility of the Congress to reflect public attitudes on important matters of foreign policy. The public, therefore, has a heavy responsibility to keep itself accurately informed. With regard to the United Nations, this means that we must sift fact from fiction. Here a little misunderstanding goes a long way. Let us consider for a few moments some of the common fallacies about the United Nations.

It is said that the United Nations is a superstate with treatymaking powers. This, of course, is not the case. The United Nations is a voluntary association of sovereign states. It has no power to legislate, to levy taxes, or to make treaties. The members may propose conventions and treaties, but these are only binding on countries which subsequently approve them through their constitutional processes. In our case this means approval by the United States Senate.

It is said by a few critics that UNESCO interferes in and dictates to our American educational system. This likewise is untrue. UNESCO, which is also a free association of nations, does make recommendations to member countries regarding teaching about the United Nations and teaching to foster international understanding. It is entirely up to the member countries whether they want to follow these recommendations or not. And yet there is a small but vocal minority in this country which continues to regard UNESCO as some sort of threat to our educational system and to American youth.

Shortly after the inauguration of President Eisenhower, this administration undertook an independent appraisal of UNESCO to determine whether the charges against it were valid. The President appointed three distinguished citizens to study UNESCO activities. Let me summarize the principal findings of this group:

1. UNESCO does not advocate world government or world citizenship in the political sense.

2. UNESCO does not attempt, directly or indirectly, to undermine national loyalties or to encourage the substitution of loyalty to a supranational authority for loyalty to one's own country.

3. The official bodies and the personnel of UNESCO observe the provision of the UNESCO Constitution which prohibits UNESCO from interfering in matters within the domestic jurisdiction of member states. UNESCO does not attempt to interfere in the American school system.

4. There was no evidence of atheism or antireligious bias in any of UNESCO's work.

It seems to me that these findings should more than counteract the negative criticisms that have been made with respect to UNESCO.

But we must not be content with merely laying bare fallacies about the United Nations. We must understand why the United Nations deserves our support.

Since its foundation the United Nations has been the most effective mechanism available for settling international disputes. It has facilitated peaceful change where violence might otherwise have been the only course. We have the examples of the peaceful settlement of the Indonesian-Dutch conflict, the dispute between India and Pakistan over Kashmir, and the removal of the aggressive Communist threat to Iran and Greece.

We have the important example of the resistance to aggression in Korea in which the United States called for and got the material or moral support of the overwhelming majority of the United Nations members. This may well have prevented world war III.

The United Nations, at President Eisenhower's initiative, has promoted the peaceful uses of atomic energy. The historic peaceful uses conference held at Geneva last summer opened up vast potential benefits which the atom has made possible for mankind.

The work of the technical assistance program and the specialized agencies has raised standards of living and has brought prospects of economic and social well-being closer for millions of peoples everywhere.

These are some of the reasons why the United Nations deserves our continuing support. President Eisenhower has called the United Natons man's best hope to substitute to conference table for the battlefield. He has said, and I certainly agree, that if we did not have a United Nations we would have to create one to cope with the common problems of the world. In the United Nations we get a great deal for very little cost. It will prosper and serve our purposes and the purposes of the free world if we give it our continuing and enlightened support.

U. N. CANNOT SOLVE ALL OUR PROBLEMS

Understanding and support for the United Nations does not mean unthinking approval of everything it does. Nor should we look upon it as a cure-all or panacea for all the world's ills. The United Nations can only be a "center for harmonizing the actions of nations" to the extent to which each sovereign state is willing to cooperate for the common good. There are many issues which it has been unable to solve. For example, once again we are faced with mounting tension between Israel and the Arab States in the Middle East. The United Nations could resolve that issue if the parties concerned were more willing to cooperate.

This is no place to assess blame for what is happening in the Near East.

Neither the Israelis nor the Arabs are guiltless in the tense situation which prevails there. If the two sides would fulfill their obligations under the Security Council resolutions and would carry out the recommendations of General Burns, the U. N. truce supervisor, they could do much to lessen tensions in the area. However, aside from the responsibility of the Arab states and Israel for prevening hostilities, the other members of the United Nations have a serious responsibility—indeed an obligation—to keep the peace there. This cannot be done by irresponsible shipments of arms to the countries in that area, or by trying to maintain a precarious "balance of arms" between Israel and the Arab states. An arms race will magnify suspicions and tend to create the impression—if not the fact—of power alinements which can only lead to hostilities disastrous for the Near East and possibly the world.

We are vitally interested in the peace and welfare of the Near East, as a nation and as a member of the Security Council. We are convinced that early action in the United Nations is necessary on the problems that confront us all in the Near East.

The United Nations, through its members, is the logical focal point for remedying the dangerous developments which confront us. What the United Nations can and must do is something which, I can assure you, the United States is earnestly and prayerfully considering.

Similarly in the field of disarmament. Despite 10 years of negotiation, no safeguarded system of disarmament has yet been agreed upon. The threat of atomic disaster still hangs over man's head. From the very start in 1946, the United States has been squarely on record for a genuine program of safeguarded disarmament. The Soviet Union has consistently blocked progress, but the quest continues, for we cannot afford to slacken our efforts.

President Eisenhower has given world leadership in the search for ways to put the atom to the service of mankind. In his letter to Premier Bulganin last week, the President suggested concrete measures which, as he wrote, "if carried out adequately, would

reverse the present trend toward a constant increase in nuclear weapons overhanging the world. My ultimate hope," the President said, "is that all production of fissionable materials anywhere in the world will be devoted exclusively to peaceful purposes." This month the disarmament subcommittee of the United Nations will try again in London. The United Nations provides a forum where this problem can be solved, and solved it must be.

Let us remember this. Many important and difficult international problems are solved outside the United Nations. But the really tough ones, the well-nigh insoluble ones, come to the United Nations. It is, in a way, the court of last appeal. I don't believe the United Nations should try to shelve or dodge such problems. But let us remember that the United Nations doesn't create them. The organization mirrors the realities of the world. If the image is ugly it is not the mirror that is at fault.

CHALLENGE OF NEW SOVIET OFFENSIVE

In conclusion, the challenge of the new Soviet offensive faces all of us. It is not a short-run proposition. The Communists are not handicapped by any timetable. The cold war—with all its trickery and fraud, its subversion and sabotage, and perhaps even its peripheral outbreaks of violence—may run for 10, 20, 30, or 40 years.

This will call for firmness and determination and patience on the part of the American people, together with a willingness to sacrifice over a long period of time. It will call for flexibility and understanding.

Let us not waver in our determination to preserve our heritage of freedom and to create those conditions in the world in which the cause of free men can flourish.

To sum up—

We must understand the long-range nature of the Soviet threat and meet it with courage and imagination;

We must continue to support the United Nations and the high purposes and principles for which it stands;

We must work closely with our allies and not try to go it alone;

We must demonstrate to the uncommitted nations of the world the enduring values of democracy.

If, as a nation, we follow this course, then we can face the future with confidence that freedom will prevail.

Alcoholic Beverages on Airplanes

EXTENSION OF REMARKS
OF
HON. EDWARD T. MILLER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. MILLER of Maryland. Mr. Speaker, I have received the following letter in behalf of legislation to prohibit the sale or gift of alcoholic beverages on airplanes being flown in the United States of America and throughout the world:

RISING SUN, MD., *April 10, 1956.*

DEAR MR. MILLER: I enclose petition against serving or giving alcoholic beverages on board airplanes and I believe everyone should sign this.

I appreciate your sending me the list of seeds, etc., our Government prepares for our use. And I wish to take this opportunity also to thank you for the CONGRESSIONAL RECORD as I have found it most interesting and I appreciate your kindness in sending it to me.

Very truly,

BERTHA M. TYSON.

P. S.: I'll appreciate your having this petition printed in the RECORD for others to see.

RISING SUN, MD., *March 15, 1956.*

We, the undersigned members of West Nottingham Presbyterian Church, Colora, Md., favor the Lane bill 7922, to prohibit sale or gift of alcoholic beverages on aeroplanes being flown in the United States of America and throughout the world.

Bertha M. Tyson, Sarah Greer, Mr. Calvert, Grace S. David, Mary C. Greer, Mrs. J. Otis Kennard, Lydia M. Cameron, Mrs. Joseph A. Gillespie, Louise M. Worthington, Miss Anna E. Garvin, Ella E. Tyson, Elizabeth B. K. Jones, Rising Sun, Md.; G. V. Morris, North East, Md., Marie L. Nichell, Port Deposit, Md.; Myrtle Hite, Rising Sun, Md.

Finish the Dam

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. HENDERSON. Mr. Speaker, I wish to commend to the House of Representatives an excellent editorial which appeared in the April 14 issue of the Cleveland Plain Dealer urging that the Congress provide necessary funds to resume the construction of the Dillon Dam on the Licking River in Muskingum County, Ohio. The importance of the completion of this project transcends even the vital concern of the area immediately affected since what is done or not done at Dillon will be felt for many years to come in southeastern Ohio and in the Ohio and Mississippi Basins.

The present controversy to which the editorial refers far exceeds the prominence it deserves when the relatively few individuals who would be affected adversely are considered. I should like to point out at this time that the Dillon Dam was authorized by the Congress in 1938. Arguments against it have been considered by the Congress and rejected repeatedly in the past as the impressive total of $9 million was appropriated for the project. Construction was interrupted during the Korean war and a few vocal opponents have seized upon the suspension of work to recommend that the Dillon Dam be abandoned and that the millions of dollars already spent be allowed to rust and erode in the Licking River Valley. The recommendation, unfounded as it is, becomes the more incredible if it is allowed to influence congressional action beyond passing consideration.

The so-called facts presented as reasons by the Dillon Dam's opponents have been labored, studied, and found insufficient in the past. To resurrect these long-bankrupt arguments and outright myths now is to persist in fomenting misunderstanding for the immediate purpose of delaying the action which, as we all know, must come.

The Cleveland Plain Dealer editorial is as follows:

FINISH THE DAM

Not since the chants and war whoops of the Tuscarawas Tribe reverberated up and down the Muskingum Valley has downstate Ohio been the source of such an uproar as is now being expended over the unfinished Dillon Dam.

The Plain Dealer's Ted Princiotto has ably presented various sides of the debate. Already $9 million—a substantial chunk of the taxpayers' funds—has been spent on this flood-control project. It is the final link in a series of 15 dams calculated to bottle up spring runoff in the Muskingum watershed.

There is no gainsaying the fact that the 14 dams previously built, dating back to 1938 originally, have converted a not-too-fruitful part of Ohio into a section offering fine vacation and recreation opportunities. And the flood-control aspects have worked admirably.

It would, of course, fit more into our frame of thinking if the State could somehow finish the project. Some $20 million worth of work still remains. But no such State funds are available.

We would far rather see Federal reclamation funds stay in these environs than go, say to some remote area like the Sudan where the Egyptians will benefit. For example, both the water and power inherent in the Aswan development will undoubtedly be used both to grow more cotton and to run cotton mills. Each would compete with the American economy. Rather, let's keep that money for home consumption.

It is unfortunate that some people would have to be displaced if the dam were completed, but in this modern age of big construction developments the intersts of the few cannot be allowed to block progress.

The public interest, in the largest sense, would be served by completion of Dillon Dam. But whatever the decision, something should be decided and decided now. Further dallying only threatens to make the major investment to date quite useless.

Eighth Anniversary of Israel Independence

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. FULTON. Mr. Speaker, the people of Israel are to be congratulated on this eighth anniversary of their independence. The road has been rough and rocky and even at times discouraging, but Israel is making great progress with a united people, and is known as one of the strongest friends of the United States among the democratic nations.

We people with friends and relatives in Israel wish to encourage them with a friendly pat on the back at this time, and reassure them that United States Secretary of State Dulles has stated repeatedly that the existence of the State of Israel is one of the basic premises of United States foreign policy.

We hope that in this period of tension, that the threats to Israel's survival will disappear, and that both sides may be able with United Nations assistance to work out agreements by which each may live in peace for the economic progress

and development of the Middle East, in which both the United States and Israel can be such key factors.

Our warm regards go to you at this significant anniversary time, and with our hearty congratulations to the people of Israel on their courage and devotion to the cause of freedom.

Freedom of Information

EXTENSION OF REMARKS
OF

HON. HOWARD H. BAKER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. BAKER. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include therein an address entitled "Freedom of Information," delivered by Mr. Guy Easterly, editor and publisher, LaFollette Press, LaFollette, Tenn., and the Advance Sentinel, Jellico, Tenn., before the National Editorial Association in Chandler, Ariz., January 21, 1956, and which I consider an excellent discussion of the subject:

Mr. Chairman, Governor McFarland, distinguished guests, ladies, and gentlemen of the National Editorial Association, freedom of information, freedom of the press, freedom to put one's thoughts into words and to print these words and distribute them as a story or an editorial to the people, is the right of the people to know—to know particularly what their Government is doing. This is a right of the people. Let's make that clear. It is not particularly the right of the press. The press are only guardians of that right for the people.

Not only is the business of our Government the business of the people, who have this right to know. But the business or doings of individuals, cooperatives, and corporations, insofar as their rights interlock and/or intermingle, or conflict, with the rights of individuals or families, is also public business and the people have the right to know how all this does, or will affect them.

This freedom of information is guaranteed, we believe, in the first amendment to the Constitution of the United States. It is further guaranteed and strengthened in the 5th and 14th amendments, having to do with due process, and by the 9th and 10th amendments, which set out that all powers not granted to the United States by the Constitution, nor prohibited by it to the several States, are reserved to the States or the people.

The fact of the suppression of information—information which the people have a right to know—is not new. It has existed from time immemorial.

Perhaps the first recorded case of news suppression was when Eve ate the apple and suppressed the news from God. Another case in point would be when Cain slew Abel and denied to his father, Abraham, that he knew the whereabouts of his brother.

They tell us that most freedom of information is at a cocktail party. They tell us further that the people who are most against suppression of news are women—if you'll submit that women are people.

The suppression of news, and the attempted suppression of news, is not new to weekly newspaper publishers. We have it with us always.

Attempts to suppress information of the Federal Government have been made since the administration of Thomas Jefferson, and one such attempt is brought to light and reported in the case of *Marbury* v. *Madison* in public law. From this legal action stemmed what we believe to be the first public records law. This law sets out that public officials must keep public records, and, further, that the public has a right to access to such records.

Two restrictions were placed in this law. We believe they are right and just. One restriction is that public demands to see public records must not disrupt the orderly operation of the public office. The second restriction is that access to such records may be limited to persons of "proper interest," or persons, we may say, who have more than an idle curiosity to examine such records.

But newspapers, as such, have no more right to examine and print from public records, nor to attend and report procedures of public meetings of legislatures, and cases in court, than any other citizen "of interest." To make this positive, we might say newspaper reporters have the same rights under the law as any individual "of interest."

Newspapers, however, are persons of "proper interest."

Newspaper reporters are persons of proper interest because they are the ears and eyes of the greater public which is interested in the doings and procedures of law and justice. Reporters observe, hear, see, and then write the information for the larger audience of proper interests which audience cannot attent all legislative meetings, nor sit for long hours in a courtroom, nor be on the scene of every disaster or wreck. Newspapers have bargained with their readers to keep them informed on affairs affecting their welfare and government.

Newspapers, by their very nature, then, are only agents of that larger public. They are the eyes, the ears, and if you please, the servant of those we serve.

It is a terrible thing to have a job that you can't complete.

It is a more terrible thing to have a job which you can never complete,, but which, theoretically, is a losing fight from start to finish.

But such is the job of those who spend their time in working for freedom of information.

The work (and I do not like to use the word "fight") for freedom of information is a continuing work. It is a fight that will never be won. There will always be suppression and attempts at suppression of information that rightfully belongs to the people, at Federal, State, county, and municipal levels.

Win one fight (although, we suppose, Governor McFarland, that you have no suppression of information here) in Arizona, and another is begun in Tennessee. Set some misguided public official right in Wisconsin and another bobs up in Texas with suppression of some information of which it is the right of the people—the very people who are paying his salary—to know.

It would be great news to tell you here that the work of this committee is done—that the suppression of public information will be no more. But that story can never be truthfully told. This evil we will have with us always.

This being true, the battle for freedom of information must go on. Each succeeding generation will fight this seemingly losing fight, and then throw the torch from failing hands to the next.

Be it theirs to hold that torch high. And be it the privilege of every weekly newspaper to carry on that fight—not for its own selfish interests, but for the right and good and welfare of the people we serve, and for the welfare of this whole nation. For—take away the voice of the newspapers and you take away the voice of freedom.

The work for freedom of information rightfully begins with the grassroots newspapers, the country newspapers, the "county" weeklies, if you please. If we allow little bureaucrats at home, in the smalltown government, who suppress information and only give the public such information as they see fit, these, rising in power and political influence, will become big bureaucrats in Washington, in Phoenix, in Nashville. And they will carry on their nefarious habits and work in high places. This right to full freedom of information would have far more chance of being, if all weekly newspapers knew their rights, and pressed them, fairly and courageously. Freedom of information would have far more chance of being, if weekly newspapers gave the people all the information they're entitled to, at all times and under all circumstances.

Despite what we have said, your FOI committee chairman believes he is conservative on this matter of freedom of information.

We are against trying accused criminals in the newspapers. We are against trying any lawsuit in the newspapers. We are against the wholesale dissemination of information, regardless of how it may affect the military or political welfare of our country. We are against the invasion of the privacy of the individual in any way. We do not defend irresponsible reporting. We do not condone the dragging into public notice the life of an individual who is not guilty of a crime. We believe some information, printed as such, may not be information at all. And yet, we would fight for the publication of any news matter of importance to the welfare of the community or public.

We believe the fight for freedom of information can be carried to ridiculous extremes. We believe it can be carried to the hurt, not only of the medium itself, but of the public—even to the losing of our medium's influence and importance in the welfare of the people and the Nation.

That we do not wish to see. That you do not want.

"Why don't you keep irresponsible reporters away?" Representative CLARE HOFFMAN, of Michigan, asked, when we appeared before the subcommittee of the Government Operations Committee of the House in Washington last December. To this question answer was made that the irresponsible reporter has the right, under the law, to see, to hear, to view, to write. It is guaranted under the first amendment.

But Congressman HOFFMAN had a point there. That point is that publishers must police their own operation. They must hire responsible reporters, and charge them that information must be reported objectively, fairly, accurately, and without malice or color.

We believe that fully 95 percent of all cases of suppression of information is due to personalities. The personality of the reporter or the public official. In most of these cases, we believe, the reporter is the malefactor.

Suppression of information by officials is chargeable to many other causes, of course. Honest mistakes cause some suppression. A case in point is the recent vital statistics misunderstanding in Topeka, Kans.

Under a rule in Kansas, births may be reported, but illegitimate births must not be reported. Following the publication of a list of births, some of which were of illegitimates, the record was withheld from reporters. We assume that the reporting of the illegitimate births were honest mistakes. We were told that at any rate.

Ignorant government officials suppress information. These do not necessarily willfully withhold information. They do not realize in many cases the national necessity for the people to know, or they have the wrong interpretation of certain rules.

Such we believe to be the case in the Civil Service Department of the Federal Government when it refuses to release the names of the top three candidates for postmasters.

We believe the same applies to the refusal of the Civil Service to give out salaries of its employees.

Bad government officials do suppress information willfully and maliciously. And this is one cause of suppression that we should fight day and night. And when this kind of official appears, you can bet your bottom dollar he is the same bureaucrat we spoke of a minute ago. He began this practice in his hometown—at the grassroots. He retained this passion for suppression right on up as his political power and prestige increased. He grew up feeling that public information is none of the people's business.

Government officials are still the servants, or at least the employees of the people. We hire them. And we would not hire a worker and not have an idea of what wages we'd pay them. Should not the people (who hire them) know what salaries they pay their sheriff, their coroner, their court clerks, their mayors, their councilmen, their judges, their attorneys general? Shouldn't they know what they're paying their employees of the Federal Government? They're paying the freight in taxes. We believe those of interest have the right to know.

My Presbyterian pastor and a Presbyterian elder put at me to accompany them to presbytery in a distant city for 2 or 3 days. The elder was a sales tax official of the State. So, I was helping to pay his salary also.

"Certainly," they said, "if we can go, you can."

I reminded them that it was far easier for them to go than for me to go. I clinched my point by reciting to them that they could go and their salaries would go right on. For that reason I must stay at home and work so that they could be paid when payday rolled around. I won my point.

We have no quarrel with departments of the Federal Government which handle confidential information. We realize there is some information which cannot be made public, consistent with the welfare and security of the Nation. Freedom of information would be useless if we had no free Nation. We would not, by any manner or means, endanger our freedom, even to break the greatest story of the decade, the generation, or the century. We believe the President and Defense Department, especially, have "in process" information which should not be made public. We believe the same applies to the State and Justice Departments.

The work for freedom of information, to us then, represents a reasonable responsibleness to the people, whose right it is really to know. And this work is the work of every weekly newspaper, as well as the work of every small and large daily newspaper. But our fight (of weekly newspapers) is at the grassroots, the most important. It is in the small country towns and cities, where America really lives and where the people really understand freedom and liberty, that liberty may be saved or lost for our Nation.

But our fight also must be in Washington because rural America is not the distant hinterland it once was. The Federal Government is gradually touching more lives in every village and town.

A few years ago the Federal Government was something that came into our east Tennessee mountains and tore up our stills, or a man who came to bring our letter mail by rural free delivery.

Today the long fingers of the Federal Government reach us in many ways. The average weekly newspaper has to deal with the Federal Government in 10 to 15, or more, different departments, bureaus, and agencies.

Weekly newspapers today come not only in close touch with their local county and city government, but with the larger State government and with the sprawling Federal Government. We have its Federal Bureau of Investigation, its post offices, its national banks, its Census Bureau, its air bases, its game wardens, its recruiting offices, its Internal Revenue Bureau, its Selective Service System, its alcohol tax units, its Tennessee Valley Authority, its Oak Ridge, and numerous others.

In closing, let us say that the work for freedom of information is just begun. It must be aroused on our home front—in the small towns and cities—at the grassroots. You weekly newspaper publishers are charged with the work. Remembering that "eternal vigilance is the price of liberty" still—let us go forward, ever working for the people, whose right to know, we but represent.

The Small-Business Man

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. KEARNS. Mr. Speaker and distinguished colleagues, I would like to remind the Congress that I represent an important congressional district in which there are numerous small business concerns. As we all know, the small-business man is the backbone of the American industrial system of free enterprise. It is the small-business man that is the very core of our economic life today—the man upon whom we have depended during the past century to elevate our Nation to a position where we now stand foremost among the earth's free republics.

Today, Mr. Speaker, quite understandably the small-business men of America are strongly concerned about their participation in the atomic-energy program on a prime contract level in the present race to develop peaceful uses of atomic energy. One of the very first spokesmen for small business to focus congressional attention on current problems of the small-business man was Mr. K. W. Van Eman, vice president of the Skinner Engine Co., of Erie, Pa.

Significantly, the Skinner Engine Co. has rendered outstanding service to our Nation since 1868 and is the builder of the world's largest marine uniflow engines. This great small-business enterprise has made outstanding contributions to the military and industrial life of our Nation now for more than 88 years.

In his testimony before the Joint Committee on Atomic Energy on March 5, Mr. Van Eman made crystal clear the need for immediate action by Congress and the Atomic Energy Commission to move forward with all possible speed toward the application of nuclear power for merchant marine surface vessels. With all the emphasis at his command, Mr. Van Eman also urged the Congress to assist small business in realining our program for atomic power plants and insisted that small business be permitted to join the parade of progress in the development of peaceful uses of man's most destructive force.

However, Mr. Speaker, during the course of his testimony Mr. Van Eman also issued an important warning to the Congress, and his admonition should not go unheeded.

Listen to his sage advice which I quote:

(1) The arrival of nuclear power is making obsolete not a minor industry but a very large industry in the United States today.

(2) The use of nuclear power will mean the rebuilding of our merchant fleet due to technological changes, age, and obsolescence.

(3) Small business in the maritime and power plant industry will die on the vine because of lack of help and assistance to realine our program for atomic power plants and join in the progress parade of the atomic field. In other words, as we see it, we are in the living or dying era so to speak, and will perish unless the doors are open to us.

Referring to the strategic vessels on our Great Lakes, Mr. Van Eman also pointed out that: "207 larger vessels on the Great Lakes are over 35 years of age. It has been the custom and accepted practice in the maritime industry since its inception, to engage in prototype development. Herein lies the key to small business participation in the field of atomic development along commercial lines."

Much to the point, Mr. Van Eman further warned the Congress of the Soviet atomic race and quoted Mr. Kurchatov who heads the Soviet atomic development. He pointed out that an atomic-powered ice breaker is scheduled to be built before 1960 that is designed so that it would be refueled only once every 2 or 3 years.

In conclusion, Mr. Speaker, let me say that I was gratified to learn that our distinguished colleague from Connecticut, the Honorable JAMES T. PATTERSON, a member of the Joint Committee on Atomic Energy and the House Armed Services Committee, has also focused public attention on the problems now confronting small business in the current atomic energy peacetime program. I have read with great interest the article written by Congressman PATTERSON that appears in the current issue of the authoritative Washington Atomic Energy Report. So significant is this article by Congressman PATTERSON that I wish to here include it in the CONGRESSIONAL RECORD:

THE SMALL-BUSINESS MAN AND THE PEACETIME ATOMIC ENERGY PROGRAM

(By JAMES T. PATTERSON, Representative in Congress from Connecticut and member of the Joint Atomic Energy Committee; written expressly for Washington Atomic Energy Report)

Arising from the new and glorious age in which man is transforming the most destructive force of nature into the most powerful source of energy for peaceful uses, is the problem of wider participation of American small-business men in the atomic energy program. Day by day, small-business men of America are intensifying their demands that our Government permit them to enter the current race to develop peaceful uses of the atom. We in Government cannot ignore these demands; for it was the small-business men who struggled unceasingly to elevate America to its present and unprecedented sphere of greatness.

As Representative of a congressional district that is largely industrial—and one in which small-business concerns abound—I am strongly concerned with the welfare of small business. Their economic welfare determines

the livelihood of thousands upon thousands of residents of the Naugatuck Valley of Connecticut that I have represented in Congress for almost 10 years. Of equal concern to me, of course, is the welfare of our entire Nation.

Participation of small business in developing peaceful uses of atomic energy gives rise to two fundamental questions: (1) Shall we liberalize present security policies of the Atomic Energy Commission, to facilitate the participation of small business, or (2) shall we continue to rely upon a comparatively small number of companies to carry on the peacetime program?

Concerning the question of liberalizing present security policies of the AEC, it is noteworthy that during World War II when a "crash" program was needed to develop atomic weapons, there was imperative need for top secrecy and utilization of a limited number of individuals to participate in the "Manhattan Project." Also, there was need to call upon our largest industries, for they were at the time better prepared to participate in such a "crash" program. However, the situation is somewhat different today with respect to peaceful uses of the atom.

For example, there is no longer any secrecy about the fundamentals of atomic energy. The basic theory was in fact known as early as 1906 when Albert Einstein wrote his celebrated theory: $E=MC^2$. Today the average high school student knows that controlled fission from a properly sized mass of uranium will produce almost incredible heat and energy. In fact, numerous books have been written for high school students since 1945 that explain in detail the fundamentals of atomic energy and reactors.

Top secrecy must be maintained with regard to the further development of atomic weapons. But in the field of peaceful uses of the atom, such secrecy is no longer necessary. It is my conviction that only through participation of small business in developing peaceful uses of the atom can the manifold applications of the atom be ultimately realized. To me it is obvious that the manifold peaceful applications of atomic energy cannot be enjoyed in their greatest extent so long as we continue to rely upon a comparatively small number of companies to carry forward the program of development. Further, in my opinion, many small-business concerns will be doomed if they are denied participation in developing peaceful uses of the atom. This feeling is shared by many small-business men.

Consequently, I believe that we must reexamine our policies and set a goal that will provide for early participation of small-business men in the program for development of peaceful uses of the atom.

Prospects for Peace

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to include the summary of a speech delivered by my friend, Dr. Joseph F. Thorning, before the Kiwanis International Club in Frederick, Md. Presiding on this occasion was the Honorable John Durr, mayor of Frederick, and Mr. Glenn Main, president of the Kiwanis Club. Earlier this year, Dr. Thorning served the United States as a member of the special diplomatic mission appointed by President Dwight D. Eisenhower and Secretary of State John Foster Dulles for the inauguration of Brazilian President Juscelino Kubitschek. Dr. Thorning was also one of the principal North American delegates and speakers at the International Congress on Christian Culture for the Peace of the World which took place in the Dominican Republic during the first week of March. Consequently, he thinks and speaks as a sincere champion of a true peace, "the tranquillity of order."

Speech of Dr. Joseph F. Thorning, associate editor of World Affairs and pastor of St. Joseph's Church, Carrollton Manor, Md.:

If peace consists in "the tranquillity of order," the prospects for such a peace, with security for all concerned, would quickly be improved by the following Soviet deeds:

1. Permission for 1 million Soviet citizens to travel, freely, outside the borders of the Soviet Union;

2. The issuance of 1 million visas to private citizens of France, the United Kingdom, the Scandinavian countries, Italy, Turkey, the Philippine Republic, the Republic of Korea, Vietnam, Spain, Portugal, the American Republics, and other independent nations to visit all the Socialist Republics during the coming summer months;

3. Prompt, effective fulfillment of all the agreements mentioned in the United States Senate Judiciary Subcommittee report entitled "Soviet Political Treaties and Violations" (84th Cong., 1st sess., Government Printing Office, Washington: 1955);

4. Free elections, supervised by the United Nations, in Czechoslovakia, Poland, Hungary, Bulgaria, Rumania, East Germany, China, the Ukraine, and Georgia;

5. Immediate suppression of arms shipments to Egypt and other countries of the Middle East;

6. Public, jury trials, open to uncensored reporting by radio and newspaper correspondents, of the most important accomplices of the onetime czar of all the Russias, Josef Stalin, now denounced by the Soviet hierarchy as a vicious butcher, although formerly described by no less a person than an American President, still living, as a likable person;

7. Genuine abolition of all engines of Soviet subversion in such nations as are still independent of Moscow;

8. Arrangements for a 1-year tour of inspection of all temples of religion in the U. S. S. R. by an international commission of 30 Protestant, Jewish, and Catholic scholars with a view to the preparation of a comprehensive, fair report about the Soviet attitude toward God and the conditions which affect the exercise of religious and civil rights.

Until action, not mere lipservice, is noticeable along these lines, Nikita Khrushchev and Nikolai Bulganin, like Josef Stalin and Lavrenti Beria, must be regarded as the lord high executioners, after torture, of human society. Although Khrushchev and Bulganin, upon occasion, know how to masquerade as rowdy clowns, they are, if anything, more deadly than Stalin and Beria. To imagine that there has been any change of strategy on the part of the despots of the Kremlin is to confuse overall planning with local and ephemeral tactics. The international gangsters are still at large; they are no longer worried about possible arrest or punishment by an international FBI; they are more active and more successful than ever.

What is the evidence? Never before in the history of the world have 500 million people been enslaved within 10 years. This is a fact as unprecedented as it is inexcusable. Khrushchev and Bulganin are making Adolf Hitler and Benito Mussolini look like amateurs. The Red Fascists in the Soviet Union are the Hitlerites of the contemporary world. The Neo-Nazis in the Kremlin can best be understood in their own words. Here is the description which Mr. Khrushchev gave in India and Burma about the British people who are soon to be his hosts:

"They are the dirty capitalist warmongers who have been sucking your blood for centuries and who will be wiped out by our peace-loving peoples."

What then is the meaning of the so-called new Soviet look? It is simply another adroit effort to soften us up for the Sunday punch. The Soviet tyrants need time, desperately. They need some years to consolidate their gains. Like the Fascists, after the conquest of Ethiopia, they are assimilating a huge expanse of territory and hundreds of millions of human beings. The present pause is digestive.

Furthermore, the Soviet chieftains are now convinced that it will be easier to work through their fellow-traveling dupes, the Marxian Socialists. Why should they wage war when all the plums are being placed in their laps by Soviet sympathizers? Once their current positions shall have been established to their own satisfaction and in their good time, the world criminals in the Kremlin will confront the rest of humanity with an ultimatim: "Surrender or die an atomic death." And, sad to relate, there are already voices in our own beloved land raised to suggest that slavery is better than annihilation. One hope remains: Under God, to recognize that this is the Soviet conspiracy and that there will be no peace until the Soviet conspirators shall have been exterminated.

Low-Yield Atomic Weapons: A New Military Dimension

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 10, 1956

Mr. REUSS. Mr. Speaker, an article by Arthur T. Hadley in the current Reporter magazine contains a thoughtful and provocative study of the tactical use of atomic weapons. In considering our national defense plans, no one can escape some hard thinking on the revolutionary innovations in weapons that Mr. Hadley's article touches upon.

The article follows:

LOW-YIELD ATOMIC WEAPONS: A NEW MILITARY DIMENSION

On Saturday, March 3, the Joint Chiefs of Staff flew out of Washington secretly, to meet for a week at Ramey Air Force Base in Puerto Rico. The chiefs had gone into seclusion to give the United States military policy its most searching review since 1949.

The nature of this review, curiously, had been forced upon them by the superabundance of atomic military power that had become available to both the United States and the Soviets. The most pressing problem was not how to fight bigger and better wars. Instead, according to reports that have since leaked out, they were at last facing up to the question: What range of atomic weapons can the Nation use in this age of hydrogen-bomb plenty without risking total destruction? Has the growing power of the atom made it impossible to fight limited wars to back up specific and limited objectives of our foreign policy?

The potential of unlimited war has become so fantastic that it baffles even the military mind. Today the biggest fusion bomb (60 megatons) is 3,000 times more powerful than the atomic bomb (20 kilotons) dropped on Hiroshima. It represents as much increase in power over the Hiroshima bomb as that bomb did over the TNT bomb load of a B–29.

Even the atomic weaponry so far produced by Pentagon planners with a view to a limited war makes the word "limited" more than questionable. Last fall, during Exercise Sagebrush in Louisiana, the Air Force tested simulated (theoretical) 20-kiloton atomic weapons, which are toward the low end of the present destructive scale. They are at present standard Air Force tactical weapons for use in and around the battlefield and against enemy airfields. About 70 of these "bombs" were dropped on Louisiana in 1 day. The umpires ruled that all life had "ceased to exist" in Louisiana. For countries the size of Louisiana such as Greece or Portugal destruction on this scale could hardly be called limited war.

At the heavy end of the atomic destructive scale are the 60-megaton fusion weapons. These weapons are ready to be loaded into United States bombers today—they are probably ready to be loaded into Soviet bombers, too. Just one of these 60-megaton fusion weapons strategically placed could destroy all life on the British Isles, a fact brought sharply home to Sir Winston Churchill when he received data on the second United States hydrogen-bomb test in the Pacific. His moving speeches toward the end of his career as Prime Minister on the world's need for atomic peace were undoubtedly born of this knowledge. In an address to the House of Commons on March 1, 1955, he said that with the coming of the hydrogen bomb, "* * * the entire foundation of human affairs was revolutionized and mankind placed in a situation both measureless and laden with doom."

Moreover, the destructiveness of megaton warfare can affect friends or neutrals as well as enemies. Soviet atomic production is centered around Lake Baikal in southeast Siberia. From there the prevailing winds blow south. In an all-out war the United States would bomb the Baikal area with megaton fusion weapons. In the opinion of Pentagon experts, radioactive fallout from the presently planned attack would cause India and Burma to cease to exist as population centers. This is the price of unlimited war. The Pentagon believes that the Russians made the nature of such a war quite clear to Burmese Premier U Nu during his recent visit.

Although the tactical atomic weapons we now have in Europe for NATO are of a much smaller variety, ranging from 15 to 20 kilotons, they are scarcely suited for limited warfare either. The Army's 280-millimeter atomic cannon lacks mobility and range. The Air Force's Matador is just an improved German buzz bomb, too slow and inaccurate. The Army's Honest John rocket has the advantage of greater mobility but still packs too powerful an atomic explosion. The Army will have to rely on it until other, more manageable weapons are ready. Jet fighters are so fast their pilots cannot spot the target with enough accuracy, and their large fixed bases are wide open to enemy atomic attack. Clearly, present American atomic weapons are too imprecise and too destructive to be much use in a really "limited" war.

DOMESTICATED MILITARY ATOM

To destroy enemy targets without knocking out an area the size of Louisiana, the military is currently developing atomic weapons of from 4 to 10 kilotons' power for battlefield use. These are the low-yield atomic weapons in which all the fissionable material and gadgetry neceessary to produce an atomic explosion is packed into a sphere about the size of a lumpy softball.

The new low-yield atomic weapons are not yet available. They have been designed, and their atomic cores have been test fired in Nevada. Their prototypes indicate that in them the military atom has finally been domesticated. But how many will be built, and how soon, remain controversial questions among the military planners.

These new low-yield atomic weapons are designed to be used primarily against enemy troops on the battlefield. They are accurate and highly mobile, and their explosive power is distinctly limited. Furthermore, there is almost no fallout from them since they are engineered not to suck up a great deal of dust and debris from the ground into a radioactive cloud. Troops could battle through a city the size of Worcester, Mass., or Des Moines, Iowa, using such weapons, and large parts of the city would survive.

So far these low-yield weapons have been developed by the Army with severely limited funds. But if the present program is not cut back some of them could be in production by next January.

The most interesting of the group is the Sidewinder. This is a hand-carried Army atomic missile, rather like an oversized bazooka, that can be used by an infantry squad. The Moritzer, a completely mobile mortar mounted on a light tank chassis and firing an atomic shell, provides slightly heavier atomic fire support. Finally, for really hit-and-run "sky cavalry" operation the Army has designed a helicopter-mounted 155-mm. recoilless rifle firing an atomic shell.

In the dreams of some military planners, the possibilities for limited police action opened up by these new weapons are infinite. Suppose Iran were invaded by Free Kurdish forces backed by the Russians. Joint staff planners in the Pentagon estimate that one mechanized cavalry regiment with light air support and low-yield weapons could check an advance into Iran.

To do the job without low-yield weapons would require about 10 conventional infantry divisions. By the time these were mobilized and shipped to Iran by sea all would be over but the shouting—and the shouts would be in Free Kurdish.

The increased power of low-yield weapons reduces the number of men needed to a small ready force that could be moved by air. These, it, is believed, could permit the United States to meet localized aggression rapidly and successfully.

TWO-BILLION-DOLLAR FIRE BRIGADE

But what would these weapons cost? Counting the cost is not made easier by the fact that low-yield weapons make many of today's tactical weapons obsolete. Military rivalry comes into play—no service is inclined to admit it has spent or is spending large sums on tactical weapons that are now of secondary importance. The official opposition to the Army's development of low-yield weapons has come mainly from SAC, which feared its own weapons would be outmoded, and from the civilian brass in the Pentagon, which feared the change would increase the defense budget.

Various official groups have wrestled with the cost of creating a force able to fight limited atomic wars. Their estimates vary according to how much they make do with old equipment. During his last months at the White House, Nelson Rockefeller had an all-government team of experts probe the problem. Parts of Army G–3 as well as the office of the Chief of Naval Operations have worked up estimates. One recent staff study put the creation and maintenance of a fire brigade for limited atomic war at $2 billion a year more than the country now spends on defense.

According to this estimate, the $2 billion would be spent in three broad areas: military units, strategic transport and special weapons, and technical equipment. In the category of military units, three mobile air task forces of between eleven thousand and fifteen thousand men each are envisaged. The increased firepower of atomic weapons would permit these task forces to employ fewer men than the conventional 18,000-man division while doing a bigger job. Just how many fewer remains to be determined on maneuvers—with much of the testing being done by the 101st Airborne Division, recently remodeled as an 11,500-man unit. Of the 3 task forces, 1 would be based in the Middle East, and would be capable of acting in Europe also; 1 would be in the Far East; and 1 would be held in America as a replacement force. Unlike the present airborne division or the remodeled 101st, which lack mobility once they have parachuted in, the new forces would be modeled on highly mobile sky cavalry tested by the Army during Sage Brush.

NEED FOR MOBILITY

This desire for increased mobility is a source of continuing friction between the Army and the Air Force. The Air Force, which now provides the transports, has resisted spending its dollars on planes designed to move troops and supplies about the battlefield. Tactical transport planes have been cut back drastically at a time when the rest of the Air Force is expanding. As a result, the Army now has less tactical mobility than at the end of the Korean War.

Planes needed to give the task forces aerial mobility on the battlefield are not expensive. While the standard long-range Air Force transport (the C–124, which carries 200 men and equipment costs $1.5 million, a 12-man assault transport costs only $60,000. Creating and maintaining the three task forces, it is estimated, would require a total of $900 million a year. This figure is based on such known constants as $5,000 to maintain one airborne soldier 1 year, $280 to operate a helicopter or assault plane for an hour, and standard vehicle operating costs.

To move these mobile task forces long distances about the globe would require a great increase in strategic transport for resupply. Last fall, after 6 weeks of frenetic planning, the Air Force was just able to scrape together enough strategic air transport to move one Army regiment from the United States to Japan. A global airlift would have to be created that could move one of these task forces fully equipped. After the initial move, all but the most critical items of resupply would be brought in by sea. Inside the limited-war area, supplies would be handled by the task force's own land and air vehicles.

With the average strategic transport plane costing $1.2 million to buy and $350 an hour to fly, $700 million a year should produce the necessary long-range air mobility. For sea supply about 30 fast (30-knot) transports would be needed, possibly some of them atomic-powered. The annual cost of this sea force has been estimated at around $250 million, bringing the yearly total strategic transport cost to $950 million.

Special weapons and equipment account for the remaining $150 million of the estimated $2 billion. It is said that building the new low-yield atomic weapons in sufficient numbers would require $75 million a year, including the cost of the fissionable material. For the low-yield weapons to be used with maximum effect new technical equipment is necessary. The chief item planned is an electronic battlefield-surveillance system now being designed that uses infrared television and radar to maintain a continuous watch on the enemy's battle area—a great help in selecting the best atomic target.

Two billion dollars is a substantial sum to add to the nnual cost of the cold war, especially at a time when foreign aid and other costs are climbing. Yet by creating the capability to wage limited atomic war, the

$2 billion could add a whole new dimension to our military strategy. It could help restore to our foreign policy a degree of flexibility that is sadly needed.

A Bill To Be Vetoed

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks, I include in the RECORD the following editorial appearing in the New York Times entitled "A Bill To Be Vetoed":

It would appear that the Democratic leadership in Congress has succeeded, with the stalwart assistance of a handful of Midwest Republicans, in accomplishing what it set out to accomplish with respect to farm legislation. It has succeeded in presenting President Eisenhower with a bill which, in the light of his known views on this question, it seems clear he has no choice but to veto.

Mr. Eisenhower called for stepped-up action on the farm problem in the very first week of the new year in his state of the Union message. Four days later, on January 9, he followed this with a special message on agriculture containing his specific recommendations. The heart of the program was his double-barreled soil bank proposal in which were combined a new and more vigorous attack on the surplus program and a strengthening of the conservation side of the long-term farm program. This legislative proposal, it is estimated, would have put from $1,200 to $1,350 millions in the hands of the Nation's farmers in 1956 alone.

Time after time in his farm message the President stressed the importance of speed in putting this measure on the statute books, so that the greatest possible number of farmers might take advantage of it before their planting season began. "Remedies," he said, "are needed now, and it is up to the administration and the Congress to provide them swiftly." And again, "I urge the Congress to approve this program with the least possible delay so that a significant part of the desired 25 million acres can come into the program in 1956." And the concluding words of his message were: "Again I urge upon the Congress the need for swift legislative action, on these recommendations in the interest of our farm people, in the interest of every American citizen."

There is no good reason why legislation containing the soil bank proposal could not have become law at least as early as March 1. In the first place, there has been no opposition in either House to the soil bank plan. In the second place, the House Agricultural Committee did not even have to prepare a farm bill, since its own contribution—its standard proposal for high, rigid price supports—had been passed during the first session of the present Congress.

If the opposition leadership had pursued this course it would have meant sharing credit with the Administration for voting aid to the farmer. It would have meant taking the farm problem out of politics and dealing with it at the economic level. And this was a challenge—coming, as it did in an election year—that was just too big for the politicians to face up to. So what happened?

First, the Senate Committee on Agriculture tried to sabotage the measure by writing into it a provision rejecting flexible price supports—the key to the whole administration farm program—in favor of high, rigid supports. When that provision was knocked out in a clearcut fight on the Senate floor the opposition shifted its tactics. By a shocking series of alliances of convenience it succeeded in achieving by indirection what it hadn't been able to achieve by more forthright action. It loaded the measure down with amendments calculated to nullify the purposes of the legislation just as effectively as it would have been nullified by the provision for high, rigid price supports. Then, just to guard against the possibility that the wounds inflicted on the Senate floor might not prove fatal—that the President might sign the bill even in the mutilated form in which it came before them—the Members of the Senate-House Conference Committee, in a final bellicose gesture, elected to reinstate high, rigid supports, just to make sure.

There is still a possibility that Congress will have one more opportunity to demonstrate that it is interested in aiding the farmer, and not merely preventing the administration from doing so. If the President vetoes the present bill it may be given a chance to vote on title II (the soil bank) separately, in the confident expectation that such a measure would receive the blessings of the White House. We do not see, however, how Mr. Eisenhower can conscientiously lend his signature to the caricature of his proposals that Congress, in its reckless effrontery, has seen fit to give him.

Eighth Anniversary of the Independence of Israel

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following letter which I wrote on April 9 to Mr. DeVere Kostoff, chairman of the Committee for the Celebration of Israel Independence Day in Saginaw, Mich., in connection with the eighth anniversary of the independence of Israel which was observed there last Thursday, April 12:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., April 9, 1956.

Mr. DEVERE KOSTOFF,
Chairman, Independence Day Committee, Temple B'nai Israel, Saginaw, Mich.

DEAR MR. KOSTOFF: I take pleasure in replying to your letter of April 5 in connection with the celebration of Israel Independence Day by the Saginaw Jewish community.

I have had occasion in the past to express to my Jewish friends in Saginaw my own feelings with respect to the question of Israel. It is, therefore, a real pleasure to reaffirm my own feelings which are to the effect that all freedom-loving people in this country and throughout the world should rejoice at this passage of another milestone in Israel's brief history of independence. I am confident that our own Government strongly shares this feeling and is making every effort to bring peace and security to the Middle East so that Israel may turn her efforts from defense to peaceful ends.

The continued free existence of Israel is a "must" in any consideration of the problems of this part of the world. Any negotiations with the opposing sides must accept this fact as a foregone conclusion—it should not be a subject for international discussion. If our position in this matter is made sufficiently clear to the Arab leaders, I hope that other differences can be ironed out providing that both sides are prepared to make honorable concessions for the sake of mutual peace.

The national security of this country would be imperiled were Israel to be defeated and overrun by her enemies. I am confident that the administration realizes this. I promise you that my own work on the House Foreign Affairs Committee will be guided along these lines.

With congratulations and best wishes to all in attendance, I remain

Sincerely yours,

ALVIN M. BENTLEY,
Member of Congress.

Constitution for the State of Alaska

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. BARTLETT. Mr. Speaker, on April 24 the citizens of Alaska will go to the polls to vote in their primary election. At that time they will have opportunity to accept the proposed constitution for the future State of Alaska. In this connection I desire to call to the attention of the Members of Congress an editorial which appeared on April 5 in the Seattle (Wash.) Times:

ALASKA WILL BE WELL PREPARED WHEN STATEHOOD FINALLY COMES

This April is an important month for citizens of Alaska. On the 24th, at the territorial primary election, the voters will ballot on ratification of a proposed constitution, to become effective when Alaska becomes a State. If the constitution is approved, the northern Territory will be in the same status of preparation for statehood as Hawaii, which adopted its constitution several years ago.

The constitution drafted by delegates to the State constitutional convention is, by general agreement, an excellent document. Its framers profited by the experience of many States whose constitutions were written long ago, when different conditions prevailed.

Though patched up by amendments, these venerable instruments still contain defects and anachronisms which, in many instances, could best be corrected by starting anew, from scratch, and drafting an entirely new basic State law, more applicable to the times. When and if Alaska attains statehood, it will have a streamlined State government which other States could well envy.

This has been attested by acknowledged authorities on the subject. The Alaska constitutional convention sought the advice of a corps of 15 expert consultants on government, including the assistant director of the National Municipal League of New York, an executive of a professional public administration service firm from Chicago and a professor of State government at Louisiana State University. The latter three agreed that the document drawn up by the delegates comes closer to "carrying out the pattern of separation of powers" laid down by the Nation's Founding Fathers than any State constitution now in force.

In voting on ratification of the proposed constitution, Alaskans will have two other propositions before them. They will vote on an old, highly controversial question and decide whether a clause prohibiting the use of fish traps in Alaska waters shall be included in the constitution. They will vote also on whether the Territory should follow the precedent set by seven of the States that were denied statehood overlong, as their citizens believed.

Thus the territorial voters will determine April 24 whether they will elect 2 Senators and 1 Representative in advance of the granting of statehood, and send them to Washington, D. C., as accredited Representatives of the State to be in Congress. It is said that each of the 7 States that adopted this procedure gained statehood within 2 years. Alaskans hope that by resorting to this dramatic gesture they, too, may expedite their own admission to the Union as a State.

Alaska citizens have not been unanimous on the question of early statehood, by any means; but some influential residents of the Territory formerly in opposition have been converted now to the statehood ranks. In any case, the decision cannot be made in Alaska, but in Congress. Meanwhile, adoption of the constitution would seem to be the part of wisdom and foresight. That will place the Territory in a position to function as a State, when Congress gives the nod, without further long delay.

The President Says He "Believes in Treating River Valleys as a Whole Thing"—His Words and Actions Sometimes Differ

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. EVINS. Mr. Speaker, as the President signed the bill for the upper Colorado River storage project, he announced again that "treating river valleys as a whole thing" is something he "believes in." The words of the President are encouraging but some of his actions and deeds differ sharply from the words he expresses. I am reminded, of course, of his many friendly and favorable expressions with reference to the Tennessee Valley Authority, one of which has become famous—that TVA, under his administration, would be operated and maintained at maximum efficiency. We all know, Democrats and Republicans alike, that the President, the Budget Bureau and his administration has whittled away at TVA appropriations and endeavored to cripple TVA operations on every hand. The President's words are sometimes inspiring but his deeds, at least with respect to TVA, are the dagger deeds of a deadly enemy. The President's recent expression of his belief in treating river valleys as a whole causes some to wonder whether his belief applies only to the Colorado River rather than the Tennessee.

In this connection, Mr. Speaker, I insert in the CONGRESSIONAL RECORD an excellent article by the distinguished columnist, Thomas L. Stokes, entitled "Word and Action Sometimes Differ":

WORD AND ACTION SOMETIMES DIFFER—EISENHOWER O. K. OF COLORADO RIVER BILL VIEWED AS RUNNING COUNTER TO POLICY

It's easy to understand how our people can be fooled about what goes on here. Often there's a difference in what is said about policy and what is actually done.

An example is what President Eisenhower said at Augusta, Ga., when he signed into law the bill recently passed by Congress for the mammoth upper Colorado River storage project to be developed by the Federal Government.

This, he said, "represents something I believe in." It follows his idea, he explained, of "treating river valleys as a whole thing—it goes from top to bottom—it recognizes that one thing is certainly true—water is getting to be one of our most valuable resources."

Such an aim first was expressed half a century ago by President Theodore Roosevelt. He told Congress in his first message of the need for great storage works to equalize the flow of streams which, he said, were too big to be undertaken by private interests, as is the case with the Colorado River project. In a later message to Congress, Theodore Roosevelt advocated integrated public development of our river systems for navigation, flood control, reclamation, and production of electric power.

It was not until many years later that his vision began to come true in great public projects—Boulder Canyon Dam in Nevada during the Hoover administration, later renamed Hoover Dam, and, in the Roosevelt and Truman administrations, a whole bevy of giant projects—TVA in the South, Bonneville in Oregon, Grand Coulee in Washington, Shasta in California, Hungry Horse in Montana, and so on.

But, if President Eisenhower believes in "treating river valleys as a whole thing," he either has not told the responsible officials in his administration or they have not followed his instructions. For, until the upper Colorado, in which special factors are involved, the administration's policy had been contrary to "treating river valleys as a whole thing." That's why conservationists have so bitterly attacked the administration policy.

In letter or spirit the principle now espoused by the President has been violated in numerous instances. Perhaps the most graphic illustration is in the case of another great river system like the Colorado—the Columbia, which spans our Pacific Northwest. Both Bonneville and Grand Coulee dams are on it. When built in the Franklin D. Roosevelt administration they were envisaged as part of a series to develop the Columbia system from "top to bottom." A grand plan for unified and integrated development of the Columbia Basin was completed by the Army Engineer Corps in 1950 after Bonneville and Grand Coulee were built.

But the Eisenhower administration has scrapped this in the so-called partnership of Federal Government with private utilities proclaimed by President Eisenhower in his 1952 campaign speech at Seattle and faithfully executed by Secretary of Interior Douglas McKay.

This violation of treating river valleys as a whole thing began at Hells Canyon on the Snake River, a Columbia tributary, along the Oregon-Idaho border. The Army engineers had recommended a high dam there to be built by the Federal Government to utilize the full potential of the river and fit Hells Canyon most effectively into the Columbia River plan. But Secretary McKay stopped this. He withdrew an application for a license for Federal development submitted by the Interior Department in the Truman administration to the Federal Power Commission to carry out the Army engineer plan. That opened the way for a private power company, Idaho Power, to put in its bid to build, instead, three small dams, which subsequently was granted by the FPC. This would mean piecemeal development that would throw the whole Army engineer plan askew.

Though this was represented as partnership with a local power company, that came to be a joke around here. For Idaho Power stock is owned mostly in the East, and stockholders were, in fact, holding their annual meeting at Augusta, Maine, the day that Secretary McKay opened the way for them to cut in on Hells Canyon by withdrawing the application for a license to carry out the Army engineer plan. In turn, this discarding of the Army engineer plan at Hells Canyon led to other private utility companies coming forward with plans for small partnership dams at other points in the Columbia system. That, if carried through, would prevent the building of larger dams called for by the Army engineers. It can only be stopped through a suit now pending in the courts brought by the Hells Canyon Association to invalidate the license of the Idaho Power Co., or by Congress acting on bills which have been bottled up.

Thus far the utilities have been successful in fighting the public development of the Columbia as projected by the Army engineers and are making a mockery out of the Eisenhower theory of treating river valleys as a whole thing. In the case of the upper Colorado, the utilities were not interested, as this is not to be utilized for power on the some scope and does not offer the rich profits of the Columbia, and so they were content to let the Government develop it.

People of the 15th District Express Their Views on Major Issues

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. McDONOUGH. Mr. Speaker, I recently requested the people of my district to share their opinions with me on several of the vital and important issues under consideration by Congress. The response and interest in this questionnaire which was sent to all sections of the 15th District and to people in all types of business and professions as well as to wage-earners, housewives, and those on retirement was an amazing indication of the personal interest the people of the 15th District have in these major issues.

The great response to my questionnaire was an example of government of the people, by the people, and for the people, and convinced me that the people back home are seriously thinking and want to participate in the affairs of good government by expressing their opinions on these vital issues.

It was very encouraging to me to have this widespread opinion from the people of my district on these vital issues. In many cases I not only received the answers to the questions submitted, but additional opinions on many other subjects.

The satisfaction and gratification that I have received from the replies to my questionnaire is that the replies of the majority have confirmed my opinion and belief on these issues, and in the case of rigid or flexible farm supports, I voted as the majority indicated for flexible farm price supports.

The following are the results of the replies I received on my questionnaire:

[Percent]

	Yes	No
1. Do you favor a greater reduction in foreign aid?	79.0	21.0
2. Will the consolidation of the CIO-AFL be of greater benefit to the average wage-earner?	27.5	72.5
3. Should our public school system be left free from Federal aid?	74.1	25.9
4. Should taxes be reduced with a high public debt and unbalanced budget?	24.1	75.9
5. Do you favor rigid or flexible farm price supports?		
Rigid?	10.8	------
Flexible?	89.2	------
6. Should the unlimited power of the Federal Government to levy taxes be restricted by a constitutional amendment?	71.5	28.5
7. Do you believe that wire tapping should be made legal?	49.5	50.5
8. Should secret recordings of jury deliberations be outlawed?	75.8	24.2

Mr. Speaker, I am confident that the above review of my questionnaire will be of great interest to the Members of the House of Representatives.

Israel's Critical Anniversary

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. CRETELLA. Mr. Speaker, I include for the RECORD an editorial from the April 15 issue of the New York Herald Tribune entitled "Israel's Critical Anniversary."

The building of the new State of Israel, which started a mere 8 years ago by her citizens, is nothing short of miraculous. They were building for peace primarily rather than amassing strength for war. The United States has a great stake in the Middle East and a moral alliance with Israel which must be preserved, for the two countries have both had experience in the struggles for democracy and freedom. We should do everything within our power to restore the peace in this area because it is only in the atmosphere of peace that Israel can continue to provide the fruits of her labors for her people.

The editorial follows:

ISRAEL'S CRITICAL ANNIVERSARY

On the eve of its eighth anniversary the State of Israel confronts a crisis greater than any since those tense, grim days of 1948 when a nation was proclaimed in the face of apparently insuperable odds. Then, as now, there were divided councils in the United Nations and among the powers over the fate of Palestine; then, as now, there was hostility among the new state's Arab neighbors. But to complete the parallel there was firm determination in Israel itself to fulfill the dream of generations in a land which had been won back from the desert. As Dr. Chaim Weizmann, first President of Israel, wrote in his autobiography, Trial and Error, which was serialized in this newspaper: "The issue would be decided, as we were willing it should be, by the basic strength and solidity of the organism which we had created in the last 50 years."

To show how much of that old dream has been made real in Israel, the Herald Tribune is presenting with this issue a special section which does not deal with the threat of war but with the triumphs of peace, with the economic growth—the rapid industrialization, the discovery and utilization of oil and copper and chemicals, the expansion of agriculture and afforestation—that has accompanied the doubling of Israel's population in less than a decade. This is the substance of the dream, the physical stake which the Israelis have in their nation. It is a record of growth that is worthy of being celebrated even in the shadow of the ominous events that have clustered about the contested borders of the State. Those events are a matter of legitimate concern to the United States, since the fact of Israel as a State is one which the Arabs must accept if there is to be peace.

Israel's achievements also show what can be done by all the Middle East, if hostility gives way to cooperation, and if an area too long allowed to lie fallow is put to intensive use. A partnership of Arab and Israeli, of the Western nations and those of the Middle East, of the skills, the capital, and the energy that could be applied if the region were at peace, would make these ancient lands productive, prosperous and wholly free. That is the hope of the American people for the Middle East; they seek only peace and an opportunity to join in a cooperative effort to restore the full vigor of the cradles of faith and civilization.

A New Challenge for Negroes

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. PELLY. Mr. Speaker, the March 15, 1956, issue of the Negro Statesman, a bimonthly publication edited by Joseph V. Baker, of Philadelphia, contains a thought-provoking article entitled, "United States Negroes Challenged by Eisenhower Decision."

As a consistent supporter of President Eisenhower's policies and program for racial justice and equality, I found this forthright statement of an intelligent Negro editor of great interest. It deserves to be read by all Members of Congress because, regardless of who the Democratic Party selects as its candidate for President this year, civil rights is bound to be a campaign issue with the voters. As for me, I do not believe that any longer the American Negro will allow his rightful aspirations to be killed by the kindness of Democrat lipservice. With the Negro from now on actions will count louder than words.

Under unanimous consent, I quote Mr. Baker's article in full:

The decision of the President to allow his name to be offered for another term in the White House gives America's Negro leadership one of the sharpest challenges of recent history. The President has proved that he is the foremost American in the matter of racial engineering. With a minimum of talking and a maximum of quiet, determined action, he has made the Central Government something to which all men may look and live.

Supporting the President is not going to be, in itself, a tremendous assignment for Negro leadership. However, that leadership knows, full well, that getting Negroes to give a shoulder to the Republican Party, per se, is another cut of the meat and calls for quite some digesting.

The cold fact is that the President did not carry a single Negro community when he ran 3 years ago. He did not, because few Negroes were prepared to believe that a man who refused to promise all of heaven and earth would deliver any appreciable portion of either. Therefore, they stood, not with Stevenson, but with the loud-talking Democrats who made more promises than they, themselves, could remember.

As of now, however, Negroes have been rocked back on their heels by the spectacle of a man re-writing the Emancipation Proclamation without fanfare. They know and can believe him. They understand his method of reaching for truth and daring to speak what he believes, once he feels he has the answer.

The job ahead of the Nation's Negro leadership is to try to interpret this man and his deeds within a framework of political reference. Rather or not, the Republican Party, per se, is one with Dwight D. Eisenhower in spirit, it can be wholly said that surely the dominant party of Mississippi and Alabama is not.

Rather or not, some Republican leaders are throwbacks to the dreary years, as far as race is concerned, even the worst one is an improvement by far on anything that can be produced behind America's own iron curtain. And if there was every any doubt about this, the present rebellion of the new confederacy should be enough for any thinking man.

In driving home the message, therefore, the Nation's Negro leadership will have to be honest enough to say to their fellow-Americans that it is a choice, not between the President and whomever the Democrats choose, but one between men who respect the Constitution and the courts and men who would again sever this country in twain with a sword of bigotry.

There is no middle road on this.

There is no ground upon which logic can be used to combat bigotry when that evil is in power.

A classic example of this is the sorry spectacle of Adlai Stevenson. In Los Angeles, operating on a rule of political thumb, he told Negroes to figuratively wait out in the kitchen until the South has had its meal of the land's fat; and then, in the fullness of that section's own good time, they could come in and get what may be left.

It is to the everlasting glory of Negroes everywhere that their fellows in Los Angeles branded Stevenson with the label he will wear: "a phony." That their assay was correct is witnessed by the fact that a week later he was trying to tell the North to get itself in shape before it "threw rocks at Alabama."

How utterly low can lust for an office reduce a human instinct?

What kind of a President would a man like that make?

It is not hard to vision EASTLAND, of Mississippi, making a deal with a President who wants another hundred years or so to pass before Negroes come out of the kitchen of things. Even EASTLAND would settle for that much breathing space.

And so, there is a new challenge for the Nation's Negro leadership. One that is not nearly so much political as it is moral. One

that is simple in its import: shall we have one Federal Government, paramount in its responsibility and power, or shall there exist within this Nation a confederacy of rebellion which makes this country a subject for laughter and derision wherever freemen stand for right?

He did not say so, but this threat must have been one of the persuasive reasons why the President refuses to retire to his tent and leave the Nation to darkness and rebellion. What else could a great man do?

It has been this refusal of the President to walk away from his duty, whether it was serving another term in a heartbreaking job, or saying a flat negative to pressure groups of any kind, even Negroes, that has begun to endear him to a racial group too long weary of many words and no action. The true worth of the man has even yet to be given the full light of truth; but it is on its way and when it fully dawns, bigots will do well to take to cover.

Lesson for Alaskans

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks, I desire to bring to the attention of the Members of the House and Senate an editorial concerning the Alaska Mental Act which appeared in the Fairbanks (Alaska) Daily News-Miner of April 4, 1956:

A LESSON FOR ALASKANS

On page 1 today there is a story concerning amendments to the Alaska mental health bill.

This bill passed the House, but it met a storm of strange protests in the Senate. Suddenly all over America people began writing indignant letters charging that the bill would set up a political Siberia in Alaska.

From some source the word was passed that this measure provided for the establishment of a million-acre insane asylum in Alaska, to which people might be sentenced from every State of the Union.

The charges made against this bill were utterly fantastic. The million acres of land was a part of the 99 percent of Alaska that the Federal Government owns. This land was to be given to the Territory to help finance a mental health program for which the Federal Government is financially responsible. But try and explain that to people in the States.

The mental health bill is absolutely sound and it is badly needed in Alaska. But misinformed people in the United States have attacked it and apparently almost beaten it down. The fact that these attacks are based on utterly false charges makes no difference. Those people have votes and representatives in Congress. When they yell somebody listens.

In our opinion, this entire episode illustrates the futility of any attempt by Alaskans to win their full rights as American citizens a little bit at a time.

People in the United States are busy listening to TV, traveling in the family car and deciding whether to vote for KEFAUVER or Stevenson. Alaska is a very distant and vague place to them. They aren't worried about the fact that Alaskans who become mentally ill are committed by a jury of laymen, to a hospital more than a thousand miles from the Territory. So what? "Who cares if a bunch of Eskimos have problems?"

Alaskans will get nowhere trying to win their basic rights one at a time. No matter how just the cause, we will be defeated by the first enemy that comes along who has representatives in Congress. Those people in Congress will listen to their constituents no matter how foolish these voters may really be.

What does the average Congressman care about voteless Alaskans? He'll sacrifice the hopes and ambitions of Alaskans any day to please a constituent who can vote for him or against him.

How can Alaska win a satisfactory mental health setup, control of its own resources, tax equality, and the right to shape it own destiny? By asking for these things "one at a time?" Absolutely not, for every request will be misconstrued and defeated by any "crackpot" organization in the United States that chooses to oppose the idea.

We have to fight for something the people of America immediately understand—statehood.

Americans will look up from their TV sets if we protest "taxation without representation." They remember that slogan because they read about it in their grammar school history books.

They will be sympathetic if we, as American citizens, demand the same rights they possess. They vaguely understand the value of American citizenship, and it won't cost them a cent to extend these rights to Alaska. They'll say, "go ahead. Have the rights. But don't be asking for $12 million for an insane asylum."

Once we are granted statehood, these simple things that we are fighting for "one at a time" will be granted to us automatically.

Statehood is a big step for Alaska. There are those in the Territory who fear we are not ready for it. Yet it is obviously impossible for us to get anything less than statehood. No group of citizens can have any influence in Congress if they do not have voting representatives there.

Alaskans have only one hope of achieving a measure of control over their own government, and that is to fight for statehood with all their might.

Yes; it is a big step. But it is a step that the people of the United States will understand. Nobody can smear this ambition with false charges. It is a completely American goal.

If we keep on fighting for our rights a little bit at a time, we will eventually end up with all the financial responsibilities of statehood but none of the benefits of statehood. Every step forward we try to take as a Territory will be turned against us.

Our sensible course of action is to forget about patching up the territorial form of government to make it a little more palatable and democratic.

Forget every ambition we have as a Territory and fight for statehood. When we are granted statehood, we'll have every right that an American citizen possesses.

When we fight for anything less than statehood, without the right to vote in presidential elections and without voting representatives in Congress, we are indulging in a colossal waste of time and effort.

Pauper-Prince Role Played by Tungsten

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. ENGLE. Mr. Speaker, one of the most important critical and strategic metals in the world is tungsten. There is a grave question as to whether or not the defense agencies are making adequate use of this metal. I understand that the Defense Department has limited the use of tungsten in jet engines because of a supposed shortage. The fact is, that the premium price program has brought out tremendous production of tungsten in this country, and we have a sizable stockpile. It would seem intelligent to revise the current uses of tungsten in the light of the demonstrated ability of the American miners to produce it. An article in the April 5, 1956, issue of Christian Science Monitor gives some interesting facts on tungsten and I make the article a part of the RECORD:

PAUPER-PRINCE ROLE PLAYED BY TUNGSTEN

(By Phil Elderkin)

A one-time seldom-explored, often-ignored metal called tungsten is today playing a vital role in key industrial centers and armament headquarters throughout the world.

Considered a nuisance by British mining interests in 1913 because it made tin extraction difficult, Britain was extremely happy when German industrialists began offering them 8 to 10 shillings a unit for tungsten—and the Germans always came back for more.

Thirty years later it was to prove invaluable in war, important in peace, and extremely difficult to wrest from nature. It is a metal unlike anything man had come to visualize as metal. It never occurs in nature by itself, but is always tied in with oxygen. Even when it is laboriously concentrated by complicated processes from reluctant ores, this trioxide must be further refined for commercial use in alloys or as pure metal.

CALLED HARDEST METAL

The name tungsten is derived from two Swedish words meaning heavy stone. It is all of that and, as a carbide, also very hard. In fact, in hardness it is second only to the diamond. Spoken of in units instead of pounds, it has a density 2½ times that of iron and equal to that of gold.

Experts call tungsten carbide the hardest metallic substance yet made use of by man with quality characteristics unequalled by those of any other metal.

Possessing the highest melting point of any metal known (6,152 degrees Fahrenheit), tungsten is just beginning to come into its own, despite the many lessons it taught the Allies during two world wars.

For example, it is finding many new jobs to accomplish in the field of electronics. The vacuum tube, experts say, is the heart of virtually all electrical devices. The filaments in these tubes must be able to resist extreme heat in order to be effective. Tungsten in the pure metal form does the job as no other substance yet tried and at phenominally low costs. Without such efficient filaments, there would be no modern electric lamps, no electric tubes, and few of the electronic wonders so commonplace today.

FIRST NAMED WOLFERAM

Tungsten, as a mineral, was first mentioned in scientific literature in 1574—but by the name "wolferam." However, it was not until 1771 that tungsten was isolated as a new element by K. W. Scheele. When Robert Oxland took a British patent in 1847 for a process of making sodium tungstate and tungstic acid, the metallurgy of tungsten began.

Its first practical application came in the form of steel rails made in France in 1868. A generation later, in 1900, tungsten high-speed steel was first brought to the attention of the general public. That also was at the Paris Exposition.

An exhibitor, the Bethlehem Steel Co., stirred considerable interest by demonstrating tungsten steel alloy as a tool steel. The general adoption of this product eventually led to the redesigning of machine tools and to great savings in production costs.

Today, virtually all types of high-speed tools are made of steel containing tungsten. The basic type contains 18 percent tungsten, 4 percent chromium, 1 percent vanadium, and from 0.50 to 0.80 percent carbon.

Tungsten-steel high-speed tools have meant savings of billions of dollars to industry and lower consumer prices.

Already established as a strategic military item in the munitions race of World War I, the demand for tungsten became astronomical during World War II when Germany suddenly introduced a tungsten carbide armor-piercing shell.

It was Germany's use of high-velocity, armor-piercing projectiles with the tungsten carbide core, military experts say, which almost made the north African campaign a success. British tanks were knocked out by the hundreds. The Germans had equipped their Panther and Tiger tank divisions with a projectile, the tungsten carbide core of which would pierce the wall of a heavily armored tank.

It was 2 years before the United States perfected similar projectiles and produced them in sufficient quantity to give the Allies victory in the Battle of the Bulge. In fact, United States military requirements for tungsten during the peak munitions production year of World War II were approximately 30 million pounds of tungsten metal, more than twice again the production of this country alone.

LARGE DEPOSITS IN CHINA

The largest known deposits of tungsten ore are located in Communist China. However, there is also a large deposit in South Korea, just a few miles south of the 38th parallel.

Prior to what some natural scientists call the electronics era, the chief use of tungsten was as a constituent of tool steels, especially high-speed steels. One man operating a lathe with high-speed tungsten-steel tools can do the work of 5 men, with 5 lathes, using carbon-steel tools. The savings probably run into the millions.

Tungsten was discovered in California in 1904. It was found next in Colorado. Then, in 1917, major deposits were discovered near Mill City, Nev. Until 14 years ago practically all domestic tungsten mining was confined to the Western States.

However, in 1942, tungsten was found in Vance County, N. C., on the home site of Jefferson Davis' grandfather. It turned out to be one of the richest mineral strikes in the history of the State and one of the rare finds east of the Rockies.

MOST MINES IN WEST

Currently, tungsten mines are operating in North Carolina, California, Nevada, Idaho, Utah, Colorado, Washington, Wyoming, Montana, and Arizona.

Unfortunately, the amount of tungsten ore produced in the United States is barely enough to meet present industrial consumption.

The nation with a huge tungsten stockpile, experts say, not only will possess military strength but also great political power.

A Just and Lasting Peace

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1956

Mr. FEIGHAN. Mr. Speaker, under leave previously granted, I insert in the RECORD an address I made on Easter Sunday, April 1, over Radio Station WHK, in Cleveland, on a just and lasting peace:

A JUST AND LASTING PEACE

Today is Easter Sunday. For the whole Christian world, this means that Christ, the King, has arisen. This is a period of prayerful rejoicing. It is a time when all good Christians take renewed hope for a better future for all mankind.

This year the Jewish passover comes at the same time as the Christian Easter Holy Week. For the Jews, the season of the passover is a time of thanksgiving for relief from the persecution of King Pharaoh. For them it is a time to remember the plagues which struck Pharaoh for his cruel persecution of the Jews. It is a time when all Jews renew their faith in the fatherhod of God and the brotherhod of man.

I believe, therefore, this to be an excellent occasion for us to take an inventory and to examine the prospects for a better future for all mankind.

Most of the people of the world yearn for an era of genuine peace. The Christian-Judean world strives for a just and lasting peace, and that is a peace built upon immutable moral principles. Other religions of the world such as the Moslems, the Buddahists, and the Hindu, seek a similar goal.

On the other hand, the leaders of world communism continue their cruel warfare against all civilization. These same leaders proclaim the doctrine that if needs be, three-quarters of all mankind must perish in order that communism may prevail throughout the world.

Against this background, I am going to explore the prospects for a just and lasting peace. Last summer, all the world witnessed what became known as the meeting at the summit. There President Eisenhower, the leaders of France and Great Britain, and the rulers of Soviet Russia met in what was described as an effort to reduce world tensions.

At Geneva hundreds of pictures were taken of the Russian rulers with President Eisenhower and other leaders of the free world. These pictures emphasized positions and postures of warm friendship. At the climax point of this so-called meeting at the summit President Eisenhower announced to the world his belief that the Russian Communists were as sincere in their desire for peace as were the leaders of the free world.

From these events which were explained over and over again to all the people of the free world, there developed a great uplift in the hopes of the American people for that era of peace to which they so ardently aspired. There was talk about a spirit of Geneva which carried with it great promises of things to come. When the Geneva Conference at the so-called summit ended, people of the free world heaved a sigh of relief. There appeared to be an almost immediate relaxation among the nations which had found it necessary to rearm, to maintain large standing armies, and to build alliances in order to hold back the tidal wave of communism.

Upon his return to Great Britain, Prime Minister Anthony Eden announced at the London Airport that the cold war was over and that a new era for all the people of the world had been ushered in. He assured the British people of peace in our time.

Upon his return to France, Minister Pinay assured the French people that the danger of war had passed and that world tensions, many of which beset the French Empire, would soon settle down. The new spirit of Geneva held out for the French people hopes which they had not enjoyed since the days between the great wars.

Here in the United States, great optimism was expressed in the belief that the Russian Communists were prepared to amend their ways and to begin acting like responsible members of civilization. Here and there a note of caution was raised that we had best await the carrying into effect of the Geneva spirit by concrete deeds rather than the platitudes of promises which had been generated at the luncheons and the press conferences attending the meetings at Geneva.

It was but a few days after the breakup of the Geneva Conference that word leaked out from Russian-occupied East Germany to the effect that Communist Party boss Khrushchev, en route from Geneva to Moscow, had made it known to the Communist elite that there was no change whatever in fundamental Communist doctrine or policy. To some, this news was shocking because Khrushchev had been one of those who took part in the Geneva Conference. Still others brushed aside this startling news, charging it off to those elements of society who are unwilling to try to find a modus vivendi with the Communist rulers.

Shortly thereafter, the Foreign Ministers of the United States, Great Britain, France, and the Soviet Union met at the historic summit of Geneva to work out the details of the spirit of Geneva in order that the dangerous tensions which gripped the world could be eliminated and the way opened to a just and lasting peace. It was soon discovered, however, that when the conferences moved from pleasant lunches and press conferences to the business of agreeing to specific methods for removing world tensions, the spirit of Geneva burst like a toy balloon in the hands of a mischievous child. The Russian Communists made it crystal clear that what they meant by the spirit of Geneva was that the West should accept their program of peaceful coexistence—their program of peaceful coexistence being nothing short of complete surrender on the part of the free world.

Thus the Communist leaders demonstrated their complete insincerity in their claims to support a program for relaxation of world tensions and for a just world peace.

Only a few months later on, the world was shocked when Communist Party boss Khrushchev and his traveling companion, Bulganin, both of whom had been the spokesmen for the Russian rulers at Geneva, engaged in a provocative propaganda campaign against the United States, Great Britain, and France.

This was done on the occasion of their visits to India, Burma, and Afghanistan. These same rulers branded the American people as imperialists and exploiters as well as warmongers.

But still the propaganda drums of the Kremlin beat out the dirge of peaceful coexistence. The protestations of the Kremlin leaders for peace and good will become louder with each successive attack they make against the sincerity and integrity of all the leaders of the free world.

In February of this year the 20th socalled congress meeting of the Communist Party was held in Moscow. At this meeting the official policy of the world Communist movement was set forth as well as the tactics to be employed in carrying out those policies. The decisions taken at that meeting serve as instructions to members of the Communist movement everywhere in the world.

The key policy speech was given by Communist Party boss Khrushchev, and I just want to quote one small part of Khrushchev's 6-hour speech because it clearly explains the true Communist intention toward the goal of a just and lasting peace:

"Intensify our efforts in Communist education of the masses and in eliminating the survival of capitalism in the minds of men, make fuller and more active use, to this end, of all the ideological media—propaganda, agitation, the press, radio, cultural and educational organizations and institutions, science, literature, and art."

In addition, instructions were given that steps of subversion and violence were to be increased in those nations which offered the greatest resistance to Communist take-over. Thus the leaders in the Kremlin single out the United States as aspecific victim of their new tactics to conquer the world for communism.

You and I can see from this summary of basic events which have taken place within the past 9 months that the Christian-Judean world is still a long way off from its goal of a just and lasting peace. It is becoming increasingly clear that the hope of all mankind which reached an almost unprecedented pinnacle in response to the proclamation of the spirit of Geneva, have been dashed upon the dangerous rocks of false promises.

It may be a bit too early to measure the full damage done to the hopes of all mankind for a just and lasting peace as a consequence of the meetings which took place at Geneva between President Eisenhower and other leaders of the West and the Russian rulers, but it is not too late for the free world to learn some valuable lessons from the broken spirit of Geneva.

In my judgment, the first lesson we must relearn is that basic Communist doctrine holds that peace in the world is only possible when all the world is under Communist rule. The Communist leaders have made it clear that they have not changed in the least this basic doctrine. Communist Party Boss Khrushchev stated that there is no more chance for change in the basic Communist doctrine than there is in developing a shrimp that can whistle.

The Communists will shift their tactics at any time in order to confuse and mislead their intended victims. Stalin once said that it is sometimes necessary to take 1 step back in order to take 2 steps forward. This is a typical example of the Russian strategy that was employed at the so-called conferences at Geneva.

The just and lasting peace which the Christian and Judean world so earnestly yearns and strives for, cannot be won by the simple utterances of high sounding phrases or by platitudinous promises sealed by a toast accompanied by the clinking of glasses filled with martini cocktails. That just and lasting peace can be won and maintained only by the acceptance of those moral principles which support civilized mankind everywhere in the world.

In the true spirit of Eastertide, we must find renewed hope for a better future for all mankind. Our faith in God demands that we never lose courage in the face of difficulties. On this Easter Sunday, man's spirits must be raised up and dedicated to the emancipation of all those nations which today still suffer the degradation of enslavement and tyranny by the Russian Communists.

With a firm faith in the Fatherhood of God and the brotherhood of man, we will somehow find our way through to that golden era of a universal, just and lasting peace.

Memo for an Election Year

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mrs. FRANCES P. BOLTON. Mr. Speaker, these are days when once again the country is readying itself for the presidential nominating conventions. In the current Saturday Review appears a quotation assembled from a talk given by James Russell Lowell in New York on April 13, 1888, which I am inserting as part of my remarks:

MEMO FOR AN ELECTION YEAR

EDITOR'S NOTE.—Sixty-eight years ago this month James Russell Lowell, editor, poet, ambassador, interpreter of America to other peoples, spoke before the Reform Club of New York. The country was readying itself for the presidential nominating conventions, and Mr. Lowell had some pertinent comments to make. The material here is assembled from that talk.

In its least comprehensive definition, politics is an art which concerns itself about the national housekeeping, about immediate interests and workaday wants, the income and the outgo of the people.

But there is perhaps a higher and wider sense in which politics may fairly be ranked as a science. When it rises to this level we call it statesmanship. The statesman applies himself to the observation and recording of certain causes which lead constantly to certain effects, and is thus able to formulate general laws for the guidance of his own judgment and for the conduct of affairs. He is not so much interested in the devices by which men may be influenced as about how they ought to be influenced; not so much about how men's passions and prejudices may be utilized for a momentary advantage to himself or his party as about how they may be hindered from doing a permanent harm to the commonwealth. He trains himself to discern evils in their causes that he may forewarn if he cannot prevent, and that he may not be taken unawares by the long bill of damages they are sure to bring in, and always at the least convenient moment. He seeks and finds in the moral world the weather-signs of the actual world. He strives to see and know things as they really are and as they are related to each other. His vision is undeflected by the cross-lights of transitory circumstance, his judgment undisturbed by the clamor of passionate and changeful opinion.

I think there is a growing doubt whether perhaps we are not losing the power to produce such statesmen. The tricks of management are more and more superseding the science of government. How often do we not read in our morning paper that such and snch a local politician is dictating the choice of delegates to a nominating convention, or manipulating them after they are chosen? We should not tolerate a packed jury which is to decide on the fate of a single man, yet we are content to leave the life of the Nation at the mercy of a packed convention.

Parties refuse to see or, if they see, to look into vicious methods which help them to a majority, and each is thus estopped from sincere protest against the same methods when employed by the other. If parties will not look after their own drainage and ventilation there must be people who will do it for them, who will cry out without ceasing till their fellow citizens are aroused to the danger of infection.

Under every form of representative government parties become necessary for the marshaling and expression of opinion. When parties are once formed those questions the discussion of which would discipline and fortify men's minds tend more and more to pass out of sight, and the topics that interest their prejudices and passions to become more absorbing. What will be of immediate advantage to the party is the first thing considered, what of permanent advantage to their country the last. I refer especially to neither of the great parties which divide the country. I am treating a question of natural history.

Parties being necessary things, it follows, of course, that there must be politicians to manage and leaders to represent and symbolize them. The desire of man to see his wishes, his prejudices, his aspirations summed up and personified in a single representative has the permanence of an instinct. Few escape it, few are conscious of its controlling influence. The danger always is that loyalty to the man shall insensibly replace loyalty to the thing he is supposed to represent, till at last the question of what he represents fades wholly out of mind. The love of victory as a good in itself is also a powerful ingredient in the temperament of most men.

If the politicians must look after the parties there should be somebody to look after the politicians; somebody to ask disagreeable questions and to utter uncomfortable truths; somebody to make sure if possible before election not only what, but whom the candidate if elected is going to represent. What to me is the saddest feature of our present methods is the pitfalls which they dig in the path of ambitious and able men who feel that they are fitted for a political career, that by character and training they could be of service to their country, yet who find every avenue closed to them unless at the sacrifice of the very independence which gives them a claim to what they seek. It has been proved, I think, that the old parties are not to be reformed from within. It is from without that the attempt must be made, and it is the independents who must make it. If the attempt should fail the failure of the experiment of democracy would inevitably follow.

What we want is an active class who will insist in season and out of season that we shall have a country whose greatness is measured not only by its square miles, its number of yards woven, of hogs packed, or bushels of wheat raised, not only by its skill to feed and clothe the body, but also by its power to feed and clothe the soul; a country which shall be as great morally as it is materially; a country whose very name shall call out all that is best within us.

JAMES RUSSELL LOWELL.

APRIL 13, 1888.

LeMay Says SAC's Readiness Is Our Peace Insurance Policy

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. ENGLE. Mr. Speaker—

For centuries it has been the job of a general to win wars. In the nuclear air age his job must be to prevent wars.

In a most interesting article on readiness as our peace-insurance policy, Gen. Curtis E. LeMay makes this statement about the new job of generals and explains how he is performing the job as commander in chief of the Strategic Air Command.

All training, all operations in the Strategic Air Command add up to one simple purpose—readiness for combat on an instant's warning anywhere in the world. SAC crewmen, flying from bases here and overseas, can find their targets with complete certainty. Once they have found them, they can destroy them effectively. Having destroyed them, they can get back to home base. As General LeMay says:

Today we have a combat-ready force in being, and I think there is good reason to hope it may never have to be used.

If we never have to use the power we have built into our Air Force and its Strategic Air Command, it will have justified its cost many times over.

We have to face, however, the fact that the United States no longer enjoys a monopoly on long-range nuclear airpower. The Communists now also have such a force. But the fact that they do in no way detracts from the deterrent power of our own Air Force in being.

Our task today is to preserve that deterrent power. We must provide long-range bombers and nuclear bombs in sufficient numbers and of superior quality as a national insurance policy. We must push forward our research and development programs on advance-type aircraft and guided missiles to guarantee future leadership in the air.

Mr. Speaker, both the airmen and the generals of today know the futility of war, and that the greatest job facing any of us is to keep war from happening. We can and must insure our security by our continuing efforts toward a peaceful solution to the world's problems, backed up with the type of military strength our potential enemies fear most.

Mr. Speaker, it gives me great comfort to know that Gen. Curtis E. LeMay recognizes this task and this responsibility and can express his thoughts in ways to be such an inspiration to others. With the consent of my colleagues, I wish to insert in the CONGRESSIONAL RECORD General LeMay's own article from the special April issue of Air Force magazine, which follows:

SAC's READINESS IS OUR PEACE INSURANCE POLICY

(By Gen. Curtis E. LeMay)

For centuries it has been the job of the general to win wars. In the nuclear air age his job must be to prevent wars. There is good reason to believe that the military solution to the problem is relatively simple—superior long-range nuclear airpower and adequate defensive airpower in being combat-ready on a continuing basis. This airpower must be strong enough to win, beyond the shadow of a doubt, the decision in any global nuclear war. Without this kind of force in being we cannot expect to keep the peace. This is perhaps the most significant military fact of today.

Therefore, all training, all operations, in the Strategic Air Command add up to one simple purpose—readiness for combat on an instant's warning, anywhere in the world. If we are not ready—in terms of trained men, modern equipment, and effective organization—then SAC is wasting its time.

Military power, in any form, has always been a matter of men, and for the foreseeable future it will continue to be. The day of the pilotless long-range bomber and the guided missile is coming. As they become available they will augment the manned force and, very slowly, may even replace it.

But in SAC we can take no comfort in the prospects of being combat-ready 5 years from now, or 1 year from now, or even tomorrow. Our prime interest is in readiness today, this instant. To do so we need men of the highest caliber, trained to the peak of perfection, armed with sufficient quantities of the best equipment the Nation can supply them.

Among the almost 200,000 personnel of the command, motivations naturally vary greatly from person to person, yet there is one attribute that is common to almost all SAC people. This is the satisfaction they derive from knowing that the force they have helped to build, and which they maintain in a state of constant readiness, is vital to the security of the free world. They know that they are making a contribution toward the achievement of lasting peace. These people represent the finest in the military tradition—these who choose service to their country above all other considerations.

Building the Strategic Air Command to its present high state of readiness was, essentially, a matter of bringing the men and the aircraft together, and exercising them constantly on combat training missions which duplicate actual war requirements. Realistic training is our greatest continuing need, and many hundreds of hours of study are required to master today's highly complicated air equipments.

Consider, for example, the fact that 3 men in a B–47 bomber do substantially the same jobs that 11 men did in the World War II B–29. Their training has to be broader and more technical and the demands on each man are gerater. Not only must everyone achieve high standards of proficiency in his own job—he is often cross-trained to the other jobs as well.

Ever since the Strategic Air Command was activated, it has been necessary to work on the assumption that a war might start at any time. It is a fact that hours—even minutes—might spell the difference between victory and defeat. Therefore, there has always been a certain urgency to our operations. It is essential to be ready to go—not next week, nor tomorrow, but today—now, if the need arises.

It is our responsibility to know how well the combat crewmen of SAC can do their jobs. In determining this we have had to ask—and answer—three questions. We would like to give you both questions and annswers, for they bear on our conclusions.

First, can SAC combat crewmen, flying from bases here and overseas, find their targets with certainty? The answer is an unqualified yes. On celestial navigation alone, our crews can fly to within 15 miles of any spot on earth, and from there move on their targets with precision by means of radar navigation.

Second, when they arrive over their targets, can they destroy them? Again, the answer is an unqualified yes. By means of carefully scored bombing runs, each of these crews has proved its ability on hundreds of occasions. I should like to point out that their targets are not cities—they are often specific corners of buildings within military target areas. By a combination of radar and radio, we can tell with what degree of accuracy any given crew is bombing.

Third, having destroyed their targets, will these crews get back? Again, the answer is "Yes." In World War II, using mass formations of bombers, subject to massed attack, our percentage of losses was less than 2 percent. With many hundreds of jet bombers utilizing optimum tactics, in small formations or on single-plane penetrations, the odds are equally in favor of our bombers.

Today we have a combat-ready force in being—and I think there is good reason to hope it may never have to be used. The strength it poses to any potential enemy as of now is so great it is very probable that he will not risk its blows. There is no profit in aggression if it brings on self-destruction. Therefore, we may well regard the Strategic Air Command as peace insurance, and the premiums we must pay to keep it more modern than the strategic air force of any nation are not high. If we never have to use the power we have built into SAC, it will have justified its cost many times over.

We must face squarely the fact that the United States no longer enjoys a monopoly on long-range nuclear airpower. It was inevitable, of course, that the Communists would build this most potent type of force as quickly as they could. The fact they now have such a force, however, in no way detracts from the deterrent power of our own. It is not likely that any major attack could be made on the United States without the aggressor nation suffering disaster. As long as a potential aggressor is convinced of this, I do not think we have to worry about a major war. Our main job is to keep him convinced.

We are not a belligerent people. We prefer to devote our inventive natures and our industrial capacity to providing better lives for ourselves and for others. In the past this inclination has been mistaken for weakness, and as a result we have been drawn into two World Wars in a single generation.

I would not say to you that SAC is the ultimate of military tools. Today, it is our best and most formidable military expression, and for the foreseeable future it appears clear that the long-range bomber and the nuclear bomb will be required in sufficient numbers, and of superior quality, as a national insurance policy. We must keep it that way, at the same time pushing forward our research and development programs on advanced type aircraft and guided missiles to guarantee future leadership in the air.

The airman knows the futility of war and his job today is to help prevent war from happening. We can and must insure our security by our continuing efforts toward a peaceful solution to world problems, backed up with the type of military strength our potential enemies fear most. In such an atmosphere, with that strength behind our position of moral leadership in the world, we can look at the future with confidence.

Whose Side Is Nehru Really On?

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following article from the April 13 issue of U. S. News & World Report entitled, "Whose Side Is Nehru Really On?"

At every turn, in the conduct of United States policy abroad, American diplomats are encountering the foreign policy of India as conducted by Prime Minister Jawaharlal Nehru.

United States concern about Mr. Nehru's actions and attitudes is rising rapidly. The Indian leader is scheduled to come to the United States as a guest of President Eisenhower in July. In preparation for this visit, United States officials are taking a new look at India's policies.

Inside story of India's behavior, as directed by Mr. Nehru, in diplomatic contacts with the rest of the world is revealed in these official studies.

One case history—the recent meeting of the United Nations Economic Commission for Asia and the Far East, held at Bangalore, India—is of particular interest. United States officials call it a typical example of how Mr. Nehru's policy of "nonalinement" operates to place India on the side of the Communists—against the United States and its non-Communist allies.

Here, in substance, you get the developments at this meeting as is shown from records now under study by United States officials trying to analyze Mr. Nehru's role in world affairs.

Delegates from 27 nations, including the United States and Soviet Russia, met at Bangalore early in February of this year. Some nations were members of the Commission. Others, such as Communist Bulgaria and Czechoslovakia, sent observers.

An address of welcome, opening the conference, was delivered by the Indian Prime Minister himself.

"Customarily," said a United States official who knows the Bangalore record, "such addresses are made on a very high level and are largely free from controversial issues. Mr. Nehru's speech was a striking departure from this custom."

The Indian Premier expressed his regret that Japan and the People's Republic of Outer Mongolia had not been admitted to membership in the United Nations. This remark was in support of a membership deal offered by Soviet Russia, whose delegate blocked the admission of Japan when the U. N. refused to admit Outer Mongolia, a Communist creation recognized by few free governments.

Next, Mr. Nehru deplored the absence of Communist China, not admitted to the U. N., from the U. N.-sponsored conference. He urged that Red China's delegates be admitted—a proposal later rejected by a majority.

"We in Asia," said Mr. Nehru to delegates who included Americans, Britons, Frenchmen, and Canadians, "must solve our own problems for ourselves." And the Indian leader also denounced aid given on a bilateral basis—such as United States aid to India. He expressed thanks for such aid as India had received by this route, but said it could better be given through the United Nations.

Aid given directly by one country to another, Mr. Nehru declared, is without virtue because political strings are attached to it. If aid came "from a country which is in the happy position of giving it, the assistance could be accepted only if it were free from any strings," he said.

In addition, Mr. Nehru's address of welcome attacked the Southeast Asia Treaty Organization and the Baghdad Pact—both defensive alliances supported by the United States and its allies. He made no mention of the Communist alliances.

This Nehru speech, United States officials report, set the tone for the attitude of India at the conference. Communist delegates who spoke later also picked up phrases and whole paragraphs of Nehru's speech to quote in support of their remarks.

The presiding officer of the conference—D. P. Karmarkar—was an Indian. Ignoring normal procedure, according to United States analysis of the record of the Bangalore Conference, Karmarkar made little effort to stay out of the debate.

On the contrary, the record shows, the Indian chairman encouraged Communist observers to speak as though they were delegates to the conference. Bulgarians and Czechs, representing Communist regimes, spoke at length of the importance of trade with Red China and with Outer Mongolia. They were given full time to praise the Communist system as against free enterprise. When delegates from Korea, the Philippines, and Nationalist China sought to reply to the Communists, Karmarkar ignored them.

On one occasion, conference records reveal, the Indian chairman actually took the lead in speaking for the Communists. The Soviet delegate introduced a resolution against the embargo on trade with Red China. As other delegates spoke, it became obvious that the Soviet resolution would be defeated in a clear setback to the Communists.

At this point, Karmarkar asked the Soviet delegate to withdraw his motion. "I don't understand," said the Russian. The Indian chairman, in violation of the rules, thereupon spoke for 15 minutes giving the Soviet position. At the end he said: "That is the Soviet delegate's stand—now I ask him again to withdraw his motion." Smiling, the Soviet delegate agreed.

The executive secretary of the conference also was an Indian, P. S. Lokanathan. Under the rules of the United Nations, all officials of the secretariat including the executive secretary are U. N. employees with no right to enter the debate. But United States officials point out that the official minutes show frequent remarks by Lokanathan, most of them openly favoring the Indian or the Communist positions.

Under Lokanathan's direction, the secretariat quickly prepared copies of draft resolutions for Indian and Soviet delegates, but was slow in preparing copies of resolutions offered by other members. In the official summary record of the conference as compared by the secretariat, statements of Communist and Indian delegates were reproduced in full while statements by United States delegates and others were whittled to a minimum.

India's delegate, K. B. Lall, was outspoken in his attacks on the United States and in his support of the Soviet position. He left Bangalore for 2 days to consult with Mr. Nehru in New Delhi, and many delegates expected him to return with some kind words for the United States and its allies. Instead, when Lall came back, his attacks on the United States increased in fury.

"On virtually all controversial issues," one United States official said after studying the record of Bangalore, "the position of India was to support the Soviet Union or to lead the way for Soviet support of India's view. In very case the Indian attitude was in opposition to that of the United States."

Lall, United States observers report, made a far more vehement attack on the United Nations for its failure to admit Red China than the Soviet delegate did. Lall attacked bilateral-aid programs of the United States and United States trade policies.

Once, during a vote on a motion supported by the Soviet delegate, the Indian delegate told an American official: "If you vote against us you will force us to support the Russians. They're the only people who support our position."

The overall record, United States officials say, is not very different from that of Bangalore. Studies of India's position in recent diplomatic activities the world over show that Indian delegations, under Mr. Nehru's direction, almost invariably stand in opposition to the United States, on the Communist side. As American diplomats see it:

In south Asia, Mr. Nehru wants the United States to abandon its support of the Southeast Asia Treaty Organization, leaving the area to the Nehru policy of "nonalignment"—and to Communists.

In the Middle East, Mr. Nehru supports an Egyptian military regime which gets arms from Communists and wants to build an Arab empire under Egypt's leadership.

In the Far East, Mr. Nehru urges the United States to make friends with Red China, to abandon support for anti-Communist Nationalists on Formosa and for the Syngman Rhee Government of South Korea.

Even as to Europe, Mr. Nehru has expressed sympathy for Russia's position—opposing the rearming of West Germany, while ignoring the rearming of Red East Germany.

In question, as the result of American studies of the Nehru policy for India, is the whole policy of the United States toward India. And Mr. Nehru, on his visit to Washington, will be asked blunt questions about what some United States officials consider his "one-way neutrality."

Missouri's Care of Mentally Retarded Termed Blot on State

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the St. Louis Globe-Democrat of July 25, 1955:

WE MUST PROVIDE FULLEST MEASURE OF HELP, EISENHOWER DECLARES

President Eisenhower said, in a letter to Martin Papish, president of the National Association for Retarded Children:

"In our Republic, in which we recognize the dignity and importance of every individual, regardless of physical or mental handicap, it will give serious thought to the needs of our more than 4,800,000 mentally retarded children.

"We must provide the fullest measure of compassion and constructive help to the end that retarded children everywhere may have the fullest opportunity to achieve the maximum development within their limitations.

"This is not alone in harmony with America's best humanitarian conditions. It can be, in addition, a definite contribution to the economic well-being of our Nation."

MISSOURI'S CARE OF MENTALLY RETARDED TERMED BLOT ON STATE

(By Morton Mintz)

(First of a series)

"The whole are a blot upon civilization, a reproach against our enlightenment and Christianity, an indignity upon the race, and a shame to our State and people."

In those enraged words an official commission denounced the care of the mentally retarded in New Jersey in 1874.

The same words hold true for Missouri in 1955.

The experts say that 1 of every 2 retarded children is born to families with no known inheritance of mental deficiency.

Missouri parents of normal intelligence thus will bear an estimated 1,400 such children in 1955.

The awful, numbing shock of having such a child is as great as any a family can suffer.

For countless Missouri parents, the initial stunning anguish will be needlessly prolonged by years of strain and torture. Sometimes the breaking point is passed, and the result is divorce, desertion, or attempted suicide.

Why?

Because Missouri does so little to meet the total need.

Most States do as little as Missouri, some even less. But some States do much, much more—and so could Missouri.

Institutions for the mentally retarded are a part—but only a part—of the answer. Only in this field has Missouri made a real effort through the years to grapple with the problem, and even here it is falling far short.

Missouri has two public institutions for the mentally retarded. One is the St. Louis State Training School at 10695 Bellefontaine Road in North St. Louis County. The other is the State School for the Mentally Defective and Epileptic at Marshall.

At the present rate of admission, it will take up to 10 years to have a child placed at Marshall. It will take up to 7 years at St. Louis State.

The waiting lists now include a total of 1,138 applications. But that is only part of the story:

1. The number of mentally retarded children who should be in Missouri institutions is reliably estimated at 6,100. The number actually in them is 2,336, and that is 358 more than rated capacity. Thus Missouri is providing for less than half the load.

2. The experience of some States has shown that the number of applications doubles when additional facilities are opened. Many Missouri parents, discouraged by the ever-increasing waiting periods, simply give up and don't apply.

3. Because of the long waiting lists, the two Missouri institutions do not accept children under 5 or over 20.

4. The population is growing and the retarded are keeping step.

5. Along with the rest of us, retarded children are living longer. One reason is the antibiotics. Some experts say these drugs may double the life span—and the length of stay in an institution—of some types of retarded children, for example, the mongoloid.

If the experts' guess proves correct, the admission of new patients will automatically be braked to a crawl.

The figures on the number of mentally retarded are little known. And they are staggering.

The National Association for Retarded Children says the evidence is that 3 persons out of 100 are mentally below normal. The Surgeon-General of the United States is one of the experts who agrees.

Let's apply this percentage to Missouri.

Missouri's 1954 population was 4,095,000 persons. The number of retarded among them: 123,000.

Another retarded child is born somewhere in the State every 3 hours. The number that will be born in Missouri in 1955: 2,800.

In St. Louis and St. Louis County, a retarded child is born every 8 hours. The city-county score for 1955 will be 1,050.

The national rate is 300 a day, or 1 every 5 minutes.

You are familiar with polio. It is a dread disease. You have given your dimes and your dollars to fight it. And miracles have been performed in prevention and treatment.

Polio struck 38,741 Americans last year.

Mental retardation crippled the brains of 120,000 children.

Most polio victims recover.

For mental retardation there is no cure.

Not all authorities go along with the 3 percent figure. Some say the incidence is 1 or 2 percent. But one Federal agency, the National Institute of Mental Health, sets the figure at 3.5. Spot surveys in certain areas have indicated 5 percent.

Likely there will never be an exact census. For one thing, some parents won't admit, even to themselves, that their retarded child is retarded.

Because there is no exact census the estimates of the need for more institional care, for example, must be inexact.

But the estimate that Missouri needs institutions for 3,800 more retarded rests on a firm footing:

1. Two authorities—Dr. Salvatore G. DiMichael, executive director of the N. A. R. C., and Dr. Lloyd N. Yepsen, former executive vice president of the American Association on Mental Deficiency—calculate that 5 percent of the mentally retarded require institutionalization at any one time. If Missouri has 123,000 retarded, then it should have institution beds for 6,142. It has beds for 2,336. The difference is 3,806.

2. Minnesota has provided institutions for 5 percent of its retarded. And it has not exhausted the demand.

Mental retardation afflicts St. Louisians and Missourians just as it afflicts mankind everywhere—impartially.

Almost as democratic as death, it cares not if the parents live in wealth or poverty, how they earn their daily bread, or if their ancestors sailed to the United States on the *Mayflower* or in the hole of a slave ship.

What is mental retardation, or mental deficiency, or feeble-mindedness? What causes it?

It is a condition arising from one or more of at least 70 different causes.

If it is hereditary, the transmitters of heredity, the genes, are in some way defective.

Half the cases are not hereditary. And here the causes are mostly hidden from man's eyes because the study of mental deficiency stands today about where psychiatry stood in the 1800's.

Certain infections, like German measles at critical periods during pregnancy, and certain injuries before, during, or after birth, can be responsible.

But retardation itself, even though it is often accompanied by one or a combination of physical handicaps, is not a disease. Nor is it mental illness, in which a mind with a normal potential goes wrong.

Retardation means that the brain does not develop as it should. No matter how old the body, the mental age is never higher than 12, and it may be only 1 or 2.

The victim is, as Author Pearl Buck said, "the child who never grew."

He does not have the natural intelligence and ability to make his way through life without help. He cannot compete on equal terms with normal people.

But most retarded persons are not severely so. And, with help and guidance, they can become useful, productive citizens.

Nine out of 10 retarded persons look like the rest of us. One out of 10 has physical traits obvious to the eye.

Retarded children are short on brainpower, but they are human beings with human feelings, human frailties, and human qualities.

They treasure affection and kindness. When they can give and receive these things, they are helped to develop to the limit of their ability—and that is all any of us can do.

They are the most innocent among us. They can be happy in their innocence, and they can be led into delinquency.

Even their limited minds can be balanced or unbalanced. The testimony to that is at hand in the State mental hospitals where psychopathic defectives can be found.

Mentally Retarded Must Wait 7 to 10 Years for Care in State

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the St. Louis Globe-Democrat of July 26, 1955:

MENTALLY RETARDED MUST WAIT 7 TO 10 YEARS FOR CARE IN STATE

(By Morton Mintz)

(Second of a series)

In the basement of his St. Louis County home a man built a cage of chicken wire and wood.

Into it he put his 11-year-old mentally retarded son.

Dr. Curtis H. Lohr, superintendent of County Hospital, tells of this case.

"I know of others just as bad," he says.

The boy was one of the relatively few retarded children who are unmanageable and destructive.

The parents had tried to have the boy admitted into 1 of the 2 Missouri State institutions for the mentally deficient.

The answer was that they were filled beyond capacity and there was a waiting list requiring many years to accommodate.

For this family the cage was the only resort until they left the area about 3 years ago. Dr. Lohr has been unable to find out where they have gone.

He says bitterly, "The motto of Missouri, 'Let the welfare of the people be the first law,' is a meaningless platitude until our obligation to the feebleminded and their families is fulfilled."

The files of area institutions and social-work agencies include many cases in which the prolonged presence of a mentally retarded child in the home has led to the family's collapse.

To escape the problem, some families become refugees from Missouri. One such case is on file at the Washington University clinics.

Mr. and Mrs. X had a severely retarded son, Billy. They did their best to care for him at home.

But he required so much of their attention that his normal younger brother did not get a fair share. In an institution Billy might have been helped; but he did not benefit from the training and care Mrs. X was able to give him.

Day by day the relationship between husband and wife grew more strained.

Finally Mr. X threatened to divorce his wife and seek custody of the normal child unless Billy left.

The family had been almost impoverished in going from one doctor and institution to another in a hopeless search for a cure for Billy. So a private institution was out.

An admission to a Missouri institution at that time would have meant a 6-year wait.

Some States spend more and do more for the mentally retarded, and in their institutions the waiting period is much shorter.

Mr. and Mrs. X fled Missouri to one of those States, Illinois, where Billy could be placed in a reasonable time.

Said social worker Miss Catherine Jones, "My own opinion is that, had they not reached this solution, this family would certainly have broken up."

To the heads of the State institutions—and even to the director of the division of mental diseases himself—come the frantic letters and phone calls pleading for admission.

They do their best to admit the most urgent cases as quickly as possible. But with an estimated 6,100 patients who should be in their institutions, they now care for fewer than 2,400.

In the 1954–55 fiscal year the State school for the mentally defective and epileptic at Marshall was able to admit only 58 new patients, 7 fewer than in the previous year. The waiting period for admission is now up to a record 10 years.

The St. Louis State Training School in St. Louis County was able to admit only 33 patients in the last fiscal year, a drop of 5 from 1953–54. Its applicants must wait up to 7 years, also a record.

Dr. George A. Johns, superintendent at Marshall, says, "I never knew of one case that the applicants regarded as optional. They usually wait until the pressure becomes strong. Then the label ranges from must to emergency."

The birth of a retarded child in itself has caused mothers to suffer nervous break-

downs. But if placement of the child is quickly sought, this situation is found:

1. Adequate private care is expensive and far beyond the reach of most people. In this region it can be had for about $900 to $1,500 a year and up. The range nationally is usually $2,400 to $3,000. One private school, in Pennsylvania charges between $5,000 and $10,000.

2. The State, except in the rarest instances, cannot take in a child under 5 years of age. In most cases, then, the child must be at home at least 5 years.

"I wish we could admit tomorrow every child who needs care in a State institution," says B. E. Ragland, director of the Division of Mental Diseases. "The situation is heartbreaking."

Dr. Arthur A. Hines, superintendent of St. Louis State Training School, says of the need for facilities for infants and children under 5:

"The severely defective child, who is usually identified shortly after birth, requires care of a type that cannot be given without tragic cost to the family in money and emotional strain.

"Their continued presence in the home is not only inadvisable but often impossible. The lack of some public facility forces the use of types of care that cannot really meet the child's needs, and the eventual cost to the public is greater than it would be with a well-establish State facility for mentally defective infants."

Often a child is at home for a few years before the parents know, or are convinced, he is seriously retarded. Or they may not be table to accept the idea until he is several years old that an institution is the only answer. Or the variety of circumstances that require instutionalization may not become acute for several years.

But in any case the problem again is the waiting list.

Two Washington University psychiatrists testified before the President's Commission on the Health of the Nation about this problem in 1952. What they said then about the delay in admission is even truer today, for while 61 patients were admitted to St. Louis State in that year, only 33 were admitted in the fiscal year just past.

Drs. Edwin F. and Margaret C. L. Gildea said:

"The delay has many disadvantages.

"Out of it arise many cases of delinquency, sexual molestation, crimes and illegitimate pregnancies.

"If any serious attempt at training and education is to be made, the most trainable years may have already been lost.

"The whole family suffers. The normal children are emotionally handicapped. For example, many normal siblings of defectives refuse to have children of their own later in life.

"The defective child fails to get the help he needs when he can best use it. The parents and neighbors suffer in this situation, and the morale of the home and community is diminished or lost."

Institutional care is required at any one time for an estimated 5 percent of the mentally retarded, who are always children no matter their age. Missouri provides it for only 2 percent.

The lacks in the program for the other 95 percent and their families are in most ways as great or even greater. Subsequent articles will deal with these.

The National Association for Retarded Children believes that it should be up to the parents to decide if the child should be placed in an institution—but that there must be space and care available in institutions for those who want to put their children in them.

One mother, Mrs. Kean O'Bannon, told in Sign magazine what it meant to her to have a retarded child.

She spoke of the countless nights her tormented mind cried into the darkness: "Why? Oh, why did it have to happen to us * * * Who is God that He dare do this?

Then she described the "backwash lapping at moral impotence" and asked. "Who am I that I question?"

In Missouri, approximately 2,800 times this year, a father and mother will learn that their child is retarded. They will experience grief as shattering as Mrs. O'Bannon's.

For the sake of their child and their family, they may decide that a State institution—the only kind that will care for the child no matter what may happen to them or their income—is the only solution.

Missouri's answer is "You must wait up to 7 years or even 10."

State's Mentally Retarded Need Diagnosis and Guidance Clinic

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the St. Louis Globe-Democrat of July 27, 1955:

STATE'S MENTALLY RETARDED NEED DIAGNOSIS AND GUIDANCE CLINIC

(By Morton Mintz)

(Third of a series)

A Richmond Heights man was recalling a day in 1951.

"My wife and I had taken our 6-week-old daughter to the pediatrician for a routine checkup.

"In the kindest way he knew how, he told us that 'something' was wrong. He wouldn't say what it was. He just urged us to take the baby to a specialist.

"The specialist didn't know how to tell us.

"Finally he just blurted it out.

"He told us, 'the baby isn't normal. It's mentaly retarded, a mongoloid.'

"Then the doctor said:

"'It happens in the best of families. Some people even think it's a mark of aristocratic breeding.'"

"I felt," the father said, "like I had been hit with a spiked glove."

Dr. Israel Zwerling, of the Cincinnati General Hospital, has studied the problem of "initial counseling"—how to break the news.

He wrote in the Journal of Pedriatics last year that few diagnoses cause so much anxiety in the physician as mental retardation.

He cited letters from parents who told of the superb job done by many doctors.

But he cited other reports that showed there are some people who do not know how to handle the heartbreaking job of telling a father and mother that they have suffered one of life's most brutal blows; that their tragedy will go on and on while even that of a child stillborn can be more often overcome.

Such reports highlight the need for diagnostic and guidance clinics.

The St. Louis unit of the National Association of Retarded Children says there is no such clinic in all of Missouri, public or private, that is set up and staffed for this particular need.

Such clinics assemble a battery of specialists, medical and others. They check speech, hearing, psychiatric, and other possible disturbances. They test intelligence and measure ability. They try to be as certain as humanly possible that what may seem like mental retardation is not actually something else. Possibly something that could be successfully treated or cured.

These things are vital, for only occasionally, as in the case of the Richmond Heights couple's child is mental retardation diagnosed quickly and easily.

The clinics provide more than diagnosis. Their staffs are trained in how to break the news, how to counsel the parents, how to analyze the problem, and above all, how to help.

There are parents who rush about the country, wasting their money to the point of bankruptcy, in a futile effort to find an expert who will say, "It isn't so," or "It can be cured." Sometimes they do this because they will not accept the diagnosis of 1 man, or 2.

But some of these parents will accept exactly the same diagnosis, and begin to adjust to their problem, if it is made by a team of specialists.

Missouri chalks up zeroes in other vital areas.

Let's start with the authoritative estimate than 95 out of 100 of Missouri's approximately 123,000 retarded do not need to be in institutions.

Their parents frequently want to keep their retarded child with them and are capable of doing more for them than anyone else.

Also in the group of retarded children kept at home are those who are there only because of the waiting lists at the two institutions for the mentally retarded. Their parents must keep them at home up to 7 or 10 years before admission.

The circumstances of 20 such families with applications on file at St. Louis State School were studied, for a sociology thesis, at St. Louis University, by Lydia J. Strand.

One mother told her, "He is getting too heavy for me to lift from the wheelchair, and my husband works long hours, and can't help much, and there's no one else to help. I am the only one who can care for him, and the doctor said I need an operation."

In some States there would be others to help her and others like her with a special home-training program.

New Jersey has such a program. It began 12 years ago with 30 families.

Twenty-eight of these families had children so retarded that the parents were considering or had applied for admission to a State institution.

At the end of that year, 26 couples had been so greatly helped and encouraged that they decided they could care for the children at home.

Miss Vincentz Cianci has headed the New Jersey program since it began in 1943. She has two associates. Together they handle about 150 cases a year.

The Saturday Evening Post called Miss Cianci a "one-woman rescue squad."

"She is daily engaged," the magazine said, "in snatching frantic mothers from the emotional whirlpools into which 24-hour-a-day care of a retarded child has drawn them. She effects the rescue not by taking over the care herself, but by showing the mothers how to teach basic living habits and simple tasks and amusements to those youngsters who had been regarded as hopelessly unteachable."

Miss Cianci herself wrote:

"Parents of retarded children can actually be as proud of the accomplishments of their retarded child as one of their normal children.

"The first trip to the grocer or barber alone, the first time the child completely dresses himself—these events can fill parents with the same emotion as when their normal child is chosen soloist in the school

orchestra or completely cooks the evening meal.

"* * * These accomplishments, no matter how small they may be, encourage the parents to continue with the training."

The annual cost to New Jersey is about $15,000. State officials say that, if these children had been in institutions, the cost would have been about $150,000 a year.

An estimated 75 out of 100 retarded children can find a job and be at least partially self-supporting if they have proper help from childhood on.

Missouri does not provide that help early in life with a home-training program. Or with the nursery schools and recreation programs that would also ease the parents' burden and, at the same time, the demand for more and more State institutions.

Nor does it provide later on another very important facility, the "sheltered workshop."

Several States have these workshops for two groups of mentally retarded who, unaided, cannot compete in the business world:

1. Those who need a "stepping stone" past their previous education so they can go out and be successful in a job.

2. Those who can be trained for permanent work in the workshop (an estimated 12,000 of Missouri's approximately 123,000 retarded).

The work they can do might not interest you and me. But many small, routine jobs that would be unbearably dull to us can give a rich sense of achievement to a retarded child, even if it is only putting metal tips on shoe laces.

The executive director of the National Association for Retarded Children says: "If we could help and train these people to the point where they can produce, partially support themselves, contribute tangible wealth to society, the value of workshops would be incontestable."

State Lacks Aid for Retarded After Release From Institutions

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the St. Louis Globe-Democrat of July 28, 1955:

STATE LACKS AID FOR RETARDED AFTER RELEASE FROM INSTITUTIONS

(By Morton Mintz)

(Fourth of a series)

MARSHALL, Mo., July 27.—In February, 1953, the State school for the mentally defective and epileptic received a big black eye.

A House Appropriations Subcommittee visited the institution here and its branch at Carrollton and took testimony.

The subcommittee reported that the 82-year-old superintendent, Dr. R. P. C. Wilson, testified he did not believe in patient rehabilitation.

It said he was alone among the seven superintendents of the State mental institutions in stressing custody.

It said that at Marshall "absolutely no steps had been taken toward the rehabilitation of patients."

It accused Dr. Wilson of using "slave labor"—keeping patients at work for a pittance though they were capable of being released.

It climaxed its charges with a demand that Dr. Wilson be fired.

While Gov. Phil M. Donnelly had the demand under advisement, Dr. Wilson died, in July, 1953, without making a public reply to the charges.

Before Dr. Wilson's death a Senate committee came here to make its own investigation.

It reported on March 12 that it had found no evidence to justify the charges.

It said it had found no "slave labor" and added, "Whatever employment as is now being afforded to inmates of this institution, in the opinion of the committee, greatly alleviates their condition."

In other words, working is better than being idle and useless.

It made no direct comment on the House subcommittee's demand that Dr. Wilson be fired.

But it did recommend that a psychologist be hired to begin a rehabilitation program and suggested that the legislature appropriate the funds to put it into effect.

Regarding the need for rehabilitation, then, the two committees seemed to be in general agreement.

Regarding "slave labor," they seemed to be far apart.

The real question boiled down to this:

If patients were being held at Marshall though they could succeed outside, was Dr. Wilson or the State responsible? or both?

Dr. Edwin F. Gildea, a Washington University psychiatrist, came up with part of the answer.

He was summoned to Marshall by the House subcommittee to investigate whether the stress on custody was justified.

He agreed with the subcommittee that certain patients were being held "in order to have cheap labor * * *. Dr. Wilson has administered an economical custodial institution regardless of how many patients were exploited."

He agreed that Dr. Wilson should be replaced.

Later, Dr. Gildeo made the full text of his report available. It contains this statement which stands out because of its last seven words.

"Out of 7 persons examined, at least 4 could earn their own living in the community and keep out of trouble if they had some form of supervision."

That's a big "if."

Yesterday's article told of Missouri's failures to provide help to the retarded and their families through diagnostic and guidance clinics and sheltered workshops.

Today three more zeroes must be racked up.

THE WELFARE WORKER PLAN

Missouri has no setup for providing continuing help and guidance to the retarded in finding jobs ad solving other problems after their release from an institution, or eve if they have never been in one.

An inevitable result is that some patients capable of release must remain in an institution, lengthening the waiting lists (now 7 to 10 years) and costing the State much more than if they were outside and working.

Minnesota has such a plan. In each of its counties there is a welfare worker specifically assigned to the job of helping the retarded get along in society.

THE COLONY PLAN

Missouri has no State-sponsored "colonies" for the retarded—supervised residence homes in which they live while earning money in private jobs.

Vermont has a plan like this.

THE FOSTER-HOME PLAN

Under this arrangement, certain retarded children, many orphans among them, are transferred from an institution to a private home and maintained there at State expense.

New York State has a foster-home setup. The cost to the taxpayers is about 20 percent less than if the child were in an institution.

Dr. George A. Johns, who succeeded Dr. Wilson, says the adoption of these plans on an adequate scale would enable him to increase his release rate "substantially." Each patient kept at Marshall costs the State $695 a year to maintain.

Dr. Arthur A. Hines, superintendent at St. Louis State Training School, estimates that the "colony" plan would enable him to release 25 to 30 patients and the foster-home plan 30 to 35 more.

Thus these two plans could open the way for a minimum of 55 applicants on his waiting list. That is 22 more than were admitted in the whole fiscal year just ended.

The two superintendents and other authorities agree that many patients who would qualify for the plans would be happier and more productive outside the institution.

But they also cite the risks that are run if release is attempted without adequate, continuing supervision.

One risk concerns retarded boys. If they lack adequate supervision, they can fall prey to unscrupulous persons who drag them into delinquency and crime.

Another risk concerns retarded girls. If they lack adequate supervision, in their ignorance and innocence they are liable to become illegitimately pregnant or otherwise exploited.

In Dr. Wilson's official reports to the director of the division of mental diseases he gave these figures on the number of patients discharged on parole:

In the 1952–53 fiscal year (his last), 5; 1951–52, 12.

These are the comparable figures reported by Dr. Johns, successor to Dr. Wilson:

In his first year as superintendent, 1953–54, 14; 1954–55, 56.

Overcrowding Is Plainly Visible at State School for Retarded

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the St. Louis Globe-Democrat of July 29, 1955:

OVERCROWDING IS PLAINLY VISIBLE AT STATE SCHOOL FOR RETARDED

(By Morton Mintz)

(Fifth of a series)

MARSHALL, Mo., July 28.—Pearl S. Buck, the famed novelist who told the story of her mentally retarded daughter in The Child Who Never Grew, said in a letter to a St. Louis father:

"It's a lifelong responsibility for us parents to keep in touch with their retarded children, who are so helpless and so unable to protect themselves.

"It is not possible to put these children out of mind and to leave them as though they did not exist, unless the partents are monsters of cruelty, which I cannot believe most of them are."

Because they are not monsters of cruelty, parents come, on visiting days, from all of Missouri's 114 counties to see their children at the State School for the Mentally Defective and Epileptic here and at its Carrollton branch.

A visit here means for many parents a whole day of driving, for Marshall, a city of about 9,000 persons, is in the northwest section of the State. For St. Louis and St. Louis County parents, who have a total of 142 children at the institution, the round trip is about 360 miles.

This reporter came here—not on a visiting day—to inspect the institution.

What kind of care is given its 1,838 patients?

Has there been any progress since 1953, when a new superintendent, Dr. George A. Johns, took over?

This institution, Missouri's first for the mentally retarded, was opened in 1901.

It came late—New Jersey opened its first 13 years earlier—and has not been able to keep pace with the demand.

It is overcrowded. It has 246 more patients than were advised by an official State agency, the Section of Environmental Health of the Division of Public Health and Welfare.

The overcrowding is plain to the eye in many dormitories. You see beds jammed together and in the aisles.

You see it in dining rooms, where patients must eat in rigid shifts in order that all will be fed.

You see it in dayrooms, some of them cut in half to make room for more beds.

And you see it in the extra burden on the staff, which cannot devote ample time and energy to many individual patients because it must care, as best it can, for so many.

A Kansas City women's group that was here last year reported, "Facilities are inadequate for even simple custodial care."

Dr. Johns has 332 employes counting the 102 not on the medical staff.

That divides out to about one for every six patients, or one for every 16 patients on each 8-hour shift, not figuring time off.

Dr. Johns says he could discharge more patients if he had more people. He would like to have 100 more, including doctors, psychologists, dentists, nurses, attendants; teachers for home economics, manual trades, the blind, the deaf, the backward in speech, the cerebral spastics.

"If we had them," he said, "we would do as good a job as anyone else."

Adding to his problem is the fact that Marshall is getting more and more severely handicapped patients who require extra care; fewer than can be trained and discharged.

There are too many patients who could be learning things faster, even if only to care for their personal needs; too many who could be more speedily trained in more advanced ways—if there were the staff to do it.

Too many rock in their chairs or stay in their beds because there aren't enough employees to do for them all that could be done.

It is a tricky business to determine how much staff there should be.

For example, you cannot compare one institution with another unless you give fair weight to the number of patients in each who are totally helpless and must have everything done for them.

The American Psychiatric Association sets up precise staff-patient ratios for mental hospitals.

But the American Association on Mental Deficiency has not set up similar yardsticks for institutions for the mentally retarded.

Further, the APA now makes surveys of mental hospitals; the AAMD does not make comparable surveys.

This is one of the reasons why B. E. Ragland, director of the Division of Mental Diseases this year requested the National Institute of Mental Health to survey this institution and the St. Louis State Training School.

To his knowledge, the survey will be the first of its kind in Missouri by a Federal agency. He says he will ask that it be as broad as possible.

The Institute hopes to make the survey during or before November. It will make its report to the State and Ragland says he will release it as soon as copies can be made.

There is no doubt that Marshall has made definite progress in the past 2 years.

In 1953 suspicions were voiced aloud that normal children were being held here, children who were merely emotionally disturbed. No one could prove it one way or the other because there was no psychological retesting program.

There is a regular retesting program now that has checked the entire patient population. The psychologists say there are no patients of normal intelligence.

The staff has been expanded in vital areas.

Newcomers include a second part-time physician, 2 psychologists, its first social worker, 2 nurses, and, for summer work, a third psychologist, 2 recreation supervisors and medical, dental and nursing assistants.

One of Dr. Johns' "cherished desires" is to establish a connection with the School of Medicine and other schools and departments at the University of Missouri.

He says this would make possible consultation and other services for extraordinary cases.

"We hope," he says, "that such a liaison will be of mutual benefit; of teaching value to the university as well as of advancement to the children of the institution."

Dr. Johns discharged 56 patients on parole in the year ending last June 30. His predecessor discharged five in 1952–53.

Since January 1, Dr. Johns has released a total of 154 patients for visits home.

Patients work with the younger children. They sweep and clean, prepare and serve food, grow it on the farms, work in the laundry, the dairy, the bakery, the cannery.

If the percentage of them at work is very high, the question arises: Couldn't some of them do just as well or better in a job on the outside?

The percentage was 41 in 1952–53. It was down to 37 in 1954–55.

The State provides Dr. Johns with $695 per patient per year. He is proud of all that he and his staff do with so little.

There are children, many of them, who are happy here, much more so than if they were in their own homes, shunned by neighbors, teased and ridiculed by normal children, sometimes hated by their own sisters and brothers.

Dr. Johns doesn't believe defective delinquents belong here with the innocent retarded. But he has about 70 of them, and he says, "Many have become better citizens here."

He is proud of the school, which provides education up to the junior high school level; of the beautiful rugs and tablecloths made by his patients; of the regular religious services; the library; the music teaching (there are two patient bands), the TV sets donated by parents and civic groups, the canteen, the cleanliness that led the Kansas City women to say:

"We noted, even in the most backward wards, the extreme neatness of the rooms and beds, and the absence of any odor."

He is proud of the maintenance of the brick cottages and buildings and the tree-shaded grounds. Of the farms which will produce food valued at an estimated $235,000 in this fiscal year.

A typical day's menu picked at random:

Breakfast: Cereal, milk gravy, apple butter, bread, oleo, milk or coffee.

Dinner: Roast pork, sweet potatoes in broth, creamed corn, sliced turnips, oleo, milk, ice cream or peaches.

Supper: Chili-macaroni, bread, oleo, leftovers, chocolate milk, prune plums.

Now a new $1 million institution is being built at Higginsville. On the site of the old Confederate Home, it will be opened next year. It will have two 1-story modern cottages patterned after those at the Southbury (Conn.) Training School, recognized as one of the very best in the country.

It may make a dent in the waiting lists for Marshall. More likely, its opening will bring a stream of new applications.

But because it will be too small to merit a separate superintendent, Ragland says, it too will be under Dr. Johns.

Carrollton, which he also supervises, is 30 miles northwest of here; Higginsville is 30 miles north.

Dr. Johns has spent his professional life in this field. He works a long day, is on call at night, and puts in a 7-day week. He is Marshall's only full-time physician and its only psychiatrist.

It looks like he'll have to find an 8th day for his week.

School for Mentally Retarded Here Lacks Adequate Staff

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the St. Louis Globe-Democrat of July 30, 1955:

SCHOOL FOR MENTALLY RETARDED HERE LACKS ADEQUATE STAFF

(By Morton Mintz)

(Sixth of a Series)

The State of Missouri bought the St. Louis State Training School just 7 years ago. The price: $1.

The city of St. Louis put up the original buildings in 1924. By 1948, the institution, which is at 10695 Bellefontaine Road, North St. Louis County, was valued at $1,600,000.

St. Louis was several million dollars in the hole at the time. And it was the only city in the Nation maintaining an institution like this for the mentally retarded.

So it was the city that requested the State to take over, for the nominal price of $1 each, the training school and the city sanitarium for the mentally ill as well.

Missouri now spends about $1,240 a year per patient at St. Louis State. It spends only $695 at the State Training School for the Mentally Defective and Epileptic at Marshall.

Does this mean St. Louis State is twice as good? No.

The gap is not as big as it seems, B. E. Ragland, director of the division of mental diseases, cites two chief reasons for the difference:

1. Civil service has three pay scales, metropolitan, urban and rural.

Employees at Marshall are on the rural scale. Hospital attendants (group 1) there earn from $140 to $187 a month.

At St. Louis State (metropolitan), the pay range for the same group starts at $187 and runs to $250.

2. Marshall has more than three times as many patients as St. Louis State. This, Ragland says, enables it to effect substantial savings on food and other items.

The staff-patient ratio is much higher at St. Louis State. It has 187 full-time employees for its 565 patients, a ratio of about 1 to 3. Marshall's ratio is roughtly 1 to 6.

But again the figures alone are not enough.

They don't take into account, for example, how much work can be done by patients. If a patient can't do the work, an employee must.

In the 1953-54 fiscal year, 39 out of 100 patients at Marshall were working; at St. Louis State, 34 out of 100.

They also do not take into account the extra employees needed when an institution is short of labor-saving equipment.

Like his counterpart at Marshall, Dr. Arthur A. Hines, superintendent at St. Louis State is convinced he could do more for the patients and discharge more if he had an adequate staff. The only job training now is on work details.

More could be done for purely custodial patients too.

For example, many children who are severely handicaped physically must be housed on the second story of dormitory buildings that are not equipped with elevators. If they are large and heavy, as some are, there is no practical way to get them down the steps and outside for fresh air. It is too much of a job for a woman attendant.

But there is a sizeable recreational program.

Each building has a TV set, radio and record player, often donated by parents and civic groups. Parties, dancing, games and movies are provided occasionally.

There's a swimming pool (converted in WPA days from the basement of a razed building). There are hikes, ball games, outings (to the Zoo, the Veiled Prophet Parade, the Police Circus, the Municipal Opera, Cardinal baseball games), and excursions on the Steamer *Admiral*.

Ninety-eight patients go to the nine-classroom school and are educated up to the fourth-grade level, higher in a few cases.

Protestant, Catholic and Jewish religious services are held regularly.

There's a canteen at which children buy candy and soft drinks with their allowances and learn to make change.

Just now being staffed and occupied is the first major new facility since the hospital-administration building was erected in 1939.

It is the $500,000, 76-bed Donnelly Building (named for the Governor) for mentally defective delinquents. It gives St. Louis State for the first time, an effective way of separating the delinquents from the innocent and easily-led retarded children.

Also new is a $12,000 cannery, a big cost-cutter for St. Louis State. The institution farms 450 of its 582 acres—grains, tomatoes and green beans are big items—and produces all its pork, nearly all its veal and beef; all its milk.

Here is a patient's menu for a typical day (last July 20):

Breakfast: Chilled fruit juice, cereal, fried eggs, bread and butter, coffee or milk. Dinner: Grilled pork chops, candied sweet potatoes, corn on the cob, fresh tomatoes, cranberry cauce, bread and butter, iced tea or milk. Supper: Cold boiled ham, buttered string beans, fresh tomatoes, ice cream, bread and butter, iced tea or milk.

The grounds are spacious and well kept. As you go around them, you see clusters of patients, and you hear many say "Hi, Dr. Hines!"

The brick buildings are well maintained. Paint is in good condition. New floors and matresses are bing put in.

There is a hospital, clinic, laboratory, pharmacy and dentist's office. Patients are given routine physical examinations and psychological testing as well as special care.

St. Louis State had on nurses for seven years; today it has two.

On the other side of the ledger:

St. Louis State is overcrowded. It has a state-rated capacity of 386 (not counting the Donnelly Building), or 179 fewer than actual.

As at Marshall, you see the overcrowding most dramatically in the dormitories, where beds are placed end against end.

The Donnelly Building, when it is fully staffed and occupied, will cut sharply into the allowance of $1,240 per patient. That sum is calculated exclusive of the new addition's requirements and the legislature made no extra appropriation.

Patients cannot be properly grouped by type.

Again, as at Marshall, there is no space and no provision for children younger than 5. And completely dependent children, those who require a great amount of care and can be trained to only a small degree, are a rising percentage of the population.

In his 16 years as superintendent, Dr. Hines' most difficult task has been getting the right kind of employees—kind, understanding, sympathetic, competent.

For years he was handicapped by the State pay scale, which was below that of other area hospitals and institutions. Last July 1, a new scale went into effect. Since then he has been able to compete on better terms. He expects to cut his annual turnover among attendants from 1 out of 3 to 1 out of 5.

His task is still aggravated by the distance of the institution from the city and the lack of employee living quarters on the grounds.

He says the "great majority of his employees are kindly and humane. Many times they develop affection and love for children who are not their own."

He says these employees "are faithful to their trust"—but he admits frankly that a very few are found from time to time who are not.

Complaints of mistreatment of patients are made from time to time against any large institution for the mentally ill or mentally retarded.

Sometimes the complaints are unfounded—a discharged, disgruntled employee seeks revenge; a parent is hysterical; a visitor cannot imagine that restraints must ever be used.

In spite of all precautions in screening applicants, Dr. Hines says "we occasionally select persons who do not make good employees and who are dismissed before they complete their 6-month probationary period.

"Even then, an occasional employee may remain in service and at a later date be found not too well qualified and unable to adjust to the assigned duties.

"Occasionally we find an employee violates rules, and it has happened that an occasional employee has been guilty of mistreating or striking a child. All employees are warned at the time of employment of the penalty for mistreating a patient.

"Consequently, when an employee is found guilty of mistreatment of a patient, dismissal or suspension is the result. According to the State law, an employee who witnesses or knows of the mistreatment of a patient and fails to report it, is considered as guilty as the employee who mistreats the patient, and the penalty is the same.

"Mistreatment of patients will never be tolerated by this superintendent."

Dr. Hines says he has to fire 1 or 2 employees a year, no more.

Complaints of mistreatment sometimes come to the St. Louis unit of the National Association for Retarded Children. Its president and immediate past president say they have been able to verify none of them.

A report made for the Mental Health Association, a community chest agency, reached this general conclusion: "St. Louis State Training School is doing a good job with what they have."

United States To Undertake Research Into Mental Retardation Causes

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article from the St. Louis Globe-Democrat of July 31, 1955:

UNITED STATES TO UNDERTAKE RESEARCH INTO MENTAL RETARDATION CAUSES

(By Morton Mintz)

(Seventh of a series)

Research is the great frontier of mental retardation.

The Federal Government is about to explore it in force.

On President Eisenhower's desk today awaiting his signature, is the appropriation bill for the Department of Health, Education, and Welfare.

The bill, for the first time in the Nation's history, includes funds specifically designated by Congress for research into the causes and problems of mental retardation. The amount: $750,000.

The National Association for Retarded Children credits Representative JOHN E. FOGARTY, Democrat, Rhode Island, with being the most ardent champion of the appropriation in Congress.

He is chairman of the House Appropriations subcommittee that handled the new appropriation.

He made his feelings plain in a speech last month: "If the Federal Government," he said, "can spend $80 million or $90 million on research on plants and animals, they certainly ought to spend a few million on research on human beings."

Until a few years ago no State, so far as can be determined, earmarked funds for research in this field. Only a very few do today.

In the next 2 years, Missouri will spend a total of $5,649,000 at its two institutions for the mentally retarded. It spent $5,382,464 in the biennium just ended, $3,215,842 in 1951–53, $2,905,000 in 1949–51.

In the 8 years ending June 30, 1957, the State will thus have spent a grand total of $17,152,306 on its mentally retarded.

Not a dime of this was earmarked for research.

The New Jersey Commission To Study the Problems and Needs of Mentally Deficient Persons said in a report last year:

"Research is the most sensible and least expensive method for discovering new ways of helping the mentally deficient. Unfortunately, States are most reluctant to spend money on experiments that do not seem to produce immediate results.

"This attitude has boomeranged so that pennypinching States are saddled with huge costs that are hidden in the statistics of crime, ill health, poverty, and mental illness. It is 'pure' research which may cost money today that saves untold sums of money in the future."

The commission went on to make this recommendation:

"The legislature should allocate an amount equal to at least 5 percent of the total annual budgets for the institutions for the mentally deficient, the mentally ill, and the emotionally disturbed for the use of the bureau of research."

Research is no magic wand. You don't just say, "We'll spend $10 million or $100 million and that will take care of it."

Experts believe that hereditary factors are responsible for retardation in no more than half the cases, perhaps many fewer.

They point out that research through the years has shown that more and more types of retardation are not hereditary despite previous belief to the contrary.

They have found evidence that even certain hereditary types could be controlled. One example is retardation associated with the Rh factor in the blood.

Dr. Salvatore G. DiMichael, executive director of the NARC, thus hopes the day will come when research will show us how to prevent a large majority of all mental deficiency.

But, he says, continuing research on a big scale will cut down retardation by degrees as time goes on.

When could that large majority of retardation be eliminated?

Another top expert, Dr. Richard Masland, says it is theoretically possible to eliminate it "but it might take several generations."

But progress is being made even now and more is promised with the new appropriation.

Dr. Masland makes another key point: "In the long run, success depends upon getting capable people to do the job."

He is well qualified to speak on this problem. A neuropsychiatrist from Winston-Salem, N. C., he is spending 18 months, for the NARC, investigating what research is being done and what fields might be given priority.

He says there is a great shortage of qualified research personnel. He believes that one of the most important results of the $750,000 appropriation may be to alert investigators to the problem of mental retardation and to stimulate more of them to get into this work.

Dr. Masland says research aimed directly at finding the causes of mental retardation is vital to ultimate prevention; but at least equally vital is pure research aimed at understanding how the human body works—the blood, the brain, the cells, the genes.

He cites the example of research on the blood that led to this discovery: When certain antibodies are present in the blood of an expectant mother she develops an immunity against the child within her; and the child's brain can be damaged as a result.

One of the most fascinating speculations is that of a Cornell University embryologist, Dr. Alexis Lawrence Romanoff. Eugene Kinkead, in an article in the New Yorker, called him the world's leading authority on the bird's egg.

Kinkead reported that French scientists, experimenting with chicken embryos during the first 16 hours of pregnancy, were able to produce all kinds of malformed wonders.

Dr. Romanoff says the 16 hours correspond with the first 2 weeks of pregnancy in a human.

"He theorizes," Kinkead said, "that congenital malformations in human being originate during those first 2 weeks, before pregnancy has been detected * * * he cannot help but become excited when he speculates on the possibility of some day reversing the processes by which the French scientists created their nightmares"—to produce in this way a normal child from an embryo destined to be abnormal.

This, of course, may be relevant to only certain types of retardation.

There are at least 70 different causes, many of them unknown. They include certain infections during pregnancy, glandular disorders, toxic chemicals; injury during or immediately before or after birth, and brain inflammation resulting from certain childhood diseases.

Both the Washington University and St. Louis University Schools of Medicine are carrying on several studies that could shed light on the mysteries of retardation.

A starting point for one project is the fact that an infant may be short of oxygen during or immediately after birth. The infant's brain may be injured if the shortage is severe and prolonged.

A group of Washington University researchers is studying various techniques used in delivery. Circumstances indicate one technique should be used at birth; the researchers follow up to see how the child develops, both mentally and physically. Other circumstances require a different delivery technique; they follow up again.

The researchers' hope is that they will find clues to the safest techniques of delivery, those that will cut to the minimum any chance of either mental or physical handicap.

The Federal research appropriation allots $500,000 to the National Institute of Neurological Diseases and Blindness and $250,000 to the National Institute of Mental Health.

These agencies will make research grants in fields bearing on causes of retardation, to develop and train investigators and to teach persons to handle other problems of retardation, such as care and training.

One of the Nation's most distinguished pediatricians, Dr. Grover Powers, chairman of the NARC's National Scientific Advisory Committee, said 2 years ago:

"Mental retardation is still too low on the totem pole of medical respectability and of scientific concern."

Following is an excerpt of testimony befor Congressman FOGARTY's subcommittee. It indicates how low on the pole mental retardation has been:

FOGARTY is questioning Dr. Robert H. Felix, director of the National Institute of Mental Health:

"Mr. FOGARTY. Now, doctor, what are you doing in the field of retarded children, or exceptional children?

"Dr. FELIX. I wish I could say we are doing more than we are, Mr. Chairman. At the present time (February 15, 1955) we are working in this field to the extent of about $155,000 a year. We have about $120,000 or $121,000 a year in research grants in this field on various aspects of it—learning procedures, chemical causes, organic studies, and so forth."

Later, Dr. Felix testified he had a scientist working full time on the problem at the institute.

"Mr. FOGARTY. One scientist?

"Dr. FELIX. One scientist; yes, sir."

The "one scientist" was Dr. Leonard Duhl. He explained to Marsh Clark of the Globe-Democrat Washington bureau:

"Thirty to 40 years ago, there was a great interest in the retarded child among psychologists. Somehow, an attitude of complete pessimism swept in that said retardation is inherited and nothing can be done. Once that happened, professional interest dwindled.

"In recent years, however, there have been some important developments.

"Researchers have reported that things may not be as bad as originally thought, that something can be done after all.

"They have found many clues as to what is causing mental retardation.

"Along with this has come a great upsurge or parent interest which is probably the most potent force working for advancement against mental retardation today.

"Down through the recent years, the Institute has given research grants, but neither the quality, nor the quantity of the requests was too good until last year, when the whole situation improved tremendously. Not only are we getting worthwhile requests now for good projects, but they are coming in in increasing number."

Steel Firm Finds Retarded Persons Useful Workers

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the St. Louis Globe-Democrat of August 1, 1955:

STEEL FIRM FINDS RETARDED PERSONS USEFUL WORKERS

(By Morton Mintz)

(Eighth of a series)

Can mentally retarded persons actually support themselves?

Do they make good workers?

Many firms employ them. Their answer to both questions—if they know how to employ them—is "Yes."

One firm that does know how to employ them is the Granite City Steel Co. in nearby Granite City, Ill.

It is an example of a company intelligently helping itself.

It is an example of what President Eisenhower meant when he said that helping the retarded can make "a definite contribution to the economic well-being of our Nation."

It is also an example of what CIO President Walter Reuther had in mind when he said:

"We believe that many mentally handicapped persons * * * can be absorbed by industry in useful functions which they can effectively perform.

"These, placed in occupations which are suited to their abilities, need not present a problem to either the union or the management.

"They offer no competition to the so-called normal worker if existing contractual obligations * * * are made applicable to them as well as to all others covered by the agreement."

Granite City Steel has 5,000 employees.

Approximately 400 are somewhat below normal in mental ability.

Their appearance is not unusual. You cannot go into the plant and pick them out by their looks.

Outside the plant their lives follow normal patterns.

Along with most of their fellow workers, they are members of Locals 16, 30, or 67 of the CIO United Steel Workers or of Local 50 of the AFL Chemical Workers.

It has been company policy for many years to employ both physically and mentally handicapped persons. The company feels its policy is good for the company, good for the handicapped, and good for the community.

For the past 8 years a 37-year-old Washington University business administration graduate, John R. Hundley, Jr., has been the company's director of industrial relations and personnel.

Now, in the foregoing perspective, this is what he says about the mentally retarded workers:

"We treat them as human beings, which they are.

"We respect them for the way in which they live up to their potential, whatever it may be.

"Under abuse, they would go backward. Some might have to go to institutions.

"They work in 87 different jobs. They do work that is routine and repetitious and which does not put them under pressure.

"They earn from $1.74½ to $1.98½ an hour.

"Generally speaking, there is no difficulty between them and the other employees.

"If they are placed properly, they are no problem.

"If they are placed wrongly, as in jobs beyond their ability, they lose interest, don't show up for work, become confused and frustrated.

"We do our best to see that they are placed properly.

"First, we test a man in six different areas. Mental ability is only one. We also want to know, for example, about his manual coordination (use of arms and legs in complex movements), whether he would be best off with a group or by himself, whether he is best fitted for routine work or work with some variety.

"Second, we acquaint the supervisor with the situation so that he will understand how to handle it.

"The mentally retarded make satisfactory employees and are usually superior to people with higher intelligence who would quickly become bored and dissatisfied with the work done by the retarded."

What happens when there are no such programs like Granite City Steel's?

This happened in Michigan:

Frank, a 20-year-old man who was moderately retarded, got a job as a car washer. The employer knew his limitations but he didn't follow through to be sure the other employees understood.

Jane H. Potts described the results in the American Journal on Mental Deficiency:

"They misplaced his sponge and washing cloths, they hid his hat, they turned off the hose while he was working; then mysteriously turned it on again when he tried to investigate.

"They called him 'dummy.' He was hurt, he was angry and he was altogether confused. It was not surprising that he stayed only 3 days."

Later, a rehabilitation counselor found Frank a job as an after-hours cleanup man in a restaurant. The employer patiently explains his duties, where things were kept, how to scrub. The employer impressed on Frank that it was his responsibility to keep the restaurant clean.

After 6 months, Miss Potts reported, Frank "is still successful and happy; he works alone, eliminating the question of competition and wisecracks."

The story of the Granite City Steel program and of Frank make two main points:

1. Most of the retarded can earn their own living and be no problem to society if society helps them with patience and understanding, if it forgets the wisecracks and the prejudice that can send a retarded person back to an institution to be a burden on himself and the taxpayers.

2. Missouri is hurting itself when it does not provide all the things that will help each of the retarded reach his maximum potential—the vocational training in the institutions; the "sheltered workshops" that provide the steppingstone to private employment or jobs for those who cannot go into private industry; the residence homes for those who must live under supervision; the welfare workers to guide the retarded in finding suitable employment and in adjusting to other problems.

The NARC estimates that 67 out of 100 retarded persons at any one time can become self-supporting, can manage their own affairs under favorable living conditions and with occasional counseling at times of crisis.

Frank and the retarded employees at Granite City Steel come from this so-called "marginal independent" group. Its members have, roughly, the mental ability of a child of 8 to 12. Most have the mental ability of a child of 10.

What about the other 33?

They, says the NARC, are "a continuing concern of society." This is the best breakdown the NARC can make because of the lack of precise information, the progress that is being made, the effects of individual circumstances, and the way in which retarded persons sometimes shift from one group to another:

Three out of the 33 need hour-by-hour supervision.

Ten could live at home or in an institution and take care of some of their physical and social needs but will not be able to earn money.

Ten would be able to earn some of their livelihood in "sheltered workshops."

Ten more could be self-supporting with very close supervision, both on and off the job, in the kind of "sheltered employment" provided by a member of the family, for example.

"The Golden Rule applies to them," said Helen MacMurchy in "The Almosts." "We are to do for them what we would others should do for us. Give them justice and a fair chance. Do not throw them into a world where the scales are weighed against them. Do not ask them to gather grapes of thorns or figs of thistles. But give them one chance to bring out the best that is in them.

"This is but a fair request on behalf of human beings who are nevertheless permanent children and who will never grow up. Responsibility, except so far as a child understands it, is not their portion. The achievements of life, for them, are bounded by their mental makeup and character—just as our own achievements are, though on a little larger scale."

Qualified Teachers Needed for State's Mentally Retarded

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the St. Louis Globe-Democrat of August 2, 1955:

QUALIFIED TEACHERS NEEDED FOR STATE'S MENTALLY RETARDED

(By Morton Mintz)

(Ninth of a series)

Mentally retarded children have been a part of mankind since the beginning.

Some primitive peoples looked on them as divine.

The Spartans are said to have thrown them into the river or abandoned them on the mountainside.

Not until the 19th century did science and the humane spirit join to help the retarded.

Not until the 1930's did a few organized groups for parents of the retarded spring up in the United States.

In 1951, the National Association for Retarded Children was formed.

Some call the great surge of parent interest that resulted in the NARC "the most potent force working for advancement against mental retardation today."

The NARC, which has its headquarters in New York City, has about 50,000 members today. It has about 400 member units in 46 States (none in Arkansas and Mississippi), the District of Columbia, and Hawaii.

Why was the NARC, or something like it, so slow in coming when mental retardation afflicts 3 out of 100 Americans and burdens their families with brutal problems?

Because, out of ignorance, the retarted were looked upon with fear and suspicion.

Because they were insulted, abused, shunned.

Because their parents, out of ignorance, often believed the retarded child proved their inferior heredity.

Because their parents were so often overcome with shame that the last thing they wanted to do was come out in the open.

Because from their ranks could come no hero who had dramatically triumphed over his affliction—no Franklin D. Roosevelt (polio), nor Beethoven (deaf), no Helen Keller (blind, deaf).

But there were many parents who awaited only a means of getting together, who were anxious to start reversing attitudes that had held on for centuries.

It would be impossible to list all the parents in St. Louis alone who have come out in the open; who are fighting for help for all the retarded; who have become ennobled rather than crushed by the tragedy of having a retarded child.

We would like to tell you of a few:

The four couples who in January 1951, worked night and day to found the Mentally Retarded Children's Council, the NARC affiliated now called the St. Louis Association for Retarded Children, are: Mr. and Mr. Albert C. Dillingham, 2423 Shirley Avenue, Jennings; Mr. and Mrs. Louis Price, 926 Jeanerette Drive, University City; Mr. and Mrs. John C. Milton, 10359 Florissant Drive, Ferguson; and Mr. and Mrs. Russell S. Wood, Jr., 3449 Evergreen Lane, Lemay.

The current president of the unit, Wendell H. Stark, 612 Norfolk Drive, Kirkwood, and his predecessors, Mrs. Price, Joseph Link, 3317 Sims Avenue, Overland; and Mrs. R. M. Foushee, 1107A Edward Terrace, Richmond Heights.

Mr. and Mrs. Harold (Pete) Reiser, 5740 Mardell Avenue, who were especially active in raising funds (rumage and bake sales, card parties, solicitations, auctions), and Frank Ackerman, 7384 Westmoreland Avenue, University City, chairman of the legislation committees of the local and State groups.

On the shoulders of these people as well as many others rested the hard jobs of organizing, raising money, winning public support, starting projects and keeping them going, letting dinners burn while they talked on the phone with freightened parents who had just discovered their child was retarded.

A few more are:

Mrs. C. P. Pei, 6311 Waterman Avenue, University City. Her first two sons were retarded. Her third was not. Her fourth was retarded. She has gone to the help of parents in the first stage of shock, has pleaded the cause of research into the causes of retardation before the President's Commission on the Health Needs of the Nation.

In 1951, with Mrs. Milton and Mrs. Albert I. Stix, Jr., 7526 Wellington Way, Clayton, she formed the Foundation for Mentally Retarded Children (now Retarded Children's Services) to operate a play school on a small scale for retarded youngsters between 7 and 12 who were ineligible for the public schools.

At first Mrs. Pei and Mrs. Wilton ran the school in their own homes, then, with the help of the nuns, at the Helpers of the Holy Soul Convent, and, since March, 1952, at Sherman Park Recreation Center.

The Social Planning Council, a Community Chest agency, has cooperated closely with both the St. Louis Association for Retarded Children and Retarded Children's Services.

The NARC affiliate now has 302 members, some of them not parents of retarded children.

For retarded children it sponsors, within its limits, nursery school classes and recreation activities. It collects clothing for the institutionalized and gives parties.

Until the four couples went to work 4½ years ago, the words "mentally retarded" were seldom spoken here, almost never seen in public print.

Only 2 weeks ago one of the most important developments took place: The United Fund of Greater St. Louis accepted the local NARC affiliate for membership.

Association officials now hope that funds may become available for the first time for two vitally needed facilities:

1. A diagnostic and guidance clinic.

2. A full-time office headed by a paid director.

The Missouri Association for Retarded Children, the statewide NARC affiliate, was formed at a meeting in Hotel Jefferson on March 27, 1954. It has 473 members.

Its president is Dr. C. G. Leitch of Kansas City. It now has affiliates in St. Louis, Kansas City, St. Genevieve County, St. Francois County, Perry County and Springfield. Dr. Leitch is hopeful that the six affiliates will eventually grow to 30.

Many St. Louis members actively assisted in the formation of the outstate groups.

The State and local associations scored in the educational field this year with an intense effort—phone calls, letters and personal talks with legislators.

The situation was this, as related by Frank Ackerman:

In 1948, a law was passed under which a school district providing special facilities for 10 or more "educable" retarded pupils would receive $100 for each from the State. It was optional that the district provide such service.

The law then and now refers only to the educable retarded; it defines these as children with an I. Q. of between 48 and 78.

An estimated 2,000 of these educable retarded of school age—6 to 20—are in full-time special classes in Missouri. An estimated 5,500 more are in limited classes, according to the State Department of Education.

House bill 27, passed by the assembly this year after many provisions of the original measure introduced by Representative Paul Canaday, Democrat, Greene County, had been cut away, provides:

1. That in districts having 10 or more educable retarded, special classes shall be established by the fall term of 1957.

2. That the State payment for each child in such classes shall be increased to $175, effective next fall.

By the 1957 fall semester, Ackerman predicts, the chief result of the legislation will be to provide full-scale special classes for 4,000 educable now receiving only limited help. He doubts that very many of the other 18,000 educable will be affected (one reason is the fact that Missouri has about 2,900 small, one-room school districts).

He believes it may be 5 years before there are teachers and facilities to accommodate a total of 12,000.

St. Louis has an estimated 2,400 educable retarded. About 900 of these are in full-scale special classes. There is a waiting list of about 200. The main reason: A shortage of qualified teachers.

In St. Louis County, some districts provide special classes. Ritenour, Normandy, University City, and Ferguson among them. Others, including Clayton and Affton, send educable retarded children to the private Egen-Tudor School or make other special individual arrangements.

The State Department of Education says that 37 Missouri districts, including 3 in St. Louis County—Berkeley, Parkway, and Riverview Gardens, will begin special classes for the first time this fall.

A committee of county superintendents headed by Charles J. Mesnier, of Affton, has been studying the problems posed by the educable retarded for about a year.

One problem is getting trained teachers for the retarded who meet special State requirements. Another is getting adequate psychological services.

Some county districts, Mesnier says, may decide to band together to solve some of these problems on a cooperative basis. And they may send qualified teachers to colleges and universities to take the required courses.

Mesnier doubts that there is half enough teachers now to meet the demand.

In Illinois, Lions Club recently announced a 5-year program to provide $50,000 in scholarships for this special training.

What is an educable retarded child? How can education help him?

He is a child who, with education adjusted to his specific needs, can be expected to be economically useful, an acceptable member of the community. Not only that: the need for or possibility of his ever going to an institution is tremendously reduced. These children form an estimated 2½ percent of the entire school-age population, or 22,000 in Missouri, Ackerman believes.

Another group is the trainable retarded, those with an intelligence quotient of about 25 to 50 (there is an overlap). These add another ½ percent, or about 3,500 in Missouri, Ackerman says.

School districts in this State have no legal obligation to accept these children, though other States, such as New Jersey and Massachusetts, make it mandatory. Even if they learn only how to read a street sign or how to get from one place to another, their chances of getting jobs and holding them are greatly increased.

In St. Louis and St. Louis County, the largest program not paid for with public funds is that in the Catholic schools.

Rev. Elmer H. Behrmann began this program in 1950. There were classes last semester in nine different Catholic schools and in St. Mary's special school, which boards children from outside St. Louis.

The State and local NARC affiliates are now planning a campaign to win adoption of a much broader educational program throughout the State. It would include raising the payment from $175 to $300, making the education of the trainable retarded compulsory, providing financial incentives to teachers to get into this work, and setting up of special school districts for the retarded.

Proper Rehabilitation Program for Mentally Retarded Is Costly

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the St. Louis Globe-Democrat of August 3, 1955:

PROPER REHABILITATION PROGRAM FOR MENTALLY RETARDED IS COSTLY

(By Morton Mintz)

(Tenth of a series)

Eighty-one years ago a New Jersey commission said the mentally retarded "are a perpetual witness against us before God and man; and hereafter we cannot escape our responsibility by pleading ignorance of the facts."

For the past 9 days the Globe-Democrat has done all in its power that Missourians may not be ignorant of the facts about the mentally retarded and their families in our State today.

Here are the facts briefly summarized:

Missouri has an estimated 123,000 mentally retarded persons; 2,800 more will be born in 1955.

The institutions are overcrowded, can accommodate only 40 out of the 100 patients who need them and have waiting lists of 7 to 10 years; and even the waiting lists underestimate the actual need for their services.

The institution heads down through the years have requested more staff and more facilities with which to do a better job; down through the years their requests have gotten the ax.

What of the plans that keep children out of the institutions, prevent family disasters, help make it possible for retarded persons to be entirely or partially self-supporting?

The State does not have, and has no definite plans for, residence "colonies," "sheltered workshops," diagnostic and guidance clinics, foster-homes, welfare workers in each county specifically assigned to help the retarded. It has no facilities for children under 5. It has no research program. It is only now getting into a large-scale program of public education.

Many persons have written and phoned to tell of their rage that Missouri does not have these things, that some other States do. They ask, "What can be done?"

There are four key points to keep in mind:

1. The parents themselves, in Missouri as in most States, did not begin to come out in the open and organize until 1951 or later. So the public at large was little aware of the problem and little aware of the needs.

2. The extreme slowness with which this problem has penetrated the public consciousness was reflected, perhaps inevitably, in the failure of the State government to radically revise its traditional approach.

3. The condition of State finances. Missouri had a surplus of $33,785,883 at the beginning of this fiscal year. The 1955 legislature appropriated—for schools, mental hospitals, prisons, relief and a thousand obligations—an estimated $20,942,841 more than the State is expected to collect in direct taxes in the 2 years ending June 30, 1957.

Thus that surplus is expected to be down to $12,843,042 2 years from now—and no one knows if drought or other emergencies may arise to exhaust it.

4. Any adequate program for the retarded is expensive.

It is certainly true that you can have a home training program for $50,000 a year and other programs now lacking for relatively minor amounts.

It is certainly true, also, that these programs will reduce the number of family crack-ups, will be reflected in lowered rates of crime and mental and physical illness.

It is certainly true that these programs are vitally needed.

But it is also true that because the problem as a whole is so little met today that a full-blown program, particularly to expand the institutions or build new ones, will add millions and millions of dollars to Missouri's tax bill.

This series of articles found no whipping boys. The more the writer investigated, the more apparent it became that singling out for blame this public official, or that one, would be unfair, would do very little good, if any, and could do great harm. Finding a scapegoat seldom solves anything.

Some persons have tended to hold B. E. Ragland, the director of the Division of Mental Diseases, responsible. They say he has "the wrong background." Others say he has not "crusaded."

This reporter wishes only to cite a few facts in this connection:

1. Ragland is the administrator; he does not make basic policy. That is done by the governor and the legislature.

2. Ragland is responsible for the operation of 5 mental hospitals and 2 institutions for the mentally retarded. To do this job, which involves the spending of more than $32 million in the 1955–57 biennium, he has been given an office staff of only two to help him.

3. This reporter, during a long interview, asked Ragland for his opinion of the many progressive plans used in other States. His answer in every case was that he favors their adoption by Missouri. Among other things, he approves the idea of a bureau of mental deficiency to coordinate them, a means used in New Jersey and other States.

Now, what lies ahead?

1. Gov. Phil M. Donnelly has called for a $75 million State bond issue. The legislature did not fix a date for a special election, leaving that to the governor. He has not yet set it.

The bond issue, if approved by the voters, would finance a building program for State penal, higher educational and eleemosynary institutions. Into that last category—eleemosynary—fall the institutions for the mentally retarded.

Only if the bond issue passes will there be a chance in the near future to begin a long-range large expansion of institutional facilities for the retarded.

It will be up to the governor, after passage, to recommend how the $75 million should be divided. It will be up to the legislature in special session to accept or revise or reject the governor's recommendations.

In Ragland's office in Jefferson City are architect's plans for expanding the 160-bed branch at Higginsville that will be opened next year into an 1,100-bed separate training school of the most modern kind

Also in his office are requests for expansion of the St. Louis State Training School.

Here are some of the major ones for St. Louis State Training School submitted by the superintendent, Dr. Arthur A. Hines:

Building for 250 custodial patients	$1,000,000
Vocational training building	420,000
Recreational building	708,000
Four buildings for 304 trainable patients	2,200,000

2. The legislature will not meet again in regular session until January 1957. Likely not until then can there be action on the special programs, the larger staffs, unless the Governor should recommend such programs to a special session.

Before the legislature meets in regular session there will be an election. Missouri next year will nominate and elect, among others, a new Governor (in Missouri a Governor cannot succeed himself); all of its State representatives and half of its State senators.

It all adds up very simply:

If the people of Missouri want to give a better break to the mentally retarded and their families, they must be willing to pay for it in higher taxes.

If the people of Missouri are willing to do this, they must elect men to office who will carry out their wishes.

The people of Missouri have the chance to show whether they agree with these words of Archbishop Richard J. Cushing, of Boston:

"It is fair to say that the best index to the civilization of a community is what is done for 'exceptional' children, for they are unusually least in so many ways; least in years, least in endowments, least in privileges, least in all the things people covet for their children."

Missouri Far Behind Illinois in Care of Mentally Retarded

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the St. Louis Globe-Democrat of August 4, 1955:

MISSOURI FAR BEHIND ILLINOIS IN CARE OF MENTALLY RETARDED

(By Morton Mintz)

(Last of a series)

SPRINGFIELD, ILL., August 3.—Not a river but an ocean separates the neighboring States of Missouri and Illinois in the way each attacks the problem of the mentally retarded and their families.

Missouri's program has been stunted by an abundance of inertia and a drouth of money, ideas, and determination.

Missouri spends money—not enough—for institutions and public education for the retarded, period.

The Illinois program is far from perfect. For example, its institutions, like Missouri's, are very overcrowded.

But there is a sense of excitement here. Illinois has put on the gloves, it's in the ring and it's slugging.

Illinois has long kept pace with leading States in certain phases of retardation. In others it is catching up fast. In still others it has taken the lead.

Illinois is a bigger State and a richer one than Missouri. That must be kept in mind.

But its greater population automatically means that its problem of the mentally retarded is all the bigger.

Missouri has an estimated 123,000 retarded, with about 2,800 more being born each year. Illinois, using the same estimate of 3 retarded persons in every 100 of the general population, has 262,000, with 6,400 more being born each year.

The per capita income in 1953 in Illinois was $2,088, compared with only $1,547 in Missouri. The average Illinois resident last year paid $636 in State taxes; the average Missourian, again on a per capita basis, $439.

Now for some comparisons in the ways the two States deal with mental retardation:

History: Missouri opened its first permanent institution for the retarded in 1901.

Illinois opened its first in 1877.

Research: Missouri appropriates not one cent for research into the causes and problems of retardation.

Illinois allotted for this purpose $250,000 in 1953 and $302,000 more in 1955, each sum for a 2-year period. In 1955–57 the Illinois research allocation for this purpose will be equal to 40 percent of that of the Federal Government itself.

Number of institution beds: Missouri provides only 40 percent of the estimated minimum number of beds needed for retarded persons.

Illinois provides 77 percent.

New admissions: Missouri admitted only 91 new patients in the last fiscal year, or 8 percent of the number of waiting applicants.

Illinois admitted 675, or 92 percent.

Insitution expansion: Missouri added a 76-bed building (at St. Louis State Training School) in the biennium just ended.

Illinois added 260 beds in that same period.

Waiting lists: Missouri's waiting lists are officially admitted to be greatly under the actual need. Yet even now applicants must wait up to 10 years for admission at the State School for the Mentally Defective and Epileptic at Marshall and up to 7 years at St. Louis State.

Illinois' State schools at Lincoln (chiefly for southern Illinois residents) and Dixon admit immediately all cases in which the department of public welfare finds a medical or family emergency. Others wait no longer than 18 months.

Age limits for admission: Missouri institutions, because of the overcrowding and waiting lists, do not admit children under 5 or over 20, except in the rarest instances.

Illinois institutions admit, and have admitted almost from the start, retarded children of all ages. Many are accepted immediately after birth. Lincoln and Dixon have a total of 787 patients under 6 years of age.

Institution staffs: Missouri's school at Marshall has full time and year round for about 1,800 patients: One physician (the superintendent), 2 psychologists, 1 social worker, 2 registered nurses. For the summer only it also has, among others, two full-time recreation supervisors.

Illinois' school at Lincoln has full time and year round for 5,200 patients: Fourteen physicians, 7 psychologists, 8 social workers, 21 registered nurses, 23 recreation supervisors.

Special programs: Missouri has none of the following programs.

Illinois has a foster-home plan.

It has home-training institutes for parents who have retarded children at home.

It will have in operation by 1957 four halfway houses.

These are comparable to the so-called colonies at which patients are given prerelease training before being fully discharged from the institution. Under trained house parents the patients learn various skills and often work in private jobs while living in the colony.

It also places about 200 patients a year under a wage-placement program. That is, patients earn their own way while working and living under State-supervised conditions in private employment.

It makes job and other guidance continuously available to patients after discharge.

It teaches in the institutions many vocational skills beyond those learned on the usual work details.

Cost sharing: Missouri charges parents of noncharity patients $20 a month (less in emergency cases) for care at Marshall, up to $50 at St. Louis State. One main reason for the gap is that it is up to the institutions themselves to investigate family finances.

Marshall has no practical way of doing this because its patients come from all of Missouri's 114 counties. So a flat fee of $20 is set.

St. Louis State is able to check much more easily because nearly all of its patients come from St. Louis and St. Louis County.

Some parents could pay more than $20 or even $50 without sacrifice.

Illinois has a standard schedule based on ability to pay. No one pays more than $60 a month. A mother and father with two children and a third in an institution, if they have no great financial obligations, pay $9 a month if the family income falls between $400 and $409 a month. Nothing is charged if a family cannot afford to contribute, and that applies to 85 percent of the families with children at Lincoln and Dixon. The average bill at Lincoln and Dixon is $31.70.

Use of family payments: Missouri puts them into an institutional earnings fund.

Illinois puts them into a special mental health fund. The money is earmarked for research, personnel training, mental hygiene services, extra services to patients, special grants and for certain types of administration, construction, and contingencies.

The plan is like that of setting aside gasoline taxes for road building.

The mental health fund provides about $4 million extra a year to fight mental retardation and mental illness. A total of $1,837,000 will go for research in the current biennium.

In 1957 Illinois will have a research and training authority financed by this fund. Dr. Otto L. Bettag, the 49-year-old, brisk, vigorous, plain-spoken director of the department of public welfare, believes it will be the only one of its kind in the Nation.

He says the vital thing about the authority is that it will be able to attract and keep top investigators. Why? Because it will have up to $1 million a year to spend for research into both mental retardation and mental illness.

The authority will thus be able to make long-term grants and assure researchers that they will not be cut off in midair. Some researchers are reluctant to go to other States with research programs for fear of being stranded by some caprice of the legislature.

Personnel training: Missouri has no full-scale system for training and upgrading its personnel in all its mental institutions.

Illinois mental institutions hold monthly and biweekly seminars for key employees that are addressed by both State and national experts.

They hold 3-month to 4-month in-service training programs for psychiatric aids. Some of these aids get an outside, expense-paid 18-month course.

They train occupational and recreational therapists, pay them while they are in training and give them, on a superintendent's recommendation, a raise of $10 a month for successful completion of the course.

Dixon State School this year will launch a program giving an 18-month course in practical nursing to 40 persons at a time.

The Department of Public Welfare is granting 200 3-year nursing scholarships. For each year of scholarship, a nurse is obligated to work a year for the State with full pay. In Missouri, it is believed, this program and certain others would require new legislation and possible constitutional changes.

In cooperation with the University of Illinois, a 6-week institute was held for teachers of the educable retarded."

Pay: Missouri pays its lowest category of hospital attendants in three ranges. The minimum pay is $147 a month (rural), the top $250 (metropolitan). Very few actually receive $250.

Illinois pays the comparable group from $160 to $230. But more than 60 percent get the maximum.

Costs: Missouri spends $1,240 per year per patient at St. Louis State and $695 at Marshall. It has been previously explained that these figures by themselves are very tricky to compare.

Illinois spends $803 per patient. Again direct comparison is risky in the extreme.

In Missouri the costs include very little for central administration. The director of the Division of Mental Diseases in Jefferson City supervises seven mental institutions, has only two office employees.

In Illinois the per capita costs do not include any of the projects financed by the mental health fund. Nor do they include the costs of the approximately 150 persons who supervise the mental institutions on a highly centralized basis from Springfield and Chicago.

It used to be that one institution would have, say, a 10-year supply of a certain drug. Another institution would reorder the same drug.

Central administration has coordinated inventories and reduced them by $1 million since 1953.

Dr. Bettag has brought strict cost controls to his entire department.

Stealing of institutional supplies once was discovered to exist on a large scale. Dr. Bettag has instituted strict security measures.

He and Gov. William G. Stratton say proudly that they are serving more food and better food (meats are United States Good and Choice only) to about 1,000 more patients than in 1951–53 at a 2-year saving of $3,500,000.

The Governor said last January:

"The day of the meatless meal for patients will soon be a thing of the past."

Dr. Bettag says meat is now served to all patients 14 times a week.

In the 20 years prior to the time the Governor and Dr. Bettag took office, deficiency appropriations for commodities total $33,524,041. None was asked for in 1955.

The Governor also said: "For over half a century patients in one or more of our State hospitals slept either on the floors or on mattresses on the floors. At the advent of this administration, approximately 800 patients were so involved. This practice has been eliminated as a policy and at present all patients are provided with a bed."

Education of the retarded: Missouri pays $175 a month for each educable retarded child in school districts providing special classes for them. It has no provision for the trainable retarded.

Illinois pays $250 a month in both categories.

Parent groups: Missouri has no formal associations of parents of children at either of its two institutions for the retarded.

Illinois has them at both. At Lincoln, the membership is about 1,000. In the last year the Lincoln and Dixon superintendents each received a plaque commending their devotion and work in improving conditions.

Retarded Children

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the St. Louis Globe-Democrat of August 5, 1955:

RETARDED CHILDREN

The Globe-Democrat has just completed publication of 11 articles by Staff Writer Morton Mintz on the plight of mentally retarded children in Missouri. They were the result of painstaking investigation and analysis, and notably well documented and objective. The author sought to pillory no one; merely to point out an appalling situation which is every Missourian's responsibility.

The list of indictments against the public's previous inaction was startlingly long. But these stand out:

Missouri has at least 123,000 mentally retarded children and at least 2,800 more are being born every year.

Existing State care capacity is so desperately short the waiting list of applicants already is 7 years long; only about 8 percent of the list can be admitted each year.

Missouri has no adequate program either for research into the malady, for training of patients and hospital personnel, or for foster homes. Therefore, the dismissal rate is unnecessarily slow.

So, as the hospital capacity remains stationary, the cure rate low and the birth rate high, the situation will grow steadily worse.

The computation excludes the mentally retarded under 5 and over 20 years of age, who have been barred in the stringency.

In a way, this is the greatest tragedy of all, for it insures that the other children in burdened families will needlessly receive psychological scars from the association. It insures that distraight husbands and wives will be thrown into a despair of futility likely to split the union and destroy the child victim's last chance at ultimate wholesome family association. And it all but insures that interim private care will ruin the average couple financially.

Meanwhile, until recent enlightenment, a secret sense of personal guilt or of shame has prevented parents uniting and fighting for the legislative consideration afforded victims of much lesser calamity. In short, the mentally retarded could not speak for themselves; the parents would not. In the stalemate the lives of normal children were being warped while the public stood by, uninformed.

There is one major hope for quick remedy. Governor Donnelly has called for a $75 million multipurpose State bond issue, the date as yet unset. If the voters will pass it, the Governor will be empowered to allot as much money as seems necessary to expand institutional facilities for the mentally retarded. If the Legislature in special session then accepts his allotment recommendations, Missouri can begin at once building for effective handling of an agonizing problem.

Will Missouri now manifest a resolute, continuing concern for its curable tots who wander helplessly in the darkness of mental underdevelopment? Or will it hear, gasp and forget? It remains to be seen. The next steps are up to (1) the Governor, (2) the voters, (3) the State legislature. May they all act with true humanity in their hearts.

Alaska Mental Health Act

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. BARTLETT. Mr. Speaker, the Department of Health, Education, and Welfare has recently prepared a point-by-point analysis of the Alaska Mental Health Act, H. R. 6376, which I believe will be of considerable interest and assistance to many Members of Congress.

Under leave to extend my remarks that anlysis is reproduced here:

ANALYSIS OF HOSPITALIZATION PROCEDURES INCLUDED IN TITLE I OF H. R. 6376 "AN ACT TO PROVIDE FOR THE HOSPITALIZATION AND CARE OF THE MENTALLY ILL OF ALASKA"

Under present Federal law applicable to the Territory of Alaska, hospital care is available only to those mentally ill of Alaska who have been committed as "insane" after judicial "trial."

As understanding of mental illness and possibilities of treatment has grown, the trend in State legislation has been to facilitate access to hospital care, preserving the right of access to judicial procedures when any compulsory action is involved. H. R. 6376 follows this trend and is patterned generally on the "Draft Act Governing Hospitalization of the Mentally Ill" recommended by the Public Health Service for consideration by the States in 1950.

This statement covers particularly those provisions of the bill to which objections were raised by witnesses in the hearings held before the subcommittee of the Senate Committee on Interior and Insular Affairs

February 20 and 21. These may be grouped under the following headings:

I. Definition of the "mentally ill."

II. Procedures for hospitalization.

III. Transfer of patients from or to Alaska.

I. THE DEFINITION OF MENTAL ILLNESS—INCLUSION OF THE MENTALLY RETARDED AND DEFICIENT

Section 101 (1): The term "mentally ill individual" is defined as meaning "an individual having a psychiatric or other disease which substantially impairs his mental health or an individual who is mentally defective or mentally retarded."

Objection: The definition of the "mentally ill" is too broad. It covers many persons who should not be hospitalized, especially those who are mentally deficient or retarded.

Answer: It is correct that many such persons should not be hospitalized, and they could not be under the terms of the bill. The definition has significance only as it is used in other provisions of the bill.

The fact that an individual may be "mentally ill" as defined is not in itself sufficient to authorize his admission to a hospital under this bill. Exception to this is only in the case of an individual who makes a voluntary application and has sufficient capacity to act responsibly for himself in the matter.

Section 103 (a): In the case of such an individual it is enough if he has symptoms of mental illness. The purpose, of course, is to facilitate early access to care when the chance of effective prevention or cure is greatest.

The additional factors necessary in other situations for hospitalization upon an application made by others, when the proposed patient is either dangerous or lacks capacity to act for himself, are set forth in sections 103 (b), 104, and 108. They are discussed later.

The mentally defective or mentally retarded in Alaska are now hospitalized under the commitment procedure which relates to the "insane." Under this procedure, for example, there are reported to be a number of mentally retarded children who are hospitalized at Morningside.

Since there is no provision in the statutes of Alaska for the hospitalization of the mentally retarded and deficient, where need for institutional treatment is indicated, this group was included in the statutory definition. The bill would authorize hospitalization of such persons, however, only when there was shown a need for institutional care in a hospital which as defined in section 101 (e) could be an institution especially qualified for the care and treatment of such persons.

To exclude this group from the statutory definition of the "mentally ill" and provide separately for their institutional care would be a simple matter of legislative draftsmanship if felt desirable.

II. PROCEDURES FOR HOSPITALIZATION

Objection: In general, these were to the effect that individuals could be deprived of their liberty arbitrarily and without due process.

Answer: The bill provides careful safeguards at every point where liberty is involved. The more specific objections expressed by some witnesses need to be considered in relation to the four specific types of procedure provided by the bill. Of these only the judicial procedure authorizes compulsory hospitalization on other than an emergency basis.

The four procedures by which an individual in Alaska may be hospitalized are discussed in order:

Section 103 (a): (1) Upon voluntary application by the patient: An individual who is mentally ill or has symptoms of mental illness may apply for admission to a hospital and be admitted for observation, diagnosis, care, and treatment. Such application can be made, however, only by an individual "who has sufficient insight or capacity to make responsible application in his own behalf. In the case of an individual under 16 years of age, the application must be made by the parent or legal guardian.

Such an admission is not in any sense a commitment. As to the patient's right to discharge on request, see section 106.

Provisions for voluntary hospitalization are now found in the laws of most of the States. The compilation made by the Council of State Governments in 1949 showed 40 States having such provisions at that time, and the number is greater now.

The only objection made to this provision in the hearing was its authorization of voluntary admissions on application by an individual as young as 16 (in the case of a younger person, it is by his guardian). The age line is the same as that drawn in the Draft Act. The Draft Act commentary has this to say on this point:

"The specified line of division is necessarily arbitrary just as 17, 15, or 18 would be, and should therefore be considered only suggestive. However, the age of 21 which is used in a number of statutes is considered too high. Individuals in their later teens carry responsibilities which are often commensurate with those of older persons—responsibility for infractions of law, for example. Hence it is believed that they should not by reason of their age alone be denied the opportunity to apply for hospital care. It may be noted in this connection that, in cases involving the consent of a minor to the perfomance of surgery upon him, our courts have generally held the consent to be effective where the minor was over 15 years old and sufficiently mature to realize the dangers and benefits of the operation, although this fact has not been elevated to a rule of law."

Section 103 (b): (2) Admission for care and treatment on application by others.

Objection: Under this, a person could be put away simply on application of another person and a physician's certificate that he was mentally ill.

Answer: This is not so, as reading of the provision will indicate.

Section 103 (b) provides that individual may be admitted for care and treatment in a hospital upon written application (by an interested party, a health or welfare officer, the Governor, or the head of the institution in which the individual may be) accompanied by a certificate of a licensed physician. The certificate must state that, in the physician's opinion, the individual is mentally ill and because of his illness "either (1) is likely to injure himself or others if allowed to remain at liberty or (2), being in need of care of treatment in a hospital, lacks sufficient insight or capacity to make responsible application" for himself. The certificate must be based upon examination.

This provision is an authorization for admission not for confinement. It carries with it no authority to apprehend the individual and forcibly remove him to the hospital or to have the hospital detain him against his will after admission; his liberty is not curtailed.

As to the right of a person admitted under this subsection to be discharged on request, see section 106. As to emergency situations, see section 104.

Section 104: (3) Emergency hospitalization:

Section 104 (a) and (b) cover those situations in which it may be necessary to take an individual into custody and transport him to the hospital.

Objection: Specific objection was made to the exercise of police authority by other than police officers, and some objection was made to emergency provisions in general.

Answer: To protect both the patient and others, there must be authority to handle dangerous cases on an emergency basis. Since the individual is sick, however, handling by a health rather than a police officer may often be desirable.

Subsection (a). If the certificate issued by a licensed physician under section 103 (b) states a belief that the individual is likely to injure himself or others if allowed to remain at liberty, the certificate may be presented for endorsement by the governor or a United States commissioner. When endorsed it will authorize taking the individual into custody and transporting him to a designated hospital. Upon such endorsement any health, welfare, or police officer or any other person deputized for the purpose by a United States Commissioner may exercise this authority. The category of persons who exercise such authority is not limited to police officers.

This is in line with the purpose of the bill to take the handling of the sick out of the context of a strictly police action and to avoid unnecessary shock to an already disturbed person. (The Draft Act, however, does not provide for exercise of such authority by welfare officers.)

Subsection (b). This is designed for those more critical situations in which it appears that the individual is mentally ill and because of his illness is likely to injure himself or others if not immediately restrained pending the medical examination or certification or the endorsement provided by subsection (a). Any health, welfare, or police officer may act in such emergency situations but must state in the application for the individual's admission to the hospital the circumstances under which the individual was taken into custody and the reasons for the officer's belief.

As to the right of a patient under either of these emergency provisions admitted to a discharge on request unless commitment proceedings are instituted, see section 106.

According to the compilation made by the Council of State Governments in 1949, some 30 States had statutory provisions for emergency commitment without court order. The person authorized to take into custoday a mentally ill individual who is dangerous varies from any person to designated officers such as (in California) a peace or health officer. The common law, of course, recognizes that any person may take a dangerous insane person into custody and hold him temporarily until he can be safely released, arrested upon legal process, or committed under legal authority.

Section 106: Right to discharge.

Objection: No objection was made to these provisions in themselves, but some question was raised as to their sufficiency to assure due process in the case of patients not admitted under judicial commitment.

Answer: The safeguards in this bill are greater than are provided in many State laws which provide (as this bill does not) for true "commitments" without prior judicial procedure. The constitutionality of such laws is generally upheld when they provide (as this bill does) for prompt access to the courts for a judicial determination.

The following provisions of H. R. 6376 are designed to assure the prompt discharge of patients whenever the circumstances warranting either voluntary or emergency hospitalization or judicial commitment have ceased to exist.

Section 106: Any individual admitted upon his own suggestion, or that of others, including an individual admitted because likely to injure himself or others, "shall be forthwith discharged therefrom upon his request or upon the request in writing by an interested party." Section 106 (a). (The right

to discharge forthwith is stated more explicitly in this bill than in the Draft Act.)

Discharge is conditioned on his own agreement in the case of the patient admitted on his own application or the consent of the parent or guardian if the individual is under 16 years of age.

Exception to the right of immediate discharge is made only for the emergency situation, i. e., only if the head of the hospital files with the United States Commissioner within 48 hours after receipt of the request, a certificate that in his opinion discharge of the patient would be unsafe to the patient or others. In such case discharge may be postponed for such period not to exceed 5 (and under some circumstances 15) days as the Commissioner determines to be necessay to institute judicial proceedings. (The Draft Act makes this limit 5 days, but it has been indicated that 15 days may sometimes need to be allowed in Alaska.)

Section 105: The head of the hospital must in any event arrange for examination within 5 days after admission, by a designated examiner of every patient hospitalized upon application by others. The patient must be discharged if the conditions warranting admission are not found.

Section 107: Every patient, however hospitalized, is entitled to have the need for his hospitalization determined by judicial proceedings on his own petition or that of an interested party.

Section 111: Habeas corpus is specifically provided.

Section 123: The head of the hospital must cause the condition of very patient to be reviewed as frequently as practicable, and at least every 6 months, and must discharge the patient whenever the conditions justifying hospitalization no longer obtain.

Section 121: Provision is also made for conditionally releasing improved patients on convalescent status and for the discharge of such patients.

Section 108: (4) Commitment to a hospital, Judicial commitment: Commitment implies compulsory hospitalization with power to hold the patient for an indeterminate or a fixed period. Commitment is authorized by this bill only by judicial proceedings before a United States Commissioner as provided by section 108.

Objection: That the hearing may be held without notice to the patient. That the patient is not required to be present.

Answer: The first is not so. The second is true, but required attendance would in many cases be inhumane and damaging to health; the patient always has right to be present.

Orders of commitment under this bill may be made only after a hearing of which the proposed patient, as well as other interested parties as determined by the Commissioner, must be given notice with opportunity to hear, to testify, to present and cross-examine witnesses. Opportunity to be represented by counsel must be afforded to every proposed patient and if neither he nor other provide counsel, the Commissioner must appoint one. These provisions are found in subsection (f) of section 108.

Prceedings for commitment are instituted by the filing of a petition, accompanied by a certificate of a licensed physician stating that he has examined the individual and is of the opinion that he s mentally ill and should be hospitalized. The medical certificate is required unless the applicant files a written statement that the individual has refused to submit to an examination by a licensed physician (subsec. (a)).

Upon the filing of the application, notice is given to the patient, to his legal guardian, if any, and to other interested parties (subsec. (b)). At this stage, however, the Commissioner, if he has reason to believe that notice would be likely to be injurious to the proposed patient, may omit the notice to him and proceed to the appointment of two designated examiners (or one if he finds that two are not available) (subsec. (c)). If the examiners report that the proposed patient is not mentally ill, the Commissioner is authorized to dismiss the application (subsec. (e)). Otherwise, the date for the hearing is fixed and notice given to the patient, as indicated above, and to the interested parties, as provided in subsection (f).

The medical examination is held at a medical facility, at the home of the patient, or at any other suitable place not likely to have a harmful effect on his health. A patient cannot be required to submit to examination against his will unless the United States Commissioner has given prior notice to the patient and has ordered him to submit to an examination (subsec. (d)).

The United States Commissioner may order the individual's hospitalization based upon findings made upon completion of the hearing and consideration of the record. The finding must be not only that the individual is mentally ill but in addition that the individual is either because of his illness likely to injure himself or others if allowed to remain at liberty or is in need of custody, care or treatment in a hospital, and, because of his illness, lacks sufficient insight or capacity to make responsible decisions concerning hospitalization.

Jury trial is provided for on an optional basis at the request of the patient, his counsel or any member of his immediate family. (Since mental illness is not a crime, the constitutional guaranty of jury trial has been held not applicable to proceedings to determine mental condition. The Draft Act does not provide for jury trial because appearance before a jury of laymen increases the likelihood of harmful effects to the proposed patient and because the jury is a questionable instrument for the evaluation of the preeminently medical ingredients in such a proceeding.

Any party may appeal from the decision of the Commissioner to the District Court (sec. 112).

III. PROVISIONS RELATING TO THE TRANSFER OF PATIENTS FROM OR TO ALASKA

Objection: That people in the United States could be picked up and sent to Alaska for hospitalization as mentally ill. That the land granted to Alaska would be used as a place of confinement.

Answer: There is no basis in the bill for either charge. However, there are transfer provisions of a type customary under State laws for nonresidents and for patients, such as veterans, who may be entitled to care in Federal hospitals. The land grant (sec. 202) is to provide an additional source of income to the Territory to aid it in assuming responsibility for the care of the mentally ill in Alaska. These are explained below.

Outside of the provision for contract care of Alaska patients outside Alaska (sec. 102 (b) would permit, for example, continued contracting for care of patients at Morningside) the transfer provisions relate to two groups:

1. Individuals, such as veterans, who may be entitled to hospitalization at the expense of the United States.

2. Residents of States who become mentally ill in Alaska and residents of Alaska who become mentally ill while in a State.

(1) Veterans, etc.: Sections 109 (a) and (b) and section 118 (b) relate to the persons entitled to care by the United States. These provisions are derived from section 18 of the Uniform Veterans Guardianship Act which was developed by the National Conference of Commissioners on Uniform Laws and which has been in satisfactory operation for years in most of the States. The Commissioners on Uniform Laws have commented thus on section 18 of the Uniform Veterans Guardianship Act.

"Those provisions will facilitate the placing of patients in appropriate Federal institutions especially equipped to treat a particular type of mental trouble and save the patient distress and sometimes definite harm incident to a second adjudication experience in the State to which transferred. It will also save substantial expense to the various States, to the Federal Government, and to the patients."

(2) Nonresidents: Subsections (a) and (b) of section 119 resemble 48 U. S. C. 48 of the present law applicable to Alaska. They authorize arrangements by which a patient hospitalized under the judicial procedure in Alaska but who is not a resident of Alaska may be returned to his State of legal residence. A nonresident patient not hospitalized under the judicial procedures may also be returned if the patient or his guardian consents. Also under reciprocal arrangements, residents of Alaska who have been hospitalized in a State may be transferred back to Alaska.

Provisions such as these are commonly found in State laws relating to the mentally ill.

An added provision—subsection (c), which is not found in the Draft Act—has been the subject of the most extreme objection. It is not, however, a transfer provision at all, nor is it a commitment procedure. Its purpose is to obviate the need for transfer of the patient back to Alaska or the State of residence in situations where the interest of the patient would be better served by allowing his care to be continued where he is already hospitalized, the expense to be reimbursed by the State of legal residence.[1]

This provision is likely to be most useful in the case of Alaskan residents who become ill and are hospitalized while in a State where the facilities and type of care available, or other circumstances, are such that removal back to Alaska would be undesirable for the patient. If further clarification is needed, this provision could be amended to specify that it is to apply only "when it appears that transfer of the patient as provided in subsections (a) and (b) of section 119 would not be in the best interest of the patient."

[1] Personal liability for the expense of hospitalization is provided for by section 128 (a) which is derived from the present law (48 U. S. C. 48a).

We're Through With Benson and Eisenhower, Say Midwest GOP Farmers

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1956

Mr. EVINS. Mr. Speaker, the feeling among farmers of our Nation concerning the present decline in farm prices is acutely pointed out in a recent article in the Christian Science Monitor. Because of this, I include a copy of this article in the Appendix of the RECORD under the unanimous consent of my colleagues:

"WE'RE THROUGH": GOP IN HOG BELT FACES VOTE SHIFT

(By Godfrey Sperling, Jr.)

DE KALB, ILL.—We're Taft Republicans, but we decided to go along with Ike in '52. Next fall, though, we'll vote Democratic na-

tionally, and so will a lot of our neighbors who have also been hit hard by farm prices."

This was Chauncey Watson, Jr., expressing his political views. He and his father farm 640 acres a few miles south of De Kalb. No two farmers in the county are better known or better respected than the Watsons.

The grandfather of Chauncey, Jr., was one of the pioneers here. Chauncey, Sr., has been a top official with Kiwanis International and is a former president of the Corn Belt Livestock Feeders' Association.

"Before Ike came in," Chauncey, Sr., commented, "we had our land all paid for. But in 1953 and 1954, we lost $100,000 on cattle. Now we have a $100,000 mortgage on this land, and we are no different from farmers all around us. We're all in the same fix."

Chauncey, Sr., stood by his tractor—he had been turning over land preparatory to planting corn. Adding weight to his words was Elroy E. "Al" Golden, county farm adviser, nodding his head as the Watsons talked.

"That's right," said Mr. Golden. "There were at least 6 farmers in this area who lost more than $40,000 last year on feeding stock.

"We know this because they participated in the Farm Bureau's farm management service program, so we've seen their records. They were good farmers, too. Only the most efficient take part—about 10 percent in this county.

"In fact, almost all those who participated in this program showed a loss for last year."

"See all those farms around us?" asked Chauncey, Sr., pointing to at least 20 farms that could be seen from the Watson holdings. "At least half of those are people who will do just as we do, vote for a Democrat in the fall for President. We're mad at Benson and through with Eisenhower."

HE HASN'T A CHANCE HERE

"That primary didn't mean anything," said Chauncey, Jr., referring to the recent Illinois vote.

"Sure, we voted Republican. And so did all the others who usually vote Republican. This is a Republican county and there were a lot of important local races where we wanted the Republicans to get the right candidate. After all, why vote for a Democrat locally? He hasn't a chance here in any general election."

Thus it was, according to the Watsons (and to other Republican farmers talked to here) that Mr. Eisenhower gained his impressive 6-to-1 margin over Adlai E. Stevenson. Those farmers who were angry enough to protest here could see no point in crossing over at this time—when they could use their vote to good effect in the local primary.

This we have found, was also true in Champaign County, Ill., where the Republicans had an exciting race for State's Attorney and county judge.

Did the Watsons like Mr. Stevenson? Not particularly.

They liked Senator ESTES KEFAUVER better, but neither could suit a Taft Republican. They merely were ready to vote Democratic to show their displeasure over the farm situation.

"Half of the Republicans around me here, half in my township, half in this county," Chauncey, Sr., declared, "are going to vote against the administration. I know. I've talked to them."

Later, Mr. Golden gave weight to these words, too, stating that Mr. Watson gets around the county a great deal and talks with lots of the farmers. He was not, therefore, merely seeking to supply support for his own sentiment.

LOSS ON HOGS FIGURED

"In De Kalb County last year," Mr. Golden said, "the average cost of feed to produce 100 pounds of pork was $11.50. And you know how the price was, around $11 at one point. A lot of farmers were paying for the privilege of keeping livestock.

"The return for $100 of feed fed in this county was just $100 on hogs. And that doesn't take into account the money the farmer had to spend for labor, interest rates, housing, etc.

"And the return for $100 of feed fed was only $102 on cattle."

"We'll vote for Stratton for Governor and the other local Republicans, but not for a Republican President," Chauncey, Jr. added.

"On top of the prices, look at this," Chauncey, Sr., said, picking up a dry stalk of corn. Opening the stalk between his fingers, he showed a worm inside. "A corn borer. They're everywhere."

"Yes," said Mr. Golden, "latest findings show that there are more than 500 borers per 100 stalks around here. Last year our average corn production dropped from 76 to 65 bushels an acre as a result of corn borer and drought. And that year there were fewer borers, 300 for every 100 stalks."

"I don't know what to do about this plowing if we don't get a rain," said Chauncey, Sr., "maybe I'd better just turn the land over with a disk, instead of a plow.

BANK DEPOSITS AT LOW POINT

"Did you notice our tile outlets? Not even dripping. Should be spurting out two-thirds full this time of year, and should be flowing almost all year. But it's been more than a year since we've got more than a trickle out of those pipes."

Later, in town, one banker confirmed that bank deposits for farmers were down, although he didn't indicate that this would be reflected in the fall vote.

Another banker agreed with the Watsons on the vote. And another said that the auctioneer for the area had told him that more farmers had sold out this year than in a long time.

Farm implement dealers and feed-sale outlets were having their troubles, too. Hundreds of farmers were working part-time in town, General Electric and Wurlitzer employing large numbers of them.

This is feeder cattle-hog country in northern Illinois, roughly equivalent to the area in southwestern Wisconsin which showed a farm protest vote in the Wisconsin primary. Apparently, a similar feeling is welling up among many farmers here. And unless some relief comes along soon, this unrest will be reflected in the November election.

The Farm Monstrosity

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 13, 1956

Mr. VURSELL. Mr. Speaker, with leave to extend my remarks, I desire to submit an editorial of recent date which appeared in the Chicago Tribune, pointing out its opposition to the farm bill passed by the Congress. This editorial makes out an irrefutable case against the farm bill which should be of interest to the Members of the House:

THE FARM MONSTROSITY

Congress has sent to the President a farm bill which is an unabashed effort to buy rural votes. Unless Mr. Eisenhower vetoes it, the ruinous process of piling up unwanted surpluses of cotton, wheat, corn, and other agricultural commodities will be continued for at least another year.

This is a Democratic measure, sponsored by a Democratic majority, and passed largely by Democratic votes. It is the Democrats who must accept the responsibility for a tax on bread, estimated at 2 cents a loaf, which consumers must pay wheat farmers for raising more wheat than the Nation can consume.

The bill ought to be vetoed and will be vetoed unless the White House palace guard can persuade Mr. Eisenhower that, to win the election, he must outpromise the Democrats. In fact, the President and his party stand to gain nothing if he lets the bill become law. The Democrats will claim credit for it; their principal motive in passing the conglomeration of absurdities, in fact, was to invite a veto.

The original Eisenhower farm program, a soil-bank plan under which farmers would be paid to take their land out of production and build up its fertility against the day when the Nation needs it, is dead. The various giveaway schemes tacked onto the bill would make a soil bank unworkable; even if it could be worked, Congress has dallied with the measure so long that it cannot be put into effect this year. Fields are already plowed and in southern areas many have been seeded.

There is little in this bill that would help the Republican Party in the fall, even if the Republicans were successful in claiming credit for a Democratic measure. The farm voting strength that the Republicans need for a national victory is centered in the Middle West and this bill continues and aggravates the practice of earlier farm legislation of encouraging other areas to compete with the Corn Belt in raising feed crops that compete with corn.

Illinois, Iowa, and other Midwestern States don't need crop supports. They need the abolition of a system of Government controls under which farmers in less-favored areas, who could not compete with them in a free market, are paid to do so from the Federal Treasury.

Under the courageous leadership of Agriculture Secretary Benson, the Eisenhower administration made a start toward reducing farm surpluses and restoring a free market in agriculture. A veto would continue that program. It would leave in force the flexible price-support plan, under which the inducement to produce any particular commodity is reduced and the unused supply of it increases.

Social-Security Legislation

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following communications from the Commissioner of the Connecticut State Welfare Department:

HARTFORD, CONN., *April 6, 1956.*

HON. ANTONI N. SADLAK,
Member of Congress, House Office Building, Washington, D. C.

DEAR MR. SADLAK: It is our understanding that the House Committee on Ways and Means has tentatively scheduled hearings to begin on Thursday, April 12, 1956, on H. R. 9120 and H. R. 10283, H. R. 9091 and H. R. 10284. Since it is our understanding that the hearings will be confined to the public assistance titles of the Social Security Act, we are restricting our comments accordingly. With the exception of one provision in these bills the State Welfare Department of Connecticut believes that they contain a num-

ber of improvements necessary in the public assistance provisions of the social security program. Several of these provisions will mean additional Federal financial participation for this State essential to the continuance and strengthening of the social welfare program. Other provisions contain desirable social legislation making it possible for those States who desire to do so to extend their programs for needy people.

The one provision which the department recommends be deleted, concerns the reduction of the Federal share of old-age assistance of 50 percent for those cases in which old age assistance payments are being made by States to OASI beneficiaries who are added to the assistance roles after the fiscal year 1957. This provision contains a number of administrative and policy defects which have been pointed out in hearings in the past and more recently considered by the Kestnbaum Commission on Intergovernmental Relations which did not recommend its adoption. It would require the States to set up a whole separate system of accounting for such cases. Of greater importance it singles out OASI beneficiaries for discriminatory treatment by the Federal Government. We, therefore, oppose this particular provision.

We urge the passage of the bills noted with the single exception indicated above.

Sincerely yours,

CHRISTY HANAS,
Commissioner, State Welfare Department.

Deserves Recognition

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 20, 1956

Mr. MACK of Illinois. Mr. Speaker, the Junior Chamber of Commerce of Springfield, Ill., has used extremely sound judgment in selecting Oliver J. Keller, Jr., as the most outstanding young man in the Springfield area. I have been personally acquainted with Mr. Keller for many years and have admired him for the work he has been doing in assisting the young people in the capital city. I feel that his contribution in combating juvenile delinquency deserves national recognition. This high honor that has come to him is certainly justly deserved.

Mr. Speaker, under leave to extend my remarks, I would like to include the following editorial from the Illinois State Journal:

DESERVED RECOGNITION

The Jaycees couldn't have picked a more deserving recipient for the award of outstanding young man of Springfield than Oliver J. Keller, Jr. His efforts in organizing Boys Farm alone would entitle him to this special recognition, we think.

But, in addition to having given the initial push to this laudable community project, Keller has donated hundreds of hours of time and energy to other youth activities, and to other community endeavors. He was one of the leaders of the Jaycees' "Saturday Night" dance project for teen-agers, has participated in YMCA youth activities, has aided the UCS fund drive, and at present is serving on the advisory board of the Illinois Youth Commission, a post to which he was appointed by Governor Stratton.

A young man with an easy-going manner and a sense of humor, Keller is popular among the teen-agers for his disc-jockey show over WTAX.

At a time when organization leadership is needed to help turn youths' energies to constructive activities, Keller has been of invaluable service to the community. The honor accorded him has been rightly placed.

Do Income-Tax Exemptions Make Sense?

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 16, 1956

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Stanley S. Surrey entitled "Do Income-Tax Exemptions Make Sense?" which appeared in the March 30, 1956 edition of Colliers magazine:

The American taxpayer is a lucky man. Given the necessity of paying Federal taxes, he pays them in the fairest possible way—on the basis of his income.

Because the policy of relying on income taxes compares so favorably with any other yet devised for the financing of government, we all have a stake in protecting it and keeping it strong.

Yet this policy is being jeopardized by a trend that, unarrested, could ruin it. And ruin would mean that the fairest form of taxation would have to be replaced—by another less fair.

The theory—and the strength—of our income tax is that each man pays in terms of what he makes. If he makes what another man makes, he pays what the other man pays. If he makes more, he pays more.

But recent practice has strayed dangerously far from this theory. The United States Congress is itself creating ways for certain people to escape the very taxes it imposes. So persistent has this practice become that Congress and the country must now awaken to these consequences.

As special favors are granted, the income-tax system becomes unfair, and thus loses respect. As it loses respect, it loses effectiveness, until finally it does not work at all. Here is why:

From personal incomes, the Federal Government today takes income taxes of $32 billion. No matter what arrangement is made as to who pays how much, the Government must get that $32 billion to pay its present bills. If someone, somehow, escapes his burden, or even a portion of it, someone else must pay up for him. Every time Congress exempts a special group from the income tax, or a portion of it, the tax load becomes heavier for the rest of us.

Already a number of individuals have been shorn almost completely of their tax burden.

Already this trend is producing a deterioration in our tax morals and a psychology of contempt for our tax laws.

Already groups sophisticated in money matters are beginning to say, "Why pay high taxes when we can go to Washington and have our Congressman change the law for us?" As this attitude flourishes, taxpaying becomes a game of lobbying.

When some taxpayers receive favors from Washington, others are going to expect favors, too. Failing as lobbyists, they will seek out experts who, through the ardoit use of gimmicks, can ease them into tax shelters created by Congress with other groups in mind. And many an American taxpayer, angered by Congressional favoritism, will indulge in a bit of self-help as he makes out his return each year.

Our income-tax system rests to a great extent on the voluntary compliance of the taxpayers. Without honesty, enforcement becomes a vast impossibility. Without high taxpayer morale, the United States tax system is without value. Yet it is this very morale that is now being threatened.

How did such a system—where the concept of fairness is so basic to success—suddenly find itself becoming unfair, and in danger of failure?

The answer hangs on one fact: Ever since it adopted tax rates rising all the way to 91 percent, Congress has been acting as though possessed by an uneasy conscience.

A recent Harvard Business School study indicates what has been happening. According to the tax tables, anyone who make $1 million or more a year pays an overall tax of 87 percent. There are many millionaires in the United States, yet figures indicate that few of them pay taxes at the rate of 87 percent on their total incomes. The study shows that the average overall tax paid by our wealthiest groups is less than 50 percent!

A congressional hearing disclosed that one individual with a total income of $14 million from 1943 through 1947 paid taxes of only $80,000 over that period—a rate of less than six-tenths of 1 percent.

Ten other individuals, with a combined income of $62 million during the same period paid a total of only $14 million in taxes—an average rate of 22.5 percent for the group.

Each of these individuals simply took advantage of special provisions in the tax laws. Yet all of them, according to the tax tables, had sufficient income to be taxed above 90 percent for those years.

Here is a clear illustration of our current income-tax schizophrenia. In one moment, Congress sets high rates. In the next, it creates ways to escape those rates. Obviously, Congress must believe that the very rates it has created are too high. So, often when a special group vigorously complains about them, Congress listens sympathetically and almost every time grants the group relief.

Let us assume that each time Congress enacts a measure granting relief, it does so in the conviction that it is correcting an injustice. The trouble is that Congress is not reducing the tax for everyone, but only for those wtih sufficient pressures and skills to make their case appealing. Others whose problems are different in detail but just as acute—for everyone has problems under high taxes—get no relief at all.

An income tax is not the kind of tax that can tolerate many distinctions among persons of the same income group. Its basic principle is that a person with so many dollars of income is treated the same as any other person with the same amount of income. Arguments which seek to make distinctions among dollars that are earned from oil or dividends or salaries or interest are not—and should not be—sufficiently persuasive to produce a different tax for each.

Yet look at the numerous ways in which Congress has already made such distinctions:

A single person with a salary of $100,000 a year pays a tax of $65,928.

A single person with an income of $100,000 a year from oil royalties pays a tax of $42,829.

A single person with an income of $100,000 a year from the sale of stock-market investments held more than 6 months pays a tax of $25,000.

A single person with an annual income of $100,000 a year from interest on State or municipal bonds pays no tax at all.
